I have been the recipient of manifold blessings through the knowledge of Christian Science, and I wish to express my gratitude. Thirteen years ago I was healed in two weeks' treatment of one form of St. Vitus' dance, and have never had the slightest manifestation of it since. It was at this time that I began the study of the literature for myself, as I had first had treatment eighteen years ago, but after receiving help forgot all about it for five years.

The next healing I experienced was in a case of severe cold, affecting the lungs. I was having chills, and had suffered in this way each winter since I was a little girl. It had always been feared that after one of these attacks I would go into a decline, as I was said to have inherited this disease from two grandparents. My healing was at this time accomplished in two days, and entirely through the reading of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Six years ago I was saved from asphyxiation by gas after being unconscious for two hours, and I suffered no after effects. This accident occurred one night about ten o'clock, and the next morning I was as well as ever, having no knowledge of what had taken place until my family told me. In this case no practitioner was called, but the healing was brought about through my mother's clear understanding of the ever-presence and all-power of God in time of need.

My husband has been healed of heart trouble and extreme nervous exhaustion. I have seen in my own family the gradual overcoming of a strong will and quick temper, also the healing of a skin disease, acute stomach trouble, and many other ills. I am especially grateful for the peace and contentment which have been brought into my daily life by Christian Science.

MRS. ADA LADD DALBY, Los Angeles, Cal.

I have been interested in Christian Science for ten years, and was healed of nervousness in its worst form, when physicians said that medicine could not help me. I had suffered from headaches from childhood, and they were very frequent, but they have vanished, with other ills, and for all this I am indeed very grateful; but the understanding gained through the study of the Bible and Science and Health, which enabled me to overcome many faults of resentment, jealousy, fear, and worry, is greater than the physical healing, since it has changed all about me and enabled me to make others happy. Discouragement may creep in many times, but if we are obedient to our Leader's teaching, this too is quickly overcome.

Our little son, now three years old, has never taken medicine and is a perfect manifestation of the power of Truth to protect and heal. When any ailment has appeared it has always been quickly overcome. The experience passed through at the time of his birth was very interesting indeed, and a great proof to those around me of what Christian Science can do. How much joy there would be, if every mother would trust and leave all to God at such a time! Financial problems also disappear, when we learn through the study of Christian Science to leave all to divine Truth and Love and know that our every need will be met.

Our mother, after eight years of suffering with a skin disease, which physicians said was the result of ivy poisoning, turned to Christian Science for help, as she had given every known remedy a trial without finding relief. The conditions were alarming, as her eyesight was becoming affected, and she was unable to do any kind of work, her hands being badly affected. After several weeks' treatment in Christian Science, the eruption disappeared, but she was very ill, and was confined to her room five months. The symptoms indicated a fever, but this was destroyed; then dropsy and rheumatism appeared, and upon calling a physician to diagnose the case (to satisfy other members of the family) he stated there were indications of blood-poisoning, as one limb was in an alarming condition. After a time all these symptoms disappeared under Christian Science treatment, as well as others which came up.

At times one would almost yield to discouragement, but with the loving aid and patience of a practitioner, and the many assurances found in the Bible and Science and Health, we held to the truth, though many times our dear one seemed to be passing away. The reading from our Leader's works, or an absent treatment would however cause her to brighten up, and make us rejoice for the knowledge of God's ever-presence. Three months after this healing she traveled some three thousand miles, and returned five months later; now, a year and one half having passed since she was completely restored, her step is lighter than ever and her face radiates the truth which she has so gladly accepted. Added to her other blessings is a beautiful new growth of hair. One brother has been healed of a so-called incurable disease and three others have accepted Christian Science since our mother's healing.

For all these many blessings we are more grateful than words can express, also for the spiritual uplift, the peace and harmony it brings into the home life.

MRS. LILLIAN CRUSE LUTHER, Seattle, Wash.

I wish to express my deep gratitude to God for Christian Science and for the many benefits received therefrom. The first ailment overcome was a stiff neck, which was healed in one treatment; the next was a severe attack of rheumatism, both limbs being swollen so badly that I had not been out of bed for a month. My father, who had no faith either in God or in doctors, used his own remedies, till I lost all hope.

Just at this time my sister came from Milwaukee to see me. She was much interested in Christian Science, and took me back with her, also treated me, and in two days I was walking about the house. In one week I was healed, and have never had such an attack since. Again, I was healed of a fever and was up and around in two weeks' time. I have been brought out of numerous other ailments, the last attack being inaction, which was causing me great pain; but on telephoning to a practitioner I was relieved immediately, and was completely healed in three days, all of the organs performing their functions naturally. In Christian Science we truly find that God is an ever-present help in time of trouble.—ANNA B. HARDEN, Chicago, Ill.

[Written for the *Sentinel.*]

"HE THAT KEEPETH ISRAEL."

MARY C. RICHARDS.

WHEN under bright'ning morning skies
To its day's work the city wakes,
And men to all their problems rise,
Yet know the Love that ever makes
Life's burdens light and strength supplies,
There sounds o'er many a busy street
And all the human toil above,
The chime of bells whose music sweet
A message brings of peace and love.

FROM OUR EXCHANGES.

[*Christian World.*]

Charles Booth, in his "Life and Labor in London," shows how Free Church religion thrives best in the middle-class districts. When a certain line of poverty has been passed, the churches lose their hold almost completely, in spite of the most heroic efforts of Christian workers. Does that mean that God's Spirit is powerless below that line? Does it not mean rather that His Spirit is by these failures calling to our notice His violated laws, and insisting on our obedience to them as the condition of His working?

We are under a *régime* which is creating enormous fortunes for the few with a dead level of poverty for the many. The rich few live in one world, and the impecunious many in another. These worlds scarcely touch. If this is a right, a normal condition, then Christianity, which calls for a brotherly fellowship, a loving amity which expresses itself in a generous sharing of both the inner and the outer life, is clearly wrong. We do not think it is Christianity that is wrong, but something else. Shall the church acquiesce in all this; submit to be financed by millionaires, and in return accept and preach the millionaire social view; or will it have the wisdom to see that its finance, with every other portion of its scheme, can only be healthy as it comes from the free universal offerings of an equalized, industrious community; none so rich as to be separated from their neighbors, none so poor as to have nothing to spare for the ideal, spiritual interests?

[*Universalist Leader.*]

It is so easy to abuse "freedom" and "liberty," especially in religion. With the backing of these words it is unfortunately true that there has developed a vast deal of intolerance and bigotry among those in whom it is least becoming. The *Christian Life,* one of the leading Liberal religious papers of England, prints its opinion in the words of Charles Gore to this effect: "Freedom is not the power to do what we like, but to be what we ought to be." And then he goes on to say, "I have known men calling themselves liberal who have looked upon the liberty of their church simply as a personal license to plant the barbed and envenomed arrow of bitter speech in whomsoever they could gain as hearer." They called themselves "plain, blunt men," what they said "hit straight from the shoulder," and they used words which required no dictionary to make them understood. The plain truth is, they were merely rude and sometimes wantonly cruel. The liberty is ours to say what we please; all the more ought we to make sure that what we please is also what we ought to say. It is the glory of a free man that he had the power to say an unkind thing and did not, he saw a chance to hurt one who had injured him and he refrained. Such men are the leaven that leaveneth the whole lump of society, and "of such is the kingdom of heaven."

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

We have all dreamed dreams of a good that has never yet been ours; we have developed capacities which have never found their opportunity; we become conscious of yearnings which can never be satisfied in this earth sphere. You will see many a man who seems to have deserved more from life than he has ever obtained, and to have earned a better fate than has ever been his. People sometimes put forth noblest faculty to no purpose, and are spiritually fitted for greater things than they have ever seen. One cannot help feeling they are, as it were, disinherited. They seem to labor in vain and spend their strength for naught; their souls habitually move on higher levels than their daily occupations are to all appearance worth; and if you could see into their hearts you would often read much disappointment and perplexity written there, and a record of baffled endeavor, aims frustrated, and aspirations denied.

[Edward Arthur Wicher in *Continent.*]

Every truth may be degraded into a platitude by the man who uses the form of its words and tacitly denies its power. The creeds are platitudes, the liturgies are platitudes, the precepts of philosophy and all proverbial wisdom are platitudes; laws of science and rules for the conduct of life are platitudes; the great texts of the Bible, especially the greatest, are platitudes. The real heretic is the man who holds to the form of a creed without its substance. And yet this is often the very man who is most vehement in asserting his orthodoxy and most implacable in hunting down the other man who does not use his shibboleth. He that hateth his brother cannot be of the truth; for the truth—that is, the spiritual truth, the one absolute truth, which underlies and explains every other truth—is inseparable from love. And this is the reason why the possession of this truth confers prophetic power.

[Philip Moxom in *Christian Register.*]

It is a hard saying, yet it is true, that we have just as much exaltation and gladness as we are fit for and are willing to receive. Our selfishness makes our way rugged and difficult. Our ignorance of truth keeps us spiritually poor. Our moral crudeness and flabbiness of fiber make us inept and forceless. The days of fair weather and favoring winds may be multiplied. What shall we do? The answer to this question is in the words of the psalmist: "I will run the way of thy commandments, when thou shalt enlarge my heart." When God shall give depth and scope to our being, when He shall enlarge our hearts so that we can take in a fuller measure of His truth and grace, then our lives will develop new power, and we shall speed onward in the path of righteousness as the trained and stripped runner hastens to his goal.

[*British Congregationalist.*]

We choose men of knowledge and experience to declare our principles and expound our program. We say in effect to the outside world, "These are the samples of our life and work; we call your attention to their historicity, their spirituality, their general excellence." The world, listening, has a perfect right to watch us all the rest of the year and apply the test, "Is the life up to sample? Are all these things which have been demonstrated merely oratorical displays, carefully prepared and adorned for the platform, or are they the very life and essential qualities of the denomination?" It is a vital test, and one that we all need to lay to heart. In the story of individual lives no one knows what damage to the Christian church has resulted from the fact that the life has not been up to sample.

[*Standard.*]

Doubtless not a few people are in fundamental error as to that which religion really is. They conceive it to be a confession, a form, a ceremony, a posture, or any one or all of a large number of outward things. Outward things may be religious, but they cannot be religion. We may have religious ceremonies and religious symbols, but these do not constitute religion. The fact that life must express itself in visible forms, and that religion is life, no one will deny. Neither may we doubt the possibility of detaching the outward form from the inward life, leaving only a comparatively valueless symbol. The history of religion is full of illustrations of such detachment.

[*Advance.*]

A single great city, when supplied with all modern improvements, houses more forms of opposition to the gospel than the whole heathen world. And the pagan opponent is a pigmy compared with the giant nurtured in the schools and disciplined in the intense conflict of civilization. The very excellences of Christianity are turned into a cover or a vantage-ground for its enemies.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles as follows: "Greater than Circumstances," "Why Grow Old?" "Limitation," "Problem of the Hickory Tree," "Songs in the Night."

"Birthright and Dominion," containing four articles and two poems as follows: "Inalienable Rights," "Mental Self-Knowledge," "Love's Bounty," "Demand and Supply," "Humility," "Unity."

"The Father's Business," containing five articles as follows: "The Abundance of God," "One Business," "The Closed Hand," "Christian Science in the Business Life," "Truth is Power."

"The Law of Kindness," containing four articles and a poem, entitled as follows: "'Forgive, and ye shall be forgiven,'" "The Habit of Hating," "The Law of Kindness," "'Ye shall be as gods,'" "Two Roses."

"Confidence and Supply," containing the five following articles: "'The Lord thy confidence,'" "Time and Healing," "'What hast thou in the house?'" "Constructive Work," "Giving and Receiving."

Another new pamphlet has just been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, *Scientist,* with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 15 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.60; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies .	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

Entered at the Boston, Mass., post-office as second class matter.

ITEMS OF INTEREST.

National.

Political campaign material transmitted free through the mails accounted, according to post-office department records, for the difference between a postal surplus and a postal deficit for the last fiscal year ending June 30. An account of franked mail forwarded for Congress, the executive departments, and other government establishments, shows that postage at the ordinary rate on this matter would have netted the government nearly twenty million dollars. About three million two hundred and fifty thousand dollars of this would have been paid on political documents. The postal service handled during the year 310,245,000 pieces of franked mail, weighing 61,377,000 pounds. In the presidential and congressional primary campaign in the last quarter of the fiscal year, it is computed that the total weight of franked mail was between seven and eight million pounds, all of which was transmitted as first class.

Official notice is given that the postoffice department is about to issue a special series of postage-stamps in commemoration of the Panama-Pacific exposition, to be placed on sale in January, 1913. These stamps measure about three fourths by one and one sixteenth inches. At the top appear the words "U. S. Postage" and "San Francisco, 1915." In the left-hand border is a branch of laurel and in the right-hand border a palm branch. The one-cent stamp is green, and in the center appears, within a circle, a bust of Balboa. The two-cent stamp is red. It represents the Gatun locks of the Panama canal. The five-cent stamp is blue, and represents the Golden Gate of San Francisco harbor. The ten-cent stamp is dark yellow. The subject is "Discovery of San Francisco Bay."

The national grange at its meeting in Spokane, Wash., rejected the Brauer plan for a ten-million-dollar corporation for direct cooperative marketing of farm products. In place of the Brauer plan the grange indorsed a plan for state and national bureaus of information as the first step toward cooperative marketing of farm products. By this plan each state grange will establish a bureau through which subordinate granges can keep informed as to marketing conditions. A resolution indorsing the Senate bill providing for a bureau of markets in the department of agriculture was adopted.

Free wharfage is given to the Hamburg-American line in its use of the Commonwealth pier at South Boston for direct service between Boston and Hamburg, *via* Cherbourg and Southampton, according to the agreement signed by the port directors. A minimum income of twenty-five hundred dollars and a maximum of five thousand dollars per year is to be derived by the port directors from the passenger accommodations of the pier, through the charge of six and one fourth cents per passenger.

Governor Tener of Pennsylvania refused recently to approve applications for charters for street railways and for extension of existing or projected lines which desired to use portions of state highways for their tracks. This is taken on Capitol hill to mean that the Governor proposes to keep the Pennsylvania system of main highways free from trolleys. The state highway system embraces about eight thousand miles and, when completed, will be the finest set of roads in the country.

At mid-November 23,500 publications of all kinds had complied with the newspaper publicity law, which requires them to file with the postmaster-general and the local postmaster a statement of their business organization and circulation. This is eighty-three per cent of the total covered by the act.

Members of the Boston city council and others favoring a change in the method of placing assessments upon real estate in order to make them more equitable, are planning for the introduction of a bill in the Massachusetts Legislature for the adoption of the Somers unit system.

President Taft has approved regulations governing the 50,222 fourth-class postmasters throughout the country who have been placed under the classified civil service by executive order. Alaska, Guam, Hawaii, Samoa, and Porto Rico are exempted from the order.

The single tax amendment to the state constitution of Missouri, voted on at the recent election, was defeated by a majority of 421,490.

International.

The total revenue of South Australia for the twelve months ended June 30, 1912, was £4,450,739. After deducting all expenses there was a credit balance of £275,150, and this, together with the surplus of the previous five years aggregating £2,026,000, was applied to the redemption of the public debt.

It is expected that a treaty of peace between Turkey and the Balkan nations will be signed this week.

Industrial and Commercial.

The recent national apple show at Spokane, Wash., launched a movement designed to unite the states of Washington, Oregon, Idaho, and Montana into one unit for the cooperative distribution of Pacific Northwest apples and other fruits. The president of the show has decided, on request of one hundred and fifteen leading growers, railway officials, and bankers of the four states, to call a meeting in Spokane Dec. 16 for the purpose of working out a cooperative marketing plan. Delegates will represent every fruit-growing district in the Pacific Northwest. Apple growers have no fear of overproduction, but they are agreed that an effective marketing system that will eliminate some of the intermediate hands through which their product now passes and that will reduce the price to the consumer, is essential to the prosperity of thousands of orchards.

Work on the completion of the great plant of the Old Mission Portland Cement Company at San Juan, San Benito county, Cal., has begun. Together with railroad extensions, the value of lime, lime rock, clay, and oil deposits, and the cost of installation of machinery and building construction, the plant will represent, on completion, an outlay of three million five hundred thousand dollars. Engineers estimate that the materials on the ground, in sight, are sufficient for the manufacture of six hundred million barrels of cement, this taking into consideration only the limestone above the first bench plane now being stripped for the operation of steam shovels.

The thirty thousand locomotive engineers of the fifty-two eastern railroads have partially won their fight for an increase in wages. The board of arbitration between the railroads and the engineers in its award does not grant all the engineers' demands, but establishes a substantial increase on most of the roads. Notwithstanding the increase in compensation, the representative of the engineers on the board dissents from the award and says the settlement accepted by it can only be temporary.

A great combine of public utilities companies, embracing fifty electric, gas, and street railway concerns in Illinois, Indiana, Kentucky, Michigan, and Iowa in one big corporation, is being negotiated according to report. The final merger embraces companies having outstanding one hundred and fifty million dollars in stocks and bonds and serving one hundred and seventy different cities and villages.

The German petroleum monopoly bill, intended to oust the Standard Oil Company from Germany, is reported to have been adopted by the Federal Council, with certain alterations to assure the disinterested control of the company instead of allowing it to be placed in the hands of banks interested in oil production.

In 1911 the production of sand and gravel amounted to 66,846,950 short tons, valued at $21,158,583. The production of glass sand was valued at $1,547,733. The sand used for building in 1911 was valued at $7,719,286. The production of molding sand was valued at $2,132,469.

The president of the Millions Club of New South Wales, speaking at a recent luncheon in London, said that the progress of Australia was being retarded by the impossibility of conveying emigrants in sufficient numbers to its shores. Australia wants fifteen million people at once.

More than twenty million dollars' worth of freight car equipment has been contracted for this year by the Pennsylvania railroad. It is also stated that orders have just been placed for five thousand freight cars, as additions to equipment.

Three large St. Louis & San Francisco railroad bridges, which will cost approximately one million dollars, are to be constructed across the Arkansas river at Van Buren and Tulsa, Okla., and the Red river at Arthur City, Texas.

The wheat crop of Alberta this year is estimated at about twenty-five million bushels. The prospects are that the amount shipped out of the province before the close of navigation will be less than one third of the crop.

The export trade of the United States with its Canadian neighbor now averages one million dollars a day, as compared with three years ago when it averaged only five hundred thousand dollars a day.

A ton of gold, worth approximately four hundred thousand dollars, was recently received from Dawson, Yukon territory, by steamship.

The lumber harvest in Maine on the St. John river and its tributaries during the coming winter will be one hundred and ten million feet.

Newfoundland's total catch of codfish last year was worth over seven million dollars.

The granite produced in the United States in 1911 had a value of $21,391,878.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

ONE THING NEEDFUL.

CLARENCE W. CHADWICK.

HUMANITY'S greatest need is to know God. To "draw nigh to God" is not only a Christian duty, it is a paramount need. Job's counsel, "Acquaint now thyself with him, and be at peace," sounds the key-note of individual and universal salvation. The knowledge or spiritual understanding of God is the only passport to heaven. Blind belief does not unlock the heavenly portals. Humanity must become acquainted with the Giver of all good if they would be the happy recipients of His grace and bounty. God is not acquainted with strangers. Only those who obey His will are known to Him. Respecting this our revered Leader says, "The only guarantee of obedience is a right apprehension of Him whom to know aright is Life eternal" (Science and Health, Pref., p. vii). Sin is excluded from His presence as darkness is from the presence of light. How, then, queries mortal sense, is the sinner to be saved, if God is conscious of good only?

Christian Science solves this seeming enigma of the senses *by acquainting humanity* with God. The true or spiritual understanding of God uncovers and reveals the mythical nature of what the world calls sin or evil. Then it is that the so-called sinner begins to awaken from his dream of supposed life or existence in matter; in other words, he begins to "put off the old man" and to "put on the new man." This means the purification of that erroneous state of consciousness calling itself a mortal man or woman. It means the extirpation of all thought or belief in sin, but not the loss of any individual man, woman, or child. Mortality is thus put off, and immortality, which alone holds intact every individuality from the least to the greatest, is put on. The erroneous assumption that a single individuality can be absorbed by or lost in the infinite, would deny the eternal unity of God and man. If individuality can be lost, there is no such state as heaven or harmony. Christian Science brings to light man's true individuality by purifying and elevating humanity's sense of being. What the world calls personality is a false or temporal consciousness of both good and evil. This is not to be saved, but exchanged for man's true individuality, which ever reflects the consciousness of good only.

No haughty spirit of ignorant indifference to the spiritual idea will ever usher humanity into the kingdom of heaven. The voice of the Christ speaks just as imperatively in this day and generation: "Without me ye can do nothing." William Penn in commenting upon human life left this sentiment: "It is admirable to consider how many millions of people come into and go out of the world, ignorant of themselves and of the world they have lived in." And Christian Science adds: But the end is not yet; for this coming into and going out is but the picture of a dream, and the dream is not dissipated, here or hereafter, until humanity turns from self to God through an intelligent recognition of Christ, Truth, as the Saviour of the world.

Humanity's great mistake is in attempting to know and to do something through physical sense or will-power. Sooner or later through sore travail of mind and body men yield up their belief in a temporal power and turn from physics to metaphysics. Then they begin to acquaint themselves with God. So long as they clung to physical sense or human will-power they were as those "having no hope and without God in the world." They were struggling against fear, sin, poverty, disease, and limitation, and all the while ignoring or openly resisting the true idea of God. They were toiling in the darkness of human belief and accomplishing nothing worth while. They were laboring early and late "for the meat which perisheth," for the accumulation of earthly riches, and the selfish gratification of the senses. Truly has it been said that "most people spend so much time making a living that they have no time to live." The maddening rush after material wealth, fame, and power leaves little time for the contemplation of things spiritual and eternal. Matter is made of first importance in thought, word, and act. The mortal who accumulates earthly possessions is called prosperous and successful, regardless of his attitude toward God, regardless of how little time he has given to spiritual things. Thus the order of Christianity is reversed, and the teaching of the great Wayshower is side-tracked as impractical and void of common sense.

Christian Science takes issue with this popular interpretation of the Master's teaching, and begins at once to emphasize the practical import of his command, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." The entire fabric of Christian healing, reformation, and regeneration is based upon a right understanding of this spiritual command. The healing of sickness and sin through the power of Christ, Truth, becomes a divinely natural activity in human experience when this fact is realized, for in seeking God first one experiences that spontaneity of thought which reveals the kingdom of heaven on earth, and awakens him to the fact that God is his first and only need.

The first great commandment certainly bears testimony to this truth. To make God of secondary importance is to break this commandment. To acknowledge any other power, source, or activity is to break it. To accumulate material riches at the expense of spiritual growth and development is to break it, and in the sight of God is failure and not success. This is vividly portrayed in Jesus' parable of the rich man who would pull down his barns and build greater to contain the increase of his fruits and goods, and who reasoned thus within himself, "Soul, thou hast much goods laid up for many years; take thine ease, eat, drink, and be merry. But God said unto him, Thou fool, this night thy soul shall be required of thee: then whose shall those things be, which thou hast provided? So is he that layeth up treasure for himself, and is not rich toward God."

Human sense points to a thousand and one different things which are deemed absolutely essential to its health and happiness, and then resorts to every conceivable means except the right one to acquire these things, when in reality but one thing is needful and that is to know God, the creator and owner of all things. The promise that "all these things

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

shall be added" as the direct result of seeking first to know God, is one which should receive more serious attention at the hands of all professing Christians. Christian Science is calling loudly upon all mankind to cease laboring "for the meat which perisheth" and to grasp the spiritual import of the Master's teachings which give precedence to Spirit or Mind. Every holy aspiration, every departure from materiality, is a step toward the kingdom of heaven on earth. This heavenly kingdom will never be reached until it becomes transcendent in the consciousness of humanity.

To those who seek first to surround themselves with the material, the kingdom of spiritual reality seems but a vague uncertainty of the future. To those who seek first to be right with God, to look to Him as the sum and substance of being, the heavenly kingdom is a present reality and man already a permanent resident therein. There is nothing transcendental about this teaching, as results prove. The closer one gets to omnipotent and omnipresent good, the greater his capacity to express good and to eschew evil. A knowledge of evil never yet made a practical or useful man or woman. A knowledge or understanding of good is absolutely essential to the accomplishment of everything that is worthy of human attainment. The highest human accomplishment without God is but a fleeting counterfeit of reality. Hence the conclusion that to work without God is to build on sand. Not one stone shall be left upon another of that structure wherein God has not been recognized as the builder and maker.

The primary object of Christian Science is to open up to humanity the true and only metaphysical approach to the God of infinite Spirit, that they may draw so nigh to God as to make Him of first importance in thought, word, and act. Until this seeking and finding of the true way has actually taken place, human consciousness is dead and buried in trespasses and sins, however loath it may be to make this admission. Every cherished human concept must be spiritualized, before God becomes the Alpha and Omega of all human endeavor.

GOD'S WORD IS SURE.

MARY VAN DER BURGH.

IN Christian Science we learn that God's creation is perfect and eternal; it cannot change. In that creation all His children are given dominion, and though the material senses would try to rob us of our birthright, this dominion is forever ours, for God's word is sure. Mortal existence has been fraught with appalling tragedy because men have not been awake to their privileges, they have misunderstood both their relation to God and to each other. Mrs. Eddy says: "Love and Truth are not at war with God's image and likeness" (Science and Health, p. 19). Since there is no other power than good, there is manifestly nothing that can harm those who steadfastly perceive man as made in the image and likeness of God.

We may well pray for deliverance from the belief in evil, for in proportion as we are able to put this belief out of consciousness will we find freedom from bondage to fear and inharmony. In the light of Christian Science we see our mistake and begin to retrace our steps toward our Father's house, that loving Father who meets us while "yet a great way off" and begins at once to clothe us and reinstate us, giving us our rightful place as sons of God. In the illumination of Science we can no longer doubt that the word of God is sure, and we begin to look for a realization of His promises. From the flood to the present time His word has never failed. He has delivered those who unswervingly trusted Him, and in every cloud they have seen the bow of promise. If, when the overwhelming blackness of error seems to manifest itself, we will but look away from it to the promise given for the emergency, we shall find the threatening disaster powerless to overwhelm. It will even be turned into an opportunity to show us the power of Truth to deliver, and through such experiences we learn to take God at His word.

God said to Abram: "Thou shalt be a blessing;" and again, "In thy seed shall all the nations of the earth be blessed." As the "children of the promise" we have inherited this right to be a blessing, and if we are not a blessing we are not living up to our God-given inheritance. God's word is sure, therefore we must look for the fault in ourselves. To the earnest Christian Scientist the experience of Jacob with Laban is not unusual, for the material thought will acknowledge as did Laban, "I have learned by experience that the Lord hath blessed me for thy sake." If we are doing our work aright, those about us are sure to feel the benefit. In realizing health, we must reflect it in some degree to those about us; in realizing harmony, those near become more harmonious.

In so far as we are qualified by a clarified vision to perceive the truth, we have the dominion which is man's birthright. When Abram parted from his kinsman Lot, God appeared to him and promised him all the land that his eye could see for his own, and thus too we are to have dominion over all which we can spiritually comprehend. There are vistas without number which stretch away into illimitable space not yet perceived, which will be ours when we have escaped from the obscuring mists of materiality and can be sure that those who best demonstrate the power of divine Love over all lack and inharmony, are those who have most often climbed through silent communion "in the secret place of the most High" to the exalted mount of heavenly vision.

"FAITHFUL IN LITTLE."

JOAN MAC DONALD.

THERE are many students of Christian Science who for various reasons are not privileged to attend the church services which others find to be such a source of uplift and encouragement. Often, too, though perhaps unconsciously, there creeps in a sense of limitation and self-pity which is not far removed from doubt and ingratitude. Then comes the tendency to be resigned to this deprivation, to slip into a listless attitude. Being deprived of the object desired, the effort to make the most of what one has is not sufficiently valued. Now the deprivation of the services, though serious, is not so serious, not so much to be deplored, as is this apathy, and against the influence of such predisposition we all need to be on our guard.

In Christian Science we are learning that it does not help us to run away from the environment in which the truth finds us, however difficult things may appear; also that there is a great difference between patiently and lovingly accepting the task of working out of imperfect conditions, and supine resignation to them. To be resigned to circumstances usually witnesses to the indifference which is willing to accept the limitations of a condition, rather than to the meekness and humility which take up the cross and patiently progress out of it, for while patience implies the thought of calmly waiting for a desired end, it includes also a quiet activity which is steadily moving toward that end. Thus through growth and endeavor, by "patient continuance in well doing," we gradually gain that spiritual sense which results in healing and in freer, happier conditions.

There are many who live in the country, or in a village where no service is held, or who perchance have not yet found release from physical bondage, or who are debarred by the strong antagonistic thought of others, conditions which to meet wisely would seem to call for every help possible, and these very ones who seem to need most the helpful healing influence of the services, are deprived of them. But in the darkest hour, and when hardest pressed, there is a gleam of light to which we may turn and find the way gently and surely unfold, "since to all mankind, and in every hour, divine Love supplies all good" (Science and Health, p. 494).

Digitized by Google

Too often there comes the temptation to neglect the present, with its seeming limitations, to defer our expectancy of good to the future; but good is for today, omnipresent, and we shall some day realize that it is by faithfully using our very least opportunity that we multiply our sense of good and thus scientifically advance to greater freedom. It is well to put to ourselves often the question which Mrs. Eddy asks on page 3 of Science and Health: "Are we really grateful for the good already received?" and ponder her conclusion thereto: "Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more."

One will always find great good in studying the Lesson-Sermon regularly, thus coming into touch with the uplifted thought which the universality of this Scripture study gives. If we come into the spirit of the Lesson by holding the receptive mental attitude, we shall, whether far or near, "enter into his courts with praise." We learn in Christian Science that the true church is spiritual, and not a material building, and that we may be in true fellowship with its members not only when sitting in their midst, but when abiding in the spiritual consciousness of Truth and Love, though entirely separated from other worshipers. Seeing God's children as pure and spiritual, actuated by the same life-purpose, conscious of Love's ever-presence, we begin to realize the beauty and practical helpfulness of the service.

If we cannot personally attend the mid-week service we can at least gather all the tithes into our mental storehouse, reviewing with an honest heart the week past and gathering up the demonstrations which, however little they may seem to material sense, prove our growing understanding of Principle to be a practical working factor in our daily life, thus encouraging us to press on to still greater attainment. Then, as in gratitude we reach out to bless another, finding expression in a few earnest words with a neighbor, a letter written, or a paper sent to a friend, we are actually taking part in "that holier worship," and will receive the blessing of "the Father who seeth in secret." In thus patiently and persistently coming into touch with the spiritual idea of service, we shall sooner or later find the way unfolding into a more unlimited freedom. Often, through one's own faithfulness in being superior to circumstances, those in more isolated places come to find that through being "faithful over that which is least," a service has gradually grown up around them, through the pure attraction of divine Love and Truth, which may be the beginning of a far-reaching because ever-widening circle of good.

OUR WORK FOR THE *MONITOR*.

GUY S. PERKINS.

THE question must often present itself to the thought of Christian Scientists, and is not infrequently voiced, "What am I doing, or what might I do, to widen the sphere of usefulness of *The Christian Science Monitor?*" It would sometimes seem that those seeking an answer to this query entertained the belief that successful work for the *Monitor* is essentially a question of methods, of location, or perhaps of funds. It is true that these factors and many others are most important, and that they require careful and special consideration. They are not, however, fundamental, but only structural in the development of a reasonable and successful *Monitor* cooperation.

In seeking the basic motive for our work, therefore, we as Christian Scientists should first know for what reason and through whom the *Monitor* came into existence. These points settled, we should carefully consider the meaning of our Leader's designation of the paper's mission, namely, "To injure no man, but to bless all mankind." A thoughtful consideration of this statement of purpose will disclose its larger meaning and significance. Furthermore, we do well carefully to examine our concepts of how the Christian Science movement should be advanced. Just who do we think most clearly divined the present needs of humanity, and with equal clearness discerned the best methods for meeting those needs?

How many of us, perhaps with kindly motives but in zealous self-deception, are going about, seeking perchance to establish the righteousness or rightness of our own methods for advancing the movement, when our Leader may have in wisdom pointed a better way. So, too, we may find, when we glimpse a little more clearly the meaning of her guiding statement of the work to be performed by our greatest impersonal missionary, that the work we would like to do might many times be better accomplished by the *Monitor*, to say nothing of the greater possibilities to be brought out for world-wide unity in Christian Science activities. If, indeed, in all our efforts to bless mankind we were to form the habit of seeking such guidance as our Leader may have given us relative to vehicle or procedure, we would surely increase the effectiveness of our work and approximate more nearly the standard she has held up to us.

The *Monitor* was not designed to interfere with or take the place of any legitimate phase of Christian Science work, or to disturb any right methods of promulgation. In its present development it is manifestly adapted in the largest possible sense to perform missionary work,—to introduce Christian Science to the world, not in the sense of argumentative proselytizing, but by manifestation and demonstration of the higher, kinder, purer, and more rational view which Christian Science teaches us to take of the world's problems, as humanity progresses step by step toward the perfection which Christ Jesus urged upon his followers, bidding them be perfect, even as their Father in heaven is perfect.

May we not therefore more lovingly and more thoughtfully consider our Leader's invitation, when she says, "Drink with me the living waters of the spirit of my life-purpose,—to impress humanity with the genuine recognition of practical, operative Christian Science" (Miscellaneous Writings, p. 207), and thus lay a foundation for consistent work for the *Monitor* which cannot be destroyed, but which will be effective in all the ways and means our several localities may require.

WINGED THOUGHTS.

HENRIETTA H. WILLIAMS.

One afternoon we had gone out to a cozy corner in the glassed-in veranda of our winter home, for our accustomed hour with the *Journal* and *Sentinel*, when attention was at once attracted to a fluttering little something,—a small wonder of color and daintiness, gleaming in spots like burnished metal, and beating the airiest of wings against the panes in a futile effort to escape. Just how long the hum and burr of so small a visitor had been going on, we could divine somewhat from a certain droop of the little head of the tiniest of humming-birds, which curiosity or some spirit of venturesomeness had drawn to our corner of the world. He was too far up on the small square panes to catch, or to coax into changing his methods for release, so we went indoors for a long-handled broom. Returning presently, we found him still struggling to be free, but with all his arduous efforts turned in a wrong direction. So, poising the broom above him, and very gently persuading him from one bit of glass and framework to another still nearer, he was finally within reach of our hand. Realizing the suddenness of our acquaintance, his unaccustomed surroundings, and the weary and prolonged efforts for liberty, we could not doubt his discomfort, so stepping to the open porch, we opened wide our palm and he soared out upon his untrammeled way, a momentary flash of brilliance across lawns and gardens. Then we turned once more to our corner, reviewing this brief but momentous visit, and pondered the lesson it brought so vividly to mind.

Digitized by Google

Had our friend turned ever so little, he would have found all about him wide-open spaces through which to reach the goal of freedom beyond. Could he have become quiet enough to glance in the direction from whence he had traveled, turned toward it, he could have freely and easily retraced his way, to find stretches of garden all abloom to satisfy his needs and his tastes. What was it but fear that kept him struggling with those resisting panes, through which he was trying to beat—alas! in vain—to what he saw beyond. Did anything but fear prevent him from returning to the point from which he had ventured with more valor than wisdom? And who shall say how long he might have fluttered and struggled but for the friendly hand that had set him free. Speedily came the inference that fear, rather than ignorance, had confused him. For though he might not have understood the nature of the obstruction in his pathway, instinct would doubtless have come to his rescue had not dread—he scarcely knew of what—impelled him to spend his energy in a wrong direction, staying his power of more intelligent inquiry as to right means of escape to his own natural, unbarred realm of activity.

How clearly this illustrated to us something of our human way of progress in the open reaches of endeavor. Can aught but blind fear obstruct one's way? Having awakened to the freedom Christian Science gives, has some one ventured with more valor than wisdom, however worthy his intentions, or even turned in earnest inquiry into unexplored realms, only to find before him some seemingly insurmountable barrier, with its "Thus far and no farther"? Has he come upon some so-called fixed law of matter, and in the excitement and fear sometimes incident upon an untried way, striven to beat through such resisting law to what he had discerned beyond? How often must come the warning to every seeker, "Be still, and know that I am God." How often must one become consciously quiet, right where one is found, in order that reason, or even instinct, may come intelligently to one's rescue. A little retrospection of one's ongoing will so surely indicate the natural, unforced, God-appointed way and how to regain it at the point of divergence.

How much better to pause and retrace one's way, that he may advance and utilize his activities in the manner of wisdom's appointing, rather than, by a determination very likely begotten of fear, waste his strength and effort in the vain hope of working through laws far beyond his ken, laws that at the hour it may not even be needful that he should seek to annul. Does not Mrs. Eddy show in "Unity of Good" that one is not to be disturbed "by the frightened sense of any need of attempting to solve every Life-problem in a day" (p. 5)? His mission is not the dissolution of what still has its uses for others, but the fulfilment of harmony in his own realm, "his own niche," as our Leader has said in "Retrospection and Introspection" (p. 70).

If perchance he has turned into limiting byways, let him regain his freedom. Better the courage that can survey one's pathway hitherto, discern the point of deflection from the wiser journeying, and retrace the path, than in blind unreasoning effort to seek to struggle through life from the supposed clearness of a purely human point of view. Thus one finds again the boundless reaches of Truth, and enjoys them in the most natural, law-abiding, unified, and therefore truly intelligent way. Better still is that eternal vigilance which is expressed so beautifully by Mrs. Eddy (Poems, p. 14):

> I will listen for Thy voice,
> Lest my footsteps stray,

the "eternal vigilance" which is the price of liberty. How thankful is every awakened heart for the friendly hand extended in the teachings of Science, that in moments of fear, following close upon some uncertain or impulsive step, one may recover the divinely destined way.

GIVING TESTIMONY.

LLOYD B. COATE.

THROUGH the study of the Church Manual given us by our revered Leader, Mrs. Eddy, Christian Scientists are awakened to the real value of the Wednesday evening testimonial meetings. On page 47 we read: "'Glorify God in your body, and in your spirit, which are God's' (St. Paul). Testimony in regard to the healing of the sick is highly important. More than a mere rehearsal of blessings, *it* scales the pinnacle of praise and illustrates the demonstration of Christ, 'who healeth all thy diseases' (Psalm 103:3). This testimony, however, shall not include a description of symptoms or of suffering, though the generic name of the disease may be indicated."

Oftentimes, in listening to remarks made at the Wednesday evening meeting, one is inclined to think that the speakers are not so familiar with the Manual as they might be, else those things not having reference to the object of the meeting would be left unsaid. Should not this experience meeting be a matter of demonstration on the part of Christian Scientists? One need not be an orator in order to speak at these meetings. Is it not the simple statement of benefits received physically, morally, and spiritually that "scales the pinnacle of praise and illustrates the demonstration of Christ"? Probably every word spoken at these meetings is weighed by the stranger; then how careful we should be what we say! Perhaps at every service some one is present who is heavily burdened with sorrow, or sickness, or sin. No doubt he has heard that Christian Science heals the sick, comforts the sorrowing, and reforms the sinner, and how shall we best entertain this seeker after Truth? "Glorify God," saith the Manual. If we are careful in giving our testimony, we shall honor and glorify God.

"Testimony in regard to the healing of the sick is highly important," and how clearly the Manual points to what should be said at these meetings! We should note that our Leader has told us that our testimonies shall be given so as to illustrate the demonstration of Christ, "who healeth all thy diseases." If we give heed to this admonition, the stranger will be impressed with the fact that healing is accomplished through the power of God in the way Christ Jesus pointed out, namely, the supremacy of Spirit over every condition of matter. This is what Christian Science teaches. If Christian Scientists intelligently do their work before services, they will silence the error of having nothing to say at these meetings. Timidity will vanish before the pure desire to glorify God. How thankful we should be for the wisdom that led to the establishment of our church services! At the Sunday services the Bible and Science and Health preach for us, while the Wednesday evening meetings are provided to glorify God, through our testimony to Truth's healing and redemptive power.

[Written for the *Sentinel.*]

INTROSPECTION.

LILLA ELLEN BOWLEY.

I STOOD reflective at the gate of day—
What is the record of thy heart, my friend,
And whither doth its deepest purpose tend?
Shadowed about me in a cloud of gray,
But swifter than my thought, a sunlight ray
Pierced the chill cloud my glad reply to send,
The mists transfigured did but echo lend
And say, Upward and onward, in God's way!
The preparation of the heart and word,
Of answer to the constant call of Love,
Still at the pure baptismal font are heard,
For both come ever from our God, whose dove
Descendeth daily on the good preferred,
Showing His well-belov'd the bliss above.

SELECTED ARTICLES.

[Frederick Dixon in *South London* (Eng.) *Press.*]

A recent issue of your paper contains a further statement by the Rev. —— on the subject of faith-healing. I should not trouble you with any remarks on the subject were it not that one section of the discourse is headed "A Reply to Mr. Dixon." In these circumstances I am sure you will allow me to say something on the subject.

The critic said, quite truly, that I declared it was not possible to limit the power of God. I repeat that again most emphatically. To me it seems a hopeless position to take up, to say that spiritual healing can overcome a nervous or a functional disease, but cannot overcome an organic one. If there is any truth whatever in what is known as scientific idealism, all disease, whether nervous, functional, or organic, is merely a mental phenomenon or result of energy. If, therefore, these phenomena or effects can in one instance be overcome by the understanding of spiritual law, as Christian Science maintains, they can all be overcome in the same way. Even if you were to assume the most materialistic position you could arrive at, and declare that material phenomena were absolutely independent of mind, it would not in the least affect the fact that if the power of God is able to overcome one phase of disease, it must be able to overcome all.

A well-known clergyman, of the Emmanuel movement to which this critic has so often alluded, has, I know, attempted to lay down the principle that there were two kinds of leprosy in the East, one infectious and the other not infectious, and that the lepers whom Jesus touched were suffering from the non-infectious kind. To me it is frankly ludicrous to suggest that the man who raised the dead and walked upon the water would only dare to touch a case of uninfectious leprosy, and I can only repeat, as I wrote at the time, that unless critics of Christian Science are prepared to prove that there were two kinds of water in Palestine, in one of which you sank and on the other of which you could walk without sinking, he might as well cease to bother his head over leprous distinctions.

The clergyman explains that he regards the doctor as the divine instrument, and that in making use of his services the world is simply relying on a person who "might be ordained to do the work of healing." It must be admitted, from the critic's own words, that the doctor might not be ordained, and the mere settlement of that question seems a rather serious preliminary difficulty. I do not know how he would define the word divine, but I will take the definition from the best of all dictionaries, the Oxford: "of, from, like, God or a god: devoted to God, sacred." Now, from a Christian point of view this can only mean that the doctor's office is a divine one if he accepts and understands truth as it is taught in Christianity. What then becomes of all the doctors Mohammedan, Jewish, Hindu, and so on *ad infinitum?* There is no need to go outside the English kingdom for examples of these. I personally have known numbers of doctors who frankly were agnostics and who had large practises. I presume the critic would not term men to whom Christianity was a farce, divine instruments. It is for this reason that his position, if he will let me say so without any wish to be offensive, is hopelessly illogical.

As a matter of fact, Jesus of Nazareth taught the world to heal the sick through the understanding of spiritual law, which is exactly what Christian Scientists, however indifferently, are endeavoring to do today. This was so apparent to one of the greatest of Biblical critics, I mean Adolf Harnack, that in speaking of Luke he declares: "His medical profession seems to have led him to Christianity, for he embraced that religion in the conviction that by its means, and by quite new methods, he would be enabled to heal disease, and drive out evil spirits," and this method Harnack describes as Christian Science.

[Charles K. Skinner in *Cadillac* (Mich.) *Evening News.*]

Mrs. Eddy called her teaching "Christian Science" because its first step is "Christian," its effort being to follow the redeeming and healing work of Christ Jesus in his daily ministrations among the people. It is Science because the Principle from which it springs and by which it operates is the understanding of God and His relation to His spiritual creation, through which understanding Jesus did his mighty works. The great Master understood God as divine Principle,—"the same yesterday, and today, and forever." He at no time claimed to do the works by his own power, but said most emphatically, "I can of mine own self do nothing;" "The Father that dwelleth in me, he doeth the works." His teaching and his works were in the perfect accord of Science because, endowed as he was with the highest understanding of God, his works never failed to prove the truth of his teaching. He also made the strong demand on his followers that they should do the works which he did. His words were, "He that believeth on me, the works that I do shall he do also." How can a true Christian consistently disregard this command?

The Christian Scientist is doing these works so far as he is able with his limited understanding, and the proofs of his efforts are shown in every land on the globe. He does not claim that he is perfect today, or that he knows all there is to know of God and the perfect man. He is like the boy at school who is diligent in applying the rules of his problem, and is successful in so far as he understands the underlying law. In like manner the Christian Science student knows that as his life manifests a higher spirituality and expresses more love to his brother man, he will do still better work. Jesus understood that the same law cleansed the sinner and healed the sick. To his critics (for there were critics then as now) he said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" He knew that when the wrong thought which controlled one, whether it was fear or sin, had been eradicated, then he was healed. In like manner Mrs. Eddy writes on page 404 of Science and Health, "Healing the sick and reforming the sinner are one and the same thing in Christian Science. Both cures require the same method and are inseparable in Truth." These words certainly coincide with the Scriptural teaching, and if Christian Science is a "humbug," what of Jesus' words, "Ye shall know them by their fruits"?

It has never been claimed that Christian Science is a new religion; it is, on the contrary, a return to the spiritual understanding and application of Jesus' teaching. He said to those about him, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." It is true that the control of mind over body is no new theory, but the trouble has been and is now that mankind has been perfectly satisfied to be controlled by the carnal mind of which St. Paul speaks, and this carnal mind has nothing but the indulgence of self-gratification in its consciousness, and as a result its fruits are externalized on the body in sin, sickness, and death. Christian Science does not teach the control of the body by such a miscalled mind, but by that Mind which the apostle said "was also in Christ Jesus." When this is brought about, the body responds to its healing power, and the man is healed morally and physically.

We sometimes hear it said that Christian Scientists worship Mrs. Eddy because they have her name read at the service in connection with her book, "Science and Health with Key to the Scriptures." Nothing is more absurd and untrue. The author's name is read to identify the statements made with the proper authority, in the same way that a chapter from St. Luke or from the prophet Isaiah is given its proper author. This has been made necessary from the fact that spurious teachings, claiming to be the same as Christian Science, have been published and circulated, and it is to protect any honest investigator from being misled by those having a wrong impression of Christian Science

Digitized by Google

teaching. If any one really desired to learn the truth of any subject, he would not get his information from a book written by one who had no practical knowledge of the subject, or who had a sense of opposition to it.

The growth of Christian Science has never been so great as during the past year, and if any one desires to know of the facts concerning the cause and its Founder, he can secure them by an honest, unbiased reading of the text-book Science and Health, and other works by Mrs. Eddy. Christian Scientists claim no monopoly of the healing work; they will be only too glad when every Christian in the land realizes his duty to mankind as laid down by the great Master.

[Ezra W. Palmer in *Svensk-Amerikanska Western*, Denver, Col.]

My attention has been called to a criticism of Christian Science in a late issue of your paper. The gentleman evidently bases his criticism of Christian Science on very cursory and superficial examination. He visited a meeting of Christian Scientists, listened to the testimonies of healing, and rashly concluded that, because testimonies of healing by other than material remedies were vouched for by a number present, these people were suffering from delusions or hallucinations.

It will be remembered that the conclusion of this critic regarding Christian Scientists is practically the same as that of those who failed to understand and therefore opposed healing of physical ills by the power of prayer in the times of early Christianity. A certain ruler solemnly assured St. Paul on one occasion that much learning had made him mad, although this same Paul knew enough about God to raise the young man Eutychus from the dead, annul the poison of a viper's bite, and do other deeds in the name of God apparently incomprehensible to the uninstructed minds of those about him. St. Paul in commenting on this inability of the uninstructed human mind to grasp spiritual things, and its tendency to call them delusive and improbable, says: "God hath revealed them unto us by his Spirit: for the Spirit searcheth all things, yea, the deep things of God. . . . But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

This critic made the mistake of assuming that Christian Science is based on ignorance and human blindness, but nothing could be farther from the truth. Christian Science is based on right and scientific knowledge of God, and it has won its way all over the civilized world because it satisfies the hunger of humanity for a true, right relationship with God, destroys disease, and gives every man who honestly studies it a sense of peace and genuine spiritual poise which he had been unable to gain from any other source.

The healing of disease through the prayers of Christian Scientists has passed beyond the stage of experiment. It has been so amply demonstrated in innumerable cases all over the world that any one who really desires to know can find living proofs of its healing and regenerative power in every city and practically every hamlet in the land. In fact, so well known is the proof of Christian Science healing, that he who denies it places no burden of proof on Christian Science, but simply convicts himself of inability or unwillingness to see and understand the most obvious facts.

Nor is there anything strange or actually new about turning to God in prayer in times of trouble and physical weakness. The whole Bible is a record of the superiority of the spiritual over the material, and of the power of man, when knowing God rightly, to control physical phenomena. Witness the acts of Moses, of Joshua, of Elijah and Elisha and the other Old Testament worthies. So likewise note the mighty works of Jesus, who healed disease, stilled the storm, walked on the waves, found solid walls no bar to his progress, and finally proved his entire superiority to material phenomena by overcoming death itself. Note also the works of his apostles, and the early Christians who for three hundred years after the ascension followed the example of Jesus in healing disease by prayer. In fact, if the reasoning of this critic of Christian Science is followed, we must turn our backs on spiritual verities entirely, repudiate the Bible, and proclaim the material as the real and that man has no refuge from sin and its resultant discords.

The statement of this critic that cancer or consumption in advanced stages cannot be cured by Christian Science is on a par with his other statements, simply personal opinions which have no weight when opposed to the facts. If this critic had taken the trouble to investigate, he could easily have found cases in Portland, or in other cities of Oregon or Washington, which had been healed of these very same diseases. Nowhere in his article does this critic more clearly display his amazing ignorance of the subject he professes to discuss, than in his statement that "only a few people can be persuaded that sin, sickness, and death do not exist." Christian Science does not teach that they *do not* exist to material sense, but Christian Science does most emphatically deny that God made these evils or that they exist in the kingdom of heaven, the realm of the real. Christian Science teaches that man can attain a knowledge of God, here and now, to overcome mortal ills; and the acts and teachings of Jesus attest this.

The basis of Christian Science is not the unreality of sickness, sin, and death, as this critic avers, but the allness of God, infinite, ever-present Spirit, Love. Because God is Spirit, Love, all matter, sin, and disease being unlike God, Spirit, cannot be real. Christian Science treatment does not cause a state of self-deception in the mind of the patient. When a person is healed in Christian Science, he knows it because the disease and its symptoms are gone. He not only experiences freedom and health physically, but he gains an insight into the immortal truths of Spirit which transform and regenerate the man. His point of view is changed from a material to a spiritual basis, so that he can exclaim with St. Paul, "I delight in the law of God after the inward man."

[Royal D. Stearns in *Cozad* (Neb.) *Local*.]

While healing is not by any means the main purpose of Christian Science, it is demonstrating that it is possible to heal the sick today in the same manner as the sick were healed by Jesus and his immediate followers. Christian Scientists maintain that the law of spiritual healing is ever-operative, and he who understands and obeys the law can apply it, and when rightly applied it always brings gratifying results. The law of spiritual healing whereby the sick are healed and the sinner regenerated, is the unchanging and unerring law of divine Mind, "the same yesterday, and to-day, and forever." The error of the age is, according to Christian Science, the tendency to limit the power and willingness of God to help humanity in time of need. On many occasions Jesus said to those who asked for help, "According to your faith be it unto you."

According to Christian Science teaching, there is nothing mysterious about the metaphysical process of healing; it is in accordance with an ever-available spiritual law, and its application is in obedience to the oft-quoted commands of Jesus, "Go ye into all the world, and preach the gospel," "Heal the sick." It is worth remembering, and significant also, that Jesus never at any time sent out disciples to preach without telling them also to heal the sick. There is no Scriptural authority for preaching which does not also carry with it the command to heal. Mrs. Eddy realized the necessity of obeying the commands of Christ Jesus in their entirety, and did so to the fullest extent of her ability and taught all her followers to do likewise; she maintained that "healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action, in the higher range of infinite goodness. The emphatic purpose of Christian Science is the healing of sin" (Rudimental Divine Science, p. 12).

Mrs. Eddy through all the years of her self-denial and

Digitized by Google

self-sacrificing endeavor, was a humble follower of Christ. In the Preface to "Science and Health with Key to the Scriptures" (p. ix) she says, "Today, though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ." Christian Scientists never have made any comparison between Jesus Christ and Mrs. Eddy. The position of Christ Jesus as the great Wayshower of humanity finds willing and loving acceptance with Christian Scientists universally. Christian Scientists gratefully recognize and acknowledge Mrs. Eddy's contribution to this age in elucidating and explaining the teachings of the Master and in making them available in a practical way now to their needs, but no comparisons are ever made. A tribute to the value of Mrs. Eddy's work was paid by a speaker at the Protestant Episcopal convention in October, 1910, at Cincinnati as follows: "The power of restoring the sick by prayer was thrown away by our church and a woman picked up that jewel."

[A. Cope Stone in *Adelaide* (Australia) *Advertiser.*]

A clergyman again manifests his misapprehension of Christian Science. He asserts that it is opposed to the Bible in its teaching regarding God and His creation. Such is not the case. He fails to understand what Mrs. Eddy gives in place of that which she repudiates when she denies the real existence of matter. One need only turn to the discoveries of leading scientific men to learn that popular opinions regarding matter are erroneous. Christian Science teaches that God (Spirit) made all that was made, from the least to the greatest, "visible and invisible," and pronounced it good. Everything which exists is a manifestation of Him, and expresses infinite Mind. In proportion to our spiritual growth, we will gain a clearer perception of creation, until we ultimately behold all things in their true light, spiritual, not material. It is our darkened, material sense of things which hides from humanity this true view of God and His creation. Jesus said, "It is the spirit that quickeneth, the flesh profiteth nothing." He taught that Spirit alone is the real and eternal, the only source of life and existence; but this spiritual understanding can only be gained by following in his footsteps, and having the Christ-mind indicated by Paul when he declared, "But the natural [physical] man receiveth not the things of the Spirit of God, for they are foolishness unto him; neither can he know them, because they are spiritually discerned."

Let me correct our critic's statements regarding "sin and its reality." In the Christian Science text-book (Science and Health, p. 37), Mrs. Eddy makes it clear that sin brings suffering, and man cannot escape the penalty of sin until he forsakes it. In her Message to The Mother Church in June, 1901, she says: "To assume there is no reality in sin, and yet commit sin, is sin itself, that clings fast to iniquity. The publican's wail won his humble desire, while the Pharisee's self-righteousness crucified Jesus" (p. 14). Sin will exist as a seeming reality until grappled with and overcome by the power of Truth. Mortal man indulges in sin because he believes that it produces pleasure and gratification, but Christian Science opens his eyes to the enormity and fallacy of his sin, and reveals to him the fact that the only reality and satisfaction is in good. This illumination of the spiritual sense annihilates all desire to do evil, and reforms the sinner. Webster defines the word reality thus: "Actual being and existence of anything, in distinction from mere appearance." In Christian Science the word is used in this sense, and denotes that which is of God, eternal, indestructible, above mortal vision, the "actual being or existence." The Scriptures teach that Jesus came to destroy the works of the devil, which are sin, sickness, and death. If these were real in this higher sense, how could he destroy them?

The assertion that Christian Science is "a religion without a personal God" is a misconception. Mrs. Eddy certainly denies that He is an anthropomorphic God, for in Christian Science we lose our finite human concept of God, and know Him as the infinite Person, and divine Mind, who is the creator of all, from the least to the greatest. The assertion that this teaching is "prayerless" is absolutely untrue. There is no body of Christians who are more prayerful than Christian Scientists, who believe in "prayer without ceasing." They understand true prayer to be the constant uplifting of one's thoughts to God as the source of all life, truth, and love—the Giver of all good. Their supreme desire is that they may have the constant realization of the ever-presence of divine power, to overcome every temptation of sin or fear of disease that may present itself. The efficacy of this spiritual communion is proved by the results gained thereby—viz., the healing of the sick and sinful.

The assertion that we reject the atonement is incorrect. While we may differ from some in our interpretation of it, we claim that this higher and more spiritual view of the question has made the atonement more practical and effective. Christian Scientists endorse the Bible teaching regarding the birth, life, death, resurrection, and ascension of our Lord, but hold that it is not only his resurrection, his demonstration over death which is necessary to the salvation of mankind, but also his life and wonderful works, as indicated by Paul in the following: "For if, when we were enemies, we were reconciled to God by the death of his Son, much more, being reconciled, we shall be saved by his life." We maintain that the purpose of Jesus' life-work was the reconciliation of man to God, indicated in his prayer: "That they may be one as we are one."

In reference to our critic's objection to Mrs. Eddy's interpretation of the Holy Ghost, Christian Science teaches that the Comforter promised by our Lord is the spiritual consciousness of the omnipresence of God as divine Love, the unfolding of the spiritual unity of God and man, and the revelation in consciousness that the "Spirit of truth" is come, and is leading us "into all truth." Christian Science does not teach, as inferred by our critic, that "Christ is Christian Science." His reference from Science and Health is misquoted. The correct quotation is as follows: "There is but one way to heaven, harmony, and Christ in divine Science shows us this way" (p. 242). Christian Science is not a blind faith or belief, but a demonstrable scientific teaching. To those who are seeking for a higher expression of Christianity than they have hitherto known, Christian Science comes with a message of hope and healing, and unveils to their consciousness a God of love, "the Sun of righteousness," who has arisen "with healing in his wings."

[Written for the *Sentinel.*]

"AS IT IS IN HEAVEN."

LAURA GERAHTY.

Is the load heavy? Love ne'er placed it there.
Grieve not nor faint, it cannot bow thee down.
Rise in the strength of Spirit,* and thy prayer
Will mount to heav'n and claim the victor's crown.

Forgiveness difficult? Then close thine eyes
To all but Love's idea—perfect man.
The error from thy brother distant lies
As pole from pole in God's unerring plan.

Be still, and know that only Love doth reign
Supreme above the seeming ills of sense.
Out of earth's darkness then thou shalt attain
The joy and freedom of omnipotence.

* Science and Health, p. 393.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"DECENTLY AND IN ORDER."

It is scientific as well as Christian that "all things be done decently and in order," and this is especially true when applied to the organization of Christian Science societies or branch churches, for if each step of such organization be rightly taken, the possibility of friction and misunderstanding in later years will be avoided. It is for this reason that, with the constantly growing number of Christian Science organizations, we have been asked to republish an article on this subject which appeared in the *Sentinel* several years ago. We have therefore selected three specially pertinent paragraphs from this article as follows:—

Every little band of Christian Scientists which comes together and holds services, naturally hopes its work may prove to be the nucleus of a large and flourishing church, and past experience shows that in the majority of cases this hope is certain to be realized. It is, therefore, the part of wisdom for those who compose such a band to lay a foundation which will support a progressive and growing organization; but this does not mean that when but "two or three are gathered together" in the name of the Master, they should form an organization upon lines suitable to the needs of a church with several hundred members. There should, however, be a definitely formed organization, with such rules as will tend to the orderly conduct of its affairs, permit of its growth, and safeguard the rights of the individual members.

Briefly stated, the essentials for a church or society for the purpose of holding Christian Science services are, first, an organization which is in harmony with the state law governing the formation and conduct of religious societies; and second, a set of rules or by-laws which conform to the requirements of the state law and which provide for the election of additional members, the dismissal of members, the election of readers and such other officers as are necessary, also for the holding of regular and special meetings. The fewer and simpler these rules are, the better it will be for the organization; but this should not be understood to mean that anything indefinite or inadequate is advocated. As the society grows in membership and its activities and responsibilities become greater, other rules may be added, but they should be only such as the growth of the organization calls for, and their object should be to simplify the administration of the affairs of the society rather than to establish an intricate and cumbersome code of procedure. A third necessity is a complete and accurate roll of membership; a legible and correct record of the proceedings of the society at its business meetings, and a strict compliance with the rules or by-laws, especially those which relate to the election of officers. While it is true that rules and by-laws do not constitute a church or society, it is also true that definite and adequate by-laws, lived up to in both letter and spirit, will promote harmony and thus add to the effectiveness and prosperity of the organization, as well as to the peace and happiness of the individual members. There are also certain provisions of the Manual of The Mother Church, compliance with which is essential to church organization, and to these provisions particular attention should be given.

One point which calls for special emphasis is this, that even the strictest compliance with rules must have the support of our Master's healing gospel, if a genuine Church of Christ, Scientist, is to be formed. A weak and struggling church, the members of which are not healing the sick or giving other evidence of the efficacy of our Master's gospel, adds nothing to the strength of our cause, but on the contrary constitutes an element of weakness.

If we were to add to the above by way of conclusion, it would be to direct attention to the second part of Mrs. Eddy's definition of "the scientific system of divine healing" embraced in Christian Science: "The proof, by present demonstration, that the so-called miracles of Jesus did not specially belong to a dispensation now ended, but that they illustrated an ever-operative divine Principle. The operation of this Principle indicates the eternality of the scientific order and continuity of being" (Science and Health, *p. 123*). The Church of Christ, Scientist, was organized that it might offer to a needy world salvation from sickness as well as sin. In our Leader's writings and in the authorized literature which her wise forethought provided for our welfare, we have everything needed for the guidance of Christian Scientists in their labors for the advancement of the cause, and in a faithful study of and adherence to our Leader's wise counsel in every respect, we shall best show our gratitude for her own tireless labors for mankind.

ARCHIBALD McLELLAN.

SAVING THE SLUMS.

A STUDENT of social conditions in London has recently called attention to the startling fact that, according to the reports of Christian workers among the poor, when a certain level of destitution has been reached the situation seems to become quite hopeless, and from this he argues rightly that Christian thought should awaken to the fact that the gross violation of economic law is largely responsible for these conditions. The persistence of a degrading want, despite our wonderful material progress and the multiplication of means for the cheap production of creature comforts, presents a problem which lies heavily upon the heart of every true lover of men. The false doctrine that the pitiful conditions of the poor are inevitable, that nature's supply is unequal to the demand, and that it is no use trying to better things,—all this has conduced to tolerant indifference where there should have been that righteous enthusiasm which would beget intelligent effort to bring about a more just distribution of the abundance for all which nature has provided.

That Christian workers should find this state of human want and woe irresponsive to love and spiritual appeal, and turn away from it with a sense of its utter hopelessness, discloses a yet more serious fact, however; namely, the loss of that power over evil and its outcome which Christ Jesus promised to all true believers. The conditions of the abject poor in the first century were no doubt as "hopeless" to human sense as they are today, and yet it was from just these, in large part, that the early church was gathered. The slaves and outcasts of society were reached and regenerated by that healing apprehension of Truth which the Christians of the early church acquired, and which is being regained and demonstrated in an inspiring degree through Christian Science today.

The Truth and Love that won the Magdalen, that raised up the sick and dying, and that brought freedom to those possessed of devils, would prove quite as effective in this century as in the first, and we all know it. Nevertheless there are those who inveigh against Christian Science because of the emphasis it lays upon physical healing in demonstration of the presence of the saving Christ, though they would concede that the overcoming of sickness and sin is the prime requisite for the solution of the slum problem. It was a very daring thing for Mrs. Eddy to say to the Christian world that the occasion for human discouragement is not the condition of the victims of poverty and disease, but rather the condition of so-called Christian thought, its practical denial of the efficacy of faith in the Word of God. Her declaration was, however, no less true than telling, and

Digitized by Google

when in the illumination and inspiration of her conviction she demonstrated the presence of Christ, Truth, as able to heal the sick now, she kindled anew for all mankind the sin-consuming fires of true Christianity.

That the criticism of Christian Science, on the ground that it is too much devoted to the healing work, ill becomes any professed Christian, is manifest to all who realize the depth of present human need, and who know, as all may, that this healing work is grounded in and wholly dependent upon the spiritual illumination of the practitioner, and ultimately of the patient; that it heals sickness by eliminating sin, false sense; that it makes well by making "whole."

Christian Science knows no hopeless state of human degradation, whatever the fear, and however inadequate the present understanding of those who have espoused it. The teaching is above criticism because it is the teaching of the Master, and provably true; and happy are they who have gained its vision, and who are determined in their hearts to know Christ and him glorified, even to the saving of city slums.

JOHN B. WILLIS.

A VITAL FAITH.

IN Mrs. Eddy's wonderful address, given in Central Music Hall, Chicago, in 1888, to an assemblage of many thousands, she said, "In no other one thing seemed Jesus of Nazareth more divine than in his faith in the immortality of his words. He said, 'Heaven and earth shall pass away, but my words shall not pass away;' and they have not" (Miscellaneous Writings, p. 99). These words of our revered Leader were recalled by the writer the evening before our Thanksgiving service, as she went from one department to another of our publishing house and witnessed the unusual activity called forth by the Thanksgiving edition of the *Monitor*. It was deeply interesting to see the big presses turning out some fifty thousand copies per hour, and it made one think of those early days in the history of the Christian Science movement when a heroic woman stood alone, gazing across the seemingly impassable gulf which separated the Christ-healing from the Christianity of the present age, and then with prophetic vision beholding the gulf spanned by the revelation of Christian Science.

Well might one pause and ponder the import to humanity of Mrs. Eddy's sublime courage in offering to the world anew the message of Truth for the giving of which Jesus of Nazareth had been crucified; but her faith linked itself to his faith, and she firmly believed that the hour had come when the mountains of ignorance, superstition, and fear should be removed and "cast into the sea," even as the Master had said. Did she count the cost at that early day of thus witnessing to the truth? Who can tell? It is enough to know that she pressed bravely forward with the message, and today the whole world is listening because the signs follow, and newly enkindled faith in God and His Christ is linked close to the works which he said must witness to true discipleship.

This and much more came to thought as the printing-presses were left behind and a little group went to a large upper room where at least a hundred volunteers were at work, wrapping the papers and sending off the mail-sacks. It was well worth while to stand back and look at these men with coats doffed, toiling at a late hour as if for dear life. They were men from the business world and professional activity, but their faces were lighted up with the joy of unselfish and loving service for humanity, the glow of the universal brotherhood for which the *Monitor* stands. At one end of the long room stood a man whose healing in Christian Science has borne witness for many years to the ever-present power of Christ, Truth. He was keeping tally as the heavy mail-bags were passed to the elevator, the name of one state being quickly followed by that of another. Then it was "Alaska," and Isaiah's words came quickly to mind: "The Lord hath made bare his holy arm in the eyes of all the nations; and all the ends of the earth shall see the salvation of our God."

It is beyond question that the Christian Science Publishing Society, with all its activities, exists because the sick have been healed by Truth since the time when Mrs. Eddy awakened to the great spiritual fact that the Christ has never left us, and the spread of this healing gospel is beyond words to express. In witnessing the sending out of the Thanksgiving *Monitor* "the healing of the nations," as presented in the twenty-second chapter of Revelation, was understood as never before, the "curse" of malice and impurity doomed to destruction with everything that defileth or maketh a lie, either in life or in literature. As this work of purification goes on, in men and nations, joy and strength are added, and men come to face without shrinking the demand of Scripture for the works which prove the faith. Our Leader had both, and can we do better than pray as did Jesus' disciples: "Lord, increase our faith"!

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

VANCOUVER, BRITISH COLUMBIA.—Less than three months ago, First and Second Churches of Christ, Scientist, Vancouver, British Columbia, unanimously passed resolutions authorizing their respective boards of directors to enter into negotiations for the purpose of arriving at a basis upon which the said churches might unite. The boards met as a joint committee, and after several harmonious meetings, at which the question of the union of the two churches was carefully considered with regard to the provincial laws governing corporate bodies of this kind, and with regard to their standing as branches of The Mother Church, a detailed report outlining the proposed basis of unity was submitted to the respective organizations and was unanimously adopted Oct. 11.

The new church is known as First Church of Christ, Scientist. The first reader of First Church and the first reader of Second Church are the provisional readers until the first annual meeting. The provisional board of directors is composed of fourteen members, seven from each church, also holding office until the annual meeting. The assets and liabilities of the respective churches have been taken over by the united church. The edifice formerly occupied by First Church will be used for the Sunday services and Wednesday evening meetings, and the Sunday school and free reading-rooms will be located at 641 Granville street, where Second Church of Christ, Scientist, formerly held services. The first services of the new church were held on Sunday, Oct. 27. The attendance was large, and joy and peace filled the hearts of all present.—*Correspondence.*

MERCED, CAL.—Articles of incorporation of First Church of Christ, Scientist, of this city, were filed Oct. 24 with the county clerk.—*Merced Sun.*

Digitized by Google

DENVER, COL.—The edifice of Second Church of Christ, Scientist, is nearing completion on South Grant and Bayaud streets. It will cost ninety thousand dollars when finished, and will be used for services by the Christian Scientists of South Denver, who find First church too far away. The auditorium will seat nearly a thousand persons.

Denver Republican.

ST. JOSEPH, MO.—Under date of July 27, First Church of Christ, Scientist, received notification that Second Church of Christ, Scientist, of this city had disbanded its organization and that its members desired to affiliate with First Church. The rules and by-laws governing the admission of members into First Church of Christ, Scientist, were temporarily suspended, and practically the entire membership of the dissolved organization are now members of First Church. At the first Sunday service following the announcement of the disbanding of Second Church, the auditorium of First Church was filled to its capacity with members of the two congregations. There is much gratitude among local Christian Scientists over this demonstration, and it is needless to add that the cause of Christian Science in St. Joseph is prospering as never before.

Correspondence.

HUTCHINSON, KAN.—The last services of First Church of Christ, Scientist, in Century hall, where for the past nine years this society has had its home, were held Sept. 29. Future services will be held in the new church building at the northeast corner of Fourteenth avenue and North Main street. This church society first held its meetings at the private homes of its members, beginning with 1899. Later, rooms were opened in the Higley block, where public services were held, then in the building at the southwest corner of Main street and Avenue A. A hall on the west side of Main street, between Sherman street and Avenue A, was kept for a short time, while Century hall was being fitted for the purpose, and where all meetings since have been held.

The society was organized in April, 1902, and in September of the same year a charter was issued for the present organization. About a year ago the lots where the new building has been erected were purchased, and the completion of the new bungalow type of structure gives the church its first home. The new building is to be considered only a temporary home, but it is a comfortable one.

THE LECTURES.

SAN ANTONIO, TEXAS.

Willis F. Gross delivered a lecture on Christian Science at Beethoven hall before an audience of about fifteen hundred people. Judge J. D. Guinn, a prominent lawyer of San Antonio, introduced the lecturer, and said:—

I feel very keenly the compliment conferred on me by the local church in requesting me to introduce the lecturer on this occasion. As an evidence of my appreciation I will be very brief, and not tire you with a dissertation on this wonderful form of religious worship, because, first, I am not equal to the occasion, and second, Christian Science does not require any recommendation or encomium from me. It is here without my assistance and it has undoubtedly come to stay, and this in the face of many obstructions. Its growth has been marvelously rapid, and it is favorably known throughout the civilized world. Everywhere there is an earnest, honest desire to know and understand something of the truth which makes for health and happiness. Christian Science shows us the road in a simple and unostentatious way. This church, so far as I know, has no isms or creeds. It simply points to God and trusts Him for everything.—*Correspondence.*

LONG BEACH, CAL.

An audience of between twenty-five hundred and three thousand people gave close attention to a lecture on Christian Science by Frank H. Leonard at the Auditorium. This great audience is indicative of the growing interest in Christian Science in this city, as an important political gathering was held in another part of the city the same evening, besides numerous other attractions common to a tourist city. The speaker was introduced by Attorney Herbert M. Haskell, president of the Long Beach board of education, who said in part,—

Thinking people are coming to recognize that Christian Science is the most significant and important religious movement of modern times. As a part of its church organization, The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts, has established a board of lectureship, its purpose being to send out representatives who will speak with understanding and authority concerning this great world-wide religion; this religion that in our own day, and for the first time in centuries, is bringing to fruition the imperative command of the Master to "preach the gospel" and also to "heal the sick." These speakers are therefore able to correct intelligently and lovingly the many misapprehensions regarding Christian Science. In behalf of this great audience I am sure I may promise the speaker of the evening an attentive and unprejudiced hearing, that hearing which every fair and honest man and woman is always willing to accord another sincere seeker for Truth.

Correspondence.

HURON, S. DAK.

The Christian Science lecture which was delivered at the opera house by William R. Rathvon, was attended by a large audience, and the most careful attention was accorded him. The speaker was introduced by the Hon. George W. Wright, with the following remarks:—

I am not affiliated with the Christian Science church in any way, and know but little of its teaching. What little I do know of Christian Scientists is based on observation. I know that there are thousands of good people who are giving their life to this work. I also know that there are thousands who are receiving great good from their teaching. I would not speak disparagingly of the religious beliefs of any human being, as I believe there is good in all of them. This age in which we live is a scientific age. It is a time in which order, system, research, and reform seem to be in the very air, a time in which people are more and more seeking an exact knowledge about everything in a scientific way. For centuries thousands of people in every nation have sought for God—for the only true God, "who forgiveth all thine iniquities." The reason for this is, that in every human being there is some knowledge of a Supreme Being, and with few exceptions there is anticipation of the hereafter. The search for truth still goes on the world over, and this audience assembled here gives us emphatic assurance that we are all seeking a better knowledge of Him whom to know aright is life eternal.

As over nineteen hundred years ago the gospel was preached by the wayside to the thousands who were eager for the truth, so in our day Christianity is being preached to humanity and is restoring health, peace, hope, and joy through an understanding of the Word of God, as revealed in Christian Science.—*Huron Herald.*

AKRON, OHIO.

The address delivered by Dr. A. B. Church, president of Buchtel college, in introducing Virgil O. Strickler, who delivered a Christian Science lecture at Music hall, was in part as follows:—

In a survey of the history of civilization, one thing is quite manifest, viz., that the great force in human life which

Digitized by Google

is as an anchor sure and steadfast to hold man in his course in the storm and stress of life, is faith. Again, the one great force in human life which is as a beacon-light to lead man on to the heights where he will catch a larger vision of life, and where he will achieve in the vineyard of life's opportunities, is faith. I am very well aware that in every generation there have been differences of belief, great separations of religious organizations, great heated discussion as to the evidences and manifestations of faith. To one, faith and the evidences of faith are a deep, religious, miraculous experience, and the manifestation of faith is a platitude of ritual and dogma. To another these are largely matters of opinion, and have little to do with conduct. Yet to others the evidence of faith is a deep and abiding faith in their God and in the manifested life of His Son; and the manifestation of that faith is an unselfish, helpful service to mankind.

We are often told that we are living in a practical age, not only in the industrial arts, but in the expression of religious life as well, and the world is no longer content in leaving religion and politics, religion and business, religion and society, or even religion and health, entirely divorced. It is no longer content to leave preaching and practise unknown to each other in the same human life. We no longer are satisfied with simple and pietistic expressions of faith, but we require helpful service in the expression of Christian faith, and as a verification of Christian preaching we require practise as well.

You know that long years ago a man of authority discussed this matter of faith and works, and he said: "A man may say, Thou hast faith, and I have works: show me thy faith without thy works, and I will show thee my faith by my works." This is the great key-note of the civilization of our day. Faith is not dead, but more alive and a more potent factor than ever in our history, and with this great growing faith in a God of integrity in this universe, and in the practical message of His Son, we are laying stress today upon the works of faith, which must be manifested by a great helpful service of man to man. We have gathered here tonight under the auspices of a great church which not only lays claim to a great faith, but which manifests that faith by an uplifting, saving, restoring service to mankind. I consider it a pleasure, and count it a distinct honor, to stand here and introduce to you the speaker of the evening.

Akron Times.

VIRGINIA, MINN.

Prof. Hermann S. Hering, who lectured on Christian Science at the Lyric theater, was introduced by Supt. Lafayette Bliss of the Virginia schools, who spoke in part as follows:—

What strikes an observer from the outside,—for I am not a member of this church,—in viewing this rapidly developing religious movement, is the hold which the teachings of Mrs. Eddy have upon the membership of the Christian Science church, and indirectly through the members upon a vast number of people,—good people, sensible people, educated people,—throughout the world at large. I do not know Christian Science from within, but as "a tree is known by his fruit," I venture to name a few tenets of the Scientists' creed, if indeed they have a creed, picked up by observing the lives of many delightful friends who are members of that church. They believe in the goodness of God, that God is all good; that He is infinite, all powerful; that He would not and has not created that which is evil or abnormal; that Christ is the "great Physician," the great healer, and that his followers can also heal disease. Christian Scientists believe in good health, not only for the physical body, but for the mental and spiritual life as well. They believe that cleanliness is next to godliness. They do not countenance the doping with drugs for all the ills to which flesh is heir; and in this fact alone the teachings of Mrs. Eddy have done great good to the American people, who were fast becoming a drug-cursed nation. They believe in harmony. They believe that to be truly happy in this world a person must be in harmony in a threefold way: he must be in harmony with himself, in harmony with his environment, and in harmony with God; that is, he must live in such a way that he can respect himself, he must not fret and worry on account of his physical surroundings, and he must not be at enmity with God.—*Correspondence.*

BURLINGTON, IOWA.

At the Grand opera house William D. McCrackan, M.A., gave an address on Christian Science to an appreciative audience which filled the auditorium. The lecturer was introduced by Arthur F. Felker, who spoke as follows:—

In the last month or two articles have appeared in leading magazines commenting at length on the growth of Christian Science since Mrs. Eddy passed away. It seemed to be expected by some that such an event would arrest the progress of the movement, but instead there has been a greater increase each year.. These articles dealt only with increase in numbers. They did not treat of that more intangible growth manifest in the changed attitude of the world at large, the growth that most delights the Christian Scientist, the acceptance of the spirit of various truths for which Christian Science has stood for years. The lecturer has recently returned from a lecture tour around the world. He found in all countries the increasing interest in Christian Science of which the magazines speak, and also this change in the world's opinions in harmony with the Principle of Christian Science. —*Burlington Hawkeye.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Athol, Mass.—Athol opera house, 8 p.m., Dec. 17.
Baker, Ore.—Elks hall, 8 p.m., Dec. 16.
Brockton, Mass.—Hathaway theater, Main street, 3 p.m., Dec. 15.
Brunswick, Maine.—Pythian hall, 8 p.m., Dec. 7.
Chattanooga, Tenn. (Second Church).—8 p.m., Dec. 17.
Chicago, Ill. (Eleventh Church).—Logan Square auditorium, 8 p.m., Dec. 17.
City of Mexico, Mexico.—Church auditorium, Cinco de Mayo, No. 6, 8:30 p.m., Dec. 20.
Clinton, Iowa.—The Clinton, 8 p.m., Dec. 20.
Denver, Col. (Second Church).—Church edifice, South Grant street and Bayaud avenue, 8 p.m., Dec. 19 and 20.
Fall River, Mass.—Music hall, 8 p.m., Dec. 12.
Gloucester, Mass. (First Church).—Y. M. C. A., Bradford hall, 8 p.m., Dec. 16.
Hartford, Conn. (Second Church).—Parsons theater, 3 p.m., Dec. 15.
Haverhill, Mass. (Second Church).—City hall, 7:45 p.m., Dec. 15.
Lansing, Mich.—Church edifice, 8 p.m., Dec. 16.
Manhattan, Kan.—Wareham's opera house, 3:30 p.m., Dec. 15.
Memphis, Tenn.—Lyceum theater, 8 p.m., Dec. 19.
Muskogee, Okla.—Hinton theater, 3 p.m., Dec. 15.
New York, N. Y. (Sixth Church).—Lexington Assembly hall, 155 East 58th street, 8 p.m., Dec. 19.
Paris, France (First Church).—Washington Palace, 14 rue Magellan, 9 p.m., Dec. 13.
Park Ridge, Ill.—Clark's hall, 8 p.m., Dec. 10.
Pendleton, Ore.—Oregon theater, 3 p.m., Dec. 15.
Richmond, Ind.—Murray opera house, 8:15 p.m., Dec. 15.
Rutherford, N. J.—Church building, Park and Newall avenues, 8:15 p.m., Dec. 19.
Springfield, Ohio.—Columbia theater, 3 p.m., Dec. 15.
Wakefield, Yorkshire, England.—The Corn Exchange, 8 p.m., Dec. 12.
Wichita, Kan.—Auditorium, 8 p.m., Dec. 16.

TESTIMONIES OF HEALING.

Christian Science has done so much for me during the last eight years, that I should like to express my gratitude through the columns of one of our periodicals, and I do so with the earnest desire that my experience may help some of its readers to reach the light. I was in great physical and mental trouble when I was at last persuaded to seek help from Christian Science by two friends who were not then, nor are they now, Christian Scientists themselves. My husband and I had first become somewhat interested in the subject by a magazine article against Christian Science, in consequence of which we had attended a Sunday evening service when passing through New York in 1902; but we could not understand it, and we did not know about the Wednesday evening meetings.

When in the following year I first went to a practitioner in London, I told her frankly that I did not believe in Christian Science, but that oculists seemed to have done all they could for me, and had failed to improve my condition. The four leading specialists I had consulted, or been treated by, agreed that I would never be able to read again. The leading one of them, to whom I had been periodically for eighteen years, during which time one eye was practically blind, often said, in response to my questionings, that it would be an act of creation to restore the sight in that eye. It was after three weeks' treatment in Christian Science that I first saw some slight sign of improvement, and it was in the eye which all the oculists had reported to be beyond medical help. My healing was very slow, and is not even yet complete. I was not seeking Truth in those early days when I first turned to Science, but only physical help.

At that time I was indeed blind to spiritual things, but as the first faint glimmer of spiritual understanding dawned in my consciousness, and I learned to know something of God as divine Principle, Love, the sense of sight improved. One by one the asserted medical laws which bore so heavily on me were broken, and I wore weaker and weaker lenses, till the time came when I was able to lay them aside altogether. I thank God with all my heart, that in spite of seemingly slow progress, I was guided to hold on to the truth. The road I had to travel seemed very difficult to me, but I was helped most kindly and patiently along the way, and as I learned to know more of this wonderful teaching, I found that true happiness, harmony, and health come from obeying the commandments of God, as epitomized and demonstrated by Christ Jesus, and from learning to resist evil's every claim of place or power.

I have had much in the way of physical healing since I began the study of Christian Science: sometimes it has been slow, sometimes instantaneous. As instances of the latter I recall attacks of rheumatism and severe colds, also a scalded hand. Some physical ailments dropped away from me without special treatment, and I have had better health than at any other period of my life, never, indeed, having been confined to my bed for an hour beyond my usual time in these eight years. But far beyond all the physical help I have received, is the change of outlook. Christian Science found me in the depths of despair, when I was indeed in the "horrible pit," and it lifted me out and set my feet upon the rock, Truth. It has given me hope, and confidence, and assurance of faith in God, for which I am most grateful. When I think of how I owe all this to the consecrated life of our beloved Leader, whose God-given book, "Science and Health with Key to the Scriptures," has explained so clearly the words and life-work of Christ Jesus, which had always seemed to me so incomprehensible and unpractical before, my heart overflows with gratitude, and I long to obey his injunction by letting my light so shine before men that they may glorify our Father which is in heaven.

MRS. FLORENCE E. B. DONALDSON, London, England.

Three years ago my wife wished to try Christian Science for our elder daughter, who had been an invalid for seven years. Up to this time I had never heard of Christian Science, but I gave my consent, and a practitioner was called to take the case, although even then I did not take the trouble to find out how the healing was to be accomplished, nor did I realize in the least the blessings which indirectly would advert to me through this treatment. I did not, in fact, give any further thought to it, until three months afterward, at which time I started on a business trip through New York state. After starting out, I felt a mental change coming over me, but did not know what was bringing it about.

On Sunday morning I received a letter in my box at the hotel where I was stopping, and upon opening found it was an invitation to attend service at one of the churches in the city. Formerly I would have destroyed this letter after reading it, for I had not been accustomed to attend church, in fact I do not think I had been in church ten times in as many years. Later in the day I decided to attend the service, and while the minister was preaching he spoke of God, but after he had mentioned God's name I heard very little of the balance of his sermon. All I could think of was God; and in the mean time the tears came to my eyes, tears which I tried to hide lest some one should notice my emotion. I returned to the hotel for the night, and when I awoke on Monday morning I felt that I was a changed man. I wrote my wife what had happened, and upon my return home (which was Thanksgiving eve) I explained in detail my experience. My wife said she would like me to go to Brooklyn and see the practitioner who had been treating our daughter, and I consented. Several days later I met this practitioner and asked her a number of questions about Christian Science,—how the healing was accomplished, and whether she took the parents into her prayers when treating a child, as in our case. To this she replied in the affirmative. I then told her what had happened to me, and she seemed grateful for this demonstration of the impersonal power of Truth, which is ever available to help and to heal those who are ready for and therefore responsive to its influence. She advised me to read the Bible and Science and Health, which would answer all my questions. I also found that I had been healed of gall-stones, stomach trouble, the wearing of glasses, and minor ailments, for which I am indeed grateful.

I wish to say that since my healing I have secured two insurance policies. When I applied for insurance and stated on my application that I had suffered from gall-stones, five companies refused me without an examination. The sixth, however, stated they would take me, provided I would submit to a thorough examination by their physician. I consented to this, with the result that they took me. In a year or so I was examined for another company, and this physician stated that I was as fine a specimen of physical manhood as he ever examined, and that he could not understand how I could ever have had gall-stones. I have never worn glasses from the day of my healing up to the present time, which is very nearly four years, and my health has been good ever since. I am trying to put into practise what I understand of Science, and the results are being made manifest.

Regarding the result in the case of my daughter, a great improvement has taken place. Ten years ago she was operated on, her head being cut open for the purpose of removing a growth said to be on the brain. The doctor stated she could not live, indeed she had become blind before this operation, and had not grown an inch in seven years. Since the time she was placed under Christian Science treatment she has grown at least five inches in height, has increased wonderfully in weight, and has enjoyed fairly good health. On several occasions her sight has returned for a moment, and I am confident that if we continue to be obedient to Truth, the perfect healing will come.

Digitized by Google

Words cannot express my thankfulness to God, also my gratitude to our beloved Leader for this spiritual uplift which has come to me. My only desire is to live so as to put into practise what I have received, that I too may give a cup of cold water in Christ's name to the thirsty ones who are seeking the truth.—H. N. BROWN, Philadelphia, Pa.

About sixteen years ago I first heard of Christian Science, and when I remember the many blessings that have come to me and to my family, I not only feel it a privilege but a duty to give my testimony that others may see it and be benefited by it. When Christian Science found me, I was not only a physical wreck, but I was so burdened with cares and trials that I hardly knew which way to turn. I had been left alone with two small children to care for, and one of them was an invalid, suffering from what is known to *materia medica* as infantile paralysis. He also had dreadful spells with his head, said to be caused by an abscess at the base of the brain. He had had the best medical aid that money could procure, but only seemed to grow worse, and would have unconscious spells, sometimes as many as twelve in a day. Finally, one of the most noted physicians in Michigan told me that he could only give me something to relieve the child's suffering when he had trouble with his head, and that when the abscess broke he would pass away; so after each bad spell I would look for the worst to happen. With it all I was obliged to earn our living, as home and everything had been swept away by financial reverses, so I associated myself with a publishing house in New York city, which of course obliged me to travel a great deal.

In one of the large cities of the middle West I met a lady who told me about Christian Science and how it had healed her. I listened, but am sorry to say that it did not make any impression on me, and I finally told her I had come to the conclusion that there was no God, and I thought she would probably have gotten well anyway. I felt I had reason for thinking so. When I was only five weeks old, my mother passed away, leaving eight children. My father lived only a few years after, and as I was among strangers I do not remember him. As I grew up to the age of reason I often talked on this subject of both parents being taken (especially my mother, for I felt sure it would have been different with my father had my mother lived), and I argued with my elders that a loving God, being all-powerful, would not permit such a thing to happen when He could have prevented it as well as not. Many times I was told that I was not to question God; that my dear mother was too pure for this world, and that God in His wisdom and mercy had taken her to Himself. Then I would say, "But what about the little five-weeks-old child, who was surely just as pure? why did He not take them both?" As I look back on my life at that time it seems like a very bad dream, and now I know that this was all it was. I do thank God, and I am deeply grateful to Mrs. Eddy, who was good enough to be an avenue for this truth that has come to me, and this is the way God prepared me to accept the truth when it was presented to me the second time.

It so happened that I was obliged to take my children and go to eastern cities, and before starting I laid in a supply of medicines for this sick child, as I felt that no other doctor would understand his case like this particular one; but on leaving the sleeper on reaching our destination, I forgot to take the medicines I had put under the pillow. We arrived early in the morning on the 4th of July. It was very warm, and we had only gotten comfortably settled in our boarding-place when the child began to feel ill, and it was then I missed the medicine. There I was, in a strange city, with very little money, no friend, and without God or seemingly any help in the world. Finally I turned to my little girl and said, "Let us say the Lord's Prayer, and if there is a God, I believe He is right here and will help us in our trouble." We did so; and my surprise can be imagined when the child went to sleep and slept for several hours, getting up refreshed and free from pain. From that time on I was convinced there is a God and that He is an ever-present help in trouble. A few days after this I called on a public school teacher, and in our conversation I mentioned the matter, for it was on my mind all the time. After she had heard my story, she took my hand and said, "You are on the right road, but you need help;" and then she told me that she was a Christian Scientist and had been healed through this teaching.

To make a long story short, a practitioner was secured and this child was healed of his dreadful head trouble. My little girl was healed of stomach trouble, and I was healed of chronic catarrh and other minor ailments too numerous to mention, and from that day to this I have never taken a drop of medicine, depending entirely upon this truth and my understanding of it. My husband, who was said to be suffering from tubercular disease, also accepted Christian Science and was finally healed. He was also healed of the tobacco habit and of the moderate use of liquor.

Words fail me when I try to express my gratitude. While the way has been rugged, and I have stumbled and fallen sometimes, Christian Science has shown me how to rise again quickly and go on stronger and more determined than ever; and now I can truly say with our beloved Leader, "O make me glad for every scalding tear" (Poems, p. 4).

MRS. CLARA L. NAUGLE, Washington, D. C.

I can fully attest to the facts set forth in Mrs. Naugle's testimony of healing. Today, after fourteen years, she enjoys perfect immunity from the old nightmare of disease. This initial healing was the "little leaven" entering our home, and its work of transformation cannot be told, for during this time it has solved every perplexing problem and met our every need. Our gratitude is unbounded.

J. PARKER NAUGLE, Washington, D. C.

Christian Science came to me over five years ago when I was in intense suffering, in a condition of hopelessness, and neither expecting nor desiring to live. My greatest wish was that I might be annihilated, and I thought God cruel because He did not meet this wish, which in my ignorance I thought a very easy thing for Him to do. Prior to this I had for seventy years been in darkness, wandering through the wilderness of human experience and seeing only false and delusive lights. I desired to be a religious man, so I attended and supported various churches, finding in them many good people and making friends among them all, "orthodox" and "liberal" (which are much nearer alike than is generally supposed), and finally I became a member of one of the latter. I had always entertained a high opinion of will-power, and was therefore a good subject to embrace mental science, which I did while in a condition of great physical suffering. For a time this seemed to help me, and for some years I was a believer in its claims.

Six years ago I removed from Yonkers, N. Y., to San Diego, Cal. For many years I had been suffering from a bladder trouble which began when I was a boy. It attacked me periodically at first, but afterward became chronic and always with a tendency to grow worse. About this time the climax seemed to have arrived. I was utterly disheartened and discouraged. There seemed at most but a few days of suffering before me. Job's condition was not worse than mine when he said, "God hath overthrown me." So I also felt. I wished for mental science treatment, but no one of that belief was to be found in San Diego. My faith in medicine had long since been rudely shattered and there seemed no possibility of help from any source.

At this time a neighbor spoke to me of Christian Science, although not a believer in it. My wife and I consulted together and decided that it could do no harm, and a practi-

Digitized by Google

tioner was sent for. She came, and began by speaking of the allness and goodness of God! This almost angered me, and pointing to portraits of my father and mother on the opposite side of the room, I said that they were better than God, for neither of them would ever have permitted such suffering as I was enduring. "Erring though I may be," I cried, "what have I ever done to deserve this?" This and more I said of what to me seemed God's cruelty. I thought I knew something of Christian Science by what I had heard through mental science lectures and books, also through newspapers, magazines, etc., but I found I was utterly ignorant of it.

The practitioner asked me to be quiet, and treatment began with an unwilling and incredulous patient, who was amazed to find almost at once a condition of improvement which awakened immediate interest in both my wife and myself. I purchased a copy of "Science and Health with Key to the Scriptures," and began to read it, while still believing in the "broadness" of that which I had formerly been taught. The Preface was read, and I could find no fault with it; likewise the chapter on Prayer, which seemed beautiful to me. With the next chapter I thought I could find fault, so I sat down to read it again, pencil in hand to note subjects for objection, though on looking for them I found none. From this, on through the book, the truth shone with increasing clearness in every chapter, till I saw that I had been depending on the very opposite and counterfeit of Truth, the most delusive and destructive error with which a Christian could have to contend.

Since then the Bible and Science and Health, which is indeed a "Key to the Scriptures," have been my daily companions. These last five years have been the happiest, the most useful, and the most progressive of my life. I am thankful for prolonged years and comfortable health through the continuous support of divine power. No words can express my gratitude for what I have received and am daily receiving through Christian Science, the divine message sent to the world through our revered Leader, Mrs. Eddy, who so loyally and lovingly conveyed this revelation of Truth to waiting humanity.

JOHN S. HAWLEY, San Diego, Cal.

It is with a heart full of gratitude and a sincere desire that my words may lighten the path of another, that I join the throng of those who are testifying to the healing power of Truth and Love. Christian Science was presented to me six years ago, and when I think of the many blessings which it has brought to me, I realize how tardy I have been in making a public declaration of it.

I was healed of chronic female trouble through reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had been miserable for eight years, although we spent money continually for medicines and doctors. Finally, as a last resort, I went through two very serious operations. I was in the sanitarium four months, and when I came away from there I was a mere shadow and so weak and nervous that I could not even lift a chair. Indeed, I was in a much worse condition after I came out of the sanitarium than when I went in. I also had more ailments, as my stomach was all out of order on account of the medicines which had been given me.

We were living at that time in the country, my husband being a successful farmer, but it took all he made and more to pay for medicines and doctors, as I had three of the best there were, all being specialists; so that we got badly in debt and were fast going down hill. We dragged along in this way for about a year and a half after the operations, and I was in a terrible condition when a lady who was a Christian Scientist moved into the neighborhood. She heard of my illness, and of course wanted us to try Christian Science, as she had been healed of chronic trouble by its means. We did not, however, take to it, as I did not understand it, and we would even go out of our way to avoid meeting the lady, as she talked so much about Science.

One day, when I was suffering very much, my faith in medicine suddenly left me and I decided to look into Christian Science. I had a desire to read the text-book, if I could only get hold of a copy, and so I made up my mind to call on the lady that afternoon to see if she would lend me hers to read. A few minutes after I so decided, some one came to the door, and when I went to it, there was the very woman I wanted to see. I told her what I had made up my mind to do, and asked her if she would lend me her book to read. I not only borrowed the book, but I bought a copy, for I could not give it up. All the time I was reading, the thought would keep coming, This is just what I want; why did I not come to it sooner? The result was that in about four weeks I was like a new woman. The first week that I read the book I did not improve; I even seemed much worse, but this was explained to me by the Scientist friend, and I kept on reading. In four weeks I was out one evening, helping my husband to lift bushel baskets of tomatoes to get them ready for market, and this was a thing which I had never thought of doing before, as I was not able to do even my own housework.

Since that time I have had help from a practitioner for other ailments, and I not only do all my housework, but washing and ironing without any of the improved methods, and also all the sewing of the family. It has been six years since Science came into our home, and Truth has been the physician for sickness and discord of every kind. I have two little girls, fourteen and nine, and Christian Science is our only doctor. I am of course truly grateful for the healing of physical ailments, but it does not begin to compare with the spiritual education which I have received all these years. The greatest of all has been the understanding which I have gained of God as ever-present good, and the overcoming in a small degree of the beliefs of a mind separate from God. I have had many rough places to cross which I was not looking for, but through it all I could feel the power of divine Love, and I have never been discouraged with Science but have been lifted out of the depths of mortal thinking many times.

We united with the local Science church one year after my healing, and afterward with The Mother Church in Boston. I am very grateful for the Lesson-Sermons and the *Sentinel* each week, also the *Monitor* which comes as a guide for our every-day living; and above all for the text-book to which Mrs. Eddy devoted her life that she might bring the truth to a needy world. It is my dearest treasure, and my heart goes out in such gratitude and love for all this, that words cannot express my thoughts. I owe all I am or have to Christian Science, and my one desire is to live so that I may be a consistent example of this wonderful truth.—MRS. CARRIE PIERSON, Cincinnati, Ohio.

As Christian Science is the greatest blessing which has ever come into my life, I wish to express publicly my gratitude for it. I am deeply grateful that when the truth was presented to me I was ready to accept it; and although at first it seemed "too good to be true," as I prove the truth of its teachings for myself and others, I am learning that only the good is true, and my gratitude for all it has brought me grows accordingly.

I turned to Christian Science on the advice of an aunt, hoping to find through its teachings the physical healing so greatly desired. I had never been well or strong, and as drugs had failed to benefit me, I was discouraged and unhappy. Through the study of Christian Science I have grown stronger, and many physical ills have been entirely overcome, so that I am able to lead a more normal and useful life. These blessings mean a great deal to me, but the help and comfort and joy that Christian Science is in my every-day life means very much more. At times, when

Digitized by Google

tempted to discouragement because of the great distance between my present attainment and the goal of all right desires, I find encouragement in the assurance which Mrs. Eddy has given us, both by her words and her life, that "progress is the law of God" (Science and Health, p. 233); and I am trusting that, as I put into practise my present understanding of Christian Science, I shall grow more and more worthy to be called a Christian Scientist.

My heart goes out in gratitude to God for all His goodness; also to our beloved Leader, Mrs. Eddy, for giving us "Science and Health with Key to the Scriptures," and for all the channels through which Christian Science is reaching out for and redeeming the thought of the whole world.

BERNICE RUGER, Chicago, Ill.

[Translated from the German.]

I wish to tell in a few words of how my life has been touched and in part transformed through Christian Science. Previous to becoming acquainted with this Science of God, I had suffered for years with neuralgic pain in its various manifestations, which often grew intolerable. I spent nights in sleeplessness from heart disturbance, and during the day there always was more work awaiting me than I was able to do; but never a rest or unbending. I had to refrain from intercourse with others, in order to avoid excitement, and it was impossible for me to walk up-stairs without having spasms of the heart. Although I had long ago lost faith in drugs, I still believed it impossible to get along without the use of certain medicines. Moreover, since I was weighed down by disease in my family, and could see only disease and worry all around me, I had formed the opinion that there was no such thing as happiness on earth, and that suffering is the natural destiny of human beings.

While in this state of mind I became acquainted with the teachings of Christian Science through the healing of a severe sciatic trouble in the case of my married daughter. Mrs. Eddy's wonderful interpretation of the Bible seemed to me like a new gospel, and I delved with my whole heart into the pure and wondrous Christ-teaching, with its promise of heaven on earth and the possibility of all our material distresses being reduced to nothingness. Shortly after this, I noticed that my condition was improving, and the pain gradually disappeared. A sense of joy and buoyancy began to make itself felt, where resignation to suffering had prevailed, and the understanding began to dawn upon me of a God who loves His offspring and protects them from all evil, who imparts the wealth of His fatherly love and goodness to His children without restriction, that it might fare well with them. I experienced a new, a hitherto undreamed-of sense of happiness, which unloosed all former fetters and filled me with unspeakable gratitude to the creator of all good.

Two years have elapsed since, in the course of which I have been afflicted with various troubles, but they have been entirely overcome with the help of a Christian Science practitioner. I have been completely healed of a knee trouble and of pain in the back caused by a fall, as well as of sciatica, and have gradually gained in the understanding of Christian Science. The more pronounced my attitude of indifference with regard to material pleasures and requirements, the more self-abnegation I exercise while doing works of charity, the more do I apprehend the nature of true Christianity and experience the blessings emanating therefrom.

I feel that I owe this humble expression of gratitude for the blessings already received as a tribute to Mrs. Eddy, that brave woman who in the course of a long earthly life maintained her struggle against materiality, in the face of the whole world, in order that the teachings of our Master, Christ Jesus, might be brought to light and verified by actual proofs. That she has fought a good fight is evidenced by the steady advance of Christian Science throughout the world.—FRAU AGNES SIMON, Breslau, Germany.

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

There is a very general disposition to make the test of real religion the morality it produces, rather than the profession of creeds, allegiance to a church, or an ecstatic state of being. This is right, for it is the Biblical test. The religious man of the Old Testament was one who did justly, showed mercy, and practised righteousness as he walked humbly with his God. The religious man of the New Testament is he who practised love toward all other men. By this fact the disciples of Christ were to be distinguished. The Biblical religion is always and everywhere aimed toward conduct. It goes at it fundamentally, of course, laying chief emphasis on a change of heart. But the heart is to be changed for the ultimate purpose of living a pure life and serving humanity. The last chapters of John's gospel, with their sublime insistence on man's possible oneness with God, find their logical outcome in the sermon on the mount, even if they themselves did not say that the branch would be known to be part of the real vine if it brought forth fruit.

The world is everywhere inclined just now to accept this Biblical test of real religion as its own, as must be evident to any one who is watching current tendencies, and we believe that the twentieth century is going to make this the supreme and perhaps the only test of Christian belief. "Does this man believe in Jesus Christ and accept him?" some one asks today. The answer is more and more coming to be, "Does he live like Jesus Christ?"

Let us also say in passing that it seems to us that this Biblical test of religion, which is everywhere reviving, will be the end of any exclusive denominationalism. For when some one asks of his friend, "Is Smith a Christian?" it will not do to answer that he is a Methodist or Baptist or Presbyterian. For the answer will be one that fits any denomination. "Yes, he is a real Christian, for he follows Christ, believes in him, and is Christlike." But denominations have grown up about the idea (the idea has largely passed while the denominations remain) that to be really Christian was to believe some one or two doctrines or phase of those doctrines, or to submit to certain practises considered necessary for full Christian fellowship.

[William Pierson Merrill in *Continent.*]

The plunge of the torrent awes and amazes us. It is spectacular. And the religion of excitement catches the attention. The eloquent evangelist easily seems the best type of soul-winning; but the preachers and teachers and mothers who bring out patiently from a hidden life of prayer and longing a steady stream of influence, bring hundreds into God's life and peace for every one reached by the revival method. The large sum given on impulse, in dramatic response to a heart-stirring appeal, easily seems the finest example of Christian giving; but God's work in the world depends a thousand times more on the steady giving of the thoughtful, conscientious men and women who are always hearkening to God's commandments, than upon the large gifts that spring from sudden enthusiasm. The soul that has wandered far off from God into sin, and is brought back through some Damascus vision, some spectacular moment of conversion, may seem to us the greatest instance of God's saving grace; but incomparably more numerous and more valuable to the kingdom of God are those who grow into that kingdom without crisis or violence, coming up into its citizenship as the boy grows into the citizenship of his native land, growing somewhat as the child Jesus grew.

[*Standard.*]

Religion is essentially of the common life. While it is found revealing itself, and necessarily so, in associated worship and through the varied outward forms by which the soul makes its longings and purposes known to others, it is

Digitized by Google

in the daily relations with our fellow men, hour by hour and moment by moment, that religion exercises its highest function and rises to its highest value. The real tests of religion are applied when we ask ourselves, "In how far am I striving to live all the time in conscious companionship with God? Do I undertake to carry out His will in all the affairs of daily life?" These questions reach down underneath visible forms and touch underlying realities.

Few people are consciously hypocrites. The rank and file of those who make up church life are not acting a part. But while this is true, it must be admitted that many of us are too easily satisfied as regards our relations to God. If we have made public confession of Jesus Christ as Lord and Saviour, have related ourselves to organized Christianity, and now hold ourselves to a fair degree of faithfulness in attendance upon public worship, we are prone to assume that we have discharged our whole duty. Such assumption should be tested in the presence of Jesus Christ. It is the Christian's privilege and duty to live his life over again in so far as our poor human nature makes it possible. The reproduction in ourselves of the life of Jesus means constant fellowship with him and with our heavenly Father, unfailing interest in all that concerns the welfare of our fellow men, and a love constantly revealing itself through unselfish ministry. Without this, religion is only of the surface and is unworthy of the name.

[Rev. John Hall in *Universalist Leader.*]

I have peered into "quiet parlors," where the carpet is clean and not old, and the furniture polished and bright; into "rooms" where the chairs are neat and the floor carpetless; into "kitchens" where the family live and the meals are cooked and eaten, and the boys and girls are as blithe as the sparrows in the thatch overhead; and I see that it is not so much wealth and learning, nor clothing, nor servants, nor toil, nor idleness, nor town, nor country, nor station, as tone and temper, that render homes happy or wretched. And I see, too, that in town or country good sense and God's grace make life what no teachers or accomplishments, or means or society, can make it—the opening stave of an everlasting psalm; the fair beginning of an endless existence; the goodly, modest, well-proportioned vestibule of a temple of God's building that shall never decay, wax old, or vanish away.

[Rev. Frederick Hastings in *British Congregationalist.*]

These days are the very best that some of us who have lived long have ever seen. There is a greater sensitiveness of conscience everywhere. Conscience is evidently very active in individuals in society, is even hanging over battle-fields, and we hope it will still more dominate the council of nations. The nation's conscience is shocked when some white-haired old soldier, who ought to know better, breathes out sentiments that mean blood and slaughter. This is all hopeful. Conscience is the Christianity of Christ asserting itself. We rejoice. We stand on our watch-tower and lift up our voices. We glory in the coming triumph of Christ. We are enthusiastic for the kingdom.

[*Watchman.*]

Every attack on the Bible is an attack on the only features which distinguish Christianity from other religions. Everything which lessens confidence in the Bible lowers the distinctive place which Christianity occupies among the religions of the world, for the belief of men in Christianity as a peculiar religion is necessarily based solely on the statements of the Bible. If the Bible is reduced to the level of other books in inspiration and authority, Christianity inevitably falls to the level of other religions, and will cease to command the confidence of men as the one religion of a supernatural origin, given by revelation from God in His Word.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles as follows: "Greater than Circumstances," "Why Grow Old?" "Limitation," "Problem of the Hickory Tree," "Songs in the Night."

"Birthright and Dominion," containing four articles and two poems as follows: "Inalienable Rights," "Mental Self-Knowledge," "Love's Bounty," "Demand and Supply," "Humility," "Unity."

"The Father's Business," containing five articles as follows: "The Abundance of God," "One Business," "The Closed Hand," "Christian Science in the Business Life," "Truth is Power."

"The Law of Kindness," containing four articles and a poem, entitled as follows: " 'Forgive, and ye shall be forgiven,' " "The Habit of Hating," "The Law of Kindness," " 'Ye shall be as gods,' " "Two Roses."

"Confidence and Supply," containing the five following articles: " 'The Lord thy confidence,' " "Time and Healing," " 'What hast thou in the house?' " "Constructive Work," "Giving and Receiving."

Another new pamphlet has just been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 15 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Make all remittances payable to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The initiative and the recall of judicial decisions, as amendments to the federal constitution, are proposed by Senator Bristow in resolutions laid before the Senate. Senator Bristow's first resolution would permit the President to submit to popular vote at a congressional election any measure he has recommended to Congress and upon which no action has been taken for six months. The second would provide that "if the supreme court shall decide a law enacted by Congress is in violation of the provisions of the constitution of the United States, the Congress at a regular session held after such decision may submit the act to the electors at a regular congressional election." Under such amendment it is proposed that the questions submitted to the people must have a majority of the popular vote in a majority of the states, as well as in a majority of the congressional districts of the nation.

Permission to use the mails under the Sherman antitrust law as "conspiracies in restraint of trade" may be denied to the nation's stock exchanges and bank clearing houses, according to the declaration of Representative Pujo of Louisiana, chairman of the House banking committee and head of the "money trust" investigating committee. "I believe it is clearly shown," he says, "that the stock and some of the produce exchanges as well as most of the 'clearing houses' are conspiracies in restraint of trade. As such, all of their interstate business should be barred from the mails. The committee, I feel certain, will recommend such action. In listing securities, in limiting the size of their membership by the various other restrictions, the stock exchanges and clearing houses have become, in effect, monopolies of commerce that are amenable to the law."

Congress has been asked for $823,415,455.14 for all government expenses for the fiscal year beginning July 1, 1913. This was the aggregate of estimates of the different government departments submitted by the secretary of the treasury to Speaker Clark. Following are the estimated expenses: Legislative establishment, $7,402,000; executive establishment, $27,727,000; judicial establishment, $1,215,000; department of agriculture, $18,287,000; foreign relations, $3,965,000; army, $70,401,000; navy, $144,947,000; Indian affairs, $11,303,000; pensions, $185,220,000; public works, $118,307,000; miscellaneous, $80,855,000; permanent annual appropriations, $127,525,000.

President Taft in his message to Congress advocates: Government owned legation buildings in all foreign countries; immediate laws designed to protect finances of South and Central American republics; amendment of the maximum and minimum tariff plank to provide more effective means of meeting discrimination against American exports; further legislation to protect and increase the seal herd at Pribilof islands, now protected for five years under the seal treaty between the United States, Great Britain, Japan, and Russia, effected in July, 1911; establishment of a merchant marine, and proper credit extension to Americans in foreign countries.

"Harness the Mississippi and make the water-power development pay for the expenditures of improving the river," was the gist of the message brought by Secretary of War Stimson to the national rivers and harbors congress. Secretary Stimson declared that when the nation assumed a responsibility as great as that of spending fifty million dollars for improving a river, the general taxpayers of the country should get the benefit of the incidental profits arising.

An increase of eight million dollars annually for the government appropriation for repair work and improvement of Mississippi river levees from Cairo to the gulf has been asked by speakers before the House rivers and harbors committee. Appropriations for the last year aggregated only six million dollars.

One-cent letter postage within a city where mail is first deposited would be provided by a bill introduced by Senator Penrose. The measure would extend the one-cent rate now applying in towns that have no carrier delivery to all cities, restoring the general "drop-letter" rate.

For the ninth time in its history, the Senate convened last week as a high court of impeachment. It is trying Judge Robert W. Archbald of the commerce court on thirteen separate charges alleged to constitute "high crimes and misdemeanors."

Appropriations of nearly two hundred million dollars for pensions to veterans of American wars will be necessary at the present short session of Congress.

It is estimated that more than five million dollars has been taken from New England people by the sale of *de luxe* editions of fake subscription books.

The voters of Duluth, Minn., by a large majority have adopted the new charter and the commission form of government, to become effective April 14.

International.

Owing to the building "boom" in New South Wales it is very difficult to obtain bricks there at the present time. The metropolitan district of Sydney alone is using three hundred and fifty million bricks a year and the government of the state requires fifty million annually to carry out various government enterprises it has in contemplation. In order to be independent of commercial fluctuations and high prices consequent upon the great demand for bricks, the New South Wales government has now established state brick works close to Sydney where it intends turning out one million bricks weekly for its own wants. This interesting state experiment will not affect private enterprise, as at the present time the government has no intention of supplying the public with bricks. The employees of the state brick works number one hundred and fifty.

The marked success of the laborers' (Ireland) act, by means of which money is lent by government for the building of houses for agricultural laborers, has induced many of the dwellers in country towns, to which the act does not extend, and also city tenants, to join a movement to ask for better houses. A deputation has waited on the lord-lieutenant of Ireland to put before him the request that the urban councils be empowered to borrow money on the same terms to build houses which could be let at moderate rents without burdening the rates, and could also acquire ground for gardens near the towns.

The Russian minister of agriculture and imperial domains has elaborated a scheme by which an area of five hundred million acres on the Golodnai steppe in Turkestan is to be reclaimed for the cultivation of cotton. This scheme is the outcome of an effort to make Russia self-supporting in the matter of cotton produce. Already fifty per cent of Russia's cotton supply is produced in the Caucasian and Transcaspian plantations, the other half being imported from the United States and Egypt.

Three super-dreadnaughts and nine first-class armored cruisers will shortly be presented to the British government by the independent rulers, princes, and nobles of India if they can carry out successfully a plan recently drawn up by them to collect funds for the purpose among themselves. It is suggested that the warships, when presented, be stationed in the Red sea, the Mediterranean, and the Indian ocean.

The Russian government will publish on Jan. 1, the day of the expiration of the Russo-American treaty of commerce and navigation, a statement outlining its future commercial policy toward the United States and also a provisional tariff which will not contain any great increase over the existing tariff.

The new Franco-Spanish treaty has just been signed. It is regarded in diplomatic circles as being a wholly satisfactory settlement of all questions in Morocco between the two countries.

An armistice between Turkey on the one hand, and Bulgaria, Montenegro, Servia, and Greece on the other, has been signed.

Industrial and Commercial.

Nearly forty million dollars has been expended in Massachusetts on the abolition of grade crossings since 1890, when legislation was enacted providing for the separation of the grades of railroads and highways where they cross each other. Of this sum the railroads have paid about sixty-five per cent of the total, the state has paid twenty-five per cent of the cost, and the one hundred and twenty cities and towns in which the crossings were located have paid the other ten per cent.

The world's international commerce will establish a new high record in 1912, present indications being that the total will aggregate thirty-five billion dollars, against thirty-one billion in 1910, twenty billion in 1900, and seventeen and one half billion in 1890.

It is reported that the Russians have been occupying large stretches of the Spitzbergen coal-fields area. This activity is said to be due to the desire of the Russian government to render itself independent of English coal in the Arctic sea.

Property situated sixty miles east of Santa Rosalia in Chihuahua, Mexico, is said, after careful examination, to show more than two billion tons of iron ore in sight. Situated adjacent to the iron ore deposits is a coal field.

The value of the coal exported from the United States last year was fifty-two and one half million dollars, against twenty-one million in 1902 and eight and one third million in 1892.

California's 1912 orange and lemon crops will be worth fifty-eight million dollars and will require fifty-five thousand railroad cars to move them.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MENTAL NEEDS.

WILLIAM D. MC CRACKAN, M.A.

WHEN mankind realizes that all its needs are primarily mental, it will no longer offer any opposition to the metaphysical teaching of Christian Science. The physical senses do indeed seem to witness to the reality of matter, but this evidence is circumscribed by its own nature, and material sense is incompetent to testify concerning the essential nature of men and things. What is it that is competent to do this? Spiritual understanding only can testify to the real and the true, because it is born of God and its testimony bears the imprint of authenticity. God is Spirit, and His creation, man and the universe, must partake of His nature, must also be spiritual; then to know God, His universe, and His man, must in reality be a spiritual or mental process.

To understand God's law necessitates metaphysical action, and to do this is to neutralize and annihilate any laws supposed to antagonize His reign of peace and plenty. To understand His law means to put in practise that which is better than any physical hygiene or sanitation, to have at hand an infallible medicine, to rejoice in protection from disaster, to extract the sting of fear from every moment of test and emergency, and to recognize that there is no blind law of destruction which is capable of engulfing our right desires in a tidal wave of onrushing, resistless fury.

Christian Science does not deny the existence of a single object in God's universe, but it exposes as false the belief that these objects are material. It stigmatizes as unworthy of credence the supposition that God's law has no regard for man's needs, no compassion for his wants. On the contrary, Christian Science glorifies the law of God as wholly good, bearing in its train priceless benefits and blessings for humanity. God, as Mind, expresses Himself in ideas, and these ideas constitute the universe, including man. His law is mental, and the process of recognizing its activity must be mental also. Therefore the method of salvation, its ways and means, must be mental, and mankind, instead of clamoring for physical satisfaction and bowing down to physical concepts, must learn to realize that their needs are wholly mental, even though to personal sense these needs seem physical.

In "Retrospection and Introspection" (pp. 13, 14) Mrs. Eddy tells us of an experience when she was a girl which shows at once the unfortunate effect of erroneous theological belief, and the cure for it. At an early age she was admitted to the Congregational church, but dread of the doctrine of unconditional election, or predestination, so visibly affected her "that the family doctor was summoned, and pronounced" her "stricken with fever." On the advice of her mother she prayed, and "the fever was gone." Never after did the erroneous doctrine above mentioned exercise any power over her. She had the moral courage to maintain her trust in God as wholly good, and this so impressed the elders that she was admitted to the church in spite of her refusal to entertain this special feature of their creed. Even at that early age Mrs. Eddy had made the discovery that true prayer, *i.e.*, the consciousness of at-one-ment with God, heals the sick as well as the sinner.

Many a stricken individual who once was pining, is today receiving the health-giving mental food of Christian Science. Many a one, once imbued through inheritance or tradition with false beliefs about God, having as it were acquired a perverted sense of God which makes for sin and sickness, is today rejoicing in knowing a wholly good God. The cure is mental or spiritual in every instance. It consists of the right understanding of God, His universe, and His man.

The health of the individual as of the community reposes upon righteousness or right thinking. From a mental attitude of purity proceeds the natural desire for physical cleanliness, but physical cleanliness cannot ensure health, because health is fundamentally a mental condition. Right thinking alone can check fear and greed, correct the prevailing sense of limitation, maintain good habits, ensure legitimate success. Happiness is a mental state, trust and confidence are mental, activity and alertness are not primarily physical, for their origin is in Mind. It is possible to examine all those things for which mankind strive and to show that they all belong to the realm of metaphysics instead of physics, and that the way to have and to hold them is through mind and not matter.

From this point of view it is impressive to watch the activity of the great business centers in the cities of the world. Here are people rushing hither and thither on errands which seem material, displaying a great amount of energy in attaining certain ends. Lofty buildings are erected for the service of business, filled with busy workers or stocked with merchandise. Railroad trains and ships are loaded with passengers and goods, vaults are filled with gold, silver, and securities, banks are making transactions which mount up into the millions.

Now all this activity is based upon a mental something, invisible and intangible to physical sense. This great display of matter waits upon a thought which we call credit. Withdraw credit from the business world, and its activities would collapse and business could not be resumed until credit had been reestablished. Paper money is dependent for its value upon that invisible credit which men can think about, but which can neither be handled nor weighed. Let a few members in a stock exchange allow fear to enter their thoughts, and they may drag down the whole fabric built on credit or trust. Confidence is essential to the small as well as the large affairs of daily existence. Fear is the great disturber of business as well as of happiness and health.

The very planting of the crops by the farmer represents a state of consciousness. His expectation that his crops will grow to maturity and be sold with profit encourages him to do the necessary manual labor, but expectation is a purely mental quality and makes of the farmer a metaphysician. We often hear it stated that the prosperity of a country depends upon its crops. All manner of enterprises are held in abeyance waiting for a clear indication of success. According to this reasoning, if the farmer for some reason or other concluded that there was no reasonable expectation

of success, the prosperity of the whole country would suffer disastrously by reason of his attitude of mind, whether that mental attitude were seemingly justified or not.

Probably few persons have considered that the proper management of any business enterprise is a metaphysical vocation. But thought is the mainspring of all action, and underlying every apparent physical want is the true mental need asking to be satisfied. It might not occur to any one, for example, that the management of a hotel is a metaphysical occupation; but let us question ourselves as to the real needs which a hotel subserves, and the matter will be clear. It occurs to the writer that the mental needs supplied by a hotel may be readily summed up in the word home. This definition includes qualities such as shelter, safety, peace, comfort, harmony, beauty, practically home. So that when a traveler arrives at a hotel he does not merely buy a certain number of cubic feet of room, or exchange his money in return for matter; he really acquires certain rights to satisfy his mental needs, and his payment should not stop at mere matter. He should repay in kind,—with gratitude, with a cheerful sense of the omnipresence of good, with good wishes for the genuine success of the house in which he has been entertained.

It is clear that to take the correct metaphysical point of view in regard to all our daily affairs is to raise them above the turmoil of contending evils. Every legitimate occupation is ennobled by seeing its relation to the one infinite Mind. The dross of matter drops from it. A man feels the dignity of labor when he realizes that he is meeting mental needs, that he is a public benefactor. There is a secret joy in knowing that we are serving God while serving our fellow man. This joy permeates even apparently commonplace activities, when the conviction has been gained that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468).

Jesus gave the complete rule for our daily occupations when he advised his disciples: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." To learn the Science of righteousness, or right thinking, opens to us the kingdom of God, and there we find all our needs supplied. It is not necessary to break the first commandment and have "other gods" before Him, in order to satisfy our daily wants. No one need bow down to matter, for matter is only a false concept without actuality or power. No one need seek salvation in material ceremonies or consolation in material forms. No material remedies are essential to health, for salvation, consolation, and health are all mental facts, calling for mental acknowledgment and established in the divine Mind.

FUTURE EXPECTATION.

VIOLET KER SEYMER.

UNTIL such time as humanity understands more of the eternality of Truth, Life, and Love, its belief in a "future" had best be utilized for the expectation of good, rather than spent in dread of what that unknown future may bring and take away. We read in the Bible of those who "through fear of death were all their lifetime subject to bondage," and we all know of individuals whose present enjoyment is quite eclipsed by fear of loss in the future.

Times without number, it has been found that the ministry of Christian Science not only effaces the discords of the past and relieves the fears of the immediate present, but that it also sets one's mind at rest regarding the future. Instead of brooding over the possible loss of health, funds, and necessary faculties, the Christian Scientist, understanding that the creator is responsible for what He has created, looks upon time as an opportunity to discover more of the treasures of divine Mind, whose storehouse is open for those who confide their destiny to Mind and not matter. In divine Mind is found the supply of all things needful, and in reality there is neither prime nor decay, neither youth nor old age. So far from fearing the future, one looks forward with joy to a greater and ever greater perception of divine truths, and to a proportionately greater emancipation from the discords and limitations of material sense. If a single fear about the future seeks to intrude itself, this fear should be not only denied, but reversed, on the understanding that time is an opportunity for gain not loss, and that the law of progress governs our twofold efforts at overcoming evil and gaining good.

Speaking of the general tendency to accept every erroneous suggestion about the future, our Leader says: "You confess to ignorance of the future and incapacity to preserve your own existence, and this belief helps rather than hinders disease" (Science and Health, p. 374). Concerning health, Christian Science holds out to every one who practises it scientifically and to the best of his ability the certainty of the recovery of health that has been lost and the continuance of health that is good. It bases every statement regarding health upon the fact that life proceeds from God and is governed by His laws, and that this alliance between God and His ideas continues unhindered by considerations of time, personality, age, or constitution.

To those striving to be faithful to its teachings, Christian Science brings a thorough and continuous regeneration of both mind and body, which proves that, as fear, anger, worry, and other errors are eliminated from thought and replaced by a greater degree of spiritual serenity, confidence, and brotherly love, so a person's well-being becomes grounded in Spirit, in the godlike quality of his thought, in the very Mind which alone is "the health of his countenance." What is there to fear for such well-being as this? The passing of time cannot change God, nor can it sever a relationship which every experience tends but to strengthen and ratify. When presenting the true picture in contrast with the false, Mrs. Eddy says: "Man, governed by immortal Mind, is always beautiful and grand. Each succeeding year unfolds wisdom, beauty, and holiness" (Science and Health, p. 246). Thus it transpires that Christian Science reverses the former apprehension, and bids us look to each passing year for the continued unfoldment of all that reveals godlikeness in man and the universe. The former dread was largely due to the tyrannous belief in matter, and in proportion as this theory about finite life and material sense is constantly combated, its results are gradually replaced, in human experience, by the dominion of Spirit, the dawn of life eternal and the harmony of spiritual sense.

Mortal mind seems to argue that humanity is separated from God; spiritual sense replies that the only separation which can ever take place is the separation from evil. Fear of financial loss and limitation ceases to haunt us, in proportion as we look to Mind for our supply and count our blessings rather than our coins. Jesus knew that the multitude need not go hungry, and he pronounced a blessing upon what little food was visibly at hand. It is often found that gratitude is the quickest and best remedy for fear. The elements of time, change, loss, and limitation do not enter into God's plans, therefore they should not be allowed to harass the individual who is learning to confide his future to God, even as he is surrendering up the dark memories of the past.

Much of the anxiety of mortals is due to the fact that they depend too egotistically on themselves and their own efforts to obtain a livelihood, and meanwhile harbor fear that their health will give out before they have laid by enough to keep them in their old age. In Psalms we read: "Trust in the Lord, and do good; so shalt thou dwell in the land, and verily thou shalt be fed." Christian Science teaches us what scientific trust is when based upon divine Love; it teaches us to look to the creator to direct, sustain, and safeguard the interests of His entire family of dependent children; and this view of dependence insures independence and freedom from harassing care. It does

Digitized by Google

not mean that we shall sit idle, with folded hands, nor yet that we squander money believing that God will provide; but it does mean that we shall look to divine Mind to show us the proper outlet for our activities and talents, so that we may work with enjoyment and with motives that are not mercenary. Mortal mind has been apt to look to the future as a paradise of idleness, an opportunity for relaxation, but activity is a law supporting every individual and revealing that heaven includes no stagnation, but only harmonious, sustained activity and fruitage.

A greater spirituality would reveal to us now the full beauty of man's destiny, for it is neither time nor space that separates us from heaven, but the belief in materialism; neither is it time nor transit which will usher us into that perfect condition, but spiritual living and the pursuit of diviner ideals. Physical sense is mostly absorbed in its contemplation of material possessions or material losses, and it is not infrequently harassed by having too many or too few of this world's goods; so it troubles itself continuously about the past, the present, or the future, or about all three simultaneously. Spiritual sense, meanwhile, is gratefully drinking in the evidences of spiritual good, which is "the same yesterday, and today, and forever," which includes temporal blessings, albeit free from idolatry.

Spiritual sense confides every plan, every decision at the cross-roads of our earthly careers, to the one infinite wisdom, intelligence, and Love, knowing that so long as divine Principle is at the helm of our thought, and we obey with promptitude and discrimination, we shall inevitably be guided into "a land that floweth with milk and honey." Seeing that infinite progress is a law, then our future can but be an improvement on the present, especially if we remember to emphasize, in the interests of the world as well as our own, the divine fact that infinite Mind accords to evil and suffering no realm, no authority, no period of any kind. The Christian Scientist does not tremble, nor yet look wistfully at the future, or what to him is as yet unknown. He appreciates what he does know, though it be only "in part," and looks forward with joyful anticipation to the day when, as the apostle Paul declares, he will know even as he is known.

REJOICING RATHER IN THE TRUTH.

ALFRED FARLOW.

THE Master of Christianity, on an occasion of a successful demonstration of Truth's power over error, said to his disciples: "Rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven;" meaning undoubtedly that whatever of joy may be afforded the disciple of Truth through any triumph, should rest upon the eternal Science of being which has brought about the result, and that he should refrain from expressing satisfaction over the subjugation of an enemy.

A righteous triumph can be effected in no other way than by the power of omnipotent good, the understanding that good is the only real power, and such a triumph must depend upon this same understanding for its continuance. Thus, we note that although on a given occasion we may have gained a legitimate victory, it is necessary to continue in well-doing in order to hold the vantage-point thus gained. St. Paul advised our "forgetting those things which are behind, and reaching forth unto those things which are before." If an individual has gained a victory over sin in himself, the permanency of that victory is assured by the spiritual strength which is referred to by the psalmist when he said, "His delight is in the law of the Lord; and in his law doth he meditate day and night." To look back in a manner which continues to give power to that which has enslaved us in the past, is to renew, in a degree at least, the power of evil over us; hence the importance, when a victory has been gained, of standing our ground, of holding steadfastly to the reality of truth which has enabled us to win the victory.

What is said of the individual with equal propriety may be said of the church. If an organization has been enabled to purge itself of unscientific and unchristian methods which it may have ignorantly entertained, it cannot afford, by overmuch discussion of the things which have been left behind, nor by a continued reference to the persons who have been concerned therewith, to weaken its opportunities of maintaining the advantage which it has gained. Having done its "weeding," as well as its "planting and watering," the church can well afford to leave its increase to God, and those who have been subject to discipline to the judgment and guidance of divine Love.

"ARISE UP QUICKLY."

ANNIE C. BRIDGERS.

MUCH has been written and said about St. Paul's statement that "whom he [God] did foreknow, he also did predestinate to be conformed to the image of his Son, that he might be the firstborn among many brethren." In Christian Science we learn that God has never known any other than the true man, His son, who by his very nature and relation to God was predestinated to prevail over every false sense and remain forever the expression of his Father's being.

Jesus was the first to bring into demonstration upon the human plane this spiritual man; and he was therefore called "the firstborn." But, "among many brethren" being added, we may accept the apostle's statement that "every man that hath this hope in him purifieth himself, even as he is pure;" and this expectation is sustained and confirmed by Paul's further statement that "whom he did predestinate, them he also called: and whom he called, them he also justified: and whom he justified, them he also glorified." What greater promise can humanity wish for? The Bible teaches that the body is transformed by the renewal of the mind,—that an understanding of health does away with the belief in sickness; that the knowledge of good reveals the unreality of evil; that a realization and acceptance of a spiritual sense of love, joy, peace, does away with any sense of resentment, injustice, or depression.

Christian Science has come, as the angel came to Peter in prison, to waken men to the fact that the light of spiritual understanding is here and that conditions of matter have nothing to do with life; but that one's daily thoughts, words, and deeds, the tenor or spirit of one's life, has everything to do with the harmony of human conditions. The Scriptures tell us that "one day is with the Lord as a thousand years," and Mrs. Eddy declares that "the rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously, whereas a thousand years of human doctrines, hypotheses, and vague conjectures emit no such effulgence" (Science and Health, p. 504).

The angel of Truth's presence smote Peter and bade him, "Arise up quickly." When the light of spiritual understanding comes to human consciousness, it reveals the hidden errors of sense, and doubt, fear, and suffering are experienced until the demand to arise out of this sense into the realm of Truth and Life and Love is heeded and obeyed. The angel said unto Peter, "Gird thyself, and bind on thy sandals," and so he did. Then the angel said unto him, "Cast thy garment about thee, and follow me." Peter's obedience gained for him his freedom. Had he not made the required preparation he had not been ready to progress, and it must have been his childlike faith in God which inspired him to obedience.

Spiritually understood, the girdle is a symbol of strength and endurance; it means to be strengthened spiritually and then to prove one's trustworthiness. To bind on the sandals

Digitized by Google

is to have faith planted in Truth and Love, in God; to "cast thy garment about thee" is to be enfolded in the Christ-mind, and to "follow me" is to respond to Love in thought, word, and deed; it is to express our faith in unselfishness and good works, healing sickness and destroying sin. This work is individual, and must be done before the journey from sense to Soul is accomplished.

It is written that Peter followed the angel, but "wist not that it was true which was done by the angel; but thought he saw a vision." So to many who read Science and Health it would seem that it is too good to be true, too blessed to be practical. When they learn, however, that nothing is true save good; that the beauty of holiness is the most practical thing in the whole world, and that obedience to the rule of Science will as surely bring their freedom as it brought Peter's, what glad tidings will be theirs! "When they were past the first and the second ward, they came unto the iron gate that leadeth unto the city; which opened to them of his own accord." Obedience to the divine demands of Christian Science is leading men to the open gate, and to the vision of the Apocalypse, where there is no sin, sickness, disease, or death.

The high priest asked Jesus, "Art thou the Christ, the Son of the Blessed?" Jesus boldly answered, "I am: and ye shall see the Son of man sitting on the right hand of power,"—the spiritual triumphing over the material, and coming in the clouds of heaven; Truth hidden from sense, but golden with spiritual promise. "Unto them that look for him [all who are receptive to the spiritual idea] shall he appear the second time without sin unto salvation."

"BE YE SEPARATE."

MARY STEWART.

In Christian Science one becomes conscious of "the new man," or the truth about man, in proportion as "the old man" with his deeds is "put off," as false sense is put out of consciousness. In correcting a false belief which has been accepted as true teaching, and in clearing out all the effects of belief in evil, one has to pay the utmost farthing and let go every personal association and circumstance connected with it, in order to prove to oneself and to others his genuine repentance and reformation.

This cutting loose from the old in consciousness has its natural expression in outward separation, not through human will, but through divine direction, for the wine-press has to be trodden alone. One must become willing and glad to lay down personal sense in order that he may discern the truth sufficiently to understand and begin to follow the teaching and practise of Jesus and of Christian Science as revealed to this age through Mrs. Eddy. If one has not known enough to reach this through Science only, it is sure to be found through suffering. This is a slow, hard way, but what matters that if, as Mrs. Eddy writes, "the lesson is sufficient to exalt you" (Science and Health, p. 266); for as she further says, "the goal of goodness" must be "assiduously earned and won" (p. 233), and the process is a giving up of nothing for something.

The awful lengths to which mortal sense will go when it has its way, and the evil influences which have been brought to light as Truth has uncovered error, must have made all Christian Scientists look to themselves and to their past and present attitude, while remembering the Biblical warning, "Let him that thinketh he standeth, take heed lest he fall." The false charity and belief of goodness and kindness which sometimes condones or hides or refuses to see evil, or does not admit certain forms of wrong-doing to be wholly evil, and tries to sustain or protect persons who are the operators or channels of error, is not Christian charity or love, but the effect of malicious animal magnetism. The effects of ignorance and self-mesmerism can only be destroyed by eliminating their roots.

As unity with good means also unity with those governed by good, so does it mean separation from those who deny God's law. Love for God, good, includes love for and unity with Christ Jesus, who daily exemplified good, and consequent dissociation from those who do not love and follow his teaching and example. It is moral cowardice to wish to avoid, or to help another to avoid the suffering for wrong which eventually awakens the erring one and leads him to put off false sense, "the old man," and reach the mental attitude in which he can receive the blessings that rightly belong to and can only be enjoyed by "the new man." The only logical, honest way is to drop absolutely from thought every memory of an experience or association in any wise related to error and which bears no fruit but suffering.

In the consciousness awakened from the condition of mesmerism or error, probably the last thing to be healed is regret; but even that will finally be obliterated, and there will be nothing left which maketh or worketh a lie or can prevent one from learning to know God aright. May this full and final healing come to all those who have ever been the victims of delusive personal sense, opposing itself to Principle in the name of Science, and these lines from the Hymnal be proven true for each:

> The longing to be good and true
> Has brought the light again.

LITTLE TASKS.

MAY LANGRISHE.

It came to be the writer's duty to perform the clerical part of the preparation for a Christian Science lecture. A huge pile of envelopes waiting to be addressed lay before her, and it seemed a tedious task. Just then a mental picture presented itself; it was that of two men who had been instructed to go to the Jewish capital long ago, find a certain room, and there make such preparations as were necessary for keeping that annual festival the passover. Did those simple men when setting forth on their errand guess the spiritual nature of the feast which the Master was about to supply them? If so, what expectant light must have glowed in their faces as they paced the dusty thoroughfare from Bethany to Jerusalem; what a flame of love burned in their hearts at the prospect! The commonplace task with which they had been entrusted must have seemed all too easy and too short. But, whether they knew it or not, they went to prepare the place where the bread of Truth was to be broken for them, and through their simple obedience to a whole hungry world.

The parallel of today was startling. Had not the writer also been desired to help in preparing for such a feast? Had not a room been found, and was not the call being made today to the hungry ones to come and share the feast? With this thought came a glorious sense of joy and privilege. She saw that every notice sent out was the offering to a brother of a cup of cold water in Christ's name, and she saw as never before the meaning of that water. The poised pen was laid aside to amplify these thoughts by applying them to one who had sought help in Christian Science, but whose claim to it had been temporarily waived that the clerical work on hand might be carried through first.

It was then seen that the water our Leader bids us give comes from the river of life; that God's child needs no other sustenance. It is the calm, clear, refreshing assurance that Spirit is his sustenance, divine Love his support, divine Mind his guide, divine law his safety, divine Truth his healer. This realization illumined also the lesser duty, and showed what a ringing echo of Christ's passover a Christian Science lecture is and how even the humble work of addressing an invitation to it, if it be done in love, is not a task, but rather is it a privilege invested with the glory of divine service.

SELECTED ARTICLES.

[Frederick Dixon in *Telegram*, Weymouth, England.]

In comparing, in a recent letter, the exegetical method of Mrs. Eddy with that of the fourth gospel, the argument drifted, naturally enough, to the second question touched upon by your contributor, the Christian Science doctrine of the unreality of matter. The moment this point is reached, the necessity for clear thinking on the part of critics becomes obvious, otherwise they will merely render themselves ridiculous by such foolish and futile statements as that Christian Science says that nothing exists.

The theory of the unreality of matter was first formulated, in the West, by Plato. His teaching took the form of an insistence on the reality of ideas, as opposed to that of physical phenomena. In this way he became the father of philosophical idealism, the doctrine that nothing exists but mind and its ideas, as opposed to the contention of materialism, that the only true reality is matter and the forces inherent in it. The Platonic theory of ideas is so subtly metaphysical as to be extremely difficult to reduce to words. This is clear from the effort of a certain school of Platonists to reconcile his theory of predication with that of his disciple Aristotle, an attempt Aristotle could have told them was foredoomed to failure. Scientific knowledge of the universe, Plato insisted, was an impossibility. You could only have opinions about it, for the simple reason that sensible phenomena are merely participations in or resemblances of ideas. Thus, "The veritable diagrams of the mathematician are only aids to the imagination; they are not themselves the true objects of his reasoning." There exist, in the admirable phrase of Mr. Taylor, "a supraphysical world of entities, eternal and immutable, and it is these unchanging entities, called by Plato 'ideas,' which are the objects with which the definitions and universal truths of exact science are concerned."

It was this transcendental element in the teaching of Plato which provoked what has been termed the "smashing" attack of Aristotle. To Plato, the soul was the charioteer and the body the chariot; to Aristotle, it was the prime constituent of the body, and the two made up a unity. The effect of this was seen when, after the long night of the Dark Ages, human thought began to stir itself into new activities in the era of scholasticism. The struggle between idealism and materialism was continued in the battle between the Conceptualists and the Realists, which found Archbishop Anselm, the first of the schoolmen, the champion of the latter, and Pierre Abélard, the greatest of twelfth-century thinkers, of the former. The thirteenth century saw realism triumphant, mainly through the effort of Thomas Aquinas, "the angelic doctor," the man described by Huxley as the most subtle of medieval thinkers. Four centuries passed, the Renaissance came and went, and the age of the Rationalists dawned, before idealism found another adequate exponent. When he strode upon the stage he was a bishop, though on the opposite side to Anselm, George Berkeley, lecturer on divinity and Greek in the University of Dublin, sometime Dean of Derry, and eventually presented to the see of Cloyne.

The Berkeleian theory, worked out in the famous "Treatise concerning the Principles of Human Knowledge," and in those luminous dialogues which are the lineal descendants of "Protagoras and the New Timæus," is simple enough. It amounts to a frank declaration that the only reality is the substance of mind, and that the material phenomena, such as trees and mountains, which seem to exist independently of us, really have no existence apart from our minds. It was this that drew from Lord Byron the famous couplet:

> When Bishop Berkeley said there was no matter
> And proved it—'twas no matter what he said.

Now mind, Plato has taught us, is a unity, and consequently when Berkeley argued that there was no substance but the substance of mind, itself spirit, he involved himself in a conclusion as purely pantheistic as any ever conceived by John of Erigena himself. Had he been content with this, he would at least have been logical, but he must needs write another treatise, the famous "Siris," in which he recommended tar water to a legion of sick mentalities as what Mr. Balfour has termed "a universal panacea." If sickness and pain are purely states of consciousness, the proposal that they should be cured by libations of tar water is, to put it plainly, frankly illogical, and so Huxley was completely justified in describing the Bishop of Cloyne as a "mired logician."

The coxcombs, however, who "vanquished Berkeley with a grin," were no more intelligent than the common-sense philosophers who proved matter to be real by stamping upon it, or some such "irrelevant proceeding." The idealistic philosophers pursued "the noiseless tenor of their way," and in due course substituted energy for mind. As a matter of fact, the change made very little difference. Philosophy knows as little about energy as about matter. Matter, writes one of the greatest of modern chemists, "is only a thing imagined, which we have constructed for ourselves, very imperfectly, to represent the constant element in the changing series of phenomena. Now we begin to understand the actual—that is, that which acts upon us—is only energy, we have to ascertain by tests in what relation the two conceptions stand, and the result is, without a doubt, that of energy alone can reality be predicated." To which a famous biologist replies in advance, "All that we know about motion is that it is a name for certain changes in the relations of our visual, tactile, and muscular sensations." The consequence is, as Huxley truly says, when the hypothetical substance of mind is endowed with energy, the world arrives at something perilously near a new name for matter. With marvelous prescience, Mrs. Eddy has written, on page 409 of Science and Health, "Mortal mind and body combine as one."

The gentleman who boasts freely of his common sense is quite frequently only extolling his uncommon ignorance. Matter, says a great natural scientist of today, is a hypothetical vacuum in a suppositional medium. "We have actually touched," says Sir William Crookes, "the borderland where matter and force seem to merge into one another. I venture to think that the greatest scientific problems of the future will find their solution in this borderland, and even beyond; here, it seems to me, lie ultimate realities, subtle, far-reaching, wonderful. And although the whole range of human experience is all too short to afford a parallax whereby the date of the extinction of matter can be calculated, Protyle, the 'formless mist,' once again may reign supreme, and the other hand of eternity will have completed one revolution." Mrs. Eddy, on page 523 of Science and Health, put the spiritual significance of this quite clearly many years ago when she said: "The creations of matter arise from a mist or false claim, or from mystification, and not from the firmament, or understanding, which God erects between the true and false." It is not so much to be wondered at that Mr. Balfour in his famous address at Cambridge should have declared that modern natural scientists have not only explained matter, they have explained it away. The people, however, who applaud the acumen of Mr. Balfour, need not make themselves ridiculous by satire of Mrs. Eddy.

The teaching of Mrs. Eddy follows the teaching of the idealism of natural science up to a point, but at that point it diverges completely. The natural scientists had dealt with matter as a phenomenon resulting from a noumenon described variously as mind or energy. Mrs. Eddy accepted this, but she pointed out that the mind which manifests itself in material phenomena must, in the nature of things, be material, unless you can grow olive berries on a fig tree or figs on a vine. She therefore insisted that this mind must be just as material as the phenomena produced by it, and was therefore itself a negation of the actual true Mind,

Digitized by Google

which the world has decided to describe as God or Spirit. This Mind, being spiritual, was only capable of producing spiritual phenomena, and therefore just as the material mind, which she calls mortal mind, was nothing but the negation of divine Mind, so the material phenomena produced by it were nothing but negations of the spiritual phenomena reflected by divine Mind. In this way she made Christian Science the idealism, not of schools, but of the New Testament.

"Jesus of Nazareth," Mrs. Eddy wrote, on page 313 of Science and Health, "was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." Now Jesus said, "Ye shall know the truth, and the truth shall make you free." This knowledge is necessarily the most absolute knowledge conceivable, and therefore the most scientific. It is, in a word, that knowledge of God, spoken of in the epistles, which is itself the translation of a phrase which should be rendered, not knowledge, but full, exact, and so scientific knowledge of God or Truth. Natural scientists have insisted on the fact that science is confined to secondary or physical causes, and that, in the nature of things, nothing can be known of primary or spiritual causes. Mrs. Eddy objected that such a limitation was a bar to any knowledge of the absolute, and was contrary, not only to the teaching of Jesus, but to his demonstration. The teaching of Jesus was that men should know the truth, the absolute reality, and that through this knowledge of primary causation, they should be made free from the effects of their belief that knowledge was confined to secondary causes. Any one who will fairly consider the way in which Jesus subjected his teaching to demonstration, will see exactly what this means.

Seated on the parapet of Jacob's well, he told the woman of Samaria that "God is Spirit; and they that worship him must worship him in spirit and in truth" (Rev. Ver.). The universe, therefore, and man made in the image and likeness of God, must be spiritual and not material. The material universe, as mortals see it, cannot be anything but a counterfeit of the spiritual reality. It is the subjective state of that mortal mind of which Jesus himself said, personifying it after the manner of the East, "He is a liar, and the father of it." If, consequently, material phenomena seem to exist, they can only do so as a dream in a supposititious mortal consciousness, and as one wakens out of this dream he begins to see the new heaven and the new earth, "for the former things are passed away."

If this teaching is correct, matter is unreal in a much more complete way than was ever dreamed of in the philosophy of the schools. The miracles (and it must be remembered that the Greek words translated miracle never had a supernatural significance, but ultimately mean an object-lesson) are therefore simply the proofs given by Jesus of this teaching, respecting which Jesus said distinctly that those who believed his teaching would be able to demonstrate it, necessarily to the extent of their knowledge. The greater proportion of these object-lessons were undoubtedly given to demonstrate the unreality of material phenomena. When Jesus walked upon the water he proved that gravity was not a law, that is to say, that the knowledge of the actual truth would succeed in giving man dominion over the law enforced upon him by his ignorance of the absolute. When he fed the multitude he proved distinctly that substance was not material; when he raised the dead he proved emphatically that life was not in the matter; when he carried the boat across the lake instantaneously he demonstrated convincingly the error of the human belief of time and space; when, in a word, he declared that if men had the faith of a grain of mustard seed they should say to the sycamine tree, Be removed and planted in the sea, or to the mountain, Be removed to yonder place, he was really explaining, in the clearest possible fashion, that material phenomena are nothing more or less than subjective conditions of mind, which necessarily change as that mind changes. This is the secret of the spiritual healing of Jesus. "Repent," he said, "for the kingdom of heaven is at hand." The Greek word translated repent, means a change of mind, and as man changes his mind from a belief either in the reality of mortal mind or the reality of matter, to an understanding that the only reality is Spirit, he naturally finds that the kingdom of God, the understanding of divine Principle, is at hand.

So far as much of this goes, it is only driving to a logical conclusion the teachings of the schools, hazarded in a tentative sort of way from the day of Plato to Lord Kelvin. The world regarded the speculations of the pagan philosophers with interest; it has raised statues and written libraries on the works of the idealists who have succeeded them. It only grows restive when it is asked to accept the logical consequences of its own belief. If matter is what Berkeley predicated it to be, then the remedy of tar water should be relegated to the nursery; if matter is what Professor Ostwald states it is, then mental healing should be accepted in every laboratory in the universe. Where Mrs. Eddy has separated Christian Science from the teaching of mental science has been in showing that this mental science is nothing at all but a belief in the broken reed which the pagans called exorcism or sorcery, and the moderns have dignified with the name of mesmerism or mental suggestion. It is, in a word, as frankly a reliance on mortal mind as orthodox medicine is reliance on a material drug. It is, in short, a belief in the fruit of the tree of the knowledge of good and evil, which the Bible says ultimates in death alone. Christian Science healing, on the other hand, is the acceptance of healing through a scientific understanding of God, a knowledge of the operations of spiritual law; and it demands as complete a denial of mortal mind as a reality as it does of matter as a reality. It bases itself on the statement of Jesus of Nazareth, "There is none good but one, that is, God," and declares that only by an understanding of the operations of divine law can the truth of this axiom be demonstrated, as it was demonstrated by Jesus.

If Christian Scientists rested the idealism of Christian Science on mere assertion, they would reduce themselves strictly to the "mired" logic of the philosophic idealist who uses drugs to counteract the effects of mind, or of the theologian who insists that Spirit is the ultimate of matter. It was for this reason that Mrs. Eddy accepted the onus of proof when she declared that truth must not merely be preached, it must be demonstrated, and that it must be demonstrated in the way demanded by the Founder of the Christian religion when he declared, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

[Col. W. E. Fell in *Bradford* (England) *Telegraph.*]

In a kindly reference to Christian Science, Dr. Bickersteth is reported to have said that "they [the Christian Scientists] had done good by emphasizing the fact that our bodily health greatly depended on our mental and moral condition." Christian Science teaches that health depends wholly on our mental and moral condition, as the Bible declares. The mistake of the ages, as indeed this gentleman hints, has been in believing that body is first and Soul last; that matter is causation, and that Spirit is some kind of an abstraction which we shall learn more about on another plane of existence. Christian Science teaches that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468).

Evil is not mightier than good. The fact that a little child can overcome the greatest evil with good, proves the impotence of evil. It has just the suppositional power which mortals choose to give it, no more. When it is understood that there is but one primal cause, and that cause is good, never evil, the race will emerge from its bondage of sin, sickness, disease, and death, and learn what the Scriptures mean when they say, "In him we live, and move, and have

Digitized by Google

our being;" that is, in God, in health, in holiness, in wholeness, we have our being. The seeming power of evil, independent of God, is no power. It is but an error of belief, wrong in whatever way it is regarded. Then why not cease to set up a Moloch and fall down and worship before it in the very abasement of fear? If we construct no Moloch for ourselves, there will be none to worship or to fear, and we shall be in a position to obey implicitly the first commandment of the Hebrew Decalogue: "Thou shalt have no other gods before me," that "me" being good. If our ideal is the Christ, we shall get something in the nature of perfect health, for we read that as a man "thinketh in his heart, so is he." The Master said, "And I, if I be lifted up . . . [in the consciousness of mankind], will draw all men unto me"—unto truth, health, perfection. If it were not possible for humanity through the understanding of man's relationship to God to be freed from sin and sickness, why did Jesus say, "Be ye therefore perfect, even as your Father which is in heaven is perfect"?

[William J. Bonnin in *Wigan* (England) *Observer*.]

In the endeavor to present Christian Science as a "danger to religion," a clergyman, as reported in your paper, gave to his listeners, as Christian Science teaching, something which was not only completely foreign to that teaching but even directly antithetical to it. To "seek to distract one's mind from pain by the suggestion that the pain or the sickness does not exist" may possibly fairly describe the operations of those who seek to cure by mental suggestion, but mental suggestion is the polar opposite of Christian Science practise, and nobody with even a rudimentary understanding of that practise could possibly mistake the one for the other.

If the basic truth of Christianity, the allness and omnipotence of God, is to be maintained, it becomes nothing else than a logical, intellectual, and moral impossibility to conceive that any positive power or presence or reality is in that opposite, since it would be a contradiction of God, good. If there has been found to be "only one great reality in the universe, namely, God Himself" (these are the reported words of the Bishop of London), then the asserted reality of that which would oppose and exclude this only reality must be in truth but a seeming, a false reality; in other words, an unreality. This positive truth and necessary corollary form the central and inflexible teaching of Christian Science, but no Christian Scientist is so foolish as to urge that evil, and its ultimate expression in human experience as physical or mental pain, is anything but real to mortal consciousness. This would be mere deception and make-believe, the endeavor to establish as true that which one believes to be untrue. It is the method of those who use mental suggestion, and the method which the critic has so erroneously supposed to be that of Christian Science.

Christian Science solves the problem by going to the root of the matter and attacking the mortal consciousness which alleges, and has induced the race to believe and to suffer for believing that there is an actual reality in evil. It is this carnal mind, at enmity with God, Truth, which Christian Science comes to evict and destroy. This mind and its beliefs are in their nature negative and unreal. They exist as a deception or a lie exists, only by virtue of those who believe it. Satan, the personified conception of evil, is but the deceiver, or as Jesus called him, "a liar, and the father of it." Now Christian Science declares the mission of Christianity to be the establishment of the kingdom of heaven by the destruction of this deception's power to deceive, and this it is accomplishing by inculcating spiritual understanding of the truth which Jesus promised should set mankind free. Truth can only free from the untrue, and understanding can destroy only false belief.

Nothing that is real can be destroyed or overcome, and yet Jesus overcame and destroyed evil in every form. He did this through his full spiritual understanding of the reality of good, of God's law, and he clearly indicated that his followers should strive to attain to a like understanding and demonstrate it by doing the works that he did. Thus Christian Science is the Christianly scientific way of destroying evil. All causation is mental, and true causation proceeds from the one creator, the one Mind, God. Through spiritual understanding this true causation operates to transform the human consciousness and to dissolve and nullify that supposititious carnal mind with its false claim to causation and evil effects. Thus does evil, with its material manifestations in sin and sickness, disappear, just as darkness disappears on the coming of light.

[Editorial in *Newark* (Ohio) *Express*.]

The dignified reply of the Christian Scientists to the attack on their doctrines by ——, the so-called evangelist, should be compared (to show the great contrast) with the evangelist's talk (it cannot be called a sermon) of last Sunday. His attack on Christian Science was uncalled for. The members of the Christian Science Society in Newark are some of the most respectable and influential people in our city. They conduct their meetings in a quiet, unobtrusive manner and never go begging for funds from the public. They surely have as much right to believe in their doctrines as he has to believe in his. We are not sufficiently acquainted with the teachings of Christian Science to form an opinion, but we like fair play in religious matters as well as in all other things.

[Written for the *Sentinel*.]

ON A STATUE OF HEBE IN A GARDEN.

LUCILE RUTLAND.

In that day a man shall cast his idols . . . to the moles and to the bats.—ISAIAH.

BEHOLD, this mythologue in stone,
This symbol of a faith long dead,
Stands here in state unhallowèd,
With mold and mosses overgrown.

And though iconoclastic years
Touch not th'eternal grace of Truth,
O'er this fair type of fadeless youth
The dark'ning doom of time appears.

The cup which claimed the potent draft,
Is potionless for good or ill;
But if it held its nectar still,
'Twould ne'er by mortal lips be quaffed;

For we have learned, through earth's long ruth,
How vain a deathless youth would be
That bound us close to sentiency
And kept us alienate from Truth:

Have learned, except a corn of wheat
Shall die, it must abide alone,—
The shard of sense must be outgrown
Ere we may rise to Life complete.

. . . . . .

Thus is this old divinity,
That molders in its leafy close,
Scorned by the humblest man who knows
That dust is not his destiny.

So may our false gods all be cast
To bats and moles,—all idols wrought
Of empty faiths and forms of thought,—
And naught but Truth and Love stand fast!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

UNAUTHORIZED AND UNSAFE LITERATURE.

STUDENTS of our Leader's writings, including the Manual of The Mother Church, must have noted that Mrs. Eddy has been most careful to arrange for the preservation of her teachings in their integrity, so that for all time there shall be a standard for Christian Science, and authority for everything printed and issued in the name of this Science. Nevertheless, there is extant among Christian Scientists a practise which is greatly to be deplored and should be vigorously rooted out, namely, the circulation among themselves of copies of what are alleged to be either stenographic reports of talks by teachers to their students, reports of private talks by lecturers, or formulas for treatments, and even extracts from letters which it is claimed were written by Mrs. Eddy herself. Whatever their reputed origin, these "copies" may safely be classed, one and all, as unauthorized and therefore unsafe literature.

In substantiation of what may seem a wholesale denunciation, we might cite the numerous "copies" which from time to time have been sent to this office for verification. In practically every instance they were found to be both faulty and misleading in their attempted elucidation of Christian Science, and the majority abounded in statements which were so palpably formulas for treatment that this alone should have discredited the papers with Christian Scientists, who know that the use of formulas is specifically forbidden in the Manual (see Art. VIII, Sect. 9), and that no loyal Christian Scientist would have made use of such statements either in teaching or in practise. In fact, such of these documents as we had opportunity to submit to their reputed authors, were unqualifiedly repudiated.

That these papers are passed around without inquiry as to whether their alleged authors stand sponsor for what they contain or have in any wise authorized their circulation, is largely due to a belief that they afford a short cut to the demonstrable knowledge of Christian Science which is not to be learned from its text-book, Science and Health. The practise is particularly pernicious when, as frequently happens, these spurious teachings are handed to young Scientists by those who should be, if time were the equivalent of experience, looked upon by these beginners in Science as the wisest of counselors. To offer a seeker after truth, eager to gain an understanding of this new-old teaching, what is literally "a grain of wheat in a bushel of chaff," is like tantalizing a hungry man with the apples of Sodom.

"There is no royal road to learning," runs the proverb, and there are no short cuts to an understanding of Christian Science aside from the faithful study and demonstration of the teachings of its text-book. Mrs. Eddy has spoken clearly and emphatically on this point. On page 456 of Science and Health she says: "A Christian Scientist requires my work Science and Health for his text-book, and so do all his students and patients. Why? *First:* Because it is the voice of Truth to this age, and contains the full statement of Christian Science, or the Science of healing through Mind. *Second:* Because it was the first book known, containing a thorough statement of Christian Science. Hence it gave the first rules for demonstrating this Science, and registered the revealed Truth uncontaminated by human hypotheses."

If, therefore, in the face of the above declaration by the Discoverer and Founder of Christian Science, unauthorized and misleading literature of the typewritten variety is given circulation by Christian Scientists, it must be upon the theory that the writings of Mrs. Eddy, and the publications which she authorized, are inadequate for the purpose for which she intended them. Of her own tireless labors to elucidate this Science she says: "I have revised Science and Health only to give a clearer and fuller expression of its original meaning. Spiritual ideas unfold as we advance. A human perception of divine Science, however limited, must be correct in order to be Science and subject to demonstration" (Science and Health, p. 361).

As time goes on, and it is fully recognized that Christian Science is an exact Science, and any deviation from the true line of its expression must necessarily obscure its teaching, also that the value of Science and Health and Mrs. Eddy's other writings may be tested by results, the acceptance or repudiation of these fugitive documents will no longer be a debatable question among Christian Scientists. With the rich and varied abundance of genuine Christian Science literature, our Leader's ample provision for every possible need, there is not a shadow of an excuse for the existence of "typewritten copies" of any kind, and loyal workers everywhere can do a service by not only refusing to accept or distribute this spurious literature, but also by pointing out the invalidity and harmfulness of such a practise, whenever and wherever it may come to their attention.

ARCHIBALD MCLELLAN.

SPIRITUAL RESPONSIBILITY.

ALTHOUGH mortals have widely differing opinions about many things, all who are above the plane of actual savagery are agreed that certain moral requirements are equally binding upon all men, specifically the provisions of the Decalogue, which safeguard the lives, property, and reputations of mankind. No one would have the hardihood to say, "Oh, yes, the commandments are all very well, an excellent provision for people in general; but I make no profession of religion, hence I should not be judged in this connection." Every intelligent person would readily see and admit that existence would be impossible without the protection of law, although, unfortunately, the general concept of the scope of moral law is very limited. Christian Science, however, opens our eyes to the fact that the moral law may be likened to a two-edged sword: that if we fail to heed its righteous import in our dealings with others we shall miss the protection which divine law ever gives, and we shall wound ourselves whenever we are heedless of the rights of others.

If we were to ask either a child or an adult, "Upon whom are the ten commandments binding?" we might have to wait for a reply. There are few who understand the universality of all law which springs from divine Principle, and that divine law is not only as essential to our existence as the air we breathe, but that it is wholly beneficent in all its activity, springing as it does from divine Love. This is made clear by Mrs. Eddy, who tells us of "the active, all-wise, law-creating, law-disciplining, law-abiding Principle, God" (Miscellaneous Writings, p. 206). She also says, "In the spiritual Genesis of creation, all law was vested in the Lawgiver, who was a law to Himself. In divine Science, God is One and All; and, governing Himself, He governs the universe" (p. 258). The demand, therefore, rests upon "every man" to do right; none are exempt from this requirement.

It is, however, rather surprising how many people there are who shirk the question of spiritual responsibility because they fail to see that without spiritual awakening the demands of the moral law can never be truly met. Paul admits this when he says that "the carnal mind is not subject to the law of God, neither indeed can be." But he does not stop there: he tells us that when we awaken to spiritual reality, "the Spirit itself beareth witness with our spirit [our spiritual sense], that we are the children of God." When this awakening comes God's law is no longer

Digitized by Google

proscriptive to us but purely protective, and we begin to say, "I delight to do thy will, O my God." It matters not that mortal sense may choose evil rather than good, the Christ forever says, as Jesus said to Nicodemus, "Ye must be born again" (not may be, but must be). Who would be foolish enough to say, "I do not choose to be a sharer in the sunshine or any other gift of God!" Mortals, alas, do this very thing, so far as spiritual blessings are concerned, but all the while the spiritual sense is crying out for God and will never be satisfied with aught less.

At this day, even as in Jesus' time, thousands find God and themselves through the Christ-healing, and then they rejoice to acknowledge their spiritual responsibility, with all its holy demands and its boundless blessings, not the least of which is its sense of true freedom. Then, too, they say as did Paul, "When I became a man, I put away childish things,"—put away the foolish belief that one can be a man without understanding and obeying spiritual law, that one can live at all except as he lives in God. St. John says: "He that hath the Son hath life; and he that hath not the Son of God hath not life." Who would not choose those fruits of Spirit, "love, joy, peace," especially as we are assured by Paul that "the manifestation of the Spirit is given to every man to profit withal"?

ANNIE M. KNOTT.

A NECESSARY DISCRIMINATION.

SAID a minister, a doctor of philosophy, recently: "All power is of God, and available alike to evil intent and good intent. Gravity and giant powder subserve the purposes of benevolence or malevolence with equal promptness and efficiency. The power is wholly divine; the responsibility for its use *wholly human!*" When reminded that while in this view the sinner may be justly indicted for formulating the plan of his ill deed, God, infinite Love, must be regarded as the effective agent in its accomplishment, and hence accessory to the crime, he replied, "There is one God, hence but one source of power. Men are free; they can draw upon it at their will, and they are therefore held for the results!"

There is no escape from the blight of this theological contention, with which some of us have been familiar from our youth and which is still being maintained, unless we make the discrimination, insisted upon in the teaching of Christian Science, between the power of Truth, of God, and the seeming power of error, materiality and its laws. Christ Jesus declared that "all the power of the enemy," the source and support of every human ill, is to be overcome by the word of God; and if these asserted powers of evil are to be regarded as "of God," then thought is precipitated into a bog of contradiction where one may flounder indefinitely,—he has entered the domain of mental despair. The turmoil of mortal experience would thus be transferred to the kingdom of God, it would become that "war in heaven" which Milton has so graphically pictured, and one must give up all hope that the doors of the temple of Janus can ever be closed, in time or eternity.

Such is the extremity to which logic lashes all those who fail to separate the real from the unreal, the law of Truth from the seeming law of false belief. Acceptance of the teaching that evil is permitted to enforce its behests by the use of divine power compels the conclusion that God is responsible, in part at least, for evil; and this begets for every aspiring man that struggle between spiritual instinct and the dictum of material sense which gives such dramatic interest to the book of Job. It authorizes a rephrasing of Luke's story about the long-suffering woman who was healed by the Master so that it shall read: Ought not this woman whom Satan hath bound by the power which my Father hath given him, be loosed from her bondage?

In opposition to this sense of things, Christian Science teaches that God, good, is not in partnership with evil; that He is forever true, though every mortal sense be thereby proved a liar. On page 555 of Science and Health, Mrs. Eddy writes: "Christian Science attributes to error neither entity nor power, because error is neither mind nor the outcome of Mind. . . . We lose our standard of perfection and set aside the proper conception of Deity, when we admit that the perfect is the author of aught that can become imperfect, that God bestows the power to sin, or that Truth confers the ability to err." This conclusion is simply inescapable if we accept the perfection of the divine nature, and reason therefrom respecting the divine activities or power.

"But," says one, "does not error's power to deceive inhere in the fact that we honor the truth it simulates, so that were there not some truth with us there could be no deception? Are not men led to accept the counterfeit bill by their recognition of the value of the genuine?" To this it may be answered, Yes; but in this the truth is not error's agent or abettor, it is the ever-present right standard by which error's falsity is ultimately detected, its powerlessness demonstrated. The power of God is but another name for the activity or energy of divine Mind, and far from finding its effectiveness in the use of this power, evil, as Christ Jesus proved and as Christian Scientists are proving today, disappears in the presence of good, and for the simple reason that Truth and error cannot dwell together. The law of mathematics never decrees or brings about errors of computation, and no more can the power of God be present or expressed in the phenomena of evil.

Christ came to make clear to men that every claim of evil is false, that it has neither place nor power; and the realization and demonstration of this, his gospel, is the sole purpose and concern of every true Christian Scientist.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

HYDE PARK, MASS.—The *Hyde Park Gazette-Times* of July 2 contained an item a part of which follows: "The opening services of First Church of Christ, Scientist, held last Sunday in its new place of worship, formerly the Universalist church on Arlington street in the Hazelwood section, was attended by large congregations, people being present from Boston, Roxbury, Jamaica Plain, and Dedham. The society has leased the church for a year, with the privilege of buying at the end of that time." At the quarterly business meeting held Oct. 8, the members unanimously voted to purchase the property before the privilege expired. Each time that we have been led to take an advance step, the way has been opened. The step from a rented (though very attractive) hall to a beautiful little church building of our own, all ready for us to occupy and fully furnished, including an organ, is a demonstration for which we are most grateful.—*Correspondence.*

PUYALLUP, WASH.—The Christian Scientists of Tacoma and Puyallup maintained a rest and reading-room at the Puyallup Valley fair, at Puyallup, Wash., Oct. 2 to 6. A large tent was used for the purpose, and proved a cozy and attractive place in which to rest and read. A large sign across the front of the tent announced, "Christian Science headquarters. Ask for free literature." Two hundred copies each of the *Sentinel* and *Monitor* were given away, besides many other pieces of Christian Science literature. Many expressions of pleasure and gratitude were heard from recipients of the *Monitor*. As an aid in advertising our daily newspaper the local publication committee had a stereopticon slide made and displayed at a motion-picture theater during fair week. The following was shown on the screen: "When at the fair, do not fail to ask for a copy

Digitized by Google

of *The Christian Science Monitor* at the free reading-room." The fair management seemed pleased to grant the necessary space, and the hope of having the Scientists and their good reading matter in attendance again next year was expressed. The Puyallup Valley fair is a permanent institution, and people come to it from all over western Washington. Such a large distribution of Christian Science literature cannot but be productive of much good.—*Correspondence.*

TOLEDO, OHIO.—At the Toledo Industrial Exposition which was held at the Terminal Station, Sept. 23 to Oct. 5 inclusive, First Church of Christ, Scientist, maintained a booth conducted by the local committees on publication and distribution of literature. Each day and evening during the exposition free *Monitors* together with copies of other Christian Science literature were distributed by the committees in charge. All of Mrs. Eddy's works were displayed, and the Bible and Science and Health and the *Quarterly* on a reading-board were placed in a prominent position easily accessible to any one passing the booth. The following amount of literature was judiciously distributed: 608 *Journals*, 1522 *Sentinels*, 5008 *Monitors*, 1590 pamphlets, 17 *Der Heralds*, 53 leaflets, and 965 copies of the Christian Science lecture recently delivered in the Valentine theater, Toledo, and published in full in the *Toledo Times*. A thousand copies of this lecture, printed by the Times Company on a single sheet, were donated by a member of our church for this occasion. Viewed from every standpoint this venture was a complete success, and we know that many false impressions have been corrected and much prejudice overcome, and its beneficent results are shown in increased church attendance and renewed interest throughout the field.

Correspondence.

WHITTIER, CAL.—The opening of the splendid new Christian Science church, just completed at the corner of Washington avenue and Bailey street, will take place tomorrow [Oct. 13], services to be held both morning and evening. The edifice was constructed at a cost of nine thousand dollars, including furnishings, and is one of the most attractive in the city. It is a two-story concrete structure of the classic style. The building is ideally located, in the heart of the residence section, and has a frontage both on Central park and Washington avenue.—*Whittier News.*

THE LECTURES.

ROME, N. Y.

At the lecture on Christian Science which was given by Virgil O. Strickler, he was introduced by Miss Mabel A. Gorton, first reader, who said in part,—

The lecture to be delivered on Christian Science is planned to satisfy the inquirer's thought with a positive answer, to meet the skeptics with light, and to correct the misinformed with the truth. In an issue of the *Youth's Companion* several years ago, I remember having read this statement: "When you look through a red glass, everything looks red. When you look through a blue glass, everything looks blue. When you see faults in other people, perhaps they're in you." Such was the case with most of us before Christian Science came to our thought; we saw only sin and suffering about us, with no way of escape, because we were looking upon the universe through the red lens of envy, jealousy, and hatred, or the blue lens of fear, doubt, and despair.

When Christian Science—or, to use the definition thereof as given by its Discoverer and Founder, Mrs. Eddy, when "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1)—is revealed to mankind, then God, good, is found to be the sole cause and creator and the universe His good creation. Our Master, Christ Jesus, taught that this knowledge constituted the kingdom of heaven, which he said was within men. Of this kingdom and its establishment among men here and now, the lecturer is prepared to tell us.—*Correspondence.*

HIGHLAND PARK, ILL.

A lecture on Christian Science was given in the church edifice by Prof. Hermann S. Hering. The speaker was introduced by Robert P. Walker, chairman of the board of directors, who said:—

Today, as in the time of our Master, to those who are seeking after righteousness the cry still goes forth, "What is truth?" Jesus said, "When he, the Spirit of truth, is come, he will guide you into all truth;" also, "I am the way, the truth, and the life: no man cometh unto the Father, but by me." This is the same truth which Mrs. Eddy, the Discoverer and Founder of Christian Science, presents to us through her book "Science and Health with Key to the Scriptures,"—the same truth which is today making mankind free from all manner of disease, mental, moral, and physical. This "Spirit of truth" is the way to the Father, the way to eternal life.

In the first epistle of John we read: "And we know that the Son of God is come, and hath given us an understanding, that we may know him that is true, and we are in him that is true, even in his Son Jesus Christ. This is the true God, and eternal life." No one on earth today knows better than do Christian Scientists that the Son of God is come, and hath given them an understanding of God and of man's oneness with Him. In order that Christian Science—this same Christ, Truth—might be presented correctly to those who are seeking to know more of God and His creation, Mrs. Eddy established in 1898 a board of lectureship of *The* First Church of Christ, Scientist, in Boston, Mass., composed of Christian Scientists who had been successful healers and earnest workers for the cause. Tonight we have with us a member of that board, who will address us.

Correspondence.

MEXICO, MO.

A very attentive audience listened to a lecture on Christian Science delivered by Frank H. Leonard in the auditorium of First Church of Christ, Scientist. He was introduced by F. M. Tinsley, president of the church, whose remarks were in part as follows:—

It is the verdict of a host of people that Christian Science is a vital, energizing, practical truth; a truth that is elevating, ennobling, and regenerating the lives of all who embrace it, a teaching that, while it is as old as the "Ancient of days," is yet so new that each individual has to learn it for himself. The Saviour said on one occasion: "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls. For my yoke is easy, and my burden is light." Thus we learn from the Master's own lips that there is something we may learn from his life and teaching which will give rest to our weary sense; that will assist us to bear the burdens incident to this existence; and Christian Scientists have found that this promise of the Master is susceptible of literal fulfilment, and that in the light which Christian Science sheds on the Scriptures they become illuminated and practical.

In the valley of humility, beside the ever-flowing streams of infinite Love, where self fades from view and God becomes All and in all, man does find surcease from suffering and sorrow, deliverance from sickness and sin, and an all-absorbing love, which so thrills his being with a sense of gratitude that he naturally feels inclined to use every reasonable means to plant the seeds of this truth in the hearts of

Digitized by Google

all mankind. And so I might say, in presenting the lecturer this evening, that in taking this step our little church has been prompted by love and love alone.—*Correspondence.*

CHICAGO, ILL.

At the lecture in Fifth Church of Christ, Scientist, Chicago, D. A. Clippinger, first reader, in introducing William D. McCrackan, M.A., said:—

There is a popular axiom to the effect that facts are stubborn things, but the fact is, that facts are the only peaceful and harmonious things in the universe. They only seem stubborn because they refuse to yield to or in any way to be influenced by error. Truth applied to any problem, be it in mathematics or the Science of being, harmonizes it. The truth of being, as taught in Christian Science, will harmonize every discordant condition in human experience. The great truth that God is omnipotent, omnipresent good, is healing the world of sin, sickness, poverty, and distress of every kind. We are here tonight to listen to a presentation of this truth, and hearing we shall be benefited.

Correspondence.

SYRACUSE, N. Y.

Francis J. Fluno, M.D., lectured on Christian Science at the Wieting opera house to a large and attentive audience. He was introduced by Attorney Thomas W. Dixson, who said:—

Your presence here this afternoon indicates that you have at least heard of Christian Science. It is therefore probably safe to say that, consciously or unconsciously, you have formed some concept, some idea, or possibly an opinion in regard to it. Now Christian Scientists are not indifferent to the opinion of their fellow men, but they are much more concerned that this opinion be founded upon some knowledge of the facts as they really exist. Christian Science welcomes honest investigation, but it must take issue with that spirit of criticism which condemns without a hearing or dismisses as unworthy of consideration what it does not understand. I am pleased to say, however, that this tendency to prejudge, this one-time prejudice against Christian Science, as well as many of the misconceptions as to its teachings, is being rapidly dissipated by a correct knowledge of the truth, and Christian Scientists patiently bide the time when "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."—*Correspondence.*

SALEM, MASS.

A large audience was present in the Empire theater at the lecture by the Rev. William P. McKenzie. Benjamin G. Ingalls, first reader of the local church, presided, and in introducing the speaker said:—

First Church of Christ, Scientist, of this city, welcomes you this evening to listen to a lecture on the great and universal theme of Christian Science. Thirteen years ago last April, this church offered to the public its first Christian Science lecture, by a member of the board of lectureship of The First Church of Christ, Scientist, of Boston, on which occasion the value of its teachings was proven by a remarkable case of healing. The same lecturer is with us this evening, and it is my privilege to present him to you.

Salem News.

SIOUX FALLS, S. DAK.

At the lecture on Christian Science, given by William R. Rathvon at the New theater, the speaker was introduced by E. R. Winans, who said in part,—

Perhaps no system of morality or religion has been so misquoted and misrepresented as has this one; therefore our love of fair play and of a "square deal" should compel all of us who are not believers to give at least decent attention when there comes one, like the speaker of this evening, who is thoroughly qualified and legally authorized to speak concerning the subject. To an observer, an outsider, there are certain facts apparent in connection with the practise of the doctrines of this faith which entitle it to serious consideration. First, there is the fact of its remarkably steady, persistent, and consistent growth in recent years, not among the ignorant and credulous, but in the centers of culture and intelligence, and in the face of strong resistance, including misrepresentation, ridicule, and vilification; second, there is apparent also the fact that it makes its appeal to the intelligence of mankind, and not to sentimentality, superstition, or fear; third, it cannot fail to be observed that it has been accepted by a class of people of education and ability, of strong character, high ideals, and clean lives. Those who adopt this faith seem to find help, comfort, and satisfaction therein, and few of them ever abandon it; and any system of science, or philosophy, or religion which makes these facts conspicuous in its teachings and in the lives of its followers, is worthy of respectful hearing and sincere consideration.—*Correspondence.*

LANCASTER, OHIO.

Quite a number of Lancaster people listened to the lecture on Christian Science by Willis F. Gross. The lecturer was introduced by George F. Rabe, who said:—

The message of Christian Science is one long song of Love. In Scriptural phrase it reads, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Christian Science has given rest, health, happiness, peace, and a better understanding of God to countless thousands, all over the world. The evidences of its beneficent results are to be seen in almost every community, where some one has been touched and uplifted by its healing gospel; they are also to be seen in the thousands of testimonies of healing given every week in the Christian Science testimony meetings, and in the hundreds of authenticated testimonies published yearly in the Christian Science periodicals. These testimonies all tell of moral, spiritual, and physical help, and by their very nature and effect proclaim again the words of the Master, "By their fruits ye shall know them."

Lancaster Eagle.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Alhambra, Cal.—High school auditorium, 8 p.m., Dec. 27.
Aztec, N. Mex.—Court house, 7:30 p.m., Dec. 27.
Butler, Mo. (Auspices Rich Hill).—Opera house, 8 p.m., Dec. 17.
Canon City, Col.—Opera house, 3 p.m., Dec. 22.
Gloucester, Mass. (First Church).—City hall, 8 p.m., Dec. 16.
Grants Pass, Ore.—Opera house, 8 p.m., Dec. 20.
Hammond, Ind.—Masonic temple, 8:15 p.m., Dec. 19.
Jefferson City, Mo.—Jefferson City opera house, 3 p.m., Dec. 22.
Lawrence, Kan.—Church building, corner Massachusetts and Lee streets, 8 p.m., Dec. 23.
Los Angeles, Cal. (Churches and Society).—Shrine auditorium, Jefferson street near Main, 3 p.m., Dec. 22; Third Church edifice, 734 South Hope street, 8 p.m., Dec. 23.
Modesto, Cal.—Isis theater, 3 p.m., Dec. 22.
Norristown, Pa.—Grand opera house, Main street, 3:30 p.m., Dec. 22.
Okmulgee, Okla.—City hall, 8 p.m., Dec. 16.
Pittsfield, Mass.—Colonial theater, South street, 3:30 p.m., Dec. 22.
Stamford, Conn.—First Church of Christ, Scientist, Prospect street, 8 p.m., Dec. 29.

TESTIMONIES OF HEALING.

About five years ago my wife, who had been an invalid for several years, was healed through one or two treatments in Christian Science of a so-called incurable disease which medical science had not only failed to cure but even to relieve. While I realized that a great change had taken place in her physically, I also noted with a sense of apprehension that a great change was taking place spiritually. I then knew nothing of the teachings of Christian Science, and feared that possibly she might be getting into something which would do her far more harm than good, as all that I had ever read or heard of Christian Science was in the nature of ridicule. In order to avoid as far as possible anything of this kind, and to get my wife out of what I thought Christian Science to be, I began the study of the text-book "Science and Health with Key to the Scriptures" by Mrs. Eddy, in order to be able intelligently to show my wife the falsity of its teachings.

At the time I began this study I was manager of a drug-store, having been engaged in this profession about twenty years, with two years' experience as steward of a hospital. I was at the time addicted to the drink and tobacco habit, which had held me in its grasp about fifteen years. So I was the antipode of a Christian Scientist, yet I shall never forget the assurance which came to me as I read the opening sentence of the Preface of Science and Health: "To those leaning on the sustaining infinite, today is big with blessings." Like Saul of Tarsus, the very sense of the largeness of evil in my consciousness was forcing me to see the allness and omnipotence of God, good, and with the falling away of the scales of preconceived material beliefs from my eyes, I began to realize the nothingness of these material so-called pleasures which had held me. I fairly devoured the literature; I carried it to the drug-store and studied it with a heart full of gratitude for every ray of light that it brought to me. Even then I believed it was the truth, but now I write this testimony understanding the absoluteness of the teachings of Christian Science in so far as my experience goes. The desire for drink and profanity went out with the first influx of truth, and ere long the tobacco (cigarette) habit was gone also. The true understanding of God began to dawn, and I began to love my fellow men.

The great proof of God's allness and matter's nothingness was, however, yet to come. One day I had to liquefy some carbolic acid crystals, and as the sun was very hot I placed the bottle upside down on the roof of the shed, back of the store. I forgot about it until the bottle had been in the sun several hours, and as I reached to get it and lifted the bottle, the gas formed by the heat blew the stopper out, the hot acid being thrown in my face and over my hands. For a moment the pain was severe, and through force of habit I rushed into the store to apply the material antidote. As I was about to reach for it, I was overwhelmed with the thought that I was about to forsake God at a time, when if ever I needed Him, I did then. I began to declare the truth, and in a few moments all pain was gone. I was so filled with joy that I told a friend who was in the store, one whom I had interested in Science, and he remarked that my eye and face were discolored. At this I was instantly filled with fear. I tried to work for myself, but could not; the pain began to get severe, and a film formed over the eye so that I could not see.

I immediately went home and asked my wife to treat me quickly, telling her what had occurred. She had just completed the study of the Lesson, and she asked me to sit down, saying that we would go over it together. She reminded me that God is the great Physician, and Mind the only medicine, and she also repeated these words from the Bible: "Be still, and know that I am God." It seemed at first that I could not read, but with continued declarations of the truth I was able to read the entire Lesson-Sermon, and as we conversed about the wonderful truths contained therein, one passage of Scripture being, "Am I a God at hand, saith the Lord, and not a God afar off?" I entirely forgot myself. In about an hour I returned to the store, the demonstration being complete, my eye perfectly clear, no one ever detecting the slightest sign of any burn on face, hands, or eye.

I am grateful for all this, as it proves God's tender and loving care for His children, when we *abide in Him*. But the one thing which fills my heart with gratitude to our Leader, for Christian Science, is the spiritual understanding of God as divine Love and as our Father-Mother who ever guides, governs, and keeps man in perfect accord with His eternal and unchangeable law, and does indeed bring the "sweet and certain sense that God is Love" (Science and Health, p. 569). The Bible has become a new book to me. How I enjoy searching its sacred pages, for I am daily learning more and more of the mission of the Saviour, and man's relation to his Maker. I am glad to state that I am no longer in the drug business. I have also had the privilege of class instruction, and am humbly striving day by day to reach "the high calling of God in Christ Jesus," whereby to help and lead my fellow men to the fount of Christian Science, whose waters fail not. I know that it honors God as no other teaching honors Him, and I have proved, and am proving, as we are told in our text-book, that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

W. TRUMAN GREEN, Tampa, Fla.

It is with a feeling of deep thankfulness to God that I give my testimony as to the benefits I have received as a student of Christian Science. I was brought up in the established church of England, and from my girlhood, when I first began to try to understand the problems of religion as it was presented to me by preachers and teachers, I always had the feeling that there was something lacking. My childish questionings were either given the usual evasive replies, or else I was told that these matters were mysteries far beyond the comprehension of learned and good men, and that it was useless for a child to attempt to fathom them. Thus it was that on attaining womanhood my thoughts inclined strongly toward agnosticism, and when cases of sickness, bereavement, or accident came into review, which others ascribed to the act of God, and declared that it was our duty as His children to submit to such acts as a proof of His fatherly attitude toward us, my whole being used to rise in revolt at the thought that a just and loving God should be the cause of such sorrow, distress, and misery.

About two and a half years ago I came to hear of Christian Science, and on inquiring into it I found that certain points which had hitherto been beyond my comprehension were no longer mysteries. I was induced to delve deeper into it, with the result that all my doubts were removed and I was able to affirm to myself that Christian Science undoubtedly supplied the long-felt want of heart-yearning and heart-longing humanity, and that in my own case it had given sight to the blind.

Christian Science taught me first to pray aright, with the assurance that my prayers would be heard and answered. I next learned, through small demonstrations over matter, of its utter unreality. Then as I progressed I found my duties less exacting, and in proportion as I rid myself of belief in materiality and reflected divine Love, its harmony pervaded my household, so much so that the usual infantile remedies were discarded and health and happiness maintained without recourse to them, to the wonder of my neighbors. Now, as a family, we have our daily readings as prescribed in the Christian Science *Quarterly*, and on Sundays hold a little service with a family from next door and find ourselves greatly benefited thereby. Now my great desire is to conform to Jesus' requirement, which Mrs. Eddy quotes (Sci-

Digitized by Google

ence and Health, p. 367) where she says, "A Christian Scientist occupies the place at this period of which Jesus spoke to his disciples, when he said: 'Ye are the salt of the earth;'" and that by my life and example in reflecting divine Love I may so order my ways that by retaining my savor I may indeed season my surroundings and be the means of bringing others to the knowledge of Christian Science, thus assuring health and happiness to many.

MRS. LILY WILSON, Bangalore, India.

I desire to acknowledge the many blessings I have received through Christian Science. Seven years ago I was taken ill with what was pronounced cerebral hemorrhage, and was confined to the bed for many weeks, with a doctor attending me every day. I lingered along until the autumn, when I had another and seemingly worse attack than before, also enlargement of the veins in my legs. I was in bed at this time for twelve weeks; then the doctor told my wife he could do no more for me, and that I could not live for many days longer. My wife and children then called in another doctor, who also told them that they must be prepared for the worst as I could not live many days.

My son then told me of Christian Science, as he had been healed of paralysis by it, and he wrote to the lady who had helped him to ask if she would help me. He also sent me a copy of "Science and Health with Key to the Scriptures," the reading of which I found a great help. After a little while I felt myself getting better, so that I was soon able to leave my bed. The practitioner came to Porlock and held a little service in my son's house, but it was all so strange to me that I could not see the light at first, but afterward this kind lady called at my house and told me that what Christian Science had done for others it could do for me. She read to me certain portions of Science and Health and explained them to me, and I began to see my error, for I found in reading Science and Health that diseases are not the truth of man's being and they should all be treated as error. (See page 425.) I was then suffering from dropsy, but it entirely left me; and, thank God, I have had no hemorrhage since.

My healing was slow, but it is sure. I find this passage from Science and Health very helpful to me: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea" (p. 495). My heart is overflowing with thankfulness to Mrs. Eddy for giving us this book, Science and Health. I have proven that "divine Love always has met and always will meet every human need" (p. 494), and I would close this testimony with thanks to God for the blessings of Christian Science.

T. J. PUGSLEY, Porlock Weir, Taunton, England.

Some five years ago, while bowling with a medical friend, I slipped and fell, striking the floor in such a way that my weight was entirely borne on my right hand and wrist. The wrist was strained, and we both went over immediately to the doctor's office, where the X-ray was used and the wrist examined very carefully. My friend told me it was one of the worst injuries of the kind with which he had ever come in contact. He bandaged up the wrist and otherwise treated it, saying it would probably be two weeks at least before it would be entirely healed.

That evening I had occasion to be at the home of a Christian Scientist, who, on seeing my wrist in splints and bandaged, inquired regarding the trouble. She undertook to give me treatment, and the following day I took off the splints and bandages, the pain having left me the evening previous, and by the following day the wrist was apparently as good as ever. I was greatly surprised to get relief from the pain, and to be cured so quickly and thoroughly, especially in view of the physician's statement that it would be at least two weeks before a cure would be effected by his methods.—L. O. R. CLARK, Chicago, Ill.

It is with a heart full of love and praise for our dear heavenly Father, and of gratitude to our Leader, Mrs. Eddy, who so patiently pointed the way to Truth, that I write my testimony of a remarkable healing which was done in our family. Christian Science teaches us how to find shelter in time of storm. We have the sweet peace of knowing that the sun is shining just the same, although for the time being clouds may hide it from our sight. So it is with Truth, which is always doing its perfect work.

In the fall of 1910 our little boy was taken with a fever in a severe form. I had been treating him for some time in Christian Science, but I could see very little result from my work; yet it proved to me, as Mrs. Eddy says, that "when the smoke of battle clears away, you will discern the good you have done" (Science and Health, p. 22). As my husband was not a Scientist, I consented to our having a doctor for the boy. One of the best physicians in Hattiesburg was called, who came faithfully and did all he could, but the child grew worse all the time, until the doctor had to call two or three times a day for more than a week.

The awful suffering of the child from examinations and the taking of medicines, internal and external, was heart-rending to one who could see the error of such practise, but this went on until our little girl was taken violently ill with the same fever. I then asked my husband what we should do, and he said we would have Christian Science treatment for her. The doctor advised us to take her into another room, but we did not move her that day, and that night my uncle, who is a Scientist, came to spend the night with us. About eleven o'clock the little girl was taken with alarming symptoms. I asked my uncle to give her treatment. He came over to the bedside and spoke to her and stood there a few minutes, when she became quiet and went to sleep, and slept quietly and naturally. My husband saw this demonstration, but did not say anything. The next morning I moved her to the next room and told my husband I would stay and treat her and that he could take care of the little boy. I felt no uneasiness, as I fully realized that as God's child he would be taken care of.

I had been in the room with the little girl about an hour when her brother called me. I went to him, but he did not know me; so I went back, and in a few minutes he called me again. I shall never forget how he looked at me and said, "Mama, read to me from Science and Health." He begged me not to let the doctor come near the bed. I turned to my husband and asked him if he could give up material means. He said, "My dear, what shall I do?" and began to cry. I replied, "Man's extremity is God's opportunity." Then he said, "I will give up," and asked me whom we should get.

I had written a week previous to a Scientist in New Orleans, La., who had made many demonstrations in our family, and asked if she would come, provided my husband consented to give up the doctor, and she wrote that she would; that if it was her work, God would prepare the way and show me when to send for her. We wired her that morning and she got here at nine o'clock that night. That was Thursday. It seemed as if a heavy burden had been lifted from my shoulders when I knew that God was to be the healer in the home. The dear Scientist began to treat the children as soon as she received the telegram. That evening I was alone with them, and both were unconscious, when my sister-in-law came in and begged us not to give up the medicines; but I felt perfectly satisfied that God was doing the work, and that nothing could stay His hand. On her way home she went to another relative and told her that the little boy would not live until the next morning. This relative also came early the following day, but when she arrived they were both much better, the little girl being up and dressed.

The practitioner stayed until Sunday and then returned to New Orleans, and with about two weeks' absent treatment the children were well. We then moved to another

Digitized by Google

part of the town, and there they were attacked with severe chills. I wrote to the same lady, asking for treatment, and they were soon relieved of this trouble, and the little boy began to grow fat and rosy. I came to feel that I needed to work more earnestly, and the result was that several troubles which came up in the family were overcome by Science, and now the children are healthy and happy. It is the grandest thing to know that if we fail to make a demonstration, it is not the fault of Science, but a lack of understanding in applying the truth which Mrs. Eddy teaches. I will be glad to answer any inquiries regarding this case. I am very grateful to Mrs. Eddy, through whom we have gained an understanding of the true God, "who crowneth thee with lovingkindness and tender mercies."

MRS. GERTIE ELLEN BOOTHE, Hattiesburg, Miss.

[Translated from the German.]

A sense of deep gratitude impels me to tell of the benefits derived from the study of Christian Science. I was seriously affected with heart trouble and felt very weak. A physician diagnosed the case, but I had no confidence in medical aid. My husband having heard of Christian Science, we read *Der Herold der Christian Science* assiduously, and it became clear to us that "all things are possible with God." He then wrote to a Christian Science practitioner, asking her to take up treatment for me. This she did at once, and with a couple of absent treatments I experienced help. I felt, indeed, like another being, and was able to perform my household duties.

It is now possible for me to overcome difficulties of any kind more readily than in former times, and I do not like to think of what might have happened if we had not known of Christian Science. For all the blessings which we have experienced we are unspeakably grateful to God, and we also thank our beloved Leader, Mrs. Eddy, who has shown us the way in divine Love. We now look into the future with a sense of great trust, knowing that God, good, is the only power.

FRAU ALWINE MICHAELIS, Kremmen i. d. Mark, Germany.

It is with gratitude that I give to others my testimony of help received in Christian Science. I was recently healed of what the doctor pronounced uremic poisoning. I was said to be in a very serious condition, all my friends being sure that I would never get well. Every part of my body, including my eyes and ears, was badly affected, so much so that my entire skin peeled off and the itching and discomfort were almost unendurable. Nearly all of my hair came out, and even the finger-nails came off. A good part of the time I was unconscious of all that went on around me; but, thanks to divine Love, I was completely healed through the work of a faithful practitioner. I was also healed of a bowel disorder of many years' standing.

For this wonderful healing my family and myself are truly grateful. I have in a great measure been able to overcome fear, which heretofore had seemed to master me.

MRS. MARY SMITH, Los Angeles, Cal.

My attention was first called to Christian Science six years ago, while teaching in Geneva, N. Y. I had investigated almost every conceivable religious belief, in order to satisfy my intense desire for the truth, before this was presented to me, and I cannot find words to express my gratitude to God for enabling me to find that which meets my every need. I attended the Christian Science service one Sunday, even before I began the study of Science and Health, and never after that returned to the church where I had been a member for years.

I have been benefited in innumerable ways, physically, mentally, and spiritually. I was healed of a chronic kidney trouble in one week's treatment, also of a very sore finger which under the old thought it would have been necessary to have lanced; but the truth was victorious, as under the Science treatment I was able to sleep every night and the healing was completed in about ten days. The spiritual uplift which came through this work was of great value to me. I have always found the Christian Science church services healing in their effect, and many physical ills have been met simply by reading the text-book. Words are indeed inadequate to express my gratitude for Christian Science.

MISS M. CATHERINE RICHARDS, Fort Edward, N. Y.

[Translated from the German.]

Gratitude for the great blessings which have come to me through Christian Science impels me to testify to having been healed of a severe nervous and heart trouble, also of mental depression. A physician of high repute for nervous diseases, in Frankfort-on-the-Main, made an examination some seven years ago, and I was induced to go to a sanitarium, where I experienced temporary relief. About three years ago, however, I again dropped into such a state of mental misery that I lost all hope of ever improving. I had discontinued my work for a period of six weeks, seeking recovery through a sojourn on the Zurichberg, when my attention was called to Christian Science by a friend in Zurich. I tried this method reluctantly and with a sense of distrust, but soon saw that Christian Science alone could deliver me. My wife had in the mean while also turned to this teaching, and was healed of an abdominal trouble of years' standing within a short time; and this, as well as the healing of a child of acute lung trouble, furnished me with further evidence.

Next to God I owe the recovery of my health to the activities of divine Truth, to Mrs. Eddy's efforts *in behalf* of mankind, and to the steadfastness of the practitioners, as well as to the articles in *Der Herold der Christian* Science and the other Christian Science literature in German. The moral enlightenment, however, means much more to me than the attainment of health.

H. PETER-ERFURT, Veltheim b. Winterthur, Switzerland.

[Translated from the German.]

I herewith wish to testify to having been healed two years ago of an abdominal trouble of long years' standing. It was impossible for me to do any heavy work without severe pain. Now I am able to do any kind of work without apprehension, for I know that God gives us the needed strength, and that we live in Spirit, not in matter. Along with this ailment many others have vanished. Our boy and girl, the one aged eleven and the other ten, have also been healed of colds which were ever recurring in the spring and fall. The girl was also healed about two years ago of acute lung trouble which had set in suddenly. After a week or ten days she was able to attend school again, which we consider a quick result in view of our comparatively limited understanding at the time.

I give sincere thanks to God for these blessings as well as for the elimination of many erroneous beliefs, and I take occasion to express my reverence to our beloved Leader who has shown us the way to Truth.

MARGARETE PETER-ERFURT, Veltheim b. Winterthur, Switzerland.

I give this testimony in the hope that it may help others. I have been healed in Christian Science of extreme weakness, and heart disease of many years' standing. It is over two years since I first heard of Christian Science, and it has been a great help to me in many ways. I am very thankful to God for the revelation of this truth, and to Mrs. Eddy for her devoted work in the cause. I am also thankful for all help received from members of the church here.

CLARA BISHOP, South Kensington, London, England.

Digitized by Google

From a heart filled with love and gratitude to God for the truth which proved indeed a very present help in trouble, I desire to acknowledge the instantaneous healing of my two-year-old daughter. During house-cleaning time the baby accidentally got hold of a bottle containing antiseptic tablets which had been used in a case of poisoning. The drug being in crystal form, the baby mistook it for candy and ate over a tablespoonful, when screaming with pain she came running to me, bottle in hand, with her tongue swollen so that she could not close her mouth. I at once snatched the little one up in my arms, and hurried to a Christian Science practitioner who was in the house. By the time I had explained the conditions to the practitioner, the child had turned cold and stiff. Although I was in great fear, I held her in my arms, while the practitioner went to work, and after a few minutes' treatment, to my unutterable joy the tongue was reduced to its normal size and the mouth and lips slowly resumed their natural color. Within half an hour my little one was able to walk around, and within two hours she was perfectly well and ate heartily.

For this demonstration of the power of Truth I am deeply grateful to God, who is willing at all times to help us if we only trust ourselves to Him; also to Mrs. Eddy, who has made known to us the Christ-way of healing.

MRS. JOHN ULRICH, Los Angeles, Cal.

When the glorious gospel of Christian Science was first brought to my notice, I was practically an invalid; I had exhausted almost all material remedies, and the patience of many physicians as well, without any benefit whatever. Some of the ills of which Christian Science healed me were rheumatism and very severe nervous headaches. I also suffered from extreme weakness, my voice being at times almost inaudible. Besides this, my eyes had been affected since babyhood; but through Christian Science I have been enabled to lay aside glasses, and my eyes are better than they have ever been before. I have seen others, besides myself and relatives, benefited in many ways.

Words are inadequate to express my thanks to God, and to Mrs. Eddy the gratitude I feel for Christian Science. When these beautiful words of Christ Jesus are read, "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; . . . For my yoke is easy, and my burden is light," I realize that truly his yoke is easy and his burden light.

MISS PEARL BIGHAM, Dallas, Texas.

Words fail to express my gratitude for what Christian Science has done for me. While I have not been healed of all my physical ailments, I do not doubt but that they will disappear as I grow in the understanding of Christian Science. One ailment, a heart trouble of three or more years' standing, was overcome through the help of a Christian Science practitioner and the application of my own understanding of the Bible and Science and Health. In "Miscellaneous Writings" (p. 358) Mrs. Eddy writes that "the student who heals by teaching and teaches by healing, will graduate under divine honors," and I esteem it a glorious privilege to have these inspired books for my teachers and guide.—MRS. T. G. JULIAN, Palmer, Va.

About two years ago I had a severe attack of kidney trouble. I was taken ill down-town, and the pain was so severe that it was necessary for me to be carried home in an ambulance. I was treated by one physician down-town, and by another at home, but neither could relieve me of the pain. I suffered for two nights and a day, and then called in a Christian Science practitioner, who gave me a treatment and the pain left me. My physician told me that I might have a second attack at any time and advised an operation. I am glad to say I have had neither another attack nor an operation.—CHAS. I. LONG, Ph.D., Chicago, Ill.

FROM OUR EXCHANGES.

[Rev. W. E. Orchard in *Christian Commonwealth.*]

The general effect of most Christological discussions has been to rob us of Jesus. It has either so explained the personality of Jesus that he ceases to have any significance whatever for us who have to live this life under the common conditions of humanity; for it holds that the origin of his nature, the composition of his personality, and the consciousness of his mission were unique and never to be shared by any other member of the human race. Or, the personality and ministry of Jesus are rendered so insignificant that there remains nothing to account for a new religion springing up around his name; for even if Christianity has made the mistake of thinking too highly of Jesus, of idealizing and deifying him, it is not the kind of mistake that could be made about any one apart from something in him which made it a somewhat natural mistake. Or, seizing upon the undoubted fact that Jesus created in men a new consciousness of God, what the New Testament calls the outpouring of the Spirit, the endeavor is made to retain this "Christ-consciousness" without any concern for the historical human experience through which it was first made current, and without gratitude or even a feeling of kinship for him who won it for us at such suffering and cost; with the inevitable result that this consciousness tends to become subjective, shadowy, individual, and sterile, and so loses anchorage among the realities of life and the facts of history. Whether we are now to conclude that Christianity is played out and should be superseded by another faith, or whether we believe that Christianity still holds the secret which can save the modern world, we ought to recognize that Christianity has spread by virtue of what distinguishes it from all other religions, namely, in proclaiming a new way to God opened up through personal attachment to Jesus Christ.

[*Christian Intelligencer.*]

Many persons are capable of gratitude only while their star is in the ascendant, only while they are growing richer, if wealth is their object, or more popular, if renown is their desire; but when prosperity, as they estimate it, is suspended or ceases altogether, when their star hastens to the setting, then they seem to lose all capacity for thankfulness, though their mercies may still be more than they can number and inestimably precious. It is in human nature that those who have never had much, who have been always poor, can easier be thankfully content and happy than those who have known, but by reverse of fortune no longer experience the comfort of abundance, the luxuries of affluence. This undoubtedly is one reason for the unrest of our time, which strangely contrasts with the content and gratitude of our earlier age of Puritan faith.

The Pilgrim Fathers, in ordering a day of thanksgiving, were grateful for small favors. The colony had no wealth. They thanked God in their poverty. We grumble in the midst of our abundance. Without the hope of wealth, they gave hearty thanks for a harvest which promised them a bare subsistence for the winter, while the men of our generation with full barns, overcrowded granaries, and the wealth of a continent in their grasp, groan in unrest, or murmur at the course of events or the order of divine Providence. The condition of the American people today is in the broadest contrast with the destitution of those who observed that first Thanksgiving day.

[*Universalist Leader.*]

The partition walls between nations and peoples are falling down, and as they fall they reveal humanity upon the other side of them. The long-cherished conceit of Christendom, that all the virtues are on its side of the dividing line between it and "heathendom," and that all the vices are on the other side of that line, is a vanishing superstition. Per-

Digitized by Google

haps the greatest surprise of modern experience is the revelation of the soul of the East. China's fight against the opium traffic is one of the heroic moral episodes of contemporary humanitarianism. Poor Persia, striving mightily to rid herself of corruption, crushed between England and Russia, is an object of world sympathy. Turkey and India have felt the thrill of awakening civic sensibility. Everywhere there comes to the surface those great qualities of honor and devotion, of patriotism and martyrdom, of which the western world foolishly thought it held a monopoly.

[Rev. Willard Brown Thorp as reported in *San Diego* (Cal.) *Union.*]

Do you want to have something to give to others that shall be a blessing and help to them? Get it for yourself, and there will be no trouble about that. Get it fresh and new out of today's experience. Get it by going beneath the surface in today's problem, and solving it by putting your trust in the power of truth and not of subterfuge, in the power of love and not of selfish scheming. Trust in that, depend on that; that is what it is to trust in God. Do that, and you will come in contact with something. You will find your lost gospel. You will have something that will so fill you with its power that you cannot help giving it to others, that you cannot help yearning over those whose eyes are holden that they see it not.

[*Advance.*]

We most thoroughly believe that the religion of the future will be more sympathetic, or, to use the popular phrase, more "altruistic." We believe not only that the coming state will "tear down the old rookery where populations are congested," but must also tear down the groggery where multitudes are besotted. There can be no doubt that much of our irreligion is caused by poverty, but it is equally true that much of our poverty is caused by our irreligion. It is easier to relieve distress than to remove its cause.

[*Standard.*]

The power of habit often leads people to continue exercises which once were the expression of reality but now are simply mechanical motions. The most difficult task which the Christian has to perform is to keep his heart; the easiest is the observance of established forms and ceremonies. To bow the head, to take upon the lips words of prayer, to observe established ordinances of the church, calls for no such self-mastery as is involved in returning good for evil or loving our enemy.

[*British Congregationalist.*]

In Christ there is neither bondman nor freeman, employer nor employed, and the suspicion that there is one gospel for the rich and another for the poor is one that must at all costs be dissipated. It is not that we need to preach that rather indefinite thing sometimes called a "social gospel," and often an excuse for avoiding the gospel altogether, but rather that we should be prepared boldly to face the social along with all other implications of the gospel of the grace of God in Jesus Christ our Lord.

[*Continent.*]

Being thankful may have in it a spirit of selfishness, giving thanks may develop a spirit of pride, but making thankful, enriching some one else's life, is sure to save one from selfishness and pride. Every Thanksgiving day is better for seeing to it that some one else is more thankful. It was the principle involved in the old régime, when Nehemiah commanded that portions should be sent to those who were without. It is this that deepens and strengthens our own spirit of thanksgiving.

[*Christian Advocate.*]

No Thanksgiving is Christly in its character which does not embrace a practical purpose to relieve the necessities of the oppressed and the destitute. To thank God for one's own advantages without seeking to extend those benefits to others whose lives have been despoiled by poverty and sin, is to stop short of sending acceptable incense to Him who is the Giver of all good.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

Another new pamphlet has recently been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.09; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

Postmaster-General Hitchcock has apportioned among sixteen hundred post-offices having city delivery, three hundred thousand dollars of the parcels-post appropriation, to be used for equipment for the delivery of parcels-post business. There has been allotted to Chicago, fifteen thousand dollars; New York, Boston, and Philadelphia, each ten thousand dollars; Brooklyn, eight thousand dollars; St. Louis, five thousand dollars; Pittsburgh, four thousand dollars; Baltimore, Cleveland, and San Francisco, each twenty-five hundred dollars. After the parcels-post system has been in operation fifteen days from Jan. 1 the postmasters are directed to submit reports showing the volume of the parcels business, the additional cost, and an outline of the plans for handling the new business. For the establishment of the parcels-post system the postmaster-general has already authorized the expenditure of one hundred and eighty thousand dollars for supplies and equipment.

President Taft, in a second message to Congress on fiscal, judicial, military, and insular affairs, favors the immediate passage of a currency reform measure along lines of the Aldrich plan; declares a bigger navy is required for our manifold interests as one of the foremost of the "families of nations"; advises further reorganization of the army for greater reserve in times of peace; also desires a plan for a naval reserve and for naval aids to the secretary of the navy; believes Filipinos are not ready for autonomy; wants workman's compensation act, and federal regulation of water-powers; recommends raising Colonel Goethals to rank of major-general with title of chief engineer when present incumbent is retired; warns against radical antitrust legislation, and praises Sherman law.

The federal government has filed a civil antitrust suit at Detroit against the horse shoers' "trust." In a petition in equity Attorney-General Wickersham seeks injunctions against the Master Horse Shoers' National Protective Association, its officers, and manufacturers of drilled horse shoes, adjustable calks, and rubber hoof pads, from continuing an alleged combination and conspiracy to confine the sale of those articles in this country and Canada to horse shoers and prevent their sale direct to horse owners. Through unlawful agreements and contracts, it is charged, the defendants have seriously interfered with interstate and foreign commerce in violation of the Sherman law.

The commissioners appointed by the supreme court of New Hampshire to assess damages for land taken by the state in the acquirement of Crawford Notch, have filed their findings with the clerk of the court at the State Library. The commission fixes the value of the soft wood and timber on the land named in the petition at twenty-seven thousand two hundred and fifty dollars and the value of the entire tract, including hard wood and excluding soft wood, at seventy-two thousand dollars.

The state department is watching with interest the methods of conducting the January election in China, and will be largely guided by the results in determining its immediate attitude toward the present government of the country, which has not yet been officially recognized by the United States. Should the elections be conducted quietly and to the satisfaction of the majority of the Chinese, little stands in the way of the official recognition of the government by the powers.

All street work that the New Haven railroad has completed for the development of its Park square lands in Boston, requiring the use of two hundred and sixty thousand square feet of land, has been officially turned over to the city. This is land formerly used as the terminal station of the old Boston & Providence railroad. It is estimated that the New Haven road, counting the land and the construction work, has thus parted with about two million dollars.

The supreme court, in an opinion announced by Justice Day, holds that the Union Pacific Railroad Company, by the acquisition of stock in the Southern Pacific, has effected a combination in violation of the Sherman antitrust law. Justice Day in reading the opinion indicated that the court would enter a decree to dissolve the combination and also an injunction to prevent the Union Pacific from voting Southern Pacific stock.

President Taft has been offered a professorship in the Yale law school. The chair which Mr. Taft has been asked to fill is maintained by the Kent endowment and has been vacant since 1900. It covers lectures in both constitutional and international law.

Estimates aggregating $56,766,092 for improvements to river and harbor works throughout the country during the next fiscal year were submitted to Congress in the annual report of the chief of engineers of the army.

International.

As a result of an international conference held at The Hague during June and July last, a uniform law of bills of exchange and promissory notes has been agreed upon, and twenty-four out of the thirty-seven nations represented at the conference have signed the convention by which the law was brought into effect. All the great powers have signed, with the exception of Great Britain and the United States. This means that within a year, probably, there will be only two codes in existence throughout the civilized world: on the one hand the uniform law, and on the other the Anglo-American code, operating throughout the English-speaking countries. Great Britain is not yet ready to repeal the bills of exchange act in favor of an untried code embodying many principles considered to be opposed to the whole trend of English law, but it is possible at some later time to amend the English law so as to bring it into line with the uniform law.

Great Britain will not curtail her own naval program, notwithstanding the gift by Canada to the British empire of three powerful battleships at a cost of thirty-five million dollars. The first lord of the admiralty says he adheres to the point of view of the Canadian government, which is, he announces, "That the aid given by Canada should be in addition to the existing British program, and that any steps Canada might take should directly strengthen the naval forces of the empire and the margin available for its security."

A monopolies bill has passed through its final stage in the House of Representatives of the Commonwealth of Australia by a vote of forty-one to twenty-six. The measure gives the government of the commonwealth power to legislate in regard to trusts, combines, and monopolies. The commonwealth government recently found itself in the grip of the International Steel Trust when making a purchase of rails, and it was also concerned over the alleged intention of the American beef trust to get the trade of Australia into its hands.

The Bombay, Baroda, and Central India railway's special boat express, starting fifty-two minutes late, owing to the late arrival of the mail boat, not only made up all this time, but arrived at Delhi eight minutes before it was due, thus accomplishing the eight hundred and forty-nine miles in twenty-three and one half hours. This is a record run between these two points.

Imperial sanction has been obtained by a Russian and Belgian syndicate for the formation of a company to utilize the water-power of Finland, including the lesser Imatra falls, as well as the Russian fall on the Volkhov river, to supply electrical energy to St. Petersburg and the neighborhood.

The Bengal and Northwestern railway's new bridge over the Ganges at Jhusi was opened recently by Sir James Meston, lieutenant-governor of the United Provinces. It is 6,380 feet in length, has taken three years to complete, and has cost about £266,667.

The Chinese minister of finance, it is understood, has practically settled with the six-power group the outlines of an agreement for a loan not exceeding one hundred and twenty-five million dollars.

Industrial and Commercial.

An avalanche of cold storage eggs was thrown on the Chicago market early last week and the price dropped from twenty-two to nineteen cents wholesale. The transformation of the butter and egg board into an open market is said to have precipitated the selling. Five hundred and seventy-six thousand eggs are reported to have been put on the market at a loss of two cents a dozen by Chicago dealers. Thousands more were offered with no takers. Commission merchants predict that with more than one million five hundred thousand cases in storage, eggs will drop nearly ten cents a dozen before New Year's. According to the Warehouse Men's Association there are 1,670,355 cases of eggs now in storage in Chicago, 341,374 more than last year. A large proportion are held by speculators who borrowed money to make the purchase last spring.

For the first time valuable hardwood timber has been exported from Port Antonio, Jamaica, to the United States. An agent from New York recently purchased in the parish of Portland a considerable number of mahogany and cedar trees. Two shipments of this timber have already been made and other shipments are to be sent to a New York firm. There is a body of some thirty-five thousand acres of forest land in this parish containing many varieties of valuable woods, which the government is taking steps to open up by building roads through it.

A new company, to be known as the Continental Can Company, is to be organized to take over the business of the Continental Can Company, a New Jersey corporation, the Export & Domestic Can Company, a new corporation, and the Standard Tin Plate Company. Authorized capitalization of the new company is to be seven million five hundred thousand dollars preferred and ten million dollars common.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"QUIET RESTING PLACES."

ROBERT NALL.

"We test our lives by thine." Many times these words of Whittier's hymn had been sung; but why on this occasion only had they set afire a train of thought which opened up a whole vista of questions? Here was a sacred declaration. It had been preceded by others: "We own thy sway; we hear thy call." Do we? The question went right home. What did it mean? Was this the result of a conviction, never before realized so clearly, that there had been only a very imperfect awakening from false beliefs; and that indeed the task which remained to be done in the upheaval and destruction of error and the demonstration of Spirit as supreme in the affections was greater than we had dreamed of? The congregation had sung the words very heartily. It was evident that the declarations were at least the sincere desire of all who took part; there was the glow of uplifted thought in the vision of the Master's beautiful life and in the privilege of trying to measure up to his perfect standard.

But to one present there was a sense of discontent, of asserted unrest. Was it the healthy dissatisfaction which recognizes that unless there is distinct progress in the Christian life there is something like retrogression? Or was it that the "test" was too severe? Yet what meant "Be ye therefore perfect, even as your Father which is in heaven is perfect"? And how can one surrounded by a thousand things that are seemingly against him attain to that? If, as we read in Science and Health, Truth imparts its "own peace and permanence" (p. 516), then a sense of disquiet and fear must mean that there is a lack of clear apprehension of Truth, some ignorance of the power of divine law, the attributes of which make for daily growth in righteousness, and for those demonstrations of the power of divine Love which the Master constantly exemplified. This being so, then it was quite time to enter upon some self-examination, not in the way of morbid introspection, from which Christian Science has delivered us, but to search out on what basis of belief one was resting, and to ascertain whether there had not been some error in working out the problems that we all must solve some time or other.

Just at that moment, while the words of the familiar hymn were still ringing in the ears, there flashed across the memory the thought of "quiet resting places." What relation had this to the test set before us in the Master's life? Who had talked about "quiet resting places"? One with wonderfully prophetic vision that had beheld the coming of a king who should reign in righteousness, who with divine compassion should bring the kingdom of heaven down to earth, and so uplift and purify the thought of mankind regarding God and His creation that no longer would it be dominated by a haunting sense of the persistence and reality of evil. It was this old prophet who, with intense spiritual intuition, had pictured that the effect of this righteousness would be quietness and assurance, and that God's people "shall dwell in a peaceable habitation, and in sure dwellings, and in quiet resting places."

What did Jesus do? Amid all the storm and stress of his three years' ministry, do we not know that his habitation was in a holy place, "the secret place of the most High"? If it had not been so, he could not have said, "My peace I give unto you." He could not have made the promise, "I will give you rest." He would not have declared that he came to give life. Everywhere and at all times he manifested composure and tranquillity of spirit and an abiding confidence in the Father. In the hour of temptation he shattered forever the claims of mortal sense, and his ascension began as the tempter left him. Ever afterward he lived in conscious union with Spirit. He said, "I and my Father are one," and his repeated saying that he did nothing of himself, only what the Father taught him, were the proclamations to a sin-beclouded world that what one child of God could do, even though, as Mrs. Eddy says, he was "the best man that ever trod the globe" (Science and Health, p. 52), others could do also, in proportion to their ascension in the scale of spiritual understanding.

The more the life of Christ Jesus is studied in the light of Christian Science, the more it is evident that his whole mission rested not on the basis of matter but of Spirit; that Spirit to him was all, and that in no sense could he have entertained the thought of the reality of that which he knew could not have emanated from a good and holy God. In his "sure dwellings," that exalted spiritual home where every thought of the reality of sin, sickness, and death was excluded, he was able to commune with the Father, and to draw from the source of all good those perennial life-giving streams which are open to mankind today.

And so we come to this. Jesus always had "quiet resting places,"—that consciousness of absolute good as alone real and eternal, and that abiding confidence and unfaltering trust in God which were to him divine strength. It was here, too, that was unfolded to him that concept of the perfect man made in God's image and likeness on the basis of which all his healing work was done. Human theories were to him nothing; spiritual realities were all. And he constantly nourished his spiritual life; let us never forget that. What a man of prayer he was! It is in the "quiet sanctuary of earnest longings" (Science and Health, p. 15), when we are able to still the turbulence of mortal thought and touch the hem of the garment of Christian Science, that we catch a glimpse of the divine fulness, and know, if yet dimly, something of the power of a consecrated life. Are we thus testing our lives? Have we ever really tried to find these "quiet resting places" open to every seeker for Truth? Where are we living most of our time? Is it in a "peaceable habitation," or are we still under the thraldom of material longings? What Jesus did in this respect we can do; but we must acknowledge and worship only one God, the infinite good, and we can only know Him by surrendering heart and purpose to His will. Then, to make our life and work fruitful, there should be time for quiet spiritual cultivation. Christ, Truth, is with us alway, as he promised he would be; and will be to us more, much more, a teacher and a guide, than he was to the disciples of old.

In "Retrospection and Introspection" (p. 91) Mrs. Eddy

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

tells us that when Jesus was with his followers, "a fishing-boat became a sanctuary, and the solitude was peopled with holy messages from the All-Father. The grove became his class-room, and nature's haunts were the Messiah's university." How those disciples grew in spiritual understanding in this sanctuary, and how those "holy messages" were manna to their hungry hearts we can judge by the Christly lives which they lived after the Master had ascended. It is safe to say that they never forgot and always spiritually interpreted the injunction to "rest a while;" they retained precious memories of the scene in Gethsemane, and they followed his example in being instant in prayer. Here is the secret of a life "hid with Christ in God." It is only when thought and desire are attuned to the divine harmonies, when we are possessed by an absolute conviction that God, our Father, has infinite resources wherewith to bless us and to strengthen every pure and holy purpose and endeavor, that we are really testing our lives aright. And we do this only in our own "quiet resting places." There is no room for us in that of another.

As individual Christian Scientists we must know that there is only one mental home, one place of quiet meditation, one dwelling-place where we can always meet with our Father. It is there alone that we can acquaint ourselves with Him and "be at peace." It is there alone also that we can be best equipped for the Christian warfare. We have an up-hill fight, mountains of error to overcome and destroy, and if we hear aright the call of Truth, we shall find that every moment of our lives needs to be devoted to the holy purpose of redeeming human thought from the awful bondage of false beliefs. Nevertheless, we have our revered Leader's assurance that "the highest and sweetest rest, even from a human standpoint, is in holy work" (Science and Health, p. 519); and we cannot be fitted for this unless, like David, we go into the "sanctuary of God" and there, refreshed and strengthened by a face to face vision of divine Principle, become conscious of and are impelled by that spirit of Truth, Life, and Love which always animated our Master.

BUILDING THE HIGHWAY.

HELEN WARD BANKS.

To Isaiah there came a voice crying in the wilderness: "Prepare ye the way of the Lord, make straight in the desert a highway for our God." This verse is often in the writer's thought as she looks abroad over the peaceful country in which her home is situated. Here, three hundred years ago, the Pequot Indians were trailing through the primeval forests and fierce beasts were making their dens in secret caves, and when the Puritans pushed their way across the sea and into the forests, they had to meet not only hunger and cold, but the ferocity of beasts and the inhumanity of savages.

Bravely, however, in their pioneer work on the rocky New England soil, they faced the elements, the wild beasts, and the Indians, and little by little all were overcome. In comfortable homes they no longer feared stealthy foes, cultivated fields took the place of deep woods, the tracks of animals became highways for civilization, and now through a fertile happy country the motor-cars of the descendants in the fourth and fifth generation of these sturdy pioneers speed without an obstacle over the highway which links two great cities. As one compares the present generation with the men who, as it were, hewed religious liberty out of this hard soil, he can but wonder if an inheritance of ease is an unmixed blessing. Are we worthy descendants of those sturdy old pioneers who put this highway beneath our feet?

To the seers of every age since Isaiah has come the call, "Make straight in the desert a highway for our God," and each has built a little stretch of this road through the desert of mortal hopes and fears. One was the true Wayshower; but after he had cut through the path to God and shown men how to walk in it, mortals lost the trail again, and turned back into the desert for another long and weary wandering. Not many years ago, the call came to a woman who scaled the peaks and looked far abroad to discover once more the course of the highway. Then, obedient to the voice of God and regardless of self, she began to mark the road that leads "from sense to Soul" (Science and Health, p. 566). Here, too, were primeval conditions,—forests of prejudice to be leveled, the wild beasts of material lusts and passions to be destroyed, lurking envy and savage malice to be driven out from ambush, the rocky soil of indifference and selfishness to be broken through; but she never faltered in her lonely task. Then her efforts caught the attention of here one and there another who, following her, lent their ardor to the road-building. As the way grew straighter, thousands flocked into it, until now the highway to our God once more lies open and "the wayfaring men, though fools, shall not err therein."

The foundation of the highway is unshakably laid, but its building is still going on. The rubbish of error is still being taken out of the way, personality, self-indulgence, the party spirit, hypocrisy. It is the task of this generation to build for eternity. But what of the next generation? Are the children of today learning the dignity and importance of the labor? Are they being trained to persevering, patient effort, so that when the responsibility of keeping the highway comes to them they shall do more than glide over it in personal ease. Are we making them sturdy workers, or merely preparing for them an inheritance of care-free inactivity?

Few children take naturally to sustained effort. Some one has said that a child's dislike of work is his salvation from being overworked, but a wise parent teaches a child little by little the benefit of that persevering labor which brings accomplishment, and Christian Science is no exception to this general rule on either side. Few children choose to sit down and read through the Lesson-Sermon or to work out their own problems. Many are like the little girl whose mother was working for her, and who, when she felt better, said, "Now, mama, you keep on working, and I'll go and play." Mortal mind, even in older people, is essentially lazy, and it is much easier to accept the results of another's effort than to do one's own right thinking. It is a wise parent who inculcates the necessity of work in Christian Science as well as in home tasks and school lessons.

It may be said that the present generation came into Christian Science as pioneers. They came convinced of the truth that this road leads to God; and they came, after a weary search, from every land, from every religious denomination and philosophy, from every human condition. They brought an unflinching purpose, and they found satisfaction. The next generation, however, will not have to seek Christian Science; they will inherit it. And how? Can we ignore entirely the disposition to inherit lightly? to accept the results of others' work? to find society more interesting than religion? to hesitate to name themselves Christian Scientists because they are not with the majority? This does not mean that children should not be children, gay and light-hearted and full of play; it does not mean that they should be forced to take up long uncongenial tasks; but what a man or woman knows to be the saving truth, should surely be utilized by their children.

Sometimes we hear it said, "I cannot make my child work in Science; it makes religion distasteful to him," or, "I cannot force my belief on my child; he must grow up free to choose for himself." Are these arguments in use anywhere except in religion? Do parents say, "I will not compel my son to learn addition, because when he grows up he may choose always to subtract"? Do they say, "I will not make mathematics seem work to my son, lest when he is grown up he should have a distaste for its exactness and cease to believe that two and two make four"? Is not the boy obliged to get his arithmetic lesson every day? and are we not sure that the methodical work is teaching him truth?

Digitized by Google

We know beyond all question that the science of numbers is infallible. We know absolutely that the Science of being is infallible. Then why should we hesitate to impress either on a child's mind? Is not Truth the only teacher?

We are building with our best endeavor on this "highway for our God," on the path of Truth shown by our Master and again discovered and outlined by our Leader. Then, as we work, let us teach those who are coming behind us the method of the work, its eternal dignity and worth, that they may not merely accept a heritage of ease, but may carry forward to its completion that "building of God" of which Mrs. Eddy has laid the firm foundation.

PREACHING AND PRACTISE.

VINTON A. HOLBROOK.

WHEN Mrs. Eddy says, "The error of the ages is preaching without practise" (Science and Health, p. 241), she gives expression to a vital truth which we all recognize, but which perhaps we do not readily appropriate to our own use. How far-reaching in effect are good deeds! How tame and weak are mere words in comparison! Perhaps in every pulpit of the land ministers are uttering truisms about goodness and honesty, and fathers are repeating similar words of advice to mold the characters of their sons, but one strong example of fidelity to Principle leaves a deeper imprint for good than many sermons.

If Jesus had not lived the truth he taught, does any one imagine that his words would be repeated in the churches of every land as they are today? On the other hand, the influence of a life of such purity and goodness could but have been felt far and wide, to the betterment of mankind and the exaltation of ideals, even though no word of advice or counsel had been given by him. "But," says some one, "it is so easy to preach and so hard to practise!" This is of course only one of the multifarious lies of mortal mind. There can be no doubt that the criminal whose career comes to a tragic end, after he has wound his devious way through the subterranean passage of sin and crime, has not found so easy a path even in this world as he would have had he taken the straight and narrow one. The fact that the shortest distance between two points is by a straight line is as correct a guide in moral and religious life as when applied to the problems of geometry.

We often attribute our failure to render perfect obedience to God's laws to the fact that we do not understand them. Doubtless if we did fully understand those laws, and were in perfect accord therewith, it would be as impossible for us to sin as it would be for the wheel to run off its axle when securely fastened thereon. But a failure to comply with the laws of harmony which we already know is not going to attune us to higher symphonies. It is a beautiful and consoling thought that if we are living in strict and thoughtful obedience to the best that we know now, it is sure to follow that we shall become better able to distinguish between good and evil, between wrong thoughts and deeds which lead to distress and suffering and right thoughts and deeds which lead to peace and harmony. We are always ready to contemplate the magnitude of the success that would have been ours in material or spiritual attainments if only our environments had afforded us the same chances and opportunities that some others have had. We feel that if we had not been deprived of certain educational or other advantages, we might today grace some position of dignity and power far above our present one. Perhaps this is true. Yet, many of those who have left us the most admirable examples have been men and women whose childhood was spent in watching the hillside flock or splitting the rails of the backwoods. The crown of triumph and achievement was placed upon their brow after they had traversed the long road of quiet doing and being and living, of putting into practise all of the good and beautiful and true which fleeting glimpses into books and into nature had revealed to them. We must practise what we know if we would gain even worldly success, and this is no less true with respect to our spiritual progress.

Let us, along with our daily prayer in which we invoke more light, also pray that we may plant our feet more firmly and securely in the path of light which is already visible, even though the light may shine but a little way into the darkness. The advent of Christian Science has awakened mankind mightily to the importance of putting into practise Christ's teachings, and has proven man's ability to obey his instructions. It is a great and marvelous thing for the Christian to adhere as strictly as possible to the pure, loving counsel given in the sermon on the mount as he understands it now. It is even more wonderful for the Christian Scientist to obey those instructions, and apply in addition thereto the instructions of Jesus to heal the sick, etc., as given in the last chapter of Mark. The sending forth of his disciples "to preach the kingdom of God and to heal the sick" seems equivalent to sending them forth to preach and to practise. The preaching of Christ's doctrines was the giving out of the true theory, while the restoration of health to the one bowed down with pain and disease, concomitant with the regeneration of the man, was the practise.

The awakening of mankind to the truths of Christianity which has resulted from the enunciation of the doctrines set forth by Mrs. Eddy, has enabled mankind to practise things which before they had only preached. The leaders in the orthodox churches are known principally by one name, that of "preachers," while the name by which the students of Christian Science are known is that of "practitioners." The writer would by no means imply that the former do not fill their lives with kindly consecrated service, nor that the Christian Science practitioner does not preach the glad tidings of the risen Christ along with his efforts for the healing of the body; but he believes these names are typical of the emphasis laid upon the respective *rôles* by the old and the new religion.

On Sunday, for instance, the Christian Scientist hears the same words read from the pulpit as does his orthodox brother: "He shall call upon me, and I will answer him: I will be with him in trouble; I will deliver him, and honor him." He believes that this promise is a substantial one, to be relied upon in every hour of need. The orthodox brother, too, will come to rest upon this promise in time of trouble, when he has seen positive evidences of the efficacy of Truth understood and begins to realize that these words are not as tinkling cymbals, but as the life-buoys in the turbulent waters that show where succor may be had.

Going once more into the rich storehouse that our beloved Leader has given us, we find this statement, "The best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death" (Science and Health, p. 201). May sermons such as this be preached every day by every Christian Scientist, with the street, the shop, and the home for their pulpits.

"TO HIM THAT KNOCKETH."

EMMA C. MERRELL.

IT happened one day that a little boy living near by was sent with a written message to his grandma who lives just around the corner. From my window I watched the little fellow set out on what was doubtless to him an important mission, and I was interested to see how he would make out with it. Carefully turning the corner, he made straight for the right house, passed on through the gate and up to the door, and there he planted his little figure, close up against the door.

It did not seem to occur to the child that in order to make the occupant within know he was there he must needs show

Digitized by Google

some sign of his presence. There he waited, never moving from his post, for some considerable time, until at last he began to look about him, apparently in utter astonishment and disappointment that no one should come and open the door to him. One could not help feeling sorry for the boy. He held the note in his hand securely enough, he had not turned out of his way in his search for the house, and he was playing the rest of his little part so well, but he failed to comply with the one condition which would have insured him an answer; namely, to knock! This little incident quickly set my thought to work, and it was the means of bringing home to me some useful lessons; hence I venture to pass it on, in the hope that it may serve to strengthen the faith or endeavor of another.

Jesus said, "To him that knocketh it shall be opened." Never before did I realize and appreciate the importance of obedience to the divine command to "knock," as at the present. Never had the force of these words of our Master appealed to me in the light in which they now did. It would almost seem that our entrance, our reception, into the kingdom of heaven is conditional, and that the condition is not altogether as in the old way of thinking we had evidently supposed by our pleadings with God, but that it likewise rests with us to do our part. God, good, is unchangeable, otherwise He could not be God; in order, then, to come in touch with the divine nature, it stands to reason there must needs be some activity—some exercise of faith from the individual. I knew the grandma's attitude toward her little grandson to be such that had he but given the usual signal, and she had recognized his baby knock, it would have brought her quickly to the door. And if as human beings this loving recognition can be so naturally and easily secured, how much more may we expect to receive a quick and ready response to our call from our heavenly Father, who is Love always. If then it is our desire to be heard of Him, it is reasonable to suppose that we shall be found knocking.

Christian Science teaches that "Principle is imperative. You cannot mock it by human will. Science is a divine demand, not a human. Always right, its divine Principle never repents" (Science and Health, p. 329). But it sometimes becomes necessary for us to buy our experience before we render implicit obedience to its laws. Until its laws are understood to be law, the young student of Christian Science may be found trying to adjust a curve into the groove of a straight line. But he learns, it may be after considerable needless toil, that at no point can the material and the spiritual be made to agree or unite. Each must be recognized for what it is. To bring out correct answers in our demonstrations we must hold unswervingly to the rules of Principle. There is no half-way position. We must make the truth our standard; and every time we yield to the insinuations or arguments of mortal mind to the contrary, we are not proving our fidelity to Principle, and are by our own consent keeping ourselves standing without, thereby hindering ourselves from entering upon and living up to our full rights and privileges.

Did it signify, was it of any vital importance, that our little friend failed to comply with the simple rule to "knock"? Did it not mean the entire failure of his mission, to remedy which was to learn his mistake by having the error uncovered to him? Finding that no one opened the door to him, he presently began to cry, and returned home evidently believing himself to have been grossly wronged and unkindly dealt with. Those who knew the truth, however, could see that he was merely laboring under a delusion, as he himself would find after waking up to the truth about it. Likewise in our own experience if we heedlessly swerve from the path of Principle, we are also in our ignorance inclined to complain of the rule because it does not seem to work, because our curve does not answer to the straight line; while the true explanation is that our mortal mind reasonings do not and cannot produce spiritual results.

We cannot reasonably expect to deduce right conclusions from wrong premises, and neither, as Mrs. Eddy says on page 167 of Science and Health, is it wise "to expect to work equally with Spirit and matter, Truth and error." As, however, we advance in our understanding of Christian Science, and le' 1 the importance of mentally working out our salvation on right lines, it is our one consolation to know that Principle does govern man, for we find that anything short of a concept of God as Mind or divine Principle could be of no service in the solving of our problems.

TRUE STRENGTH.

MARGUERITE L. QUINNELL.

In his epistle to the Ephesians Paul gives this final counsel: "Be strong in the Lord, and in the power of his might." This verse, which has been much quoted, has restored faith, increased courage, given added endurance and patience; it has been the watch-cry of faith and trust. Today, to the Christian Scientist it means all this—and more. Instead of being largely a desired mental state, it becomes a demand for mental action. Heretofore a faith in a power without, it today arouses us to the realization and use of a strength and power within.

This activity has, in turn, two phases. We are bidden to "be strong in the Lord,"—to know that God, divine Principle, ever-present, omnipotent Love, meets every spiritual, mental, or physical need, and to know this so absolutely that more and more each day the only reality in our consciousness is the good, and that, hence, evil exists not: we are to be strong in the knowledge that the power of Truth is ever-active, final, absolute,—"and in the power of his might." We are to be strong not only in the faith and knowledge of this divine law of Truth, but strong in that power to use it which is vested in man as God's reflection, and which each as God's child must prove as his birthright. Can we realize a power which is never put into action? Would our faith in the wireless transmit the message without our employment of the instruments or our understanding of the laws involved?

So the Christian Scientist must not alone be strong in his faith in this wonderful Science of being, but his confidence must be strong in his ability to put it into use every hour of every day; as Mrs. Eddy says on page 496 of Science and Health, he must "hold perpetually this thought,—that it is the spiritual idea, the Holy Ghost and Christ, which enables you to demonstrate, with scientific certainty, the rule of healing, based upon its divine Principle, Love, underlying, overlying, and encompassing all true being."

[Written for the *Sentinel*.]

CHILDREN OF GOD.

GERTRUDE BUCK.

CHILDREN of God and heirs of His dominion,
No fear, no ill against us can prevail.
Love bears us up on mighty, tireless pinion,
Love that can never falter, never fail.

Our strength renewed from God's eternal fountains,
Singing we fare on His appointed ways;
Glad are our feet upon His holy mountains,
Our hearts enkindled at the torch of praise.

Awe-stilled we watch life's harmony unfolding,
Each shifting scene in God's design arranged;
His glory we, with open face beholding,
To that same image day by day are changed.

O healing Truth, Thine uttermost salvation
No power can bar from him who sees Thy face;
Each day shall dawn a fuller revelation,
Each night add knowledge of God's wondrous grace.

[Frederick Dixon in *Evening Mail*, Newcastle, England.]

Mr. J. B., if he continues much longer to write letters on Christian Science, will inevitably be convinced. The phrase "notion," with regard to the teachings of Mrs. Eddy, is, let me hasten to explain, his own. It is, I think, admirably chosen and expressive, but it is not one which I, personally, should have selected if I had been he. "Notions" with regard to Christian Science is what I have always contended the critic was handicapped by. I have, therefore, patiently attempted to give him some knowledge of what Mrs. Eddy taught. Now that we are agreed on this, we shall perhaps get on a little quicker.

Now, first as to his notions about causation. He says the mistake I make is in attributing all effects instead of some, to mind; he wants to share causation between mind and matter. If he could show that mind and matter came into being simultaneously, such an argument might be conceivable, but even then he would be committed to a fallacy. The cause of this simultaneous effect would still remain to be discovered. The gentleman would, in short, simply have reached the standpoint of the Indian philosopher. The world was balanced on the howdah of an elephant; the elephant stood on a gigantic tortoise—and then?

If this critic will make a study of the teaching of the idealism of philosophy and natural science, from the time of Plato to the time of Lord Kelvin and Sir J. J. Thomson, he will discover that an enormous number of the greatest thinkers of the world have differed from him, and attributed all effects to mental causes. He will also, of course, discover that the whole school of materialism has insisted on the exact opposite. Christian Science is idealistic, but it is the spiritual idealism of Jesus of Nazareth as opposed to the material idealism of a Plato or a Berkeley, and so, absolutely distinct from teaching of that nature. The whole question consequently becomes one of demonstration. It is once more, as it were, Christ or Diana?

Jesus recognized this throughout his entire ministry. Recognized it when he said, "Ye shall know the truth, and the truth shall make you free;" recognized it when he insisted that theory and practise could not be divorced—preach the gospel and heal the sick was the constant note of his exhortation; recognized it when he explained that knowledge must be demonstrated—"He that believeth on me, the works that I do shall he do also." He, however, did more than recognize it; he himself reduced it to proof, when he healed the sick and raised the dead, when he fed the multitudes and found the tribute money, when he stilled the tempest and walked upon the water—in short, in all his miracles, in a word, his object-lessons. Christian Scientists, through the teaching of Mrs. Eddy, are slowly and very indifferently endeavoring to demonstrate today the power of eternal Principle, the availability of which Jesus insisted on. It is, however, far easier to gain the human knowledge necessary to demonstrate the limited intelligence of the human mind, than it is to walk in the footsteps of Jesus so as to demonstrate the infinite power of the deathless Christ.

I think I have said enough to show that the critic's "notions" are just "notions," like the familiar primrose,—"only that and nothing more." Let me show this from an instance in which he has been incautious enough to stray away from Christian Science. A fireman, he says, who puts out a fire does not trouble about the cause. No! and as a consequence, fires continue to occur whenever the physical law which operates in that direction is fulfilled, just as after centuries of the material practise of medicine people continue to get sick. Does the critic seriously imagine that the obvious dilemma he so ingeniously puts forward never occurred to any of the great idealistic thinkers? Let him read the man who is universally regarded as the father of idealism in modern natural science, and he will be told that if you put your hand in the fire, the hand, the fire, and the burn which will ensue, are all mental effects, all the results of mental causation, and the pain a state of consciousness. If, in consequence of this, he steers away from the Charybdis of metaphysics, let him beware that he does not shipwreck himself on the Scylla of physical science. "The fish of immortal memory," writes Huxley, "who threw himself out of the frying-pan into the fire, was not more ill-advised than the man who seeks sanctuary from philosophical persecution within the walls of the observatory or of the laboratory."

[E. M. Ramsay in *Haddingtonshire* (Scotland) *Advertiser*.]

Christian Scientists have no wish to press their views on those who are satisfied with their present understanding of Christianity; the appeal of this Science is to the unsatisfied. At the same time it would be a very great pleasure to me if I could clear away any false impressions received, and with this object in view I will touch on one or two points of importance in the teaching. I think the argument of Mr. Wright's book may be summed up in the declaration that what is true in Christian Science is not new, and what is new is not true. To this I reply that Christian Science does not profess to be a new religion, or in any sense a substitute for the teachings of our Lord and Master. We are convinced, on the contrary, that it is that fuller understanding of his life, of his words and works, which he himself declared would come when the world was ready to receive it.

There is no new truth; "as it was in the beginning" it "is now, and ever shall be; world without end." There is, however, much in Christian Science which is new to the thought of this age, and this exposes it to opposition, because the world has ever been inhospitably disposed toward new ideas. The healing of Christian Science differs radically from all other forms of healing, in that it recognizes that all disease is entirely of mental procurement and addresses itself first and last to the detection and correction of those unhealthy thoughts, sins, fears, or anxieties in which the disease originated. In order to have some idea of how the healing is accomplished, we must gain an understanding of the nature of Mind. Christian Science teaches that there is only one Mind, one intelligence, God. All would admit that there is but one truth, that is, that no one possesses a personal private truth of his own, but simply manifests to a greater or lesser degree the one truth which is here to be used by every one who can perceive it and grasp it.

In the same way there is but one Mind, one intelligence, and in order to express more of this true Mind we must surrender the belief in a private mind or intelligence of our own. In this way we obey the apostle's injunction, "Let this mind be in you, which was also in Christ Jesus." As we progress a little, we perceive that the good qualities we manifest are not in any sense our own, but are part of God's goodness, the reflection of His nature; we also see that the sin which once appeared so powerful and so much a part of our character is unreal, because it is not the outcome of the one and only cause. Sin is a hideous nightmare, a dire delusion, a false sense which while it is entertained shuts us out from the consciousness of God's love. Experience has shown us that this new view of sin lessens its apparent power. Once we regarded sin as a thing to be grappled with and overthrown, now we see that we must put it behind us and, clinging to God in utter humility and strong faith, wait till the light of His purity and love floods our consciousness and sweeps away the sin. This reformation of the heart expresses itself outwardly in improved bodily health, and, *vice versa*, no man can be healed by Christian Science without becoming morally better too.

As one who has been from childhood a lover of the Bible and from early youth a zealous church-member, I can well sympathize with our critic's fear lest a cold abstraction should be substituted for the fatherhood of God, or the honor accorded to our Lord be in any way lessened. He

Digitized by Google

need have no fear on this score. As the years pass, and we progress a little in this new-old way, we become more and more conscious of God's abiding presence and tenderness, more conscious of the magnitude of the salvation wrought for us by our Lord Jesus Christ.

[Lloyd B. Coate in *Dayton* (Ohio) *Herald*.]

Our clerical critic has referred to a few people as having passed away under Christian Science treatment, dying with cancer and tuberculosis, and the public must be the judge whether or not charity was here made manifest. It is seldom that any one suffering with either of the diseases named calls upon a Christian Science practitioner without first having medical aid and usually remaining under the care of physicians until told that there is no hope of ever being restored to health. There are living witnesses in the city of Dayton who have been healed in Christian Science of the diseases named, at least so pronounced by reputable physicians. It is true that in one family a child passed away with diphtheria under Christian Science treatment, but our friend omitted to tell his congregation that four cases passed away with the same disease under medical care. Is it just to speak of cases passing away under Christian Science treatment and to say not a word respecting the people who pass away under medical treatment?

"Come now, and let us reason together, saith the Lord," we read in the prophecy of Isaiah. When reputable physicians are called into a home to help some sick one and they do all they know how to do to prolong life and alleviate human suffering, but fail, should we not be grateful to them for what they tried to do? There is no strife between Christian Scientists and physicians. Those who prefer medical treatment should have that right, and those who prefer Christian Science treatment should have the same privilege. And should the loved one not be restored to health when a Christian Science practitioner is called into a home to pray for the sick, does not fairness and charity demand that both the parents and practitioner be respected without publicity from pulpit and press.

If *materia medica* were never known to fail, then there might be some excuse for censuring Christian Science treatment. From the days of Abraham, down through the ages up to the present hour, the sick have been healed through prayer. In St. John's gospel we read these words of the Master: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Jesus also gave this counsel: "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." These commands of Jesus the Christ apply no more to Christian Scientists than to other professing Christians. Instead of preaching on the failures of other professing Christians, would it not be a greater exercise of charity to examine our own heart, our own church, our own denomination, and see whether we are obeying these commands or not?

Christian Science teaches plainly that to the human sense of things sin, sickness, and death exist as stern realities, to be overcome in the way pointed out and demonstrated by our divine Exemplar, Christ Jesus, the supremacy of the Spirit over every law of matter. Christian Scientists are daily praying to be governed by that Mind which was manifest in Christ Jesus, so as to bring out more perfect healing in accord with the promise of the Master. Here let me say that the healing of disease, while not a thing to be despised by any means, is the smallest part of the work of Christian Science. Mrs. Eddy speaks of the healing of disease as but the "bugle-call" (Rudimental Divine Science, p. 2) to higher and holier living. The prime object of Christian Science is to lead people to God, and to quote from one of the tenets to which every member of the Church of Christ, Scientist, must subscribe (Science and Health, p. 497): "We acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death."

Christian Scientists are honest; they are frank to acknowledge that not every case has been healed which presents itself to them. If our brethren who criticise us can do better healing through their faith in God, we will say, "Well done." The beloved disciple, John, lays great stress upon professing Christians loving one another. He writes: "He that loveth not knoweth not God; for God is love. . . . And this commandment have we from him, That he who loveth God love his brother also." This being the Christian status, why is there any occasion for one denomination to assail another? Why should not each one go ahead and do all the good possible, according to the light it has, instead of biting and devouring one another?

[William J. Bonnin in *Accrington* (England) *Observer*.]

A very little trouble would have saved our critic, the vicar, from committing himself to such statements as that Christian Science denied the personality of God, the sonship of Christ Jesus, his death and resurrection, and others of a like character. If would-be critics of Christian Science would go for their facts to those who have genuinely studied the subject, or to authoritative publications upon it, instead of to the violent and ill-informed diatribes of its opponents, they would be fairer both to themselves and to those they address. Christian Science definitely teaches the infinite spiritual personality of God and the eternal sonship of Christ. It teaches that Christ Jesus triumphed over the human experience called death, and that his resurrection proved the great fact of eternal life. The tenets of Christian Science are plainly stated in "Science and Health with Key to the Scriptures" by Mrs. Eddy, the text-book of Christian Science, and there is really no excuse for misrepresenting them.

The critic's fault-finding might probably be traced to a source which is responsible for most of the unfriendly criticism passed upon Christian Science, and that is the inability or unwillingness to distinguish between absolute and relative truth, and the consequent judgment of the statements of the one by the standards of the other. The distinction is of paramount importance in Christian Science, for Christian Science may be said to be the Science of that absolute truth the knowledge of which the Founder of Christianity promised should make the race free. The translation, as it were, of this absolute truth about existence and what exists, into human material terms, in other words, the human material concept of things, is quite a different matter, and the fundamental teaching of Christian Science is that, in relation to the positive truth of spiritual reality, or absolute truth, this human sense concept is negative in nature, spurious, and unreal. Within the realm of this false human concept there are relatively true and untrue, relatively good and evil human experiences, and Christian Science does not for a moment teach that sin and death seem to be real and true experiences in that realm. But that does not in any way conflict with its teaching that in absolute truth, in the sight of God, evil is a falsity without power or presence. Evil is in fact just what Jesus said it was, a lie. It is the lie or untruth about the truth of the omnipresence of God, good, and the way to destroy it is the way to destroy any deception, namely, by knowing the truth.

The healing in Christian Science is not by any means the outcome of a blind faith. It is the demonstration of a fuller measure of knowledge of the truth of being, the overcoming of what is after all false belief, by understanding, by the bringing to naught (in the words of Paul) of the things that are by the things that are not, *i.e.*, to the human material sense. The prayer that heals is a realization of the truth. Christ Jesus knew the truth in its fulness, and

Digitized by Google

that knowledge was the reflection of the one Mind that is God. To him the things which are seen were temporal and unreal, and the things which are not seen were the real and eternal. He proved the truth of his teaching of God's allness by the destruction of all that was unlike God. His healing was the proof of his teaching, and he plainly taught that his followers should continue so to prove it. The critic would argue that we are to take the absence of any express prohibition of the use of material remedies as a direction to rely upon them, an argument which will hardly convince. The Master himself used no such means, nor did the apostles, and it is a bold thing to imply that there is a better method of healing which they knew not how to employ, but desired later generations to discover and make use of. And there is, moreover, the command to take no thought as to what we eat and drink, or for the body, which is rather hard to reconcile with the teaching that we should look to drugs for life.

The phenomenal growth of the Christian Science movement, a growth practically without parallel in the history of religion, has been due almost entirely to the fact that it has proved its teaching by its healing. It has accepted the test the Master imposed. In all parts of the world there arises an ever increasing chorus of gratitude to God for healing from sin and misery, from all forms of disease, after all human means had failed, and for the peace of mind and happiness that Christian Science has brought to those hundreds of thousands. It is easy to call it heresy, but so often has the heresy of one generation been welcomed as the orthodoxy of the next, that Christian Scientists can bear the reproach with composure.

And so the message that Christian Science has for the world is that salvation is attainable through Christianity now and here: that Christ is our Saviour, not from some imagined torment beyond the grave, but from all that goes to make us miserable today. It proclaims and proves that the understanding of spiritual truth and the knowledge of the omnipotence of God who is Love and nothing but Love, is the Christianly scientific way of destroying evil, and that such understanding is attainable by all and enables one to put on the new man, made in the image and likeness of God; to be, in effect, transformed by the renewing of his mind.

[Willis D. McKinstry in *Wichita* (Kan.) *Beacon.*]

A recent issue reports a clergyman as referring in his sermon to Christian Science as a "non-Christian faith," and classing it with oriental religions. That the readers of your paper may not be misled by this erroneous statement, kindly grant me space to say that our clerical friend is somewhat belated in getting into the arena of public denunciation of Christian Science with this "non-Christian" criticism which has been refuted so many times. At this day and age, when Christian Science has long passed the experimental stage and has developed into a mighty system of religious teaching and demonstration, proving its words by its works, it can hardly be conceived how any one can have such a misconception of Christian Science as to claim it to be "non-Christian," unless it be they have that "hardness of heart" to which Jesus referred when he said, "Having eyes, see ye not? and having ears, hear ye not?"

If any one will honestly investigate the teachings and demonstrations of Christian Science he will find abundant proof of the truth of its healing and redemptive power, that it is in accord with the teachings of Christ Jesus, and that it is obedient to the divine command to preach the gospel and heal the sick. He will also find that those who go to make up the congregations of the well-attended church services on Sunday morning and Wednesday evening are an honest and intelligent people. These people attend these services not through idle curiosity, but because they find that truth which satisfies the hungering heart, bringing freedom from sorrow, sickness, and sin.

"The tree is known by his fruit." Christian Scientists have proved the Christianity of Christian Science through the healing of the sick and the casting out of evil. He who established Christianity is recorded as saying, "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." Christian Science cannot be associated in any way with "occult art," it is not a "mind over matter" proposition, nor is it "suggestive therapeutics." Christian Science teaches the omnipotence and omnipresence of the one Mind, God. This is the Mind "which was also in Christ Jesus," and which enabled him to demonstrate or prove his Christianity.

[James D. Sherwood in *San Antonio* (Texas) *Express.*]

No possible relationship exists between Christian Science practise and magnetic healing. Christian Science is a demonstrable Science. It is not human opinion. Its practise is not limited to one person nor to any particular set of persons, but it is universal in its scope and availability for salutary purposes, and can be utilized by any person who has a spiritual comprehension of the Holy Bible, as interpreted in Christian Science.

Christian Science is based upon the teachings of Christ Jesus, and in obedience to his teachings is healing the sick and reforming the sinner by spiritual means alone. God is Spirit; He is the infinite divine Principle, whose nature needs to be understood by all. This spiritual understanding is the plan of salvation elucidated in the Holy Scriptures, and its possession by the student of Christian Science is essential in Christian Science practise. The Bible reveals the allness of God, and it declares that the real man is God's image and likeness; that man is like Spirit, is spiritual; and this clearly indicates that a mortal is not the man who is referred to in the first chapter of Genesis as being God's image and likeness.

Mrs. Eddy claimed to be only what she really was, namely, the Discoverer of the truth of being that was exemplified in the time of Christ Jesus by the Master and his disciples, and that became lost to the world through sensuality and materialism. She first demonstrated the claims made for Christian Science by healing all manner of diseases; then she wrote and published what had been revealed to her. The reading public today is familiar with the text-book of Christian Science, "Science and Health with Key to the Scriptures," of which she is the author, and it is also known that the perusal of this wonderful book is healing people daily.

[Written for the *Sentinel.*]

EMMANUEL.

FRANCES A. HALDANE.

"God with us!" O holy, gracious Spirit!
May our hearts be ever humble in Thy sight;
While the Father's presence gives us steadfast courage,
Gives us hope amid the most despairing night:
And we praise Thee, who art Life and light.

"God with us!" Amid the noise of battle,
When the sense is waging warfare fierce and keen;
Worn and spent is almost yielding to the foeman:
In a mighty victory will Thy strength be seen,
When we know Thee, who hast ever been.

"God with us!" Amid the bitter terror
Lest the raging flood should overwhelm us deep,
Lest we lose our hold when waves are surging o'er us:
Love divine! we cannot from Thy refuge sweep:
Thus we trust Thee, who dost Israel keep.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

CALLED OF GOD.

WHEN the Samaritans failed to welcome Christ Jesus, "because his face was as though he would go to Jerusalem," James and John were so far lacking in understanding of their Master's mission upon earth that they asked him, "Wilt thou that we command fire to come down from heaven, and consume them, even as Elias did?" The answer which they received not only rebuked this belief in human vengeance, but stated the Christ-mission with such vigor and terseness that there could be no doubt about the divine origin of that which they were being taught and which they saw demonstrated from day to day. Surely we may believe that it helped these disciples to qualify themselves for the places they subsequently filled in Christian history!

Jesus said, "Ye know not what manner of spirit ye are of. For the Son of man is not come to destroy men's lives, but to save them." The same Christliness of spirit echoes down the ages in those divinely tender words which fell from his lips in the supreme trial of his faith: "Father, forgive them; for they know not what they do." That Jesus interpreted his mission to save men's lives to include the healing of sickness, was amply proved by his ministry to the sick as well as the sinning ones of earth, to the weary and heavy laden, those who were bowed with the weight of sorrow and despair; and he also made it obligatory upon his followers to continue this ministry to the needy in token of their discipleship. In what other way, indeed, can professed followers of the great Teacher justify their claim to be known as such, if they are unable to do the works which he declared they that believed on him should do!

When through the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy gave to the world her discovery of the ever-present availability of the Principle that governed the Christ-healing, the revelation which came to her as the consummation of years of patient waiting on God, of unceasing effort to know and do His will, she destroyed forever the fallacious claim that the healing works wrought by the Master and his immediate followers were a special dispensation to that age and therefore impossible to later generations. For nearly forty years Christian Scientists have been proving for themselves and others, in daily increasing numbers, that what is impossible with men is forever possible with God, and that the fetters with which sin, disease, and death would fain hold mankind in servitude, fall away at the touch of the truth that makes men free, because "no power can withstand divine Love" (Science and Health, p. 224).

As we read in the ninth chapter of Luke the verse with which the incident above related opens, we find that the Samaritans were duly warned of Jesus' coming, but that the old racial prejudice blinded them to the priceless privilege which his stay among them would have conferred, "the gift of God" which might have been theirs. Though they would not receive him, he who had come to save men's lives would not suffer his disciples to punish them, but rather bade them continue in their commission "to preach the kingdom of God, and to heal the sick." That same call to divine service comes to every Christian Scientist today. Whatever the error that would hold us back, be it hostility to the truth or indifference to its message, we know that, though it be as adamant, nothing can resist "the universal solvent of Love" (Science and Health, p. 242). We are called of God, "according to his purpose," and we can best prove our right to be recognized as "the children of God," our allegiance to the cause instituted by our revered Leader, by continued demonstration of the Master's promise: "He that believeth on me, the works that I do shall he do also," until even "the last enemy" shall have been vanquished.

ARCHIBALD MCLELLAN.

LOVE'S EFFICIENCY.

THE significance of the teaching of Christ Jesus which the beloved disciple was ever repeating, and which Mrs. Eddy has rephrased in the four words "Love is the liberator" (Science and Health, p. 225), is best understood when put over against the Master's saying that *Truth shall make* free, for Truth and Love are thus seen to be at-one, and to be identified with the active Principle of the universe. It is this that gives character to the gospel as compared with the law, which is ordinarily thought of as fixed, unyielding, and insistent, as encouraging no hope in the offender, to whom it is likely to seem hard and unfeeling. Love on the other hand appeals to all as kindly, as considerate for circumstance, ready to hear even the Magdalene's statement of her case, to weigh every least extenuating fact, and to judge with mercy and compassion.

When to this "good news" that every divine impulse is prompted by love alone, there is added the further fact that "Love is reflected in love" (Science and Health, p. 17), that it is to be brought nigh to men in the blossomings and fruitage of a pure human affection, then an entirely new and altogether inspiring vision is gained of the possibilities of even the humblest life. We have all had a sense that God is to be revealed to mankind, and we have believed that salvation pertains to this fact. Now and then, perchance, in some rare moment of clear intuition, or when face to face with some thrilling event, we have even been led, as was Jacob, to say, "Surely the Lord is in this place;" but how feeble has been the realization that the All-Father is being, or is to be, savingly revealed to men in our lives! When, however, the truth of being is apprehended and our better self begins to appear in Christian Science, the law of this reflection of Love's efficiency becomes apparent, and as the spirit of kindliness and gentleness grows to be more Christlike and continuous, our presence and unspoken word begin to give evidence of the virtue which pertained, as we are told, to Peter's shadow.

We are bringing to our brothers the strength and sunshine of Truth, and that perchance, ofttimes, all unconsciously. This is what makes Christmas for those who have any that is really worth while; they have caught a glimpse of the meaning of the rule of the Christ-idea, and it has come to them through the love of some brother or friend. This Christmas spirit is none other than that love for God and for men upon which, as Jesus said, "hang all the law and the prophets," and we do well to remember that in no small degree it is the sequent of intelligent interest. No one wilfully trespasses upon those whom he thinks of as dear friends; though they be only the little creatures of the forest and field, he will not kill them for sport nor bring them any unnecessary pain. He has begun to understand them and to love them, and immediately something of the kindness and compassion of infinite Love is revealed. The truly helpful affection is always intelligent; it perceives things at their best, and the real need it wisely supplies.

However feebly we may have apprehended it, it is true that we become coworkers with God in living a genuinely loving life, and this is just as intelligible as is the fact that every property and power of light is made manifest in its least reflected ray, for thus also "Love giveth to the least spiritual idea might, immortality, and goodness" (Science and Health, p. 518); and this for the reason, as St. John puts it, that "the Word was with God, and the Word was God." This identity of Principle with its every idea is one of the most fundamental teachings of Christian Science, and its inspiration and outcome are blessing all the world.

Digitized by Google

They who are growing larger and kindlier hearted, and who through Christian Science are more and more fully realizing the all-inclusiveness and healing power of divine Love, reflected in spiritual consciousness,—for these the joy and gladness of the Christmastide are destined to remain all the year.

JOHN B. WILLIS.

RECONCILIATION.

IN the New Testament a good deal is said about reconciliation, and usually with the thought of establishing unity between God and man. Webster thus defines the word reconcile: "To cause to be no longer at variance;" and besides other meanings, reconciliation is given as "removal of inconsistency." It is here interesting to note that, according to St. Paul, reconciliation begins on the divine side, whereas scholastic theology has taught that mortals must approach God in fear and trembling, uncertain whether they can ever attain to sonship. We, however, read in the fifth chapter of II Corinthians that "God was in Christ, reconciling the world unto himself;" to which the apostle adds: "We pray you in Christ's stead, be ye reconciled to God." The great Teacher also admonished men to be reconciled to their fellow men where there was a sense of discord or division, and this as a preliminary to approaching God's altar with a gift. At this point Paul's words from the chapter already quoted throw much light upon this whole subject. He says: "All things are of God, who . . . hath committed unto us the word of reconciliation." We must therefore deal with spiritual realities and know nothing "after the flesh."

It should not be forgotten that it sometimes seems difficult to reconcile certain passages of Scripture with other texts; for instance, this from Proverbs: "In the way of righteousness is life; and in the pathway thereof there is no death;" then this from Paul: "I am in a strait betwixt two, having a desire to depart, and be with Christ; which is far better." Right here it may be well to ponder our revered Leader's statement: "Even Christ cannot reconcile Truth to error, for Truth and error are irreconcilable" (Science and Health, p. 19). This does not signify that either of these texts expresses error. On the contrary, as understood in Science, they both point to the same truth. Paul must have known that in the way of righteousness, the Christ-way, there is no death. Jesus had declared this in no uncertain terms, but it would seem that the apostle himself was uncertain as to whether he would most quickly reach the full spiritual consciousness of being by continuing his present labor for humanity, or by giving the proof of deathless Life in the way the Master had done. He was pressing on that he might prove "the power of his [Christ's] resurrection;" and yet with noble humility he acknowledged that he had not yet attained to this in its fulness. He tells his brethren, however, to "joy, and rejoice" with him if he were "offered upon the sacrifice and service" of their glorious faith in man's immortality.

In both the Old Testament and the New many passages are to be found which seem contradictory and irreconcilable, but this is only because some of these deal with the mortal belief in life as separate from God, hence material. This sense of life is doomed to annihilation, indeed it never had nor can it have any reality; while the Life which is God can never know death. Christian Scientists, however, learn that, like the apostle, they must "die daily" to all which is unlike God, all which is unspiritual; then they too can say: "For to me to live is Christ, and to die [in this way] is gain." As this is done, the mortal sense of Scripture and of all things, of ourselves and others, is put off with all that is corruptible, and immortality is put on.

Christ Jesus, speaking for the Father, said: "He is not a God of the dead, but of the living: for all live unto him." To God, who is Life, there can be no death, and there is no inconsistency in the Scriptures when their statements are understood in the light of Truth, interpreted by divine Principle. Especially is this true when we apply their inspired teachings in the overcoming of sin and disease, as we learn how to do in Science and Health and our Leader's other writings, all the while keeping in view the apostle's declaration of "the power of an endless life." In this way all that is based on Truth is reconciled, brought to agreement.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

CRIPPLE CREEK, COL.—At an enthusiastic meeting of the members of First Church of Christ, Scientist, Oct. 15, it was decided to take immediate steps toward the completion of the church building at the corner of Fourth street and Carr avenue. The building was only partly finished, and the foundation for over half of it has been standing for several years. Although the building will not be so large as the one originally designed, the plan is to remove the old stone foundation that is not to be used, and give the building a finished appearance.—*Cripple Creek Times.*

BALLARAT, AUSTRALIA.—On Sept. 16, in the lecture room at the City hall, we had the glad privilege of listening to Bliss Knapp, in a very clear, forceful, and convincing lecture on Christian Science. The hall was well filled, and the audience followed the lecturer with profound interest throughout, expressions of regret being rife at the close that the lecture could not be repeated. We feel that the leaven of Truth is working in the public thought, and look for an increased attendance at our services. We are very grateful for the lectures, and are greatly cheered and helped to continue bravely on our way, hopeful and rejoicing.

Correspondence.

LONDON, ENGLAND.—Fourth Church of Christ, Scientist, London, having outgrown the hall on Stamford hill where the services have been held during the past three years, has acquired the Public Library hall in Church street, Stoke Newington, N., which has a seating capacity of three hundred and sixty. This is more than three times the accommodation of the service hall just vacated. The Sunday school is held in a smaller hall in the same building. The premises at Stamford hill having been retained, the service hall is now utilized for reading-rooms. This enlargement of our borders has already resulted in an increased number of inquirers attending the services.

Correspondence.

SALT LAKE CITY, UTAH.—A Christian Science booth was maintained during the whole week of the Utah state fair. The booth was situated in such a place that every one coming into the fair grounds would read its sign, "Free Christian Science Reading and Rest Room," and it was very well patronized, many times taxed to its capacity. All who came in were invited to rest and to read, if they so desired, and offered a copy of the *Monitor* or any other periodical they chose. Practically no one visited the booth without taking away a copy of the *Monitor*, and often the *Sentinel* and *Journal*. During the week three thousand copies of the *Monitor* were distributed, besides some four hundred *Sentinels* and about two hundred *Journals*.—*Correspondence.*

MILFORD, UTAH.—Several important results have been made manifest since our recent lecture. First, there was a complete healing while the lecture was being given. We distributed over six hundred copies of the *News* containing the lecture, and people are asking for the paper yet. One

Digitized by Google

man who to mortal sense seemed to be a slave to wrong desires came and asked for the paper. "I want a friend of mine to read it," he said; "he needs it. It cured me, and it will him." A physician's wife said she enjoyed the paper we sent her, and that she had resolved to come to our services. A party taking a trip to Modena who was asked to take one hundred copies to distribute in that section, arranged to have them distributed on the train.

Correspondence.

MELBOURNE, AUSTRALIA.—We wish to express our deep sense of gratitude for the privilege of giving to the people of Melbourne a lecture on Christian Science again this year. It was given in the largest hall in this city, and was attended by a representative and appreciative audience of fully fifteen hundred people, which was a substantial increase on last year's attendance. The two previous lectures appeared in the metropolitan press the following day, but at an enormous cost. This year the practise was discontinued, but each paper gave a fair report. Nevertheless, we succeeded in having the lecture printed in a small suburban weekly newspaper, of which we purchased some two thousand copies for distribution. We are convinced, and have many proofs, that the lecture has done much good.—*Correspondence.*

MONTGOMERY, ALA.—At the state exposition held in a suburb of this city during ten days in October, *The Christian Science Monitor* was well distributed. This was the initial public presentation of clean journalism to the state. The rest tent where this newspaper and other Christian Science literature were exhibited and given out, proved very popular, several cases of healing having occurred from the impersonal realization of the truth of being.—*Correspondence.*

SKAGWAY, ALASKA.—The librarian at Seattle, Wash., sends the following letter from Skagway: "Enclosed find money order for ten dollars, for which please send by return mail or freight six Christian Science Hymnals and a pocket editon of Science and Health. We are holding services in a private office, and last night (Sept. 22) we had an attendance of twelve and a collection of five dollars. By next Sunday we expect to have our own room in the same building furnished ready for service. I have been here a month and have sold four copies of Science and Health. Divine Love is surely meeting our every need. We are in a big hurry for these books, as we only have one Hymnal. A Japanese attends who has been reading Science and Health for ten years but has not had an opportunity to attend service before. They are all pleased, and so am I, that I could help them."

MIAMI, OKLA.—Before the officers of the church, and with simple services First Church of Christ, Scientist, laid the corner-stone of its new edifice Oct. 23, at five o'clock in the afternoon. The church is located on the corner of Second and Olive streets and occupies a plot of ground fifty by one hundred and twenty.—*Miami Record-Herald.*

MARYVILLE, MO.—The Maryville Christian Scientists have bought the F. M. Petty residence at Main and Cooper streets, and will remodel the building at once for church purposes. It is expected that the alterations will be done and the church ready for occupancy before the first of the year. The consideration was seven thousand dollars. The plans are to make the whole first floor of the residence into an auditorium, and to alter the exterior. The Scientist organization here is twenty years old. The organization met at first in the old Calumet hall on the third floor of the Roseberry building, later moving to the south room of the Empire, where services were held for five years. The present meeting-place is at the Conservatory of Music on Buchanan street. The acquirement of the property will necessitate the incorporation of the organization, and this legal step will be taken at once.—*Daily Tribune.*

THE LECTURES.

ROME, GA.

The auditorium of the Carnegie library was well filled by an audience of representative culture, gathered to hear Judge Clifford P. Smith, a Christian Science lecturer. Judge Smith was introduced by Mayor Ben Yancey, who said in part,—

Since the dawn of creation, religion in some form or phase has held the attention, the awe, the reverence, of every nation, of every people, in every age and clime. That religion may have been founded upon the basest concepts of idolatry and paganism; it may have nestled in birth among the sublime and lofty heights of the life and teachings of Jesus Christ, but it is a wonderful commentary upon the trend of religious history that in no instance has that religion failed to be the stepping-stone to a higher moral and physical uplift and development in the life of a nation.

Thus it is with all denominations and all creeds in this civilized and Christianized world of ours today. Every faith has its place in the gigantic esthetic structure of the world's moral advancement and progress. The creed of Christian Science, though born but today, takes its stand foremost among those religious cults which seek the Lord's vineyard as the field of their activities in the moral betterment and uplift of humanity. It is a voice crying out in the wilderness for the salvation and redemption of God's children, a redemption founded upon the faith in Jesus Christ and through belief in the fulfilment of the prophecies of old. Its breadth of vision, its avoidance of all narrow sectarianism, is forcibly illustrated tonight in that one not of their own persuasion has by invitation come into your midst and been bidden to speak a word in introduction of the distinguished disciple of their faith.

These lectures, to one of which you have been so cordially invited here this evening, have not for their object the purpose of proselyting; they are not for the purpose of going out in the by-ways and hedges to seek converts to their faith; they are given for the purpose of dispelling the mist of misconception, of lifting the clouds of popular misbelief, and letting those that thirst drink of the great life-giving waters of truth.—*Rome Press.*

GRAND FORKS, N. DAK.

William R. Rathvon, who lectured for First Church of Christ, Scientist, on the subject of Christian Science, was introduced by Dr. Homer Martin Cook of the First Baptist church, who said:—

I am not a Christian Scientist. If I were, I would not be pastor of a Baptist church. I do not profess to understand all of Christian Science. If I did, there would probably be things I would not accept. I am not here to discuss Christian Science, but to present the speaker of the day. Some have seemed to find it their duty to search for the supposed errors in Christian Science and in its great teacher, Mrs. Eddy. For a long time certain New Testament teachings and practises lay almost dormant in the church—ignored by nearly all of us. In the plan of God it fell to the lot of Mrs. Eddy to sound the note that would awaken some of us to our birthright as heirs of God and joint-heirs with Christ. Whatever others may think, I regard her as a great and good woman who will go down in history as a prophet of God.

Christian Science has its mission and is doing its work. A people using the whole Bible as their foundation, and claiming the life of Jesus as their motive power; holding that a body of health, a mind of clearness and soundness, and a spirit of absolute poise and self-possession, are the heritage of every man and woman, can but be counted as the brother and friend of us all.—*Grand Forks Herald.*

Digitized by Google

OTTAWA, ONTARIO.

The introduction by George R. Lowe of Virgil O. Strickler, who lectured recently on Christian Science in the Russell theater, was in part as follows:—

As a result of investigation and experience, we are assured that Christian Science is based upon God, divine Principle. A lecture on Christian Science aims to make God better known to us, to define God practically. Many people seem to think very little about God; He is not uppermost in the thoughts of mortals. They may seem to be trying to get along without Him, but what folly! It is vain to try to do without God, infinite good, the very foundation of our being, the one Life and Mind. No one can progress truly without reference to and recognition of divine intelligence, the fundamental source of our conscious life. Perhaps it is because of false concepts of God, because men are not acquainted with God well enough, that they do not consult Him more and seek to know His will and way in all their undertakings.

Christian Science makes God known as our Father,—ever near, ever available, ever reliable and intelligible, the omnipotent and loving Mind. It shows how right ideals, purposes, thoughts, proceed from this Mind. It shows how these ideals elevate and purify human thought, and through this spiritual thinking benefit and heal the human body and conserve and protect real health and sanitation. It is constructive reform, building up everything good and worthy of permanence through the spiritual sense of God.

Correspondence.

EMPORIA, KAN.

William D. McCrackan, M.A., delivered a lecture on Christian Science at the Whitley opera house. The introductory address of R. M. Hamer, a local attorney, in presenting him, was as follows:—

I am not associated with the Christian Science church, neither am I informed as to the beliefs, teachings, and doctrines of this, to me, new religious institution; but I am pleased to be here tonight, and pleased to meet with this audience and to have an opportunity to listen to one speaking on behalf of this church. I am pleased because to me it is a manifestation of the fact that the world is growing better. The rank and file of mankind are taking time from their strenuous efforts to earn a living, and are giving time and energy to the consideration of religious questions. Never before has the subject of man's relation to his creator been given the consideration that it is receiving now. We are daily growing more and more to feel that we are our brothers' keepers, and more than ever the comparatively strong and comparatively successful in this world's strife are giving consideration to their weaker brother.

In each of the great political conventions held in this country during the last summer, at least one plank was placed in the platform pledging the adherence of that party to give heed to the cries of the weak and helpless in needed legislation. These planks are found in those parts of the platform which refer to labor legislations and in those parts thereof referring to legislations in behalf of the unfortunate who should find himself just leaving the prison doors. All this spells to me that the seed sowed by the men who go forth talking religious creed or religious thoughts is bearing fruit. We are growing better and stronger, and are growing to be more tolerant of each other's views; and the fact that this audience tonight is largely composed of those who are not followers of the faith presented by the speaker, is evidence of the truthfulness of this statement. I can assure the speaker that those who are assembled here and who are not followers of his teachings, are not here merely to satisfy curiosity, but to listen, learn, and accept that which appeals to them.—*Correspondence.*

GRAND RAPIDS, IOWA.

Francis J. Fluno, M.D., addressed a large audience at Greene's opera house, his subject being "Christian Science." The lecturer was introduced by Norval M. Crawford, who spoke as follows:—

I know some of you are students of Christian Science and are quite familiar with its teachings, but on the other hand no doubt there are a great many here tonight who have heard but little of it, and what they have heard has been more in the way of criticism (unjust criticism at that), which has been made by those who know nothing whatever of its exact teachings. It is therefore only a criticism of what some one thinks Christian Science to be, and this has naturally given many a wrong impression of it and had a tendency to prejudice some against it.

Perhaps one of the most common criticisms we hear is to the effect that the Christian Science denomination has no missionaries and Christian Scientists never engage in missionary work. Now Jesus, the Wayshower, was the greatest missionary who ever trod the earth, and in sending out his disciples (or missionary workers) he instructed them to "preach the kingdom of God, and to heal the sick;" and he made it very emphatic, in all his instructions to them, that the healing of sin and disease should be the fruit of their preaching. Mrs. Eddy, through her discovery of this same healing truth which Jesus taught and practised, and through the healing which has followed as a result of her teachings and writings, has proven herself the greatest missionary that the world has known since Jesus was on earth. And that she has shown greater wisdom than all other religionists in providing ways and means for the successful preaching of this healing gospel, is proven by the "signs following," as thousands have been healed of both sin and disease as a result of her discovery.

Some of the means through which this great truth is being spread all over the world today are the Christian Science publications, which Mrs. Eddy so wisely provided for and which give correct statements of Christian Science. These publications, after being read by those who subscribe for them, are passed on to friends and neighbors and have been the means of bringing this healing truth to many. The latest of these publications is *The Christian Science Monitor*, the great daily newspaper which, while it is purely a newspaper, publishes only the kind of news which has a tendency to uplift humanity and to create a desire to know more of the good which is taking place in the world, and through its columns of "glad tidings" is helping on the bringing in of "on earth peace, good will toward men," thus proving itself an important factor in this great missionary work of Christian Science. Another important branch of this work which Mrs. Eddy so wisely provided for is the board of lectureship of The Mother Church, and it is a member of this board whom we have with us this evening, one who is well qualified to correct any misapprehension you may have of Christian Science.—*Gazette.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Chicago, Ill. (Third Church).—Church edifice, Washington boulevard and Leavitt street, 8 p.m., Jan. 2 and 3.
Hornell, N. Y. (Second Church).—Woodbury Universalist church, 8 p.m., Dec. 30.
New York, N. Y. (Second Church).—Church edifice, Central Park, West, at 68th street, 8 p.m., Dec. 30.
Passaic, N. J.—Smith gymnasium, 8 p.m., Jan. 2.
Pawhuska, Okla.—County court room, 8 p.m., Jan. 2.
Providence, R. I. (First Church).—Providence opera house, 4 p.m., Dec. 29.

TESTIMONIES OF HEALING.

A burning desire to express my unspeakable gratitude to God, also to our beloved Leader, Mrs. Eddy, for Christian Science, impels me to write these lines. Devout as a child in attending Sunday school and church, I had grown up to question God and man, because of the unloving attitude of the majority of worshipers with whom I had come in contact. Then began a series of "isms,"—atheism, spiritualism, vegetarianism, etc., none of which proved satisfactory.

I had heard of Christian Science at odd times,—heard of the healing done,—but had never conversed with a Scientist. In December, 1909, I felt I had come to the end of all things. For months I had been battling with a problem which nothing seemed to touch. Again and again I had gone out into the fields and cried aloud to God for help, but none came, till one day the words Christian Science suddenly rang in my ears, and I, who in the past had shrugged my shoulders at the mention of it, now found myself harboring the thought that if Christian Scientists can do what they claim, namely, heal, then surely they have the key to the situation, and I at once wrote to a friend who had been healed in Science for the address of a practitioner. I was in Scotland and the practitioner in London, but soon we were in communication, and on the first day of the year 1910, "Science and Health with Key to the Scriptures" by Mrs. Eddy reached me.

I had visitors that day, but as soon as they left I sat down to read, and I read on into the night, and this went on for a month. At the end of the second week, while folding up the heavy deck-chair on which I had sat reading, I found my hand—between thumb and forefinger—caught in the joint of the chair. The pain was excruciating, and I only got release by pulling it out. Then came the thought of demonstrating the truth taught in Science and Health. I stood up and silently declared this truth, and the healing was instantaneous, so much so indeed that I was bewildered. At the end of five weeks from the commencement of my reading, the problem for which I had sought help was entirely removed, and though at the time it was not the answer which I had wanted, I now thank God daily for just that solution. On my return to London, four months later, friends failed to recognize me, one and all saying that I was looking ten years younger.

During August I was packing up for removal, and sustained what seemed a severe injury just under the breastbone. The blow, for the moment, made me feel sick, but I stood still, mentally declaring the truth, and in a few minutes I was at my work as if nothing had happened. During November I had an attack of acute throat and lung affection, two other members of the household also being affected. I treated them, and in two days they were well. For myself I once had to seek help, but what would in the old thought have meant six weeks in bed, was overcome in two weeks and not a day in bed.

I treated a child of three years, in my care, for an eruption on her face, and it has entirely disappeared. For some months past I have talked to her about God, have taught her the Lord's Prayer, and when she gets ruffled over anything and needs soothing she comes to me with the request, "Say 'Our Father.'" I take her in my arms and together we say it, and she is always wonderfully soothed by it. A new pair of sandals had irritated her ankle, making a nasty-looking sore, but I washed it clean and told her to ask God to help her. Next day I was about to look at it when she said, "God mended it, didn't He?" I realized then how quickly the untrammeled thought of a little child takes in the truth, and these words of our Master came to me: "Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein." Here was this little one, to whom I was almost afraid to say anything lest she should not understand, entering into the kingdom of understanding at once.

Recently, I carelessly let an iron ladder fall on my head, while unwinding the rope that held it in place, but I at once declared the truth, and though a lump appeared from the blow, I had no inconvenience from it whatever. The physical healing, however, appears as nothing to those who know the spiritual uplifting of Christian Science. *I feel that I cannot be humble enough or grateful enough for all God's* blessings to His children.

JENNY ATKINSON, London, England.

It is with a deep sense of gratitude for encouragement and help received through the testimonials in our periodicals, that I write my own, in the desire to help some other sufferer as I have been helped. I was a member of a family in which lung trouble had claimed several, and fear of it took deep hold upon me. When quite young I sought relief in the climate of Florida, where through hard work and the exposures of a pioneer life I contracted malaria, which in spite of all that the physicians could do for me retained its grip for a number of years. A large part of that time I had chills with a regularity and rigor which was very discouraging. Finally, when I had been reduced to nervous collapse, we sought a northern climate, on recommendation of a physician, and I obtained a position which enabled me to travel. I hoped to regain health through constant change, but acute lung trouble and constant colds seemed to more than offset all hoped-for gain, either in health or financially.

Christian Science had been brought to our notice a number of times, but on account of prejudice it had always been rejected. I thought it might be good for others, but it could never reach my case. Finally, when my wife was so ill that we despaired of her ever recovering her health, a lady loaned us a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I believe the first line of the Preface, "To those leaning on the sustaining infinite today is big with blessings," roused us out of our sense of hopelessness; and the chapter on Prayer fully convinced us that we had found what we had always been looking for, namely, the truth that makes free. We then hunted up a practitioner and my wife took treatment for two weeks, with the result that she was so benefited that she advised me to try it. I did so, and after three treatments we gave up our varied assortment of medicine and medical appliances with a joyful sense of deliverance from bondage.

This was nearly five years ago, and since that time this truth has met our every need, and they have seemed to be many. Besides various physical ailments, I was healed of a very bad tobacco habit, for which I had tried a number of material remedies; and I had also spent much money in trying to break myself of this habit. Thanks to Christian Science, tobacco no longer has power to tempt me, as the taste for it is entirely gone; and not alone this, but several others have been healed as a result of my experience. I am grateful not only for my own healing and that of my wife, but for the joyful fact that all may have this healing truth, no matter where they are or what their station in life, or what the nature of their trouble. I cannot express my gratitude to God for Christian Science, and for our dear Leader's unselfed life and tireless labor which brought us this truth.—J. KIRBY SMITH, Macon, Ga.

I very gladly testify to the correctness of the above statement, my husband and I having taken up the study of Christian Science together. Grateful as I am for the physical healing, I am still more grateful for my understanding of man's relation to God, and for the knowledge that He does hear and answer prayer, and is an ever-present help in time of trouble.—MRS. E. BLANCHE SMITH, Macon, Ga

Digitized by Google

I began the study of Christian Science shortly after the loss of my mother. I shall not try to express the depths of despondency and utter hopelessness into which I had fallen. I found that instead of having God to turn to and lean upon in the most needy time of my life, I was utterly cut adrift. I had thought I was obedient to God up to this time, but after my mother was gone I found that my love for her, which was really idolatry, was my highest sense of good. I tried to be good, because it would have distressed her to have me otherwise, and she was my dearest treasure. I went to the church I had formerly attended, and came away heart-broken. My husband said, "If that is all the comfort that you get there in your sore need, I hope you will never go again!" I never *did*, but how lost and comfortless I was!

Then Christian Science came into my life, and hungrily I read the Bible and Science and Health day and night. It seemed as if I could not get enough of the wonderful good news. I was suffering from nervous collapse at the time, and from almost every ill to which flesh is heir, so that I could scarcely walk without crying out from pain; in fact, most of my life had been spent in pain. I received one week's treatment from a Christian Science practitioner, and began to realize hope, and by the end of the week was able to walk about ten blocks without pain. It was, however, hard to awaken me from the mental state, until one day the practitioner said to me, "You know if you try to get well, and learn of this truth, you will be able to help others." Then I was instantly alert, for while it seemed almost useless to help myself, I did wish to be of use to others. From this time I began to get the spiritual healing, and never again sank back into that dreadful maze of materiality, but went steadily onward. After the first week I took treatment only occasionally as I needed it. The physical healing was very slow. There were many asserted hereditary laws to be broken, and I truly needed to be made anew. I did not receive the healing from sorrow immediately, but surely though slowly it came.

About two years after the passing of my mother, I lost my father and a brother and sister inside of one year, but now I have the blessed peace that has come to me in Christian Science, and what is best of all is the knowledge that this sense of grief and separation is being broken for all mankind as we each try to rise above it. Now I cherish only the happy memories of my mother and father. To know that "there is no death" (Science and Health, p. 331) would seem enough, if I never learned another thing from my study of this book. I did not expect to be healed of sorrow. I did not dream such a thing possible, and when I realized the sweet normal way it came to me, it was beautiful. It was growth; just like a child beginning at the numeration table and gradually going on. Then I saw what the true Christ-healing is. I began the study of Christian Science at this point, and all I am, all I have, and all I hope to be, I owe to the unfoldment of this blessed truth.

I wish to express my gratitude to our beloved Leader, and to all the workers in Christian Science for the efforts which have made possible the *Sentinel*, *Journal*, and *Monitor*.

MRS. MARY JOHNSON HARRIS, Omaha, Neb.

We wish to express our gratitude to God for what Christian Science has done for us. Our little daughter fell from a swing, and was rendered unconscious for seven hours. She suffered untold agony, and we thought she could not live, our family doctor having said that the chances were all against her. We then consented to call a Christian Science practitioner, to see if God would through her labors give our child relief. After she came and treated the little girl for an hour or two the child went to sleep and slept all night, and had no pain after this. The doctor had said that her skull was fractured, besides other serious injuries, and that if she lived she would not know anything until an operation was performed; but all the medical treatment she had was a tablet dropped on her tongue and allowed to dissolve. She only took two or three doses all told, and no operation was performed. After the Christian Science practitioner had treated her for three days she was restored to health and her right mind, and the cure has been permanent.

After she was healed, the doctor was asked if she had really been hurt as badly as he thought, and he said it was even worse. She has, however, been restored to us, and is well; so we feel like giving God the glory for what has been done for us through the understanding of Christian Science.

MR. AND MRS. S. P. FITZGERALD, Louisville, Ill.

As a student of Christian Science I feel it my duty to express the gratitude which I owe to this teaching. When I first heard of it I was without hope and without God in the world. It was through a young lady who was boarding at our place, and who is now my wife, that I became interested in Christian Science. She always had such a pleasant way with her that one day I asked her to loan me her copy of Science and Health; and I am glad that I did, for I found in it just what I wanted. I always had such a fear that God would send some disease upon me and take me away, that I scarcely knew what a happy day was; but from all of this I have been freed, for I have learned that God is Love, and not the source of hate. I was also healed of the tobacco habit and the appetite for strong drink, and of profanity, through the study of Science and Health alone, for which I am very thankful. I wish to express my gratitude to Mrs. Eddy for the good she has done, also for the Christian Science literature.—ERNEST FARRINGTON, Newell, S. Dak.

I wish to express my gratitude for what Christian Science has done for me. I was first cured of a chronic headache. Later I had some trouble with my thumb; but not thinking that Christian Science could cure anything of this kind, I went to a physician, who said that the end of the bone was affected. After having the thumb in splints for a few weeks, the doctor said he could do no more for it, and that I would have to give up my music. In despair I turned again to the Christian Science practitioner who had helped me before, and after reviewing the man-made laws we realized that God's perfect law of adjustment is potent to heal when material sense fails. This uplifted my depressed thought, and in studying the Lesson-Sermon for that week on "Unreality," I gained much light, and during the further unfoldment of the Lesson on Sunday, I realized that there is no limitation in the law of good. I went home and took off the bandages and splints, and the healing was complete.—EDITH LEGRAND, Pasadena, Cal.

Being unable to attend the Wednesday evening meetings, on account of living in the country, I take this opportunity of expressing my heartfelt gratitude for my healing in Christian Science. After having tried several schools of medicine, also massage and baths, for many ills, including chronic sleeplessness and severe nervous trouble, without relief, I sought help in Christian Science, and while the physical healing is wonderful, the spiritual awakening is the greatest blessing.

I am thankful for the literature, including the Lesson-Sermons, and the many helps received from kind friends in the truth. The Bible, as studied with the help of Science and Health by Mrs. Eddy, becomes a new and open book to those seeking salvation from sickness and sin.

MRS. MAY E. NEEDHAM, Fairhaven, Mass.

A feeling of gratitude too deep for words prompts me to tell others of my experience in Christian Science. When this truth found me, I was about as utterly discouraged as it is possible to be. I had lost all faith in doctors and drugs,

Digitized by Google

and had very little in God as a saving power, since those who claimed to be much better acquainted with Him than I, seemed to rely on almost anything else rather than to trust God to take care of them; but as soon as Christian Science was explained to me, I knew that it was the truth, and then and there I decided to investigate it. I certainly could never have done anything which would have resulted in bringing as much good into my own life, as well as to my family. I will not enumerate the many ailments to which I was subject, since it would be only a waste of time; but I will endeavor to tell of that which has been such a help to me. Although I have studied Christian Science for over three years, and have all this time believed that God is the only power, it has taken me all this time to find out just how to apply this truth. I have found it is good to declare that God is the only power; but that to prove it is much better. This was a question which had often perplexed me, since I had tried many times without success to prove this truth, although I had had many beautiful demonstrations of the power of Truth.

One morning, after a struggle with error, I decided to analyze the problem and see where the trouble was. All at once it dawned on me that I had only been believing instead of understanding the truth. Was it any wonder that I did not get results? We can hope to reap only what we sow; therefore, having sown ignorance, I must expect to reap accordingly. If we know that God is the only power, we know that error has no power. I reasoned from this standpoint of Christian Science, that since I, as God's child, knew that God is the only power, I also knew that discouragement, fear, sin, disease, lack, limitation, and kindred errors are not of God; therefore they have no power except as we give them place in our thought.

The 91st Psalm has been a great comfort to me when error seemed to argue that I could not think rightly; also the 23d Psalm. I am just beginning to understand that there is in reality but one Mind, and it is now easier to separate error from personality, and to treat it accordingly. Though I often stumble and fall, I keep on trying, knowing that I have all to gain and nothing to lose. I did not come into Christian Science for physical healing, but that was the means of bringing me into it. I have been healed of many discordant conditions, although my healing was very slow, but even for that I am grateful, since it has kept me from neglecting my study and caused me to use what I had learned, until I had gained sufficient understanding to enable me to work out my own problems, as well as to help others. It is helping me to rejoice always, since I know that God's will is good.

I am always grateful to Mrs. Eddy for her inspiring life-work, and the wise provisions made for her followers. For these blessings we can only prove our gratitude by daily striving to have more of that Mind in us "which was also in Christ Jesus."—MRS. L. N. LATIMER, Longford, Kan.

In April, 1911, I was taken with a fever, all of the usual symptoms, derangement of the bowels, high temperature, ringing in the head, and a coated tongue, being present. This state of affairs remained unchanged for about two days, when my wife said we must call in a practitioner, and she went to the lady who had helped her find freedom from a chronic stomach trouble. She saw the practitioner about nine o'clock that night, and treatment was given me. I was very thirsty and drank a good deal of ice water the first part of the night, then I went to sleep and did not wake up until morning, when the fever and other symptoms were gone and I knew I was healed, although still weak. I got up at my regular time and dressed, ate a light breakfast, and rested on a sofa in the sitting-room. After dinner, in the middle of the day, I sat up and read, and the next day I was as well as ever.

I am grateful for Christian Science, not only for the physical help it has been to me, and to my wife and children, but also for the help it has brought me in my business affairs, keeping up my courage when things looked dark, and showing me that I must eventually succeed because of right motives. I knew that I did not want a success which would injure or impoverish any one else. When I first began to read in my wife's copy of Science and Health, I said, "This is what I have been looking for all *my* life, but I did not know it was called religion." Christian Science is good and true and beautiful, and I am glad that Mrs. Eddy acquired and gave to the world this vision of Truth. I am thankful, too, for the care she has taken in safeguarding Christian Science from adulteration with the errors of the human mind.—JAMES MCCARTNEY, Mobile, Ala.

I wish to express my appreciation and love for Christian Science, in which I became interested four years ago. Through the help of a practitioner I was able to pass through three of the severest ordeals of my entire life. In the summer of 1908 my brother passed away without any warning, and without the comfort and support of Christian Science I could not have endured the trial. Three months later my husband underwent a surgical operation, and was given up by surgeons and physicians; but at the critical time, the practitioner who had helped me had the understanding to give us mentally the thought of life in God so plainly that my husband made a most wonderful recovery. During this time my father passed away, and with the sustaining power of Truth I was able to be of assistance to my mother and to do all that was required of me. I was also healed of a severe form of stomach trouble and inflammation.

My knowledge of Christian Science is increasing *daily*, and my life is made happier by it. I cheerfully and *lovingly* give this outward expression of my gratitude for the truth.

FLORENCE L. MCMILLAN, New York, N. Y.

I wish to add my testimony to the many helpful ones given by grateful people. In September, 1899, the truth as taught in Christian Science came into our home and in a few days healed my husband of appendicitis, gall-stones, and heart trouble, after the physician had said he could not live a week and possibly not until night. Four days later we both walked about two miles to church for the Wednesday evening service.

In less than three weeks I was healed of almost every ill that flesh is heir to, among these being lung trouble, female weakness, deafness, defective vision of about sixteen years' standing, rheumatism, constant distress in my head, supposedly inherited biliousness, of which I had had an attack every spring and fall since childhood. I could never remember a time when I did not feel tired, until the day when Christian Science came into our home. I opened the text-book, Science and Health, which a dear friend had loaned us, and read: "Mortal mind does the false talking, and that which affirms weariness, made that weariness" (p. 218). I was so impressed with the further thought that Mind governs the body, that I arose next morning perfectly rested, the throbbing in my head was gone, and I felt much stronger. Other ailments have never returned since this healing. We had four children at that time, and our boy, now nine years old, has never had any medicine. He was born without the restrictions usual in such conditions, as the one I had expected to help me did not get there, so I washed and dressed the child myself.

Knowing the truth has surely made us free, and divine Love has met all our needs. Our gratitude and love to God, also to our dear Leader, Mrs. Eddy, are more than words can express.

MRS. GRACE O. P. NICHOLAS, Spokane, Wash.

[Translated from the German.]

On March 13, 1911, I had an attack of heart trouble, which after a few weeks grew so serious that a second physician had to be consulted. Then rheumatism set in, and for three weeks I was laid up, being entirely paralyzed and suffering greatly. On the Thursday before Easter I heard of Christian Science through a young man, whereupon we immediately inquired for a practitioner and asked for help. The practitioner called at once, and treatment was taken up. For an hour and a half she explained to me the truth of being, with the result that from that hour the pain ceased. I improved daily, and with God's help soon was able to take up my work again.

For this wonderful healing I thank God, and I am also grateful for Christian Science. I look joyfully into the future, for I know that we all have one God, one Mind, who is our help at all times.

W. EICKHOFF, Hannover, Germany.

In 1910 I had a most serious attack of illness, complicated with throat trouble, my physician saying that it was the worst he had ever seen; and even after I became better there was a period of six months that I could not speak aloud. As I am a professional reader, this meant a great loss of time and money to me, and the fear of entirely losing my voice was very assertive in me and my family. I was preparing for a concert tour, but was afraid I should have to give it up.

I then decided to try Christian Science, and as a neighbor was a practitioner I asked her to take the case. She did so, and my throat was entirely healed in a few treatments, my voice resumed its flexibility, and the fear of ever losing it left me. Later, while on the road, I had an attack of cold with great hoarseness, and wrote at once to the Scientist for help. She received my letter on the morning mail, and by ten o'clock every trace of cold had gone and my voice was as clear as usual. I have also been treated successfully for catarrh of years' standing, continued suffering from female difficulties, besides which I am being helped to lay aside glasses which I have worn for fourteen years. I have the greatest confidence in Christian Science, and shall always be very thankful for the great help given me in treatment.

JASMINE L. PULVER, Chicago, Ill.

I feel it is time I should testify to what Christian Science has done for me. In 1903 I had my face badly burned. I used simple remedies, but got no relief. It became very painful, turned almost black, and I could not bear to have anything touch it or to be near a fire, on account of the burning sensation. I then began to take treatments in Christian Science, and in a few days the pain and burning began to leave. It had seemed to be developing in a malignant form, but all this entirely disappeared, scarcely leaving a scar. I had been afflicted with rheumatism more than thirty-five years, also with severe headaches from childhood. These had been treated by several doctors, but I did not get any relief, and there were many things I could not eat without experiencing pain. But all these ills left me after the second treatment in Christian Science. I never knew just when they left me, but they never returned.

I bought a copy of Science and Health, and I also read the Christian Science literature and studied the Lesson-Sermon daily. I had been a reader of the Bible from childhood, but never got the understanding that was satisfactory until I began to read Science and Health. The understanding I have received from the Bible and Science and Health is the greatest blessing of all. I am thankful to God for all the good that has come to me, also to dear Mrs. Eddy for this revelation of the healing truth.

MRS. A. MCNAIL, Los Angeles, Cal.

FROM OUR EXCHANGES.

[Henry Van Dyke in *Continent.*]

The kingdom of Christ is not helped, but hindered, by a multitude of hair-splitting creeds, exclusive claims, and ecclesiastical rivalries. Christians who hope to meet in heaven shut each other out from their communions and their pulpits on earth. They plant four or five poor little churches of various kinds in a town where a single good one of any kind would do better work. They count conversions and additions from each other as if they represented real gains from the world. The resources of Christianity are wasted, its modes of efficiency are hampered, its clarity and simplicity are obscured, its honor and power in the world are diminished, by "the unhappy divisions among Christians."

Where are we to look for relief from these harmful conditions? Certainly not backward to the false dream of absolute uniformity enforced by outward authority! Certainly not forward to the continuance of a policy of infinite subdivision based upon conscientious peculiarities of taste and opinion! What we want first is a closer fellowship, a freer and fuller cooperation in work and worship among the professed followers of Christ; and then a removal of the dividing walls, a coming together, first of those sister churches which are separated for reasons invisible to the naked eye; then of those kindred churches whose differences are more apparent but still of no vital importance compared with their agreements; and finally, if it may be, of the whole family of God, the visible church, consisting of "all those throughout the world that profess the true religion, together with their children."

[*British Congregationalist.*]

The phrase "divine discontent" has probably never been so abused as at the present time. It has probably never before been so exploited by charlatans. It has never been so devoid of the truest meaning, because there is so little that is divine about modern discontent. Men and women, it is true, are stretching out their arms in many directions; they are endeavoring to alter the nature of things; they are discontented with their lot; they are ambitious of material improvements. But to many of us there comes the conviction that in this stretching out of their arms the last thing they really desire is to touch the Christ, who can alone solve many of the problems afflicting us. The last thing they are looking for is to have their doubts set at rest by him. There is no merely ethical solution of grave moral problems any more than there can be a merely legal solution of grievous injustices and wrongs. There is no victory to be won for humanity, no solution to be arrived at of present-day unrest divorced from the teaching of Christ, no improvement to be gained by the mere onrush of material aims, or the interplay and collision of material forces.

[Winston Churchill in *Living Church.*]

We are on the threshold now of an age in which the message of Jesus Christ is at last to take its place in government. Our Lord preached no form of government, but he brought into the world the germ which was to change all governments. The kingdom of heaven is like unto leaven. And yet there are those who call themselves Christians, and who refuse to see that this leaven is working, that the world is continually getting to be a better and brighter place in which to live. They point out the terrible contrasts, to be seen especially in great cities, between luxury and poverty; they exclaim at the gross individualism and materialism which exist today. It never seems to occur to these persons that if we do not believe the world is growing better, that if we do not believe that individuals are being transformed in increasing numbers from the natural man into the spiritual man, we do not believe in God.

[*Zion's Herald.*]

"Study to show thyself approved unto God." Pleasing God is great business, and it cannot be accomplished as a mere incident in life's journey, or treated as the casual employment of an idle half-hour. God cannot be mocked with odds and ends of time and fragments of devotion. The King's business requireth not only haste, but also perseverance, assiduity, and detailed application and method. The Christian life is an art, or, we may say, a science, no less than a spiritual experience. A Christian man is expected not only to be good, but also to be good for something, and his efficiency in all ways will improve as time goes by, provided he makes a careful and prayerful study of all the conditions of holy and useful living, and continually takes into thoughtful account the environment that surrounds him.

[*Advance.*]

Christian civilization began with Christ, and he was from without, from above. "The Word was made flesh, and dwelt among us." He had long been foretold, but prophecy did not produce him. He came in the fulness of time, but he was not the offspring of the time in which he came. All attempts to account for him as a development of the age in which he lived or through his environment have proved significant failures. Nor has any age since that time been capable of producing him. He always is greater than the generation which contemplates him. Other great teachers have been received, followed, and outgrown, but Christ is always as much in the future as in the past. He was therefore the origin of a new civilization, and is the perpetual source of an ever-advancing civilization.

[*Biblical World.*]

Our most vital churches today are those which vibrate with human interest, where men talk and pray about the abatement of evils and the advancement of good. Men sneer at the church as a talking-place. That is its high and permanent function. It is the real "parliament of man." The church is a permanent need in human society because it is the place for talking to God and talking to men about righteousness and faith and love. Professor Swing once said: "We talk, and talk, and talk for a hundred years, and then the thing is done." Why not do it without the talking, and do it at once? Yes, why not bring the New Jerusalem down to earth at once? Things do not come that way. A few men see the ideal afar: they tell us what they see; they chide us for our blindness; more of us begin to see and talk of the vision; at last everybody sees.

[*Christian World.*]

We are only semicivilized as yet; and the worst is that we have become accustomed to it. We have too little imagination. We acquiesce in squalor, in vice, in wide-spread wretchedness—so long as we do not see it or endure it. We have no conception of what it must be to belong to a community of healthy and happy souls, where each individual life is a rich asset for the whole, where national wealth is computed not in the millions of millionaires but in the glorious sum total of a common well-being. We have not touched yet the possibilities of human joy. We shall only reach it when our neighbor's joy, the joy of the whole community to which we belong, joins itself to ours, and so increases it a thousandfold.

[*Standard.*]

Will we ever learn that it is not the intrinsic value of what we give that makes our gifts acceptable, but rather the love and friendship for which they stand? It is this multiplication of gifts and rivalry in expensive giving which have made the Yuletide season a positive hardship to many classes of people.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

Another new pamphlet has recently been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: **For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20.** For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: **Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.**

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. **Improved and enlarged in 1910.**

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883 1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE.

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy	$ .05	$ .06	$ .07
Twenty-five copies	1.00	1.15	1.50
Fifty copies	1.80	2.05	2.40
One hundred copies	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

	£	s.	d.	Marks	Francs

Make all remittances payable to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The regulations for the parcels-post provide that parcels merchandise, including farm and factory products (but not books and printed matter) of almost every description up to eleven pounds in weight and measuring as much as six feet in length and girth combined, except those calculated to do injury to the mails in transit, may be mailed at any post-office for delivery to any address in the country. Delivery will be made to the homes of people living on rural and star routes, as well as those living in cities and towns where there is delivery by carrier. Where there is at present no delivery by carrier the parcels will go to the post-office, as in the case of ordinary mail. The postage rate for the first zone—that is, within distances not exceeding fifty miles—will be five cents for the first pound and three cents for each additional pound. The rates increase for each successive one of the eight zones into which the country is divided, the maximum rate being twelve cents a pound, which will carry a parcel across the continent or even to Alaska and the Philippines. For a fee of ten cents a parcel may be insured, and if the parcel is lost in the mails an indemnity to the amount of its value, not to exceed fifty dollars, will be paid to the sender.

A definite and comprehensive water-power policy for streams upon the public domain and navigable streams not on the public domain, is urged by the secretary of the interior, Walter L. Fisher, as the most important subject pending before Congress and the country, in his annual report submitted to President Taft. Other legislation which Secretary Fisher recommends as important to the welfare of the country embodies an enlarged application of the leasing principle as applied to the public domain in general; a comprehensive leasing law for coal, oil, and other mineral lands; and laws providing for the classification of public lands according to their respective characteristics and appropriate uses, and administration in accordance therewith. Secretary Fisher also declares in favor of legislation for the development of the transportation facilities and the coal lands of Alaska, and for the withdrawal from entry of public lands in the West needed to conserve the water supply at the sources of streams.

The government lost its fight before the Supreme Court of the United States to have the anthracite coal carrying railroads and their affiliated coal companies declared to be in a general combination in violation of the Sherman antitrust law. It won a victory in getting the court to strike down the contracts whereby the railroad coal companies buy sixty-five per cent of the output of "independent" mines. Justice Lurton, in announcing the opinion, said these contracts were plainly in violation of the law. The court also held that the railroads had violated the law by attempting to shut out of the anthracite region a competitive road through their control of the Temple Iron Company.

The "concentration of money and credits," the larger phase of the House investigation of the so-called "money trust," was taken up last week by the Pujo committee. Two huge charts were placed in the record, purporting to show a mutual interest by the one hundred and eighty firm members of eighteen big New York, Chicago, and Boston financial institutions through their seven hundred and forty-six interlocking directorships in one hundred and thirty-four corporations, having total resources of capitalization of $25,325,000,000.

It is now practically certain that New York city will in the near future have a stadium which will rival the greatest in the world. If the proposed plans are carried out a structure costing ten million dollars will be erected in Riverside drive, between 119th and 120th streets. The expense will be shared by the city, Columbia University, and the Hudson-Fulton Association.

Radical changes in New Jersey's corporation laws are to be urged by Governor Wilson with a view to compel all corporations organizing there to have a dollar-for-dollar valuation behind their capital. The Governor announces that he proposes to secure this legislation before he resigns to become President of the United States.

Final terms of the agreement for New York's new three hundred-million-dollar rapid transit system have been reached by representatives of the Interborough and the Brooklyn Rapid Transit Companies, the public service commission, and the board of estimate and apportionment.

The largest force that has ever been engaged at one time on the construction of the Panama canal was working at the end of November, when 40,159 men, of whom 5,816 were American citizens, were employed. No fewer than four thousand men were engaged on the lock gates.

There are two hundred and five cities in thirty-three states which have adopted the commission form of municipal administration. These cities represent in all a combined population of nearly five million.

International.

A number of prominent manufacturers and merchants recently met at Bristol, England, with the object of establishing "a business league," similar to an organization which has been started in the Midlands with two hundred members, rapidly increasing to thirteen hundred, the majority of whom were working men. The objects of the league, stated broadly, are to separate business affairs from political considerations and to deal with the national commercial matters on lines which would commend themselves to a body of men engaged in the management of a large concern, and free from all the hundred and one pull-backs so necessarily associated with the party system.

The opening of the Lotschberg railway, which will take place in May, will provide a more direct route to Italy from western and northwestern Europe. Starting at Spiez, in the Bernese Oberland, it traverses the Bernese Alps range by means of the nine-mile Lotschberg tunnel, and proceeds along the Rhone valley to Brigue, the entrance to the Simplon tunnel. This forty-eight-mile length of railway will have been under construction for six and a half years and will have cost more than four million pounds. Electricity has been chosen as the motive power for the new mountain railway.

The Crisp group of financiers, it is stated, is prepared to forego issuing the second portion of the Chinese loan and to pay in advance the remaining ten million dollars of the twenty-five million dollars already floated, so as to enable China to meet her arrears on the Boxer indemnity Jan. 1.

It is expected that there will be opium from India valued at between forty and fifty million dollars in Shanghai within three months for which there will be practically no sale. The *Pekin Daily News* advocates disfranchising the districts wherein opium continues to be cultivated in defiance of the government's instructions.

The obstacle which threatened the peace deliberations of the plenipotentiaries of Turkey and the Balkan allies at London, because Greece, though not having signed the protocol armistice, demanded equal standing with the allies, has been removed by Constantinople's instructions to her representatives.

Industrial and Commercial.

As a step toward the solution of the problem of the high cost of living, Mayor Gaynor's market commission hopes to find some way of providing better terminal facilities for handling perishable produce. It is estimated that under the present docking system there is an annual waste of two hundred million dollars. This is demonstrated by the report of condemnations made by order of the New York board of health, showing that last year 8,500,000 pounds of fruits were destroyed, 2,500,000 pounds of vegetables, 7,000 pounds of eggs, 350,000 pounds of fish, and 95,000 pounds of miscellaneous market products. The condemnations made by the one hundred inspectors of the health department represent but a small fraction of the real waste in the markets of the city. The waste in handling eggs is estimated at ten per cent, or fifty million dollars a year, and the loss in poultry is more than twenty-five million dollars.

The Elgin Board of Trade, popularly known as the "butter trust," and the American Association of Creamery Butter Manufacturers were attacked by the federal government in a civil antitrust suit, filed at Chicago last week, for the dissolution of both concerns. Sweeping charges of conspiracy to fix arbitrarily the price of butter in the interest of big manufacturers and cold-storage concerns and to the detriment of the farmer, other small producers, and the consuming public, are made by Attorney-General Wickersham against the so-called trust. It is alleged that butter-making has drifted to the large manufacturer, the natural increase in volume of business has been curtailed, and prices to the people of the country have been enhanced, especially during the winter season, by the operations of the defendants.

To furnish motive power for additional street railway lines in southern California the Pacific Light & Power Company is bringing hydro-electric power from the Sierras to Los Angeles, a distance of two hundred and forty miles. The immediate expenditure exceeds ten million dollars and the total development contemplated involves twice that amount. Progress has been so rapid that the initial installation will be made Aug. 1 next. At that time seventy thousand horse-power will be ready for delivery over the new line—almost as much as the present aggregate capacity of the company's hydro-electric and steam plants. Ultimately the Big Creek line will furnish three hundred thousand horse-power.

The Burma rice trade has increased by nearly seventy-three per cent during the last twenty years.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

ORBITS.

M. G. KAINS, M.S.

ONE of the greatest wonders that has ever filled the human mind is the discovery, with its positive proof, that the celestial bodies move in definite, determinable paths. For us today this fact requires only the most rudimentary knowledge of astronomical laws to understand, but to the men who first worked it out it was a difficult problem. These orbits, as the paths are termed in astronomy, are relatively fixed. In them there is no interference, conflict, or collision. The planets which describe them move with a precision that compels the exclamation, "Order is heaven's first law"! Mrs. Eddy says: "Nature voices natural, spiritual law and divine Love, but human belief misinterprets nature," and to this she adds: "Suns and planets teach grand lessons" (Science and Health, p. 240).

It is easy to realize that neither satellites, stars, suns, planets, nor comets move with a power of their own, though they may seem so to do. As determined by human reckoning, they move in obedience to universal laws which have been discovered, proved, and repeatedly verified by astronomers, physicists, and other scientists until the last vestige of doubt has been destroyed. But when it is declared that the celestial bodies move in obedience to these laws, only a single step has been taken toward the much more important realization that the laws did not come into existence of themselves. There must be a more remote, a basic cause, for nothing happens: there is no such thing as chance. All phenomena are but effects, manifestations, proofs of causes understood or not. These causes may be grouped and regrouped systematically until the primal cause has been reached, just as minor laws of astronomy have been grouped by Newton in the fundamental, universal law of gravitation.

But no matter how evident the effects may be, neither an immediate effect, a local cause, nor the primal cause is tangible to human sense in the present state of our understanding; their action is apprehended solely through their phenomena. If, therefore, a phenomenon or effect is inseparable from its cause, and it is; if immediate causes are directly traceable to the primal cause; and if causes are tangible to human understanding only by their effects, in other words are themselves mental, the conclusion is unavoidable that the prime cause can only be appreciated mentally because it is Mind. What though the atheistic "natural" scientist would like to brush aside such reasoning, the stars in their courses denounce him, for "an undevout astronomer is mad." David expressed this thought in the exquisite words, "The heavens declare the glory of God; and the firmament showeth his handiwork. . . . There is no speech nor language, where their voice is not heard." So true is this that we can readily agree with the psalmist in saying that the understanding of the law which governs God's ideas is more to be desired "than gold, yea, than much fine gold."

Perhaps the most striking fact in conjunction with the motions of the various celestial bodies is that the orbits are definitely fixed, that there are no deflections from the prescribed paths, no interferences or conflicts with the positions or the paths of the others. Each asteroid, satellite, planet, sun, and star, from the most insignificant to the most stupendous, has its own place, its own path, its own part to perform in the universal work in praise of the creator. Could we but look out into space and see the planets of our solar system whirling around our sun, and the stars in thousands of other systems also whirling around their respective suns, we would be still more filled with awe and adoration because of the perfection of their harmonious activity, and we could the more reverently exclaim with the psalmist: "When I consider thy heavens, the work of thy fingers, the moon and the stars, which thou hast ordained: what is man, that thou art mindful of him? and the son of man, that thou visitest him?"

The appreciation of the power and perfection of God's laws is one of the keenest pleasures that humanity can experience. We may in a small way grasp the significance of the laws relating to planetary orbits, and yet never have thought of our own paths as governed or even governable by laws equally potent. We may have recognized the fact that each of the celestial bodies has its own place, its own path, and its own work in harmony with all the other members of a system and of the whole universe, but we may never have applied the same thoughts to ourselves either with respect to our daily paths, our immediate associates, our contemporaries, or mankind in general; that is as a whole, without respect to time or place. Yet such is the fact: whether we recognize it or not, our paths are governed by the laws of thought. Not only in such simple matters as mere walking, but in the complex process of life development, do these laws hold good. Not only as a man "thinketh in his heart, so is he," but as he thinketh so shall his steps be guided.

Every one will concede that thinking must precede activity of any kind, but may not be ready to concede that such activity can be or even may be in perfect harmony with the activities of others. This is because he considers himself and other people as self-governed. It is true that if a man's thoughts are dominated by the belief that he, his plans, his activities, will be in conflict with those of other people, or that he will encounter innumerable obstacles even in such a simple thing as walking from place to place, he will surely have a surfeit of just the kind of opposition and obstacles as he plans upon meeting. And the most remarkable thing, perhaps, in conjunction with this, is that the more such belief gains dominance the more will opposition and obstacles obtrude themselves and present apparent proof that the belief is true. In other words, the belief will increase in power, or become a law to the believer, in proportion to the tenacity with which it is held and the volume of phenomena that appear to support and encourage it. On the other hand, when the basic law is recognized that God's universe and all contained therein exists and progresses in perfect harmony, the obstacles disappear in proportion to the understanding that in reality there are none, and the necessary demonstration of the truth of this fact.

An illustration will perhaps not be amiss. A man whose business took him on foot a great deal among the crowded streets of a large city was constantly harassed, impeded, and annoyed by people walking in the opposite direction or crossing his path, and by the thousand and one other obstructions only too well known to foot passengers in cities. About this time his thought underwent a change. He began to see people and things in a different light when he started to prove to himself, in small ways at first, the truth of being as taught in Christian Science. From having been an agnostic he began to recognize God's law as supreme, and every creature and thing of God's creation as governed by the one Mind, not in conflict, but in perfect harmony with every other creature and thing. The proof of this thought lay in the fact that so long as he held himself and those with whom he came in contact to be governed by the one Mind, he was not only able to avoid conflict and opposition, but he was able to move with far greater facility from place to place even in the presence of crowds; not only so, but this facility was without discomfort or inconvenience to others and with perfect safety to all. Occasionally, even after becoming somewhat conversant with this rule of orbits, the converse proposition would present itself, and forgetting temporarily that every creature of God is in its own place and doing its own work, or perhaps while walking with some one, he would come in conflict with others. But an awakening to and an application of the rule that "the spiritual reality is the scientific fact in all things" (Science and Health, p. 207) invariably brought order out of chaos, prevented further inconvenience to himself and others, and proved, often with startling suddenness, how valuable even a slight understanding of this rule really is.

This instance, as illustrative of the general law, indicates much more important applications than to mere walking in a public thoroughfare. As already hinted, it applies to everything in human experience. If one really knows that God's law is the only law, he can view with composure his own orbit, even though it must lead him through (but also beyond) experiences that might startle or appal one less fortunately informed. With his understanding of God's unchanging law he need not be afraid "for the terror by night; nor for the arrow that flieth by day; nor for the pestilence that walketh in darkness; nor for the destruction that wasteth at noonday," because none of these things are of God and because the protection of divine Love is continuous even through the profundity of mortal illusions. He can feel perfectly safe in the midst of apparent peril, and he "wisely shapes his course, and is honest and consistent in following the leadings of divine Mind" (Science and Health, p. 458).

Thanks to Mrs. Eddy's labors, mankind have been enabled to prove in ever-enlarging degree the laws of thought as relating to orbits, especially with respect to the healing of disease—the establishment of harmony due to rectification of mental paths. Thanks to her researches, mankind have now a guide to the understanding which Jesus had, and which enabled him to hold his place in his own orbit even though the path led him to and also through the crowd of enemies who would have stoned him; and to and through the experiences of Gethsemane, Golgotha, Calvary, and the sepulcher. His orbit, he proved for humanity's instruction, extended beyond these tests of his understanding, and his course serves as an inspiration and encouragement to all who strive to follow him. These experiences on his part are only proofs of more advanced problems than those which may at present confront us; but the fact that we can prove the minor ones, or stepping-stones, such as those instanced, should be full of hope for each and every earnest Christian Scientist, because, as Mrs. Eddy assures us, "every trial of our faith in God makes us stronger. The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love" (Science and Health, p. 410).

A TRIBUTE.

JANET T. COLMAN.

On page 24 of "Miscellaneous Writings" we find our beloved Leader's testimony of her healing. She quotes from St. Paul: "For to be carnally minded is death; but to be spiritually minded is life and peace." She then says, "This knowledge came to me in an hour of great need; and I give it to you as death-bed testimony to the day-star that dawned on the night of material sense. This knowledge is practical, for it wrought my immediate recovery from an injury caused by an accident, and pronounced fatal by the physicians. On the third day thereafter, I called for my Bible, and opened it at Matthew ix. 2. As I read, the healing *Truth dawned* upon my sense; and the result was that I rose, dressed myself, and ever after was in better health than I had before enjoyed."

As I recently read the above testimony, I longed to be able to reflect even in a small measure the glorious light which flooded our Leader's thought at that time, and which enabled her to rise from her bed of sickness entirely healed, after the physicians had pronounced otherwise. The words which she quotes from Christ Jesus and from Paul are sounding in our ears today, and we may well ask ourselves if we are heeding this voice. If we are, we shall be blessed also. When hard pressed by the opponents of Truth, the Master said: "Verily, verily, I say unto you, The hour is coming, and now is, when the dead shall hear the voice of the Son of God: and they that hear shall live." Our Leader's ears were quick to hear, for she heard the voice and lived.

In 1883 I took my first lessons in Christian Science from Mrs. Eddy, and I can truly testify that she found life and peace in being spiritually minded, and that she daily demonstrated the truth of this statement by St. Paul in all the years that I knew her. Jesus' words had fallen upon an ear quick to hear the voice of Truth; her heart responded to the sense of man's divine relationship which had been revealed to her, and the weight of the world's belief in the reality of matter and of evil was lifted from her thought, as she gained the understanding of man's sonship with the Father. Thus it was that she arose and claimed man's divine birthright of freedom. Nothing had power to hold her back; she was divinely free, and her life from that time forth was one of selflessness and faithful ministration in helping others out of the darkness of material sense which held them in bondage, into the atmosphere of Soul, ablaze with the wondrous light of divine Love, which casteth out all fear.

On page 377 of Science and Health Mrs. Eddy tells us to "rejoice always in ever-present Love." In Jesus' sermon on the mount we read: "Rejoice, and be exceeding glad: for great is your reward in heaven." Our Leader's reward was great in heaven, which she has explained as being the reign of harmony in human consciousness. In reading the sermon on the mount we see how plain Christian Science has made the teachings of Christ Jesus, and Mrs. Eddy left us a glorious example in proof that his teachings can be lived and demonstrated here and now, not merely in words but in deed and in truth. Like the mighty waves of the sea, there has come to our age a tidal wave of love, sweeping before it all that is not of God. Following this manifestation of Truth, the golden rule will be exemplified in human lives, in our dealings with one another; and this blessing is but one of the rich fruits of our Leader's holy labor for all mankind, whether friends or foes.

The world is waking to see a little of her faithfulness, and her work goes on through our inspired text-book, "Science and Health with Key to the Scriptures," which is explaining the theology of Jesus, what it has done, and what it will do for all mankind. And so I say from the heart, "Praise God, from whom all blessings flow," for giving us our beloved Leader and all the blessings which have come to us through her understanding of God as the only Life

Digitized by Google

of man. This understanding has added about thirty years to my own earth life, as well as innumerable other blessings; but among them all I value the most that which she taught me concerning God, namely, that He is, and that this truth can be demonstrated in the healing of sickness and the overcoming of sin. Her last words to us, "God is my life," show her lasting fidelity to Life, Truth, and Love.

"WHAT THINK YE OF CHRIST?"

ALICE SANBORN BROWN.

A COMMON misunderstanding in regard to the teachings of Christian Science, and one which its students are often called upon to correct, is with regard to Christ Jesus as a Saviour. That Christian Scientists believe in him is attested by their works, but they are willing to admit that they do not worship the flesh, not even that of the man Jesus. According to his own word, "it is the spirit that quickeneth; the flesh profiteth nothing."

We read in Numbers, that when the children of Israel suffered by the bites of serpents in the wilderness, Moses made a serpent of brass and placed it upon a standard, and it came to pass that when a serpent had bitten any man, if he looked upon the serpent of brass he lived. But we are told that when Hezekiah came to the throne of Judah he "brake in pieces the brazen serpent that Moses had made: for unto those days the children of Israel did burn incense to it: and he called it Nehushtan [a piece of brass]." Christ Jesus referred to this brazen serpent as a type of human selfhood, saying, "As Moses lifted up the serpent in the wilderness, even so must the Son of man be lifted up: that whosoever believeth in him should not perish, but have eternal life." The time has come when belief in the flesh must give place to the divine idea, even as when Hezekiah broke the brazen serpent. Jesus' body on the cross was simply flesh and blood, yet it typified "the Lamb slain from the foundation of the world."

When Jesus was crucified, the veil of the temple was rent in twain from the top to the bottom, disclosing the "holy of holies" (where the high priest alone was allowed to enter), revealing to the world the very presence of God, as it were. The writer to the Hebrews makes it plain that the veil typified Jesus' flesh: "Having therefore, brethren, boldness to enter into the holiest by the blood of Jesus, by a new and living way, which he hath consecrated for us, through the veil, that is to say, his flesh; . . . let us draw near with a true heart in full assurance of faith." The rending of the veil of the flesh, *i. e.*, the destroying of the belief that flesh contains life in and of itself, by Jesus' overcoming of death and resurrection from the grave, therefore opened up the way of salvation or entrance into the "holy of holies." In other words, humanity was by that act brought face to face with Spirit as the only Life and power, and there, at that most hallowed hour in all history, "the light of the world" was revealed, "the way" appeared, "the truth" that makes free was demonstrated; and there, best of all, divine Love stood forth unveiled.

But, as "flesh and blood cannot inherit the kingdom of God," the belief in Jesus' human personality, as possessing vital power to save men, has long obscured the true meaning of the Christ. The prophecy of Isaiah is, however, being fulfilled, that "he will destroy . . . the veil that is spread over all nations," *i.e.*, the sense of man as corporeal and mortal. No one who has given her writings any thorough study can deny that through Mrs. Eddy's teachings the fulfilment of this prophecy is being hastened. The divine idea may be manifested through the flesh, but rather in spite of it than by means of it, as the light of the sun is revealed through a window-pane, but better still where no glass whatever intervenes. "Now," says Paul, "we see through a glass, darkly; but then face to face." God never enters into the flesh, or matter, nor did He need to make a human form as an instrument for His use and endow it with power; but mortals could not behold the spiritual idea, hence their blindness to the true mission of the Saviour. Christian Scientists have neither a material God nor one who is the author of materiality, but they do strive to be able to say with Paul, "Henceforth know we no man after the flesh: yea, though we have known Christ after the flesh, yet now henceforth know we him no more." At the same time they, no less than other followers of Christ, join in the exalted strain of the virgin mother, "My soul doth magnify the Lord, and my spirit hath rejoiced in God my Saviour."

Another question which is generally put to the Christian Scientist by the so-called orthodox believer is this: "But what about the atonement?" to which it may be answered that we believe in the atonement through Christ, the at-one-ment of the spiritual man with God, Spirit, his creator. Mrs. Eddy speaks of Christ as "the divine manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, p. 583). Man, made in God's image, has always been at-one with his Maker, but we must prove it to be so if we would experience salvation. The Christ declares: "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." This door, or barrier, which must be opened willingly on our part, is the carnal or fleshly mind which believes that the fleshly body, a thing apart from Spirit, is man. When this door is opened, one has proven what was true from the beginning, namely, man's at-one-ment with God. He has begun to work out his salvation. Then, indeed, he can realize the truth of Paul's words: "If Christ be in you, the body is dead because of sin; but the Spirit is life because of righteousness." Christ Jesus is our atonement in that, being sent of God, he exemplified the power of Truth for all mankind; but he did not do our work for us.

All Christians say they have accepted Christ as their Saviour, and they proceed to try to be more like Jesus in striving to purify thought; and this is right. But many have failed to note that mortality must be swallowed up in immortality, the mind which governs us must be the Mind "which was also in Christ Jesus." He had a body over which he had dominion. He was able to walk on the water, and to raise up his body when evil had done its utmost in crucifying it. So Christian Scientists go about preaching the full gospel, the good news of salvation from both sickness and sin. There are, however, some today, like those whom Isaiah found in his day, and Jesus quoted Isaiah to express himself concerning them,—people whose "heart is waxed gross, and their ears are dull of hearing, and their eyes they have closed; lest at any time they should see with their eyes, and hear with their ears, and should understand with their heart, and should be converted, and I [divine Truth] should heal them." The Christ-message is the Word sent from God to the world, of which it is written, "It shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it."

A UNIVERSAL VIEW-POINT.

E. TRENT TALIAFERRO.

FOR some time after the *Monitor* first came into our home, we read the head-lines, an occasional article, and then turned to the special article on the Home Forum page, as with our regular Science reading, the daily papers, and the weekly and monthly magazines which had already become established with us, there seemed to be no time for a thorough perusal of another paper.

Nevertheless, the *Monitor* made a strong appeal to us from the beginning. The clear type, attractive illustrations, and comprehensive head-lines bespoke the intelligence and system which characterized all the Christian Science publications; but we failed at that time to grasp the wonderful

Digitized by Google

resources of the paper. Gradually it presented to us more and more subject-matter, delightfully told and especially applicable to the lines of thought we were pursuing, until there came a time when the paper as a whole had established itself in the home, and we were glad to give to it the first place in our general reading.

Today we lay down the *Monitor*, after a thorough perusal of its pages, with an increasing sense of gratitude and mental refreshment. We have indeed encircled the globe with such a non-partizan, impersonal sense that we begin to realize more fully the bond of brotherhood which unites us with every nation, whether it be in the governmental, civic, or social conditions set forth. As we go about our daily affairs, we find that through our reading we have stored up knowledge from time to time which we are able to utilize in the most unexpected ways. For instance: recently it has been our pleasure to study the development of the modern movement in the drama, and from no other source have we gained such a universal view-point. Nowhere have we seen the question of woman's position in the world today so clearly defined and so ethically set forth.

There never seems to be a time when some special need is not met, both for ourselves and others to whom we pass along the paper, by a careful reading of the articles on the Home Forum page, and we are indeed grateful for them. We are grateful for the awakening in the present age that has made it possible to publish and circulate throughout the world a paper which will continue to bless and uplift humanity.

PAIN OVERCOME.

IGERNA B. J. SOLLAS.

A RECENT author, who is gifted above the ordinary with the vision of faith, points out the difficulty we experience in speaking freely of those things about which we feel most deeply, while "at the same time it is the deepest feeling which most persistently urges to self-expression." One of the subjects upon which this author feels deeply is the religious value of pain. Though she writes of it with gentleness and reverence as well as conviction, she conceives the teaching of Christian Science to be at variance with the truth, and her initial statement is that one root gives rise to the attitude of the Christian Scientist on the one hand, and on the other to that of the modern unbeliever, who claims that since pain is an undeniable fact, the God of Christian faith cannot exist. This root is "the assumption that pain ought not to exist."

Christian Science teaches that pain exists only as a phenomenon of false human belief, and from this standpoint Mrs. Eddy writes in Science and Health that "divine Science reveals the necessity of sufficient suffering, . . . to quench the love of sin;" also that "Science removes the penalty only by first removing the sin which incurs the penalty" (pp. 36, 40). These are only two of very many quotations which might be given in illustration of the teaching of Christian Science. Mrs. Eddy shows consistently in all her writings that in human experience suffering is the inevitable outcome of sin and of false concepts of God and man. No one is more emphatic than she in teaching that none but the sinner can pay the price of sin. She shows how Truth destroys sin and false concepts, and that with the appearing of right sense pain must vanish; but if any one should surmise that the path is made too easy for Christian Scientists, he will do well to read this passage: "In proportion to a man's spiritual progress, he will indeed drink of our Master's cup, and be baptized with his baptism! be purified as by fire,—the fires of suffering; then hath he part in Love's atonement, for 'whom the Lord loveth He chasteneth.' Then shall he also reign with him: he shall rise to know that there is no sin, that there is no suffering; since all that is *real* is *right*" (Miscellaneous Writings, p. 124).

Rejecting equally the view of the unbelieving and that which they suppose Christian Scientists hold, religious critics are accustomed to say that the right way to meet pain is to exercise courage and patience, to strive to attain self-mastery, to rise above our pain, and to be ready to rejoice in tribulation, regarding it as concealing blessings. "The whole value of suffering," they say, "is in the effect of its right endurance." Now suffering loses none of its educative value to the Christian Scientist who may need its rebuke. He too requires courage and endurance to meet suffering. To realize while in pain that this pain is unreal and is no part of God's plan, and to realize it so clearly that the pain vanishes; to resist the temptation to self-pity and the temptation to seek consolation in the pity of friends,—these exercises indeed mean self-mastery.

To rejoice in tribulations as opportunities of demonstrating the power of Truth, rather than as obstacles to progress, is a lesson early taught the student of Christian Science, but his rejoicing must be of the kind that banishes the troubles as unreal. And if he fails at first, he must patiently persevere and with humility acknowledge the failure as due to his own shortcomings. Possibly a critic might object that the Christianly scientific ideal is to annul all suffering instantaneously, and this would leave no room for endurance. But his statement would be incomplete, for the ideal is to destroy suffering by removing the false beliefs which cause it, in fact by renewing the mind. Must not that be the right endurance of suffering which knows no impatience as long as the error causing the suffering is uncorrected, but which by its very nature shortens this period?

By what means shall we benefit most in rising superior to pain, by dwelling on the love of the unknown God who for some mysterious reason is supposed to wish us to suffer, or by dwelling on the love of God who is incapable of knowing discord, whom to know aright, Jesus declared, *is life eternal*, but alienation from whom is the cause *of all our pain*? St. John heard a "great voice out of heaven" which said that God will dwell with men, that He will wipe away all tears from their eyes; that there shall be neither sorrow nor crying, "neither shall there be any more pain: for the former things are passed away;" and Christian Science constantly directs thought to this divine message, with all that it implies.

[Written for the *Sentinel*.]

INWARD JOURNEYING.

RALPH CROSMAN.

BEGONE, ye tinseled treasures
That fade in morning's light!
Pass on, ye paltry pleasures
Of days that die at night.
He gives, the great good Giver,
The day that dieth never,
The day no dark can sever,
The life that knows no blight.

Into that deathless dawning
He leads all weary feet—
Far in where all is morning,
Leads on to life complete—
Leads on to inward glory
Where love's low offertory
Sings o'er and o'er the story
The wearied heart finds sweet;

From height to height leads onward
Across the kingdom's bourn,
Leads where no paths lead sinward
Nor senses are that mourn.
There, deep in Love's deep silence,
Where God is all reliance
And Christ the only Science,
The earth sense ends—outworn!

SELECTED ARTICLES.

[Frederick Dixon in *Devon Daily Gazette*, Exeter, England.]

The writer, in a recent issue, who terms himself "Plain Peter," thinks that Science and Christianity are antithetical. They are like oil and water, he says: you cannot mix them. This is a little hard on all the great Christian thinkers, on men like Archbishop Anselm, the first of the Realists, and Bishop Berkeley, the father of modern idealism, and, finally, that great scholar of our own time, the Bishop of Durham, who insisted on the scientific requirement of the fourth gospel. Then there was the greatest of the medieval thinkers, Doctor Angelicus, Thomas Aquinas *himself*, declaring that the only absolute science was theologia, the Word of God, to say nothing of Kepler, who wrote the famous letter to the Princess of Wales, and that other mighty German, Adolf Harnack, who wrote, only a year or two ago, that the evangelist Luke left the practise of orthodox medicine, and came to Jesus to learn how he might heal spiritually, by means of "Christian Science." This critic would away with these men. "Ichabod" is, presumably, the word he would address to them. Has he not weighed them in the balance, and found them wanting?

Peter the apostle is perhaps the greatest offender of all. It was he who adorned the epistles with the memorable phrase commonly translated "knowledge of God," but which should be translated full, exact, or scientific knowledge of God. Think of it, scientific knowledge of God! Peter, be it said, does not offend alone. That learned Pharisee, Paul, uses the word quite freely, as do Matthew, the author of Hebrews, and the author of Acts. Then there is John, who draws the famous distinction between "the truth" and "truth," the absolute and scientific and the merely relative; and finally Luke, though perhaps the blame in his case is that of the last of the great schoolmen, Wyclif. It is Wyclif who is guilty of the translation "to show science and health unto his people." It will be remembered that Science and Health is the name of Mrs. Eddy's book. Evidently, all these great thinkers were less in sympathy with "Plain Peter" than with the famous writer who said, "If Science is not Christian, and if Christianity is not scientific, one or the other is unnecessary." What on earth our critic finds unchristian in science it would be interesting to learn. Huxley once defined science as the answer a man makes to the question "What do I know?" Christian Science, then, would be the answer made to the question, "What do I know of the Christ?" To be scientific, that answer would have to be demonstrated. That, indeed, was the demand of Jesus, when he said, "He that believeth on me, the works that I do shall he do also." In those words, Jesus made the demonstration of truth the test of a man's Christianity. "Ye shall know the truth," he said, "and the truth shall make you free." This knowledge of the absolute is necessarily an absolute knowledge. Could any knowledge be more scientific?

A brilliant churchman, discussing this very passage, wrote that in the Greek of the fourth gospel "the truth" always stood for absolute truth, and that the knowledge of this was the knowledge of the actual, or that which is. Now, if Christianity is the truth, it is the absolute truth, and it is, therefore, absolute Science, and the knowledge of this Science is the most scientific knowledge which exists actually, or which is. The critic has, it is to be feared, embarked on a course of reasoning after the manner of those plain common-sense philosophers of whom Huxley wrote, that they proved matter to be real by stamping on it, or some such irrelevant proceeding. Huxley's definition of science is not one a Christian Scientist would care to endorse. It is far too limited. He would turn rather to the epistles of Peter, and define it as exact knowledge of God. He would, however, also insist that scientific knowledge can, and must, be demonstrated, as it was demonstrated by Jesus of Nazareth in his miracles or object-lessons. The world to which Jesus came rebelled against the Science of his gospel, the truth, the knowledge of which was to free it. He silenced it in the most scientific way, by demonstration. If, he said, you cannot believe for the words' sake, you must believe for the very works' sake.

The Science of Christianity vanished with the primitive church. For centuries men preached the gospel, but not with "signs following." They endeavored to part the seamless garment by separating the healing of sickness from the healing of sin, though Jesus had himself demanded, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" It was against this Mrs. Eddy raised her voice. Preach the gospel, she said to her followers, and heal the sick; that is the divine command. It was thus the scientific knowledge of God was once more preached to mankind, and as in the first century, with "signs following."

["Americus Veritatis" in *Blackburn* (England) *Times*.]

Perhaps you will allow one who is not a member of the Christian Science body, but who has occasionally attended their services in Blackburn, to give a brief account of his impressions and experiences. I had never met a Christian Scientist until the first evening I walked into their hall, which was formerly Blacklock's gymnasium, on the Preston New-road.

The air of restfulness and quietude which pervaded the room I found, I must say, very gratifying, and I was favorably impressed with the decorum of the service, as well as with the devout and reverent demeanor of the worshipers. But I believe what struck me most of all was the terms of friendship on which the members of the congregation seemed to be with one another. After the service was over they did not immediately rise *en masse* and rush out of the building, as I have seen done elsewhere. No; they exchanged greetings, and chatted together for quite a long time. I am aware, of course, that "all is not gold that glitters," and that professions of friendship cannot always be taken at their face value; but, however that may be, the members of the congregation seemed to be really on terms of cordial friendship with one another.

Several rose and gave testimony of the cures which had been effected in their own persons through the agency of Christian Science. Its gospel of the triumph of good over evil—indeed, I understand, it asserts there is no reality in evil—is certainly very cheering; and under the head of evil it includes sin, disease, and death. So closely are the mental and the physical interwoven in our human nature that, as is well known, the power of mind over the body is very great; and this power has the effect of intensifying or alleviating our sufferings. Some of our complaints have their origin in, and all of them are rendered worse by, our own gloomy and despondent feelings. But no Christian Scientist can be of such a disposition, so he would escape calamities to which others are liable. He has absolute faith in the power of Truth to triumph over sin, and over sickness, which is often the result of sin; therefore he looks to the future with hope.

Hope is described by Milton in one of the noblest of his sonnets as a "hovering angel girt with golden wings." This is what Christian Science does for people. It introduces into their lives hope and joy. It gives them courage to face the world, confident that in the end they will triumph over all difficulties. I am glad, then, that I have become acquainted with the basic truths of Christian Science; that I have met the Christian Scientists, and that I have attended their services. Although not belonging to the body, I see no reason why I should not, as in fact I do, apply the teachings of Christian Science to some of the problems of my own life. I wish well to the movement. Its charity toward all men is a notable and honorable characteristic of it. I believe it is capable of doing good to mankind, and so far as it attains that end I heartily wish it success.

[Willis D. McKinstry in *Wichita* (Kan.) *Beacon.*]

Christian Science is a demonstrable religion. Its activities are upon a divine basis, they are purely spiritual, and can in no way be confounded with the practise of medicine. The teachings of Jesus repudiate the use of any material remedy. In healing, God, divine Mind, is recognized as the only power, and Christian Scientists adhere strictly to the first commandment, thereby honoring God above all else. Christian Science also repudiates any false mental action such as mesmerism or hypnotism. Christian Scientists employ the same method that Jesus did in healing the sick, and their work is done in confirmation of his injunction to them that believe: "The works that I do, shall he do also."

Christian Scientists never have asked, nor are they now asking, that any law be enacted to uphold their practise. Believing that a tree is known by its fruit, they are willing to be judged by their work. They only desire that their right to do the will of God be not infringed upon. Medical freedom does not mean the right or freedom to practise medicine, but that the individual in case of sickness be free to have the practitioner of his choice. Christian Scientists believe it to be fundamentally right that those in need of help may go to those who they believe will render them the most effective help, whether it be to the allopath, the Christian Scientist, or a practitioner of any other system of healing.

Christian Scientists are not opposing such laws as provide for pure food, pure drugs, pure water, pure air, sanitation, and reasonable quarantine regulations; neither have they any quarrel with the physicians, many of whom are broad-minded and conscientious in their endeavors to help suffering humanity; but they do oppose the endeavors of certain political workers in the medical profession to secure legislation in the interest of one school of medicine as against all other systems of healing.

[E. M. Ramsay in *Dundee* (Scotland) *Advertiser.*]

A recent issue contains a paragraph entitled "Mental Healing," in which psychotherapy and Christian Science are spoken of as nearly related to one another. As a fact, they are as far apart as any two systems can be. Psychotherapy believes in the reality of matter, believes disease to be primarily a condition of matter, and proceeds to cure the ill man by persuading him that he is well. This position seems to us eminently unsatisfactory and unscientific. Now your correspondent also believes that organic disease originates in a poisonous material germ, and he is convinced that this cannot be removed by purely mental means, though he recognizes that there are cases where the mental condition of the patient must be taken into account. He sees the evil effects produced on the sick by foreboding thoughts, by the dread of developments, and he is aware that the more a man knows about disease the harder it is for him to get free from it. Yet the investigation of material causes and conditions he considers essential to the eradication of disease. How is he to escape from this dilemma?

The position of Christian Science is entirely different. It holds that the essential nature of man is spiritual, not material; that disease always originates in an unhealthy mental condition, and it applies itself scientifically to uncover the mistaken thoughts which caused the disease, and to heal them. It deals with the mental condition of the patient first and last, because it maintains that the disease is wholly of mental procurement. How then does it proceed? How does it propose to get rid of unhealthy thoughts? It maintains that the cause of all sin, all disease, and all mistakes, originates in the false sense of God, and separation from Him. The Bible defines God as good, Spirit, Life, Truth, Love, as infinite, ever present, and eternal. If this definition be accepted as correct, it will at once be seen that the sense of separation from God is a false sense, since it is self-evident that we cannot be separated from the infinite and ever present. Thus the primary cause of the disease is an unreality, a false sense, and the only scientific way in which a false sense can be got rid of is by the substitution of the true sense, the sense of man's unity with God. This can be accomplished only by the method which our Saviour taught, by a scientific understanding of his teachings, by Christian Science.

As the sense of unity with good takes possession of a man, it separates him from his belief in evil as a pleasure, power, or necessity; as the sense of unity with Life and Love grows on him, it separates him from the fear of disease and death, and so restores him to health. In every part of the world today so-called organic and incurable diseases are being healed by this power of Truth, but these facts are only apparent to those who approach them in an unbiased and scientific spirit. The impossible never happens. If disease is cured by Christian Science, then disease is of mental origin, however surprising this may appear to be.

[W. J. Tucker in *Roanoke* (Va.) *News.*]

If the reverend gentleman, our critic, had made even a fair investigation of Christian Science, he would see that it is the exact opposite of hypnotism, *alias* malicious animal magnetism, and that it has no more relationship or likeness to it than the wonders wrought by Moses had to the necromancy of the magicians. Indeed, the works of Moses and the prophets, of Jesus and his disciples, were based on the same truth that is proclaimed today by Christian Science, and they were performed according to the same Principle and its laws as are the wonderful works of healing now being wrought by Christian Science; while the magic and deceptions of the soothsayers and magicians, denounced by the Mosaic law and by Jesus, were but phases of the evil practise which today is called hypnotism or animal magnetism, the supposed control of one human mind over others.

Jesus' discourse on this subject, recorded in the twelfth chapter of Matthew, twenty-fourth to thirty-third verses inclusive, is very instructive. He likens the use of hypnotism to cast out devils to a house divided against itself; that is, the source of evil cannot produce good. "Either make the tree good, and his fruit good; or else make the tree corrupt, and his fruit corrupt: for the tree is known by his fruit." Having shown the inconsistency of the use of hypnotism, he said, "But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you." This is the Christian Science method, the only effect of which is to bless mankind, never to injure; healing sickness and sin through the truth which Jesus said "shall make you free."

[A. Cope Stone in *West Australian*, Perth, Australia.]

Our critic states that the "Christian religion was built upon Christ," and leads his hearers to believe that Christian Science rejects the teaching of Christ, whereas every student of Christian Science accepts Christ as "the way, the truth, and the life." Jesus said: "God is a Spirit, and they that worship him must worship him in spirit and in truth." Christian Science is a system consistently deduced from a given premise, which premise is the definition of God as Spirit. From this premise Mrs. Eddy has drawn all her conclusions: they are logical, consistent, and demonstrable, and coincide in every respect with the words and works of our Master. There are today unnumbered thousands who have been raised from beds of suffering after having exhausted all medical skill, and who have turned to Christian Science in their last extremity and have found it to be a system which proves its faith by its works.

Our critic asserts that this teaching is "neither Christian nor Science." Webster defines science thus: "Accumulated and accepted knowledge which has been systematized and formulated with reference to the discovery of general truths or the operation of general laws." Of religion he says, "Religion (as distinguished from theology) is subjective, desig-

Digitized by Google

nating the feelings and acts of men which relate to God." Now, the name Christian Science indicates exactly what it expresses—the Science (or knowledge) of Christianity; it is called Christian because it is the Christ-teaching and shows men how to have the Mind that was in Christ Jesus. It is Science because it is based on divine law, is logical, practical, and applicable to all life's problems. Those having an understanding of the divine Principle of Christian Science can demonstrate with scientific certainty that "with God all things are possible."

Christian Science includes the whole of Christianity. Jesus said: "Ye shall know the truth, and the truth shall make you free." The life of our Master proved conclusively that the healing of the sick and the reformation of the sinner were accomplished by this understanding of the truth which frees from all error. Christian Science is not "New-Thoughtism," not a "little pettifogging creed," but the religion taught and practised by Jesus on the hills of Judea and the shores of Galilee, and until our critic fulfils the command of our Master to "heal the sick" as well as "preach the gospel," it would be well for him to heed the Scriptural injunction to "judge righteous judgment."

Christian Scientists have not been "duped" by Mrs. Eddy; they have found in her teaching a practical explanation of the Bible, and have proved by results that Christian Science complies with the test of Christianity demanded by Jesus. Mrs. Eddy's published works have done more to alleviate suffering than any other system known; she lived a life absolutely consecrated to God and mankind; she discouraged personal homage, her one desire being to lift the sinner and sufferer out of the bondage of sin and sickness into the glorious liberty of the children of God.

["Invicta" in *The Reporter*, Box Hill, Australia.]

You are to be commended for the very fine report published in your columns of the lecture recently delivered in the Melbourne town hall on Christian Science. I was present at the lecture, and feel very much gratified at the fact that the truths enunciated reach through your columns so many persons other than those who actually heard them. I would like with your permission to say that I, as a local preacher in the Methodist church, had for many years felt that the healing power of the Christ should still be manifest as it was in the days of Jesus on earth. This phase of our Lord's instruction to his disciples has, however, been allowed to remain dormant, and the gift of healing practically to lapse through desuetude. Undoubtedly God's love and power have ever been the same, for is He not "the same yesterday, and today, and forever"? and His willingness to bless the children of men has never been impaired. As we heard at the lecture, the normal state of man is really that of health and harmony, for God is [the source of] health and is Love, and those made in His image and likeness must of a truth reflect these attributes. Permit me to say, that in opening your columns to the proper discussion of truth you are doing a good and useful work.

["A Peripatetic" in *Yorkshire Post*, Leeds, England.]

The testimony meeting was crowded, and every seat in First Church of Christ, Scientist, Cavendish road, Leeds, was occupied. Curiously enough, the women did not outnumber the men to any great extent, and all appeared equally absorbed. There was nothing hysterical or emotional about those who had gathered together to testify to the benefits they had derived from the study of Christian Science; rather they all spoke with a quiet, earnest sincerity that appeared to carry conviction to the congregation. As one speaker put it, "On the subject one feels deepest, one can say the least." And that marked the tone of all who stood up to relate their personal experiences. They did not rant or rave, or strive to heighten an effect by a flight of oratory, or use a text as a tag, but each told a plain unvarnished tale, a tale that always had a happy ending. Even as I pondered over this, another speaker rose to give testimony. She had, it appeared, been cured of some malady by reading the literature of Christian Science. Her husband had been so impressed that he, too, had "read, marked, and inwardly digested," with the result that their material wants had become more assured. In other words, the luck had changed; Christian Science had spelt success.

Then, something that I could have only noticed in a subconscious manner, became vivid as a flash of lightning in the night. Why, of course, that was why the place differed in some subtle way from the meeting-places of other denominations. True, the church was decorated in the simple, severe manner of many mission halls, but yet there was something about it that suggested comparative affluence. The congregation, they also, wore a quietly prosperous air. It was not that they were fashionably dressed, rather that they were well groomed—the men especially so; middle-aged gentlemen who had evidently determined not to "let themselves go," and had kept Father Time under during the second round. As the speakers gave their experiences, I noticed with surprise how young they looked after, as some would express it, "all they had gone through." They had evidently reached a place of placid waters, and their faces reflected the calm.

[Editorial in *Pawtucket* (R. I.) *Chronicle*.]

Speaking of disease, here is another deplorable confession from no less an authority than the *Medical Record*. In spite of the army of physicians, their discoveries, and their hecatombs of vivisected guinea-pigs, we may doubt, says the *Medical Record*, whether the sum total of diseases is any less than it was before the medical profession reached its present high standing. Preventive medicine has made "little headway," and "in the opinion of some medical men diseases are on the increase." In the deeper recesses of our consciousness we had suspected something of the kind ourselves, but such heterodoxy on the part of a layman would have exposed him to excommunication with bell, book, and candle, or at least with bacteria, serums, and antitoxins. But with the *Medical Record* behind us, we can afford to creep out into the open.

[Written for the *Sentinel*.]

GOD DIRECTS.

EVELYN SYLVESTER KNOWLES.

WHETHER the flower grow fast or slow,
Whether the rain be falling
Or on its petals the sunbeams glow
When the south wind is calling;
Whether the dew bathe its tender face,
Or a chill breeze be blowing,
Through a divine, eternal grace
God hath directed its growing.

Whether the mellow fields of grain
Smile in the August dawning;
Whether the grasses in meadow or plain
Scatter sweet incense each morning,
Whether they send forth a tender flower,
Or be swept away in the mowing,
Every day, every passing hour
God hath directed the growing.

Ah, little one! child of Love divine,
Whether the tempest be raging
Or the clear light of Love doth shine,
Sorrow and dark assuaging;
Whether thy path be low or high,
If faithful hath been thy sowing,
Thou shalt bring forth abundantly,
For God directeth the growing.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

BLESSING AND BLESSED.

ONE of our readers has asked us to reprint the word written by Mrs. Eddy in regard to *The Christian Science Monitor* in the *Sentinel* of Nov. 21, 1908, just a few days before the first issue of that paper. We are glad to comply with this request, and our readers will doubtless welcome, in connection with this preliminary statement, the message written by Mrs. Eddy for the initial issue of the *Monitor*, which dealt not only with the daily paper she was then establishing, but also the weekly and monthly periodicals that had then been in operation for a number of years. In the *Sentinel* above mentioned, our Leader says:—

"*Beloved Christian Scientists*:—Accept my thanks for your successful plans for the first issue of *The Christian Science Monitor*. My desire is that every Christian Scientist, and as many others as possible, subscribe for and read our daily newspaper."

Nowhere has Mrs. Eddy more clearly and succinctly defined the purposes of the Christian Science periodicals than in the editorial she penned for the *Monitor's* first issue:—

"I have given the name to all the Christian Science periodicals. The first was *The Christian Science Journal*, designed to put on record the divine Science of Truth; the second I entitled *Sentinel*, intended to hold guard over Truth, Life, and Love; the third, *Der Herold der Christian Science*, to proclaim the universal activity and availability of Truth; the next I named *Monitor*, to spread undivided the Science that operates unspent. The object of the *Monitor* is to injure no man, but to bless all mankind."

From these messages it will be seen that Mrs. Eddy had not only declared the object of the *Monitor* to be "to injure no man, but to bless all mankind," but she also definitely committed to Christian Scientists the duty of supporting and circulating the *Monitor*, that it might fulfil the purpose for which she had planned it. This purpose, as declared by the founder of the *Monitor*, is so comprehensive as to require the best efforts of all those who have been called upon to further it, for there could be no higher ideal placed before any people than "to bless all mankind." In the four years since it was established, the *Monitor* has been successfully working to accomplish the purpose for which our Leader intended it, and which it has always before it. It has made wonderful progress toward this achievement, but the complete attainment of the ideal which Mrs. Eddy has set for this paper will be reached only through the active cooperation of every Christian Scientist, because to bless all mankind requires that all mankind be reached by that which is to bless them. To do this will require much more of Christian Scientists than a mere casual reading of the paper and a perfunctory mention and approval of it.

The *Monitor* has made a place for itself in the field of journalism, but we must keep before us that, wonderful as its success has been, it has not yet reached all mankind, therefore it has not blessed them. It has blessed many, but the fruition of our Leader's hopes and intentions for this paper calls for continuous earnest and helpful work on the part of all who stand for purity of journalism and cleanliness of thought, for that which is constructive as against that which is destructive, and its accomplishment, so far as we as Christian Scientists are concerned, is a responsibility that cannot be shirked. The world needs the *Monitor*, and we must not ignore that need or our own part in supplying it, remembering, as Mrs. Eddy has told us, that "the rich in spirit help the poor in one grand brotherhood, all having the same Principle, or Father; and blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good" (Science and Health, p. 518). Of this we may be sure, if our own work is faithfully done we shall find, as Mrs. Eddy wrote of another purpose twenty years ago, that "God will give the benediction" (Miscellaneous Writings, p. 320). The achievement is worthy of our best endeavors, and blessing we shall be blessed.

ARCHIBALD MCLELLAN.

NEARER.

IN thinking upon the approaching close of the year, a hymn which was at one time a favorite with the writer was recalled,—the one by Miss Cary that begins with these lines:—

One sweetly solemn thought
Comes to me o'er and o'er,
I'm nearer home today
Than ever I've been before.

As the sweet but melancholy cadences of the hymn passed in review before memory, Mrs. Eddy's words from Science and Health revealed the great change which comes to the thought of all who accept Christian Science. She says: "Immortal Mind feeds the body with supernal freshness and fairness, supplying it with beautiful images of thought and destroying the woes of sense which each day brings to a nearer tomb" (p. 248).

Who is there, outside of Christian Science, who does not believe that the close of each day brings him nearer to the tomb, and that this process is the divinely provided means of reaching our heavenly home? Now the Master himself said that the kingdom of heaven is "within;" not a place to be reached by passing through the grave or involving cycles of time, and he laid such emphasis upon this that he even said: "If a man keep my saying, he shall never see death." The question therefore for each one is whether he is daily drawing nearer to Life with all that this implies in Christian Science. As we study the Bible and the Christian Science text-book, we learn that only godlike qualities are immortal, and to measure our progress we must take account of ourselves to see whether the mental qualities inherent in the man of flesh are dying out, as they must sooner or later, and whether we are separating thought from these beliefs in knowing that as God never made aught which is evil, they never were any part of our true selfhood. In striving after spiritual realization we must never indulge the sophistry which would call sin unreal and then indulge anger, envy, selfishness, or even worry, for not one of these is of the Father. St. Paul says: "Grieve not the holy Spirit, . . . Let all bitterness, and wrath, and anger, and clamor, and evil speaking, be put away from you, with all malice." If these evil beliefs are put off, Christ, God's perfect idea, is put on, and we are truly drawing nearer each day to home, heaven, harmony.

It is really startling to be made aware that if we could suddenly find our way into the abode of the blessed, it would at that moment cease to be heaven if one carried with him a sense of hatred toward any one; but this is an unthinkable proposition, because we are told that God, who is Light, dwells in the light to which no mortal man or mortal error can approach, and yet it should not be forgotten that we are bidden and expected to "walk in the light." Mrs. Eddy gives us in Science and Health an unvarying rule by which we may measure our progress. It is this: "If divine Love is becoming nearer, dearer, and more real to us, matter is then submitting to Spirit" (p. 239). The question is, Do we really desire to be godlike, Christlike? If so, each day's living will mark some definite gain in drawing nearer to the goal. The things of earth will seem smaller and smaller as we ascend toward the heights of Spirit, and the attraction of materiality will lessen at every step of the way, so that it will cease to influence us either through fear of it or love of

Digitized by Google

it. We should never lose sight of the fact that we can never carry into the "home of the Soul" "anything that defileth, . . . or maketh a lie," and it is not enough to approach the threshold. What we need is to draw near in full assurance of faith, daily proving our worthiness to enter in and find rest.

ANNIE M. KNOTT.

A HAPPY NEW YEAR.

IT is a pleasant thing to remember that in the whole circuit of the sun the new year is ushered in with that kindly greeting which expresses a native, elemental sense of brotherhood, a bit of that spontaneous good will which is indifferent to all the separations that selfishness and social caste have made. This simple fact is altogether optimistic; it argues for the naturalness of goodness, for the deeply implanted desire of every normal nature not only to be happy but to make happy. All men are entirely at-one in their desire for happiness. Even the love of life is but a manifestation of an instinctive reaching out after what is thought of as good, and this is seen in that so many are ready to part with life when all hope of happiness seems removed. Thus does the good will to all which asserts itself not only on New Year's day, but every day when we are at our best, answer to a universal longing, and both the desire and the disposition to satisfy it speak for the possibility of that ideal experience which in Christian Science is seen to be eternally assured to man in God's image and likeness.

No less interesting and significant is the fact that all who think beyond this mortal plane are agreed in associating the ideal life, the heaven of their hope, with spiritual-mindedness. And this despite their long-time effort to find content in the pursuit of material ends. The material order of things is confused and contradictory; pain and pleasure, joy and sorrow, life and death, are forever chasing each other through its mazes. All have had bitter experiences here, and they can but respond to the appeal of Christian Science, its vision of man as continuously expressing and rejoicing in the wisdom and strength, the beauty and goodness of Spirit, his source. The longing for permanence of being and fulness of freedom is the mark of a man, and in so far as Christian Scientists have learned to recognize and mentally stand for this true man, in so far their "Happy New Year" will bring a healing thought into practical activity.

The mesmerism of the world impels even good men to try to find happiness in materiality, and its rule can never be broken so long as men associate the material order with the thought of real good, for if sense satisfaction is related to happiness by divine law, then obedience to sense impulse must be commendable. Here Christian Science sets up its standard, and declares that materiality cannot satisfy our heart-hunger, because it is not the "bread from heaven." As Mrs. Eddy has said, "The pleasures—more than the pains—of sense, retard regeneration" (Miscellaneous Writings, p. 85); they tend to make us content with the rule of materiality and thus perpetuate it.

The sunlight both comforts and stimulates growth, and like it our good will, if genuine and intelligent, answers its own prayer, so that gladness of heart is but a minor part of its blessings; it brings to others the good it covets for them. This constitutes our great privilege and our exceeding joy as the ministers of Christ. Real happiness, that calm assurance and uplift of thought which all long for, can never be "the sport of circumstance" (Science and Health, p. 250). It will come in the new year to those alone whose aspirations are anchored to the eternal; it is the fragrance of a spiritual unfoldment, and its peace is realized only when in exaltation of sense we can say with the poet,—

> My heart is singing at work apart,
> Behind the wall of sense, as safe from harm
> As sings the lark when sucked up out of sight
> In vortices of glory and blue air.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

RUTHERFORD, N. J.—Sunday morning, Nov. 17, the new church building of First Church of Christ, Scientist, at Park and Newell avenues, was opened for services. The site of the edifice, which has just been completed, was purchased by the church March 22, 1909. This church is the natural outgrowth of the understanding of the presence and power of "God with us." A Christian Science practitioner had removed from New York and made her home in Rutherford. On the 10th of February, 1905, a resident of Rutherford called upon this practitioner to ask if it was possible for her daughter to be healed. This daughter had been an invalid for ten years and was a great sufferer; she had undergone five surgical operations and was about to submit to another one, with no assured hope of complete restoration to health. This mother was told that "with God all things are possible." The daughter was treated the same day and was quickly healed, and since then has enjoyed excellent health. Others came and were healed with the result that the Bible lessons were studied weekly at the home of the practitioner, until it was felt that a public place of worship should be secured. Just six years ago the first Christian Science service was held in Ruckstuhl hall, and on Jan. 28, 1907, a church was incorporated with twenty-three members and seven pupils in the Sunday school.

As it was found impossible to hold Wednesday evening meetings, and have a reading-room at Ruckstuhl hall, a large room on the ground floor of the Franklin building was secured. On Dec. 29, 1907, services were held there, and on the New Year's eve following, the first Wednesday evening meeting. Services were continued in this room, with increasing numbers and growth in the understanding of Christian Science, until May, 1912, when the place of meeting was changed to 122 Park avenue, awaiting the completion of the new church edifice.—*Rutherford Republican.*

BUCYRUS, OHIO.—The healing work of Christian Science was begun in Bucyrus during the year 1895, which was soon afterward followed by a few interested persons studying the Bible Lessons in private homes. During the year 1898, when others becoming interested in Christian Science joined these meetings, the work assumed a more public character. The services were at first conducted in a private residence and later in the Fisher hall. At the same time the mid-week testimonial meeting was instituted. During the year 1900, the present organization was formed and a public reading-room was opened. In March, 1901, the first public lecture on Christian Science was delivered at the opera house, and an annual lecture has been given each year since. It was during the latter part of the year 1901 that the church and reading-room occupied their present location on the second floor of the First National bank building.

Bucyrus Telegraph.

IOWA CITY, IOWA.—Recently our distributing committee began to send out, with each piece of literature mailed, a circular worded as follows: "Complete Works of Mary Baker Eddy, including 'Science and Health with Key to the Scriptures,' will be found at the Iowa City public library. You are invited to the Christian Science reading-rooms, 220½ East College street, Koza block, Iowa City, Iowa, between the hours of 2 and 4 p.m., each day, excepting Sundays and holidays. The Bible and all authorized Christian Science literature will be found there. The use of these rooms is free for the perusal of the literature. Purchases may be made if desired."

We noticed the good effect almost immediately, when a gentleman called at the reading-room seeking information

Digitized by Google

about Christian Science. He stated that a lady had sent him the circular and incidentally alluded to our reading-room,—that he might call there and look into Christian Science. The lady referred to lives in an adjoining town, and obtained the circular with the literature mailed to her by our distributing committee.—*Correspondence.*

MERIDIAN, MISS.—It was in the spring of 1906 that a few of the grateful ones who had been restored to health and usefulness through Christian Science, began to hold services in a private residence, with an attendance of not more than eight or ten. Soon, however, the increasing attendance made it necessary to provide a public hall, which was secured and used for about two years, until it again became necessary to move into more convenient quarters. Then it was that the well-appointed auditorium on the second floor of I. Klein Sons' building was leased and occupied for about two and a half years.

During the fall of 1911, at one of the directors' meetings, it was decided that this body of workers should look out for yet more desirable quarters for holding services, and it was soon learned that the good people of the Church of the Mediator had merged with the St. Paul congregation and were offering their church edifice for sale. This was an opportunity to buy just what was needed, and on March 1 of the present year the Christian Science organization moved into their present home, the church edifice on the corner of Twenty-fourth avenue and Ninth street.

Meridian Dispatch.

PARK RIDGE, ILL.—The church here is in a suburb of Chicago, with a population of two thousand, and the meeting-place is in a hall. The congregation is made up of members and attendants living here and in three other suburbs particularly, and some few outside of these places. The purchase of a lot sixty by one hundred has just been consummated. The location is very central in Park Ridge and it meets with every member's approval. The cost of the property was fifteen hundred dollars. A building fund has been started, and when sufficient money has been raised a structure will be built. The reading-room was changed to a more desirable room last May; and since January, when the church decided to supply the room with funds to carry a representative stock of all our literature, so that every demand could be supplied, we have had an extraordinary increase in the sale. Even *Quarterlies,* which have always been carried in sufficient number, have doubled in sale, so that we have reason to feel this department of our work is progressing.—*Correspondence.*

MACON, GA.—First Church of Christ, Scientist, has purchased a site for a new church edifice at the corner of Georgia avenue and Madison street, overlooking Wesleyan Female College. The deal involved a consideration of six thousand dollars. The growth of the church in Macon during the past few years has made the need for a church building apparent.—*Macon Telegraph.*

WILMINGTON, DEL.—First Church of Christ, Scientist, of this city, broke ground Oct. 28 for a new church edifice, which is to be built of stone in the classic style of architecture, and which will cost about fifty-five thousand dollars. It will be on the site of the present church, facing Cool Spring park. The auditorium will seat something over five hundred persons and the Sunday school room below it will seat three hundred. It is probable that only the excavation and foundation work will be done this fall, the building to be erected next year. The new building will almost directly face Park place, which is an ideal location. The small church has been moved to another section of the lot, and it will be occupied until the new building is ready for use.

Every Evening.

THE LECTURES.

MITCHELL, S. DAK.

Frank H. Leonard delivered a lecture on Christian Science at City hall before an audience of about three hundred and fifty. He was introduced by Hiram Rodee, who said:—

To the close observer of our times, to the one who delves beneath the surface, it is apparent that we are approaching an era of greater interest in spiritual things. We are wont to boast of the marvelous material development of the past century, but notwithstanding these great achievements the soul of humanity is unsatisfied. It is said that this is an age of unrest, and this in itself is an *indication of a yearning* for something higher and better. This fact is very obvious today in the political world. And this is not surprising when we remember that laws and governments are spiritual creations. True, we may read the books in which the laws are written, we may visit the capital where affairs of state are conducted, but after all we shall be forced to admit that in reality laws and governments are of spiritual origin. And this discontent, as I interpret it, is but an effort to demonstrate a higher degree of truth.

Another indication of the correctness of my opening statement is the growth and spread of the Christian Science movement. Starting in an age of seeming ultramaterialism, in a few short years it has circled the globe. While I claim at the present time to be little more than an investigator, I am convinced from my limited study and observation that Christian Science exerts a potent influence to improve the health and morals of those who accept its teaching. As I understand it, the purpose of Christian Science is to lessen discord and promote harmony in all the relations of life. It seeks to promote harmony of body and harmony of mind, harmony in the home, harmony in business, and harmony in social relations.—*Correspondence.*

JOHANNESBURG, TRANSVAAL.

Bicknell Young delivered a lecture on Christian Science in the Orpheum theater. It is significant of the interest that is taken in Christian Science on the Rand that there was an audience numbering between thirteen hundred and fifteen hundred people, who listened with keen attention to Mr. Young. The address evidently made a deep impression. The lecturer was introduced by J. L. van der Merwe, mining commissioner and second reader of the Christian Science church, Johannesburg, who said:—

We have come here this afternoon, on the invitation of the Christian Science organization of South Africa, to listen to a lecture upon Christian Science, and it gives me great joy to extend to you all a hearty welcome. One of the reasons accounting for the remarkable growth of the Christian Science movement is that the work of a Christian Scientist is primarily an individual one. The teaching of its text-book brings this fact with irresistible force to the notice of the Bible student, and shows plainly that there is only one way to know and understand the truth of the Bible, and that is by living, by demonstrating it. And no one can do that for us; it is an individual work, resulting in individual purification, spiritual growth and unfoldment; and therein lie the growth, the permanence, and the power of the Christian Science movement. Mrs. Eddy says: "The best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death" (Science and Health, p. 201). It is at once seen, therefore, that the Christian Science movement rests upon the understanding, the demonstration, and the living of the truth of the Bible. This truth is infinite, and the unfolding of it will continue throughout all eternity, and in proportion as we understand truth, in that proportion will the beauty, harmony, and glory of God's universe unfold to us.

Transvaal Leader.

FARGO, N. DAK.

The lecture on Christian Science, delivered at Stone's music hall by William R. Rathvon, was attended by a large and deeply interested audience. The lecturer was introduced by John S. Watson, who said in part,—

With the dawn of the twentieth century two facts stood out in striking prominence: that the achievements of the race in material development during the preceding hundred years, had greatly exceeded all that it had accomplished in this field during its previously recorded history; and secondly, that these achievements, monumental though they were, had not abolished the ills from which we suffer. With the realization of these facts came a stirring of consciousness to higher purposes. The awakening is world wide. In a deeper sense than ever before it is realized that we are our brother's keeper. The idealism of the Nazarene makes a more compelling appeal. The summons to duty can be answered only by a broader and deeper observance of the golden rule, doing and thinking for and of others as we would have them do and think for and of us.

Christian Science has shown that the promises of the Bible may be made practical now and here in better lives and healthier bodies. It has challenged the world's attention by what it has done and is doing. Its one unceasing demand is for constant growth in right thinking and right living.—*Fargo Forum.*

MONTREAL, CANADA.

Prof. Hermann S. Hering delivered a lecture on Christian Science in Windsor hall to an attentive audience of several hundred. The lecturer was introduced by Major H. B. Stairs, who spoke in part as follows:—

The subject which we are to hear presented has won the allegiance of thousands of earnest men and women, educated and uneducated, in all parts of the world today, and they base their adherence to its teachings, not upon mere matter of doctrine or theory, but upon their ability in their own individual experiences daily to prove that the understanding of God and of man's relation to Him is able to dispel and eliminate sin, disease, and discord from their experience. From my personal observation of the subject, I find that the student of Christian Science is led at once to the Bible; and a study of the four gospels and of the life of Christ Jesus as therein set forth convinces one that the healing which he accomplished in his life was by him considered a component part of his ministry, and it is the object and aim of Christian Scientists humbly and earnestly to endeavor to accomplish that today.—*Correspondence.*

LOS ANGELES, CAL.

The remarks of S. M. Abbott, who introduced Francis J. Fluno, M.D., at his lecture on Christian Science in Third Church edifice, under the auspices of the churches and society of Los Angeles, were as follows:—

That the interest in Christian Science is not decreasing, is evidenced by the large audience assembled here, also by the fact that scores have been turned away. These lectures are not given because of any fear on the part of Christian Scientists that the interest in this movement will abate, for they know that so long as mankind believes in the reality of evil, as manifested in sin and disease, it will seek deliverance from these evils, and will turn to Christian Science for help, because Christian Science gives proof of its utility. It has been remarked that these lectures are given to keep Christian Scientists from backsliding. The fact is that Christian Scientists are so busy in working out their own salvation, and in helping others to know the truth, that they have no time to backslide. On the contrary, these lectures are given that those who are dissatisfied with their present condition of thought and are seeking a better state, may learn what Christian Science is; also to correct false impressions concerning this gospel of truth. Christian Scientists love the truth, because in it they have found freedom, and they earnestly desire that others may see the light which they have found.—*Correspondence.*

CHICAGO, ILL.

Two lectures on Christian Science, under the auspices of Second Church of Christ, Scientist, were delivered by Virgil O. Strickler. At the first he was introduced by Henry M. Slaymaker, who said in part,—

On behalf of Second Church of Christ, Scientist, I bid you a most cordial welcome, and especially do I welcome those for whom this is the first opportunity of learning of Christian Science. For you may it be as similar occasions have been for so many of us, the beginning of better things in the realization of the promise of Jesus when he said: "I will not leave you comfortless." "I will pray the Father, and he shall give you another Comforter, that he may abide with you forever; even the Spirit of truth." We may all learn more of the comfort that this "Spirit of truth" has brought and is bringing and can bring to mankind.

At the second lecture the introductory remarks of Percival Steele were in part as follows:—

We are living in an age of progress. Wherever one may look, he will find new ideas and new methods for the betterment and progress of humanity. To my mind, nothing has done so much to bring mankind in closer touch with God, and given them a clearer insight as to their relationship to their fellow men, as has Christian Science. It is a great spiritual, mental, and physical help for men and women in all parts of the world today.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Brookline, Mass. (auspices The Mother Church).—Beacon-Universalist church, Harvard street (near Coolidge corner), 8 p.m., Jan. 7.
Chicago, Ill. (Fifth Church).—Church edifice, 4840 Madison avenue, 3 p.m., Jan. 5, and 8 p.m., Jan. 6 and 7.
Columbia City, Ind.—Tuttle's opera house, 8 p.m., Jan. 9.
De Kalb, Ill.—Church edifice, Jan. 10.
Lincoln, Neb.—Church edifice, 12th and L streets, 8 p.m., Jan. 6 and 7.
Milton Lower Mills, Mass. (auspices The Mother Church).—Odd Fellows hall, 41 River street, Dorchester, 8 p.m., Jan. 10.
New Castle, Ind.—Alcazar opera house, 8 p.m., Jan. 10.
Newton Center, Mass. (auspices The Mother Church).—Bray's hall, 8 p.m., Jan. 6.
New York, N. Y. (First Church).—Church edifice, West 96th street, 8 p.m., Jan. 3.
Oneida, N. Y.—Madison theater, 3 p.m., Jan. 5.
Parsons, Kan.—Elks theater, 8 p.m., Jan. 9.
Pasadena, Cal.—Church edifice, Oakland avenue, 8 p.m., Jan. 10.
Rochester, N. Y.—Lyceum theater, 3:30 p.m., Jan. 5.
San Diego, Cal.—Church edifice, Second and Laurel streets, 8 p.m., Jan. 9.
Tulsa, Okla.—Grand opera house, 8:15 p.m., Jan. 10.
Waukegan, Ill.—Parish house, 410 Grand avenue, between West and Utica streets, 8 p.m., Jan. 7.
Whitewater, Wis.—Jan. 6.
Winsted, Conn.—Church edifice, High street, 8 p.m., Jan. 10.
Winthrop, Mass. (auspices The Mother Church).—Elks hall, Washington avenue, near Winthrop Beach station, 8 p.m., Jan. 9.

TESTIMONIES OF HEALING.

With the psalmist I can say: "Thou hast delivered my soul from death, mine eyes from tears, and my feet from falling." My life is being so completely transformed by my study of Christian Science that it is difficult to express the change in words, but my heart is so filled with gratitude and love that I want to tell every one who thirsts, as I once did, where to drink that he may never thirst again.

From a condition of great unhappiness and constant mental torture, I have come to a sense of peace and joy which is steadily growing greater. Finding that I was making a failure of my own life, and seeing on all sides men and women without happiness in anything and growing more bitter each year, I decided that even though Christian Science might be all that its critics said, I would overcome the prejudice in which I was steeped; and I did so up to the point where I determined to take advantage of whatever of good was in this Science, to make my life a success if it were possible.

I did not come to Science for physical healing, but previous to my taking up the study I had undergone two surgical operations for an ailment from which I had suffered practically all my life. These operations, which were the last of a long series of material so-called "cures" that I had tried, were said to be successful from a medical standpoint, but the condition was exactly the same afterward and steadily grew worse. After a few months of the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with some treatment from a practitioner, I was entirely healed of this trouble. I am more grateful than I can say for the freedom from pain and from the fear of pain. My healing has been physical, mental, and moral. I have been relieved of the necessity of using glasses, which I had worn steadily for six years. I laid them aside without any inconvenience whatever, although I had never been able previously to go without them for more than twenty-four hours without suffering from so doing.

I am also deeply grateful for the answer to the great riddle of life which Science gives so fully and so satisfyingly. For many years I had sought in literature, philosophy, and religious teaching for some reason for our being. I found no adequate solution of life's great problem. In Christian Science I have found rest from this search, and I have not been given stones when I asked for bread, but have been fed most abundantly by the living Truth. A sense of absolute unworthiness and the conviction that I ought never to have been born, which I possessed to a painful degree, have been erased from my consciousness. In this connection there is no more blessed thought than that each one of us has his particular place in the universe in which he must do the work which is to be done through him.

Above all, I am grateful for the spiritual new birth, for the richness of life and depth of purpose disclosed to me, and for all the wonderful gifts of divine Love. The utmost efforts of my whole life can only begin to repay my debt to divine Love, and my one desire is so to live that I may glorify our Father in heaven.

ELIZABETH BUCK, Stoneham, Mass.

It is with deep gratitude that I express my thanks to divine Love for my cure through Christian Science of the drug and drink habit. Being a traveling man, while in Atlanta, Ga., a number of years ago, I drank a glass of a popular beverage, never thinking that before six years had passed I would become a mental wreck. But such was the case, for in that time I experienced all the mental, physical, and business troubles possible for any one. Shortly after the habit became fastened upon me, I began to notice that unless I took a drink of this supposed nerve stimulant my spirits were so depressed that I could summon no ambition to work. All my thoughts were on pleasure; when the evening came I sought the company of dissolute people, and when the early morning hours rolled around I would often find myself in a drug-store taking a "last" drink.

Since I could not work intelligently and my mode of life required much money, the collections secured during the day were gradually used to satisfy the unnatural desires which this habit had produced in my weakened mentality. Eventually my beloved family were called on to make these shortages good. It was then that I deluded myself into believing that if I mixed the drug with whisky I would obtain still greater pleasures from the result, and after five years of this wicked life health of mind and body gave way slowly but surely. All this time my mother and sister kept asking me to attend the Christian Science church, but I felt as though it would be no use, for I was satisfied I could never overcome the desire for a stimulant. It was, however, my sister, a Christian Science practitioner, on whom I eventually called for treatment.

Finally, acquaintance with the circumstances of a dreadful deed impressed me so deeply that I realized my own helpless condition. The fall had come after a summer which had been an orgy of dissipation, race-track speculation, gambling, etc., and I was prostrated with a severe attack of illness. I also began to be morose. When I tried to stop the drug habit (and I began to realize that I must do so, before I became an outcast), I found myself as helpless as a babe. The indulgence had so increased that at the time Christian Science lifted me out of this curse eight or ten glasses a day were required to satisfy the appetite. After Christmas I decided that if possible I would go South, and when I reached New Orleans I wrote my sister, admitting my weakness and craving for this drink, for I had concealed as far as I knew the fact of my troubles from her and my mother. She wrote that she would start treatment at once.

Not long after treatment had begun, I was passing a drug-store, and I thought I would step in and have just one final drink. I asked for it, but at once changed my mind and took something else, and right then I realized that I was cured. This was over two years ago, and since then I have never had the slightest desire to take another drink of this drug. I have also prospered, am getting more and more on my feet. Surely I should be thankful to God for the blessings that have come to me in Christian Science. I notice benefits coming to me steadily in many new ways, especially so in my business. Christian Science benefited me many years ago in another way, that is, in curing me of chronic malaria after I had left the army service; indeed, I have so much to thank God for, that I am prompted to write this testimony, hoping it may be helpful to many others.—JOHN P. ANDERSON, New York, N. Y.

In the hope that it may be of some good to others, I give my testimony as to the benefits received from Christian Science. The first glimpse I had of the truth was in November, 1908, when "Science and Health with Key to the Scriptures" by Mrs. Eddy was sent me by relatives, also other Christian Science reading matter. I tried to study Science and Health as best I could, with the help of a dictionary, as my knowledge of English was limited. I had been in this country then for about eleven years, but knew only what I had learned in every-day experience. I studied the Christian Science literature faithfully, and soon began to see results of the understanding that God is to be trusted in all things and above all else. In knowing this and trying to live up to it, some of my ailments soon vanished. First of all, headaches and a bowel trouble left me, for which before I studied Science and Health I had been using regularly some kind of a remedy. Next, catarrh began to disappear, so that I was able to breathe more freely; the many attacks of cold which I used to have grew less frequent, and this was indeed a great relief to me. I am now able to breathe as freely and naturally as any one.

In the spring of 1909 all four of our children were attacked by measles, which was then very bad in our neighborhood. The two girls got along nicely, but the two boys were much worse, their lungs seeming to be much affected. The youngest, then over two years old, became so bad that for three days he never opened his eyes or took any food. My hope was almost gone, as many of the neighbors had lost their children at this time, and as my fear was so great that I was not able to do anything for him, we telegraphed to a practitioner in Minneapolis. (We were at that time in Marshfield, Wis., and no Christian Scientist was there.) We sent the telegram at five o'clock in the afternoon, and two hours later the child opened his eyes and smiled. I did *not* know what to make of it, and felt as if I were losing *him right then*; but my husband reminded me that the Christian Science practitioner was now at work. This gave me new hope, and from that time on the child gained rapidly. Then the oldest boy had very high fever, and at night we both sat up, trying to read what we thought most helpful, until the fever went down.

One morning, when I was busy tending the other children and my husband had to go to the shop early, I found the boy was growing worse. I went to send a telegram, but found that no telegraph office would be open until eight o'clock. I was at a loss what to do, so I went to see my husband, and as he wanted to call a doctor, I yielded to his wishes. The doctor came at ten, and left some medicine, which I gave the child twice; then I thought of what I had learned from the Bible and Science and Health,—that we are to put no trust in anything but God. In the mean time I had sent a letter by special delivery to our faithful practitioner, knowing that as soon as she received the same we would get help. The following day the child felt much better, and then all four were given treatment till they were well. We realized then that Truth is mighty to overcome all material conditions.

The following year we were in Minneapolis, and in July, 1910, I was taken sick with a serious bowel disorder. For two days it seemed as if I was not going to last long, but on Tuesday we called for help in Christian Science. I had three treatments, and on Friday I was able to do a little of my housework. Once more we had experienced what divine Love can do for us. Again, in the spring of 1911, I was taken sick, and not expected to live by those who put their trust in the material instead of in God, who is ever-present Love. A few days went by, during which I did not know what was going on about me, and material suggestions presented themselves from all sides, through the neighbors, who did not understand what Christian Science meant and thought I could not get well without medicine; but Truth was mightier than all mortal belief. The practitioner worked faithfully until the battle was won, and in one month I was able to be about the house and do a little.

Never will we be able to express our gratitude for the help we have received and the many noble deeds done in time of need by friends and neighbors. My most heartfelt thanks to all. May God reward them for the good done; and as for me, this experience taught me again that divine Love is stronger than all else.

MRS. HELEN ROEGER, Minneapolis, Minn.

[Translated from the German.]

In October, 1908, my mother's left hand had to be amputated on account of a tubercular affection, and very soon after this we heard of Christian Science and turned to it. Acquaintances had already told us that an operation would not amount to much, that the trouble was bound to appear again in some other part of the body. At the time when it manifested itself on the hand there were three wounds discharging continuously. We tried everything that we could think of, but the diseased condition kept growing worse until the hand had to be amputated above the wrist.

A year and a half later, however, another hardening formed, this time above the elbow, and my mother showed it to me one morning. For a moment I did not know what to say, although the thought immediately came to my mind that no harm can come to him who dwells under divine protection. I comforted her, and told her that I would at once ask for Christian Science treatment to be taken up, which was done. After some time the hardened places broke as they had formerly, but apart from daily cleansing no remedy whatever was used this time. They were open for about three months, after which they gradually healed up. Some people suggested that they should be kept open, but we held fast to the thought that error should have no manifestation, since God never made it.

A considerable length of time has elapsed since, and there have been no indications of the trouble, and my mother's health is very good, although she is seventy years old. For these as well as for other benefits received, and furthermore for having been led into the way of infinite Love, we are deeply grateful to God. We also feel greatly indebted to our dear Leader, Mrs. Eddy, who has achieved so much good for humanity.

FRAU ANNA ASSMANN, Kremmen (Brandenburg), Germany.

It is with a heart full of gratitude to God for Christian Science, that I tell of what it has done for me, hoping it may help some one who may read of my experience. It is nearly three years since I was led to this healing truth for the cure of a tubercular condition of the knee which the doctors claimed to be hereditary in my case, and from which I had suffered for a year. During that time I had been under the care of two of the best physicians in town, who put the knee in a plaster cast, which was worn constantly up to the time of my healing in Christian Science. I was not allowed to be on my feet for three months, then by the aid of crutches and cane was able to get around the rest of the time.

I had used a cane about three months at the time I came to Christian Science for healing, but after seven weeks' treatment in Christian Science I took off the cast, discarded the cane, and could walk any distance without discomfort. I also had the use of the joint, which was rigid before, and which medical law said I would never be able to bend again; but, thanks to God for Christian Science, the joint is now perfectly normal. During the treatment for lameness I was also healed of three other troubles, one a chronic ailment from which I had suffered continually for twenty years. It was very distressing at times, but after I accepted Christian Science it simply vanished. Several years ago I had an operation for appendicitis, and a very painful condition followed which the doctors claimed was caused by adhesions and could only be remedied by an operation. But that also vanished, as well as defective vision for which I had worn glasses for eight years. One morning I forgot to put on my glasses, and I have never needed them since. One by one the ills have gone, and I know of my own experience that God heals all our diseases.

I am glad for this seemingly slow healing, for during the time I was led to study Christian Science, and oh, the joy of what I found,—man as the expressed image and likeness of God! I was helped to gain such an understanding that I have been able to demonstrate many things for myself and others. Not a day passes but that there is some proof that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). I am grateful to God for my healing, and for the love and help I have received. I am also grateful to our dear Leader, Mrs. Eddy, who has brought this wonderful truth to us.

EMMA J. MATHIS, Redlands, Cal.

Having much for which I am thankful, that has come to me through Christian Science, it becomes a pleasure to take this opportunity of helping others who may be searching for health and happiness as I was a few years ago. I had not known of a day for eight years in which I did not find it necessary to take some kind of medicine to relieve the suffering from a chronic disease, as well as ailments of shorter duration. Along with all these physical troubles was a sense of unhappiness and discouragement, a life of discontent, of sin and fear, of disagreeableness and selfishness.

Four years ago I was persuaded to try Christian Science, not knowing at that time anything about it other than that it healed the sick; but from the day when I took my first treatment from a practitioner, to this time, I have not found it necessary to use any medicine. Christian Science had brought me health, and with health came peace, joy, and prosperity. It has also healed me of an eye trouble, rheumatism, colds, and a throat difficulty. Besides this, the tobacco habit, which I thought I enjoyed immensely for several years, entirely left me soon after I began the treatments.

More than all this, however, Christian Science has given me an ever-present God, one who is with us at all times, in all ways and at all places, a God who is Love. It has taught me the value of right thinking, the value of honesty and truthfulness in thought, speech, and conduct. While I have not as yet worked out my full salvation, my heart is filled with gratitude to Mrs. Eddy for enabling me to understand God sufficiently to gain the peace that comes into our lives through the study of Christian Science, and for this great blessing which has come to me I am trying by my daily life to thank God.—WALLACE H. BURNETT, Chicago, Ill.

[Translated from the German.]

I wish to express my feeling of great joy and gratitude for the blessing which was in store for us, when I read in *Der Herold der Christian Science* that our text-book, "Science and Health with Key to the Scriptures," has been translated into German by the direction of Mrs. Eddy. I believe that the German-speaking Scientists could not have been presented with a more beautiful Easter gift. Although I am familiar with the English language, I rejoice with all beginners who are familiar with the German only. This step clearly shows that steps of progress must have been taken by the German adherents of Christian Science.

I would like to give public expression to my gratitude for the many benefits which I have derived through Christian Science. Nine years ago, while stricken with an illness attacks of which had kept increasing in severity from year to year, a dear acquaintance came to see me and told me of this Christian healing, whereupon I immediately wrote to a practitioner in Geneva. She came, and with three treatments every symptom of the disease disappeared, and there has been no return of it since. Liver complaint with which I had been troubled also left me after a few treatments, and through the study of our Lesson-Sermons and of Science and Health, chronic headache and painful varicose veins, with which I had been afflicted for twelve years, disappeared. For these instances of physical healing I am very grateful, yet much more so for the spiritual awakening. Many are the errors which through spiritual discernment have dissolved into nothingness during these years, such as fear, worry, sensitiveness, and irritability.

I thank our heavenly Father from the depths of my heart for having led me to His spiritual fount, and next to Him I thank our beloved Leader, who through her earnest devotion to Truth has made these heavenly treasures accessible to us. I also think of our pioneers with a feeling of admiration for the brave way in which they carry on the work. The literature is indeed instructive and inspiring to every one. What a privilege it is to work in the vineyard of the Lord, and to be able to help uproot the plants which our heavenly Father has not planted!

ELISE BUETZBERGER, Geneva, Switzerland.

I wish to add my testimony to the many which appear in our periodicals. About two years ago my sister and I went on a trip to the Pacific coast, and early one day while we were admiring the beautiful scenery about us, for we had never seen the mountains before, I became conscious of a discordant mental state for which I could not account. I tried to divert my thought toward the scenery, but this brought no satisfaction. Then I went to work to realize the omnipotence of God; but do what I would, I could not realize harmony, and the farther we got on our journey the more pronounced this agitation became, even the train-men and passengers seeming to me to be out of sorts. We then debated the question whether we should stop off for the night or go on, and we finally decided to stop at *Leadville*, Col. This lessened the agitation somewhat, and when we stepped off the train it seemed as if a great load had been lifted from my shoulders, so that I was perfectly free from the discord with which I had been striving all day.

The next morning we had to get up at three o'clock in order to catch our train, and when we got to the depot the agent told us that the train we were on the day before had been wrecked two hours after we got off. Then we understood what had caused the discord the day before, and we thanked God then and there for His protecting care in leading us to safety. In Science and Health we read: "Mortals must find refuge in Truth in order to escape the error of these latter days" (p. 83). This coincides with the words of the 91st Psalm, "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee." A fuller sense of Truth would undoubtedly have prevented the accident altogether, but this does not lessen our thankfulness for the deliverance which we experienced.

Christian Science has been my only guide and physician for over five years, during which time I have never known a day that I could not work. It has also been a great help to me in business. Greatest of all, it has led me from a sense of bondage to freedom, it has given a spiritual uplift and understanding which is the "pearl of great price." It has also shown me the beauty and grandeur of righteous living as I never saw it before. I am very thankful to God for many blessings, and I am grateful to Mrs. Eddy for her untiring labors and for her love to mankind.

ALBERT G. ROMBERG, Blair, Neb.

In the summer of 1911 my little girl of four years was very badly scalded. A Christian Science practitioner was at once notified of the accident and began to treat the child. I attempted to bathe the injured arm, and the child seemed relieved; but then and there I realized the inability of the cool water to do any good, and turned to God with all my heart. To quiet the fear of us all, an older daughter was asked to read Science and Health aloud; and the practitioner was again notified that the suffering was intense. Being fully aware of the inability of material means to do any good, I went from the room, to be alone with God and try to unsee it all; to realize, above all else, that the child did not need an opiate to quiet the pain, and that Truth could be demonstrated. The child's crying became less, and I sent her out into the yard with her sister; but they soon returned, and the little one was laughing and holding out to me a flower which she had picked. The pain and the tears both had vanished, and the practitioner was then notified of the relief. The healing of the pain was accomplished in half an hour or less. An older daughter was badly burned at the same time, in trying to prevent the accident; but she was treated by another practitioner, was healed so that she ate her breakfast, and later went to Sunday school.

The burn was so deep in the case of the little one that fever set in during the afternoon, but she did not complain of her arm until some time in the night. The next morning the practitioner was asked to help her again, and in a day

Digitized by Google

and a half the little girl was up playing as if nothing had happened, and in a week the arm was covered with new flesh. The neighbors did not know how severe the injury was, on account of the wonderful work which Christian Science had done in this case. I have remembered with a sense of deep humility this grand healing, and hope it will encourage some one in Christian Science.

MRS. VIRGINIA ROBERTS, Birmingham, Ala.

Christian Science has healed me of many physical ailments, for which I am very grateful. I am learning to rejoice for every opportunity given to prove the healing power of Truth and Love. For the past nine years Christian Science has been our only physician and has met every need. I am grateful for the privilege of knowing, at least in part, that divine Love is operative in all, throughout the universe, and that it is destroying the antagonism and false beliefs about our revered Leader and her publications.

Some four or five years ago I spent a month in a small western town. It was a month of sorrow and trial, a testing time, as it seemed. I heard nothing but criticism and condemnation of the teaching of Christian Science and of Scientists. Recently it was my privilege to visit again this same town, and with but one or two exceptions every person I met wanted to know something about Christian Science, being eager and anxious to know of its healing power. Just previous to this last visit my sister had had a serious sickness. The family physician was called, and after spending some time with her he said that he was going to leave her some rather strong medicine, but that she should not take it unless she felt obliged to do so; that she had better read Science and Health instead. My sister, who is not a Christian Scientist, told me she was surprised to see how quickly she was able to be up. She said she never touched that medicine, and added, "I am surprised at myself. I really feel better than I have for several years."

Thus is our courage renewed, as these experiences prove that the time is near of which Jesus spoke when he said, "Look on the fields; for they are white already to harvest." They also prove that divine Love is ever active and ever operative; that Truth is destroying false concepts; they also show that God is good and doeth good and His every thought expresses love and power.

ANNIE C. MAY, Kansas City, Mo.

[Written for the *Sentinel.*]

TRUTH'S GLORIOUS STAR.

DAVID E. ANTHONY.

BRIGHT star of Truth, which pierced Judea's night
And over Bethlehem shed thy silvery light
  Upon the manger where the Christ-child lay,
Today we see thy beauteous rays again,
And hear hosannas and the glad amen,
  And view the light which heralded that day.

Never to set while time and space endure,
Be thou our beacon! May our thoughts as pure
  And holy as thy gleaming ever be;
Then in our lives no more shall enter fear,
And we shall feel the Comforter is here
  To lead us all in paths of harmony.

O glorious star, O Principle divine,
All that expresses Truth, Life, and Love, is thine
  In measure boundless as the heavens above!
Enfold us with thine essence through the days,
By night enwrap us with thy peaceful rays,
  That we may ever know that God is Love!

FROM OUR EXCHANGES.

[Rev. Frederick Hastings in *British Congregationalist.*]

The man in the street wants to see the meaning of Christ's truth and the plan of life made plain. He is not so far from the kingdom as some imagine. We have to establish the kingdom of God among the men in the street. We have to show them the need of faith in the Lord Christ and in goodness. We have to set forth the gospel not as the means only of gaining cowardly cover from wrath, but of spiritual freedom and eternal life. We have to appeal not to selfishness, but to the fact that each man is needed to help in the uplift of humanity. We have to arouse men from the spirit of indifference. We have to denounce injustice, oppression, greed, the love of pleasure. We have to show the sin of neglect of the divine love which was so definitely made known in the incarnate Christ. We have to show how that divine love had been acting all through the ages to lead up to the incarnate Christ, and how all ages since have helped us to understand the depth of the mystery and grace manifest in the victim on the summit of Calvary. We have to present not an abstract system or mere ritual observance, but a life. We, indeed, have to find our true reinforcement of power by ever getting back to Christ. We want less professionalism and less thought about wealthy churches. We must think less of salaries and more of opportunities. We must throw off the cloth of gold from the pulpit.

[*Christian Register.*]

And what is Christianity, as yet, but a dream, a hope, a prophecy, and a promise? Does it not ever move before us unrealized, unreached, like the pillar of fire the Israelites saw guiding them in the night? It is the church of the future we believe in. The church of the present too often seems abortive, inoperative, and dead. Our spiritual hopes form an important part of our religion. What is, is a crumbling edifice; what is to be, is a city of God to which all nations and races shall flock to live the true and perfect life. Our joy, our success, our satisfactions, move on before us. We see them on the hill, then in the valley, taking always the advance of performance, beckoning, inspiriting, but never attained. And we learn at last that the dream is the reflection, the dim image of the great reality, the perfection that lives in God, given us that we may not despair of the ultimate complete triumph of right, justice, and love. A thousand abortive efforts, a million failures, will not quench the possibility of the dream coming true. Our times are in God's hand, eons and cycles, countless ages; what matters delay and waiting while the whole heaven grows rosy with the promise of the future of man!

[*Continent.*]

There can never be any abundance in the preaching of any man, unless he has himself learned what Jesus said he came to teach—how to live abundantly. That means on the side toward God prayer—constant prayer. Dr. Jowett stresses this wonderfully—that fellowship with Jesus is the only thing that can put big contents into a man's religion, either spoken or lived. On the side toward men unqualified unselfishness is demanded. The taint of any concern for the preacher's own repute puts a film over his Bible eyes. He never sees the book's wealth then. Worse still is the laziness that allots to preaching something less than the ultimate sum of a man's capacities. The whole man, for God and man, all invested, is the only chance to make preaching rich.

[*Zion's Herald.*]

The truth in the case, as it has with increasing force been made clear to thinking minds, is this: The chief miracle was Christ himself—the spotless man, the peerless Teacher, the regal Master of all men, the most commanding and imperial

Digitized by Google

mind of all the ages, the completest pattern of human character ever revealed, the embodiment of all known graces and virtues, and the creator of the vast empire known by his name. In view of what he was, and what he is, all questions as to whether he wrought miracles, or was born as other men, or went out of the world as other men do, amount to little more than beating the air. The supernatural circumstances of his birth; the wonderful things that he did in his ministry by a word, a look, a touch; the authority he showed over nature, and demons, and death; the declaration that he was God manifest in the flesh, the Word who became flesh, the Lord from heaven—all these, in view of his matchless character and his pattern manhood, become, inevitably, parts of a perfect whole, congruous and symmetrical elements in his life, ministry, and work. The man Christ Jesus, who was the babe of Bethlehem, is the one who has all power in heaven and earth. He was and is Emmanuel—"God with us"—our Redeemer forevermore.

[*Christian World.*]

In the West, and not less in the East, religion is reaching forward to a new expression. The foretastes of it are manifest in philosophy, in science, in literature, but most of all in the felt necessities of the moral nature. Everywhere it is being recognized that the one true life for man is the life of the spirit; that religion is, after all, the supreme and only thing. But this feeling is allied with another. If religion is to take this place, it must be a reformed religion; one that can appeal as forcibly to the head as to the heart; one that is rid of the lumber that has gathered round its earlier forms, and which hinders its acceptance by the modern mind. One wonders sometimes to what extent the church is aware of this state of things; whether, sunk as deep as it is in its conventions, it realizes the actual condition and the actual difficulties of the multitudes who at present stand outside its borders.

[*Advance.*]

The divine word to us is, "My son, give me thine heart." That is the best of all Christmas gifts to Him to whom we owe most. The heart enriches the humblest offering. Its absence makes the costliest gift poor. He who asks it has Himself given us all things richly to enjoy, and above all other bestowments has added His "unspeakable gift" of redemption through His Son. When therefore we are looking about us for presents that will be most acceptable to those we love, let us not forget to reserve for our heavenly Father the one thing he asks, when He says to us today, "My son, give me thine heart."

[Rev. Malcolm James MacLeod in *Christian Intelligencer.*]

If human selfishness, and the inordinate lust for gain, and the passion for pleasure are the source of most of our current troubles, it would seem to be the wiser way to go straight to the spring. Jesus thought so. The first business of the church is not to secure social justice, but to try and make men socially just. The ideal social state is not going to come from any violent upheaval, but as a natural consequence of a change in the hearts of the people. Humility, renunciation, sacrifice, love—this was Christ's propaganda, and it worked. And it has worked since. It has always worked. History corroborates the view.

[*Universalist Leader.*]

The children of God are hungry for the bread of life; nothing else can ever satisfy them. There are no riches of scholarship, no reaches of administrative ability, no social, no political skill, which can take the place of this indefinable thing men call the gospel, and which they crave as starving men crave food. And experience proves that Professor Phelps is right in his conclusion that "the main difficulty with the church today is that the people in the pews do not have the gospel preached to them. The hungry sheep look up and are not fed."

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

Another new pamphlet has recently been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services *throughout* the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the *form of questions* and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The complaint in the long-expected suit of the federal government against the Southern Pacific railroad, involving title to two hundred and fifty million dollars' worth of supposed mineral-bearing lands in Fresno county, has been filed at Los Angeles, Cal., in the United States district court for the southern district of California. Other suits are to follow, in which the government will contest the ownership of a total of seven hundred and fifty million dollars' worth of lands. The suit is brought under the act of Congress passed July 27, 1866, requiring the department of the interior to exempt mineral-bearing lands in issuing patents to railroads. The government will contend that of 440,000 acres of land on the main line of the Southern Pacific railroad in California, 45,726 acres are mineral-bearing and must revert to the public domain. The land is, for the most part, in the Coalinga oil-field and is under lease to the Kern Trading & Oil Company, a subsidiary corporation of the Southern Pacific and a joint defendant in the suit.

Investigation of an alleged attempt to obtain control of the oatmeal business of the United States has been started by the federal grand jury at Chicago, Ill. Purchase of the Great Western Cereal Company by the Quaker Oats Company will be inquired into first. It is charged that virtual control of the oatmeal business resulted from this transaction. The price paid by the Quaker Oats Company for the Cereal Company was one million dollars. The Cereal Company had factories at Peoria, Ill., and Fort Dodge, Iowa. Shortly after the purchase the plants were closed and the company went into the hands of a receiver. The Quaker Oats Company last October declared a dividend of two million five hundred thousand dollars, or five per cent on its capital stock. In addition, it is said to have in its treasury accrued profits of two million five hundred thousand dollars. Petitions attacking the transfer have been filed in chancery in New Jersey by stockholders of the Cereal Company.

New application of the Sherman antitrust law was made in an important suit filed last week at Detroit, Mich., by the federal government. The action is aimed against the growing practise of manufacturers in attempting to fix a uniform jobbers and retailers' price for their products, and was brought against the Kellogg Toasted Corn Flake Company. The bill attacks the plan by which the company exacts an agreement from jobbers and retailers to whom their breakfast food is sold not to sell at less than a specified price, the penalty for violation of their agreement being forfeiture of future selling rights.

Calling upon all railroads hauling anthracite coal and coal companies alleged to be affiliated with the same carriers, to give all information as to business transactions between these different companies, the interstate commerce commission has begun one of the most comprehensive investigations it has yet undertaken. The commission has mailed blanks for all carriers to fill out, telling how much coal is mined, cost of mining, high and low selling prices, whether the stocks of coal companies are owned by the railroad companies, and all other business information.

Money-washing machines are to be placed in the sub-treasuries at New York, Boston, Chicago, Baltimore, Philadelphia, St. Louis, and New Orleans. First tried in the bureau of engraving and printing a year ago, the "money laundry" has worked so well as to warrant its general adoption. It takes six women to operate each machine. Two count the money as it goes into the laundry, two count it as it comes out, one operates the machine, and one has supervision over the other five.

On behalf of the mayor of Boston, a measure providing for the appointment of a commission of three to investigate the single tax system and to report to the Legislature on the advisability of its adoption in Massachusetts, has been filed at the office of the clerk of the Massachusetts House of Representatives.

Advanced position was taken at the recent session of the national rivers and harbors congress at Washington on the question of municipal or state-owned water terminals as one of the correlated problems growing out of the improvement of the rivers, harbors, and canals.

On Dec. 1 only one seventh of the entire excavation of the Panama canal remained to be completed. There now is at work on the canal and the railroad the largest force in the canal history, an army of 40,159 persons.

International.

The Khedive last week opened the gigantic Assouan dam works, which cost seven million five hundred thousand dollars. Lord Kitchener, British agent and consul-general in Egypt, read a congratulatory message from King George. The work of adding twenty-six feet to the height of Assouan dam, which converted the river Nile into a great lake three hundred and fifty miles south of Cairo, was begun in 1907. According to the contract it was to be completed in 1913. The undertaking has increased the storage capacity of the dam about two and a half times. The extra supply of water thus obtained will irrigate about one million acres of mainly government property, which heretofore has been sterile for lack of water. It is estimated that the annual increase in the value of the cotton crop will be twenty million dollars. The island of Philæ, just above the dam, will be completely submerged part of the year. On the island are Ptolemy's famous temple and other relics of ancient Egypt.

At the autumn meeting of the Scottish Liberal Association held in Aberdeen recently, Mr. Lloyd-George delivered a speech on the merits and working of the insurance act and on the importance of the land question. "The first essential condition to every social reform, every real improvement in the lot of the people, is a thorough, complete change in the land system," declared the chancellor of the exchequer. "Land," he said, "is at the root of most of the problems which call themselves housing, wages, food; for the solution of these there must be a free land system."

Among the most popular of the South Australian legislative enactments designed for the assistance of the workers is the advances for homes act. Under this measure loans are granted through the state bank to persons in receipt of not more than three hundred pounds per annum at a low rate of interest to enable them to erect, purchase, or enlarge a dwelling-house for themselves, or to discharge an existing mortgage. Advances are made to the extent of four fifths of the valuation, and the repayment by instalments may be spread over forty-two years.

The claims of Russia to river navigation, fishery, mining, timber cutting, and pasturing, as well as general trading rights in Mongolia, are clearly recognized in the Russo-Mongolian protocol. Russia agrees to recognize China's suzerainty and to withdraw her troops as soon as the two thousand Chinese troops, at present in Kobdo, are withdrawn. From the Chinese point of view Kobdo is in inner Mongolia, while the Russians maintain that it is in outer Mongolia.

The Yale expedition to Peru the past season conducted its exploration and excavation chiefly at Machu Picchu, the Inca city discovered on a previous expedition. This stands on a plateau surrounded by precipices two thousand feet in height. The jungle was cleared away and more than one hundred caves were discovered. Ruins of baths, houses, and palaces were also laid bare, and practically the entire city uncovered.

The six great European powers, England, France, Germany, Russia, Austria, and Italy, have accepted the principle of an autonomous Albania with a provision guaranteeing to Servia commercial access to the Adriatic sea.

Industrial and Commercial.

The water-power interests which have been urging Congress to give them the privilege to build a dam on the Connecticut river near Windsor Locks, Conn., are now, it is learned, prepared to cooperate with the administration in a policy of strong federal regulation. This means that the President will sign a bill giving the right to build a dam on the Connecticut river, and that in return for this the water-power interests will pay to the government a rent for the use of the stream. The government, furthermore, will undoubtedly reserve the right to control the price of the power.

The California Railway & Power Company has been incorporated under the laws of Delaware to acquire all the outstanding capital stocks of the United railroads of San Francisco, San Francisco Electric Railway Company, Sierra & San Francisco Power Company, Coast Valley Gas and Electric Company, and two million dollars two-year six per cent notes of the United railroads of San Francisco. The new company is to issue about fifty million dollars' worth of common and preferred stock.

Three million dollars has been voted by the directors of the port of Boston for the construction of a dry dock off the commonwealth lands at South Boston of sufficient magnitude to accommodate vessels one thousand feet long and one hundred and twenty feet wide.

The Argentine Republic is now the largest purchaser from the United States of agricultural machinery and wooden furniture. Argentina also is the third largest customer for wire and the sixth for boots and shoes.

Trade between the United States and Russia in the calendar year 1912 aggregates about fifty million dollars, against less than one half that sum a decade ago.

South Africa produced gold worth one hundred and twenty-five million five hundred and sixty thousand dollars in the first eight months of this year.

The Cape Cod canal is five eighths completed.

REFORMING HABITS.

REV. WILLIAM P. MC KENZIE.

THE gracious work of Christian Science is manifest in the redemption of men from the control of habits which, though undesirable, they once considered fixed. They would resist and resent the control of an evil habit, but they believe it to have a strength and malevolence superior to man's divinely bestowed faculty of self-government. Yet men defeated by habits which they had indulged, and hopeless regarding freedom, have found life made new for them as they came to understand how man is governed by divine Mind. Science and Health says (p. 125): "Reflecting God's government, man is self-governed." By this vision something entirely new has come into operation in their lives, and as they better understood what it is that governs man, they have seen how inevitably true it is that "of the increase of his government and peace there shall be no end." Nothing shall be left unredeemed and uncorrected. As Isaiah foresaw, there shall be a complete change of nature and habit expressed, even in animals: "The wolf and the lamb shall feed together, and the lion shall eat straw like the bullock."

Some habits are like tiger cubs which men adopt to their hurt. At first they seem harmless and perhaps amusing, but as they are nurtured they gain strength to dominate the man to the injury of his manhood. Indeed all evil habits and vicious tendencies have the appearance of innocence at their inception. Evil and bestial seems the condition of the drunkard degraded to the underworld of city life; but when in his youth he was honored, flattered, and banqueted the inevitable end was not foreseen. The tumult of angry passion in the young child which adults think amusing, may grow to be the flaming wrath which in a whirl of madness may lead to murder. The indulgence afforded by fond parents who seek to bring up their children in luxury, may develop imperative desires which must be satisfied regardless of the rights of others. The father may mourn over the wounding of his heart by the prodigal son, but he indulged the vainglory and pride of spending, perhaps congratulating himself that his son's position was superior to that of the laborer who first must earn what he spends. Sometimes, when a man's insane pride holds to a bitter feud with a brother, he will deliberately implant hatred in the mind of his son, so that malice may be prolonged into the next generation. This is as if he gave to the child a tiger cub for a playmate, careless of the wounding that must follow.

What strange results follow the dallying with taste! All manner of drugs are used to satisfy peculiar likings which by satisfaction grow to be abnormal needs. Sometimes the drug-user becomes so enslaved by his habit that characteristics appear whence he is described by his friends not as a man but as a fiend. It is unnecessary to make any list of the drugs whose use destroys manhood and self-control, but in every nation from the savage to the supercivilized may be found preparations which minister to abnormal taste with degrading results. Yet many of these disintegrations of moral character which bring calamity to a man and grief to his friends, begin with the suggestion of delicacy and luxury. Furthermore, many of the opiates and narcotics have in the inception of their use the sanction of medical advice. Many a man knows, however, that he would have fared better if he had taken a tiger cub to his bosom, since the laceration from feline claws would more readily heal than the wounding caused by his drug-habit.

The simple inference from what we thus observe in life is our own need for constant watchfulness that we consent to fellowship with no wrong or enslaving habit. Men should be masters of themselves, and if right doing is habitual one's habits are then merely his way of doing the right thing in orderly fashion. We need to consider what an indulgence of sense becomes when full grown, and the transiency of its alleged satisfaction, ere we permit ourselves to enjoy its beginning. John writes this analysis: "All that is in the world, the lust of the flesh, and the lust of the eyes, and the pride [or vainglory] of life, is not of the Father, but is of the world. And the world passeth away, and the lust thereof: but he that doeth the will of God abideth forever."

When God's will is universally done, neither animals nor men will be malevolent, for the real nature of all divine ideas will be expressed. Already there are a multitude of cases in the record of Christian Science healing where the brute animalism of the drunkard has been superseded by the qualities of manhood. Persons lowered beneath the grade of animals by drug intoxication have been redeemed from this lowest hell. The habitual hater, as well as the habitual invalid, has been healed, and brought into that obedience to divine Love which casts out both hate and fear. These reformations of habit are even more wonderful than the change of nature predicted by the prophet when he says: "The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them. . . . And the sucking child shall play on the hole of the asp, and the weaned child shall put his hand on the cockatrice' den." The time is now when we begin to see the fulfilment of that further vision which the prophet discloses: "They shall not hurt nor destroy in all my holy mountain: for the earth shall be full of the knowledge of the Lord, as the waters cover the sea."

CLEANSING WATERS.

HELEN FRIEND-ROBINSON.

THE faithful Christian Scientist who continually prays with the psalmist: "Create in me a clean heart, O God; and renew a right spirit within me," has opened the floodgates of heaven, through which pours out an inexhaustible and never-failing stream of love; the love that today as of yore "healeth all thy diseases" as well as "forgiveth all thine iniquities." Bathing in these cleansing waters, through the washing of regeneration, he daily proves for himself that true cleanliness is not only next to godliness, but is godliness. He is not only trying to wash himself spiritually clean, but

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

he is also gently leading others to this baptismal font, as he goes on his way rejoicing in these twofold blessings.

Because of the dust and heat of the eastern countries, it was customary in ancient times to wash the hands before and after each meal; it was also the custom for a traveler to wash the feet upon entering a house as guest, not only out of respect to his host but as a means of refreshing himself as well. Being fully aware of these customs, it is not to be wondered at that the Pharisee who invited Jesus to dine with him (as related in the gospel of St. Luke) marveled because his exalted guest had ignored these requirements and had sat down to dinner without first having performed the customary ablutions. It is possible that the Master purposely neglected this ceremony, in order that he might teach the Pharisees a needed lesson, for he pointedly rebuked them by saying: "Now do ye Pharisees make clean the outside of the cup and platter; but your inward part is full of ravening and wickedness." Because he knew they had retained but the outward symbol of cleanliness, while they had utterly disregarded the inner spiritual purification and the love of God which were the signs of true fellowship, or "God with us," demanded of them by the Christ, the Master's words, "These ought ye to have done, and not to leave the other undone," constituted a wholesome and merited rebuke which should have silenced forever all pharisaical forms and practises.

Prior to learning the way in Christian Science, most students have run the gamut of hygienic methods, in their futile efforts to find health of body and peace of mind. In fact the life of the average person in the old régime has been so dominated by material theories that he has welcomed almost any change from this bondage. When through much tribulation he finally turns to Christian Science and finds health and happiness, after all other means have failed, he then learns that real health is spiritual and that all the old health theories profit him nothing. He now finds that God, whom he has been ignorantly worshiping, is an ever-present help in all his needs, mental, moral, and physical.

This influx of divine power, as revealed through Christian Science, which brings spiritual regeneration in conjunction with the physical healing, comes so suddenly and with such overwhelming power to some of us, that at first we almost lose our breath in wonder; we feel so uplifted that for a time we may attempt to ride the waves of public opinion by ignoring ordinary means and usages altogether. The Pharisees followed one extreme, and the neophyte in this Science is apt to follow the other; but neither of these extremes is taught or advocated in Christian Science, and the student should watch carefully that he does not become a channel to bring reproach upon the cause which he is beginning to love so dearly.

As he advances, he should not only seek but strive for that spiritual poise which is so necessary while we are waiting according to St. Paul for "the redemption of our body." During this transitional period he will meet with many a "Suffer it to be so now," but revolting at or chafing against what at first seem to be arbitrary laws is not conducive to that peace "as a river" of which Isaiah writes, and which he is striving to attain. The sooner he falls in line with customary and proper requirements, the quicker will he regain his mental equilibrium and become a helpful factor in the larger issues in the field of Christian Science work.

Although Jesus rebuked the Pharisees for making clean merely the outside of the cup and platter, he did not imply that they should not wash both sides of these vessels. His precepts about taking no thought for the body meant that no anxious or troubled thought should be allowed to take precedence over one's spiritual unfoldment. Mrs. Eddy follows these same common-sense rules when she says: "We need a clean body and a clean mind,—a body rendered pure by [divine] Mind as well as washed by water" (Science and Health, p. 383). The student who has received divine healing from this great fountain of Love cannot long remain upon the borders of doubt or inactivity. As soon as he discovers that his life is tributary to God, the source of all good, he cannot help expressing spontaneously his desire for a "clean heart" and the renewal of a "right spirit" within.

Instead of straining at gnats and swallowing camels, the wise student soon finds the better way, and sings and rejoices continually in his new-found fellowship with Christ, because he is privileged in this age, through the understanding given in Christian Science, to do those things which the Master taught his followers to do, and to leave undone those things which he enjoined them not to do. Gradually cleansing his thought in these waters of divine Love, he sees clearly that the outer symbols should keep pace with the inner spiritual regeneration, in order to produce a harmonious whole, or holy consciousness; and *vice versa*.

One of our familiar hymns says, "Make channels for the streams of love" (Hymnal, p. 89). In the proportion that each student reflects the clean heart and right spirit of good, will he be a channel for the cleansing waters of divine Love to flow out and heal and bless others. It rests with each one to see that he removes every obstacle in his own consciousness which would obstruct this outpouring of good. Material methods of healing come and go, but these waters should flow on until all humanity has bathed in this cleansing stream. Love for God and man is the only true incentive through which one may lovingly draw others to this baptismal font. Once the flood-gates are opened to the awakening sense of those whom we wish to bless, and they have caught even a glimpse of God's imperishable glory as the infinite All of existence, we may rejoice in the fact that no lesser healing power will ever again satisfy the awakened desire for good.

Love is indeed, as Mrs. Eddy says, "impartial and universal in its adaptation and bestowals" (Science and Health, p. 13); it is the living fount which is ever inviting us to come to its waters and be healed. Sooner or later all humanity will appreciate the blessed privilege of this loving call, and will come gladly to these cleansing waters and be washed "whiter than snow." Lovingly and patiently we should one and all work on, not only for our own redemption, but in the full assurance of the ultimate salvation of all mankind.

EXPRESSION.

RAYMOND CHURCHILL.

IT is surprising but true that people who express joy and sunshine so naturally and freely in the home are often the most reticent when it comes to speaking in public. Doubtless this unnatural reluctance is caused in many instances by the fear of not being able to express themselves satisfactorily; and the fact that many come to our testimonial meetings week after week without ever giving a testimony would indicate that they are consciously or unconsciously consenting to an error which would violate the fundamental law of their being, namely, to express always and everywhere, in both word and deed, the love and the goodness of our Father-Mother God. "Ye are my witnesses, saith the Lord, . . . that ye may know and believe me, and understand that I am he." The Master said, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." It is evident from these declarations that as divine witnesses we live only in proportion as we express God or good.

In our text-book, Science and Health (p. 89), our revered Leader says: "Mind is not necessarily dependent upon educational processes. It possesses of itself all beauty and poetry, and the power of expressing them. Spirit, God, is heard when the senses are silent. We are all capable of more than we do." If we do not express freely the gratitude which every Christian Scientist should feel, it is because we are obeying the voice of fear and not of Truth,

Digitized by Google

and we should know that it is nothing less than suicidal to repress those gentle feelings of the heart that are ever pleading for utterance. Error was a murderer from the beginning, and it is because people allow these kindly feelings and impulses to be choked and throttled, through distrust of themselves or of others, that they appear to be reticent and cold and unsociable. No doubt they would recognize this error for what it is and make a greater effort to overcome it, if they but realized that they could never get out of life all the joy and happiness to which they are entitled until they filled to the full the measure of their own offering to others. The poet was probably thinking along this line when he wrote:—

He had words, he had smiles for them all,
His friends, his foes, and the rest,
But for one that he loved, no word, no smile,
Not a cool hand pressed,
Nor a sigh, but an empty jest.

Yet there at the hearth of his heart
The fire burned warm and wide,
While the welcome upon his lips,
For the guest who did not abide,
Stammered, and sobbed, and died.

Truth, indeed, seemed but "a still small voice" to Elijah, in contrast to the noisy discords of sense, but it was only as it was heeded and obeyed that he rose above his fear and his discouragement. We know of people who in the privacy of their homes play the piano or the violin so well that they prove themselves to be good musicians, but who when playing before strangers produce many discords because of their fear of making mistakes. There are many who possess naturally good voices, but in which harshness and strained effects may be detected when they are singing in public. All modern teachers of voice culture know that there is a sympathetic relation between thought and the voice which gives it its beauty and power, but that fear and other negative qualities pervert this natural coordination, close the voice passage, and destroy all freedom and purity of tone.

It was once the writer's privilege to receive instruction from a man generally recognized as the foremost living teacher of vocal expression, the fundamental theory of whose teaching was that the body responds absolutely to the thoughts impressed upon it; that it is an instrument which would express harmony or chaos according to whether the feelings that dominated it were positive or negative, beautiful or discordant. How often we have heard the expression, "He was so frightened he could not utter a word." This illustrates the disastrous effects of fear.

The writer is beginning to see that Christian Science is not only the very heart of religion, but the heart of all music, expression, and art. What is music in the final analysis but the desire in every human heart to express God? It is the spirit of good in our hearts, crying "Abba, Father," which becomes sweeter and clearer as we spiritually discern those things which "eye hath not seen, nor ear heard, neither have entered into the heart of man." Our text-book tells us (p. 213) that "Mozart experienced more than he expressed. The rapture of his grandest symphonies was never heard. He was a musician beyond what the world knew. This was even more strikingly true of Beethoven, who was so long hopelessly deaf. Mental melodies and strains of sweetest music supersede conscious sound. Music is the rhythm of head and heart. Mortal mind is the harp of many strings, discoursing either discord or harmony according as the hand, which sweeps over it, is human or divine." In deeply spiritual natures we often find a passionate love for music.

No doubt there is much in Christian Science that we are not yet ready to understand, but it would seem as though one thing should be perfectly plain to every one, that as God's image or reflection man is to express the beauty and the power of divine Love; that the task of the Christian Scientist is so to put out of sight material personality, comprising all the negative beliefs which make life discordant, such as self-will, self-distrust, and fear, that it will become just as natural for us to express the qualities which are of God as it is for the sun to shine through a transparent window-pane. When the great apostle of Love said, "Beloved, let us love one another: for love is of God; and every one that loveth is born of God, and knoweth God," he was setting forth a law which if obeyed would establish the kingdom of heaven on earth, for it is only as we love and recognize the qualities of God (His image) in others that we know Him. Of course we can only see Him in that which expresses Him, and we can see these qualities in every one only as we let the light of Love shine (express itself) in our own hearts.

Who does not love the little child? In him the divine qualities, innocence, joy, and purity, unhampered by fear, find natural expression, even as they would in every one if false material sense were not allowed to pervert the harmonious order of being. If we let our own light shine freely, others will see the light and in turn become reflectors, until all are governed absolutely by divine Love, and the "earth shall be full of the knowledge of the Lord, as the waters cover the sea;" that day of which the poet sings,—

Then shall the reign of Mind commence on earth,
And starting fresh, as from a second birth,
Man in the sunshine of the world's new spring
Shall walk transparent, like some holy thing.

PAST AND PRESENT.

SELMA W. EISEMANN.

THE question sometimes arises as to how far one is governed by his past history and religious inheritance; how much is due to established customs, and to what degree the past should be allowed to weigh against the privileges of the present. A member of the Jewish race especially needs to ask himself these questions in order to define his position in the world of progress. To be a member of the Jewish race, according to definition, "is the state of belonging to a particular group or family, descendants of a common ancestor." This, it will be seen, is a physical inheritance, not a mental state. Hence, a Jew born today need not necessarily think as his ancestors thought, nor does the fact that he is of Jewish race debar him from being progressive and enlightened in all fields, spiritual as well as intellectual.

For generations past, in spite of persecution, the Jew has clung to the Jewish religion, which to him has stood for monotheism. Now, it may be said, he is gradually awakening to the fact that his old-time religious form, with its ceremonial, is inadequate for present-day needs: it is historical, rather than practical. It would not be strange, therefore, if the Jew of today were found to be more receptive to new influences than others, especially if he is seeking that which will illumine and vitalize his own cherished ideals. He would thus be compared with the "poor in spirit," those receptive of the truth, as well as with those who "hunger and thirst after righteousness." Farthest from his thought is any desire to deny Jewish racehood, name, friends, etc. But just here, in many cases, enters the conflict between the past and the present. The past argues for loyalty to his people and to formal religion, whereas the present appeals to the dictates of conscience, which would acknowledge the revelation of Truth to our age. Paul asked the Galatians, "Who did hinder you that ye should not obey the truth?" and this is the question which we, too, should ask ourselves. In Science and Health it is written: "Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity." "Will you open or close the door upon this angel visitant, who cometh in the quiet of meekness, as he came of old to the patriarch at noonday?" (Pref. vii., p. 224). With God "there is neither Jew nor Greek, there is neither bond nor free, there is neither male

Digitized by Google

nor female." His message is to the individual and must be answered by the individual, irrespective of so-called race or station. The one Mind and creator, who is Love, is the Father of all. He places no barriers between His children, and knows no distinctions.

In order to think as God thinks, then, we need to recognize man in the image and likeness of God as the only race representative, and to understand the truth about God, to recognize that a scientific and demonstrable knowledge of Him is the only true religion. That there never has been any other race, or any other religion in reality, to claim our loyalty, is a part of the truth which makes man free. It shows the contention of the past to have been unfounded, based upon nothing, which yet claimed to be something, and points to allegiance to God and His idea in the present as the paramount duty of man. Mrs. Eddy says: "Divine Mind rightly demands man's entire obedience, affection, and strength. No reservation is made for any lesser loyalty" (Science and Health, p. 183).

OVERCOMING OF TEMPERAMENT.

CATHARINE SEVERENS.

In bygone days there was a generally accepted theory that a man's character was decided by the preponderance of certain elements in the body, certain "humors" which, proportionately combined, produced given mental characteristics or temperament; for example, the phlegmatic, the nervous, and the artistic temperaments. It is now admitted that the world has long since outgrown this specific theory, but it has not yet risen above the belief that body controls and conditions thought and character, and so we constantly hear of this or that person as possessing a certain temperament, with the inference that he is a slave to that temperament and that it governs him equally with the so-called law of heredity or environment.

Christian Science frees men from every form of bondage through the understanding that God's law is the only law; that Spirit, not matter, conditions man; that the body is but the manifestation or externalization of thought, and that Mind alone is causative, thereby completely reversing the opposite belief that mental conditions or characteristics can be in any way dependent upon the physical structure or economy. The truth of this teaching is proven every time that disease is cast out through mental treatment alone, and it is only upon this basis that real healing can ever be accomplished.

The student of Christian Science learns that he must begin with mortal thought as the seat of all disturbance, and to him temperament is but the individual measure of material thinking, whatever may be claimed or accepted of mortal belief, and nothing more. He learns that the belief of temperament, entertained and indulged, leads to discord of many kinds,—bodily disease, domestic inharmony, business failure, the loss of friendships, the distrust and dislike of one's fellow men; and he is impelled to turn to his model, the "Mind of Christ" (Science and Health, Pref., p. ix), in a prayerful effort to eliminate that which will not bear comparison in his own mentality.

The Mind of Christ, reflected in man, would make one always steadfast, wise, kind, pure, alert, uncritical, unemotional, conscious always of unity with God, of spiritual power. With this ensample held in thought, the Christian Scientist, content with no other aim, is set free to conquer his own shortcomings, and he must daily grow into the divine image, dropping off every mental makeshift, every superficial quality, until the real character shines forth and he has proven that divine Mind alone conditions man, and that matter has no control over Mind. As he ponders and practises constantly the teachings of Christian Science, as found in our revered Leader's writings, the so-called law of temperament, either as a curse or an excuse, will become to him null and void in the light of the law of Mind and its perfect manifestation, in which man is the true reflection of God.

ALONE WITH GOD.

MARY WHEELER.

To be alone with God is to have no sense of anything apart from Him. It is to have no belief in anything outside His allness. It is to acknowledge no reality in anything which contradicts His nature. It is to have *no faith in matter, no fear of evil, no love of sin, no sense of self. It is to entertain no thought that He could not think, to listen to no* prompting that could not come from Him.

Mark tells us that Jesus, "rising up a great while before day, . . . departed into a solitary place, and there prayed." So, in the night of temptation, sorrow, or pain, should the weary heart rise up, even while yet there seems no ray of light, and depart into that consciousness where only good is, and there hold communion with God. Alone with infinite good, evil has no presence. Under the heaven of Love divine, sorrow cannot abide. Going out from the lying sense of life in the body, pain dies for want of cherishing. Clinging fast to old visions of the beauty of holiness, even while groping blindly among the shadows of self-will and self-love, at length across the night of error dawn the morning beams of Truth (see Science and Health, Pref., p. vii), and presently the up-hill road that seemed so rough becomes the mount of transfiguration. Then, indeed, would the awe-filled heart build tabernacles to inflooding revelations! For then is the stern righteousness of Sinai known as one with the very Principle of life; then in the uplifted realization of the nothingness of sense is recognized the prophecy of that restoration of all things in their spiritual reality which shall satisfy every desire.

To live alone with God is to be in the world and yet not of it. It is to know loneliness, it may be, in human relationships, but it is to be companioned by all right ideas: it is to be not alone, because at one with those "highest ideas [which] are the sons and daughters of God" (Science and Health, p. 503). To live alone with God is to be at peace with self, because it is to find one's true self in Him whose peace mortality cannot give nor take away. To live alone with God is to have ears to hear and heart to understand that symphonic benediction which from the summit of the Christ-mind sounded its basic note in the pregnant words, "Blessed are the pure in heart: for they shall see God." To live alone with God is finally to attain some measure of that exaltation whence we, in reverent humility, may echo the sublime declaration: "And I, if I be lifted up from the earth, will draw all men unto me."

[Written for the *Sentinel.*]

THE NEW YEAR.

J. C. BROOKS.

The year is new to those who dwell in time,
  Who reckon age by days and months and years,
Who look through windows dimmed by winter's rime
  For twelve months more of hopes and doubts and fears!

But those who dwell forever in the light
  (Reflections of the God whose voice they hear),
Dispel the mists of error:—their clear sight
  Discerns the eternal good and knows no fear.

Not bound in chains of matter—false belief!
  Their soaring thoughts wing unimpeded flight.
They know not time, nor age, nor pain, nor grief,
  But live for Love, in God's eternal light.

SELECTED ARTICLES.

[Frederick Dixon in *Evening Telegram*, Weymouth, England.]

The letter of a critic in a recent issue of the *Telegram* manifests such extraordinary confusion of thought on the subject of Christian Science, that I should be obliged if you would permit me to make this clear. His sincerity and wish to state the case fairly I do not question for one moment, but he will forgive me for saying that he has entirely misunderstood the teaching he professes to elucidate. He starts with the statement that the teaching of Christian Science was before the world years previous to Mrs. Eddy's discovery. This is, of course, true, inasmuch as Christian Science is the primitive teaching of the Christian church. Regarded from that point of view it has been before the world since the beginning of the first century; but I do not think this is quite what the critic means. If he means that the churches were teaching what Christian Science teaches, this is obviously a mistake, as neither the theology nor the practise of Christian Science was taught for centuries previous to the time when Mrs. Eddy rescued the teaching of the primitive church from oblivion, and made it a practical religion, in the same practical way in which the primitive church preached and demonstrated the truth of its preaching. The simple fact that the Christian Science movement has been attacked without any restraint whatever from within the orthodox churches is sufficient proof of this. The orthodox churches repudiate the theology of the Christian Science church, and repudiate even more strongly the practise of healing contained in it. To say that the main points of the teaching have been before the world for years, and that much of it has been preached in the Church of England, is obviously absurd, and the critic goes on to make this quite clear by showing that he himself has not grasped what this teaching is.

He says in the very next paragraph that Christian Scientists say that God did not make the earth or the sea, but that He did make the heavens. This will be news to every Christian Scientist. Christian Science repudiates the definition of heaven as a place; and the heavens, in the sense of clouds or whatever people may imagine them to be, can no more be dissociated from all things under them, from the earth and from the sea, than the earth and the sea can be dissociated from one another. Heaven, Christian Science teaches, is a condition of mind. It is arrived at exactly in proportion as a man attains the Mind which was in Christ Jesus. "Sin," Mrs. Eddy writes, on page 196 of Science and Health, "makes its own hell, and goodness its own heaven." The conditions so produced are therefore mental.

Why, the critic goes on to ask, should Christian Science deny the reality of matter, and say that it is not God-created? The answer is extremely simple. It is, first of all, because by real, Christian Science means that which is God-created and therefore indestructible, and matter, except under analysis of materialism, is not indestructible. Then Jesus himself declared that "the flesh profiteth nothing." The Christian Scientist finds it impossible to believe that divine intelligence created something which profiteth nothing, and has to be set aside. Paul, again, wrote to the Galatians that "the flesh lusteth against the Spirit," and to the Romans that "they that are in the flesh cannot please God." To the Christian Scientist it is inconceivable that God should have created a substance which could not please Him, in order to imprison in it what the orthodox churches term the spirit.

When your correspondent goes on to ask why Christian Scientists do not "treat" a broken leg if they believe that the break is only merely imagination, I have a little difficulty in following him. Christian Scientists are endeavoring to heal broken bones, and all over the world are constantly being successful. Again, when the writer goes on to declare that Christian Scientists regard Mrs. Eddy almost as a goddess, he goes on to say something which is unintentionally a little offensive, and is in any case entirely ridiculous. Christian Scientists regard Mrs. Eddy as the person who has made it possible for them to understand and practise the teaching of the gospel in a way which never seemed possible to them before. For this they are deeply grateful to her, but they never are guilty of what they know would have been peculiarly distasteful to her, and that is of regarding her in the way suggested by the writer of the letter. One of the very reasons why the future of Christian Science is assured is because Mrs. Eddy steadfastly pointed her followers to Principle and not to person. "'What went ye out for to see?'" she asks in "Personal Contagion," "A person, or a Principle? Whichever it be, determines the right or the wrong of this following."

I have endeavored to answer briefly the objections of the critic in the same courteous spirit in which he has given expression to them. The difficulty of all letters to the press on such a subject as Christian Science is that they invariably tend to cover so wide a field. The critic himself touches on many subjects, and though it would be intensely interesting to discuss each of them at length, it is impossible within the limits of a letter. May I, therefore, finally point out to him that he is really making his greatest mistake in his failure to separate the relative evidence of the senses from absolute spiritual knowledge. Jesus himself said, "Ye shall know the truth, and the truth shall make you free."

A great scholar of the Church of England has pointed out that this truth is the absolute spiritual fact, that which positively is, and is contained in the spiritual kingdom. Christian Science insists that God and the spiritual kingdom are all that actually and absolutely exist. The evidence of the material senses is simply the appearance of something which, though desperately real to humanity, is not the actual fact. It is the effort of Christian Science to show people that evil is in no way part of divine knowledge. This critic writes: "Evil to me is the wrong usage of anything of mind and body; and incorrect thinking fathers the deed of evil." Christian Science says that evil is anything which is not part of the divine consciousness. There is the sin of commission; what presumably this critic would describe as the wrong usage of anything. But there is also the sin of omission, the sin of omitting to "love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind." In the exact ratio in which man ceases to do this he is guilty of sin. "The flesh lusteth against the Spirit," and with the flesh man serves the law of sin. Surely, then, to the extent in which a man thinks materially he thinks of the earth earthy, and turns his thought away from the reality of Spirit. "That which is born of the flesh," Jesus told Nicodemus, "is flesh; and that which is born of the Spirit is spirit." Surely, in order to continue instant in prayer, it is necessary to deny the flesh which profiteth nothing, since as Jesus himself said, "the words that I speak unto you, they are spirit, and they are life."

[James D. Sherwood in *San Antonio* (Texas) *Express*.]

The supposition of our critic that Christian Scientists do not believe in the Bible is proved erroneous when it is known that no body of Christian people makes a closer daily study of the Bible than do the Christian Scientists. Other denominations have their commentaries as aids in the study of the Bible; and the Christian Scientist has his, namely, "Science and Health with Key to the Scriptures" by Mrs. Eddy; and if the Christian Scientist is able to make proof of the correctness of the spiritual interpretation of the Bible, as given in the Christian Science text-book, if he is able to heal the sick and to reform the sinner by following faithfully the rules laid down in that book, rules based upon the teachings and practise of Christ Jesus, he has the witness that the Master required as the test of discipleship. St. James said: "Faith, if it hath not works, is dead;" and he followed up that statement by adding: "Thou hast faith, and I have

Digitized by Google

works: show me thy faith without thy works, and I will show thee my faith by my works." The healing that accompanies Christian Science practise is the very best argument for its rightful claims.

The Bible is an oriental book; its teaching is illustrated by means of metaphor and parable. This was the common method in the East. When Christ Jesus said: "Whoso eateth my flesh, and drinketh my blood, hath eternal life," he certainly did not mean his material flesh and blood, else that plan of salvation would be impossible of attainment after his resurrection, for where on earth can there be found today a drop of his blood? It is quite evident that he meant his life must be spiritually assimilated by his followers, and that salvation was dependent upon one's ability to do the work that he did while he sojourned with men. Every individual must, some day, so comprehend the teaching and the works of the Master as to be able to reform the sinner and heal the sick by spiritual means only. Thus doing he will find the path which leads out of sense and into Soul. He will be able to demonstrate the plan of salvation marked out by Christ Jesus.

Christian Science teaching does not disregard the belief in sin. It declares that sin is not the work of God, since God is the only creator, and His works were pronounced by Him to be "very good." It teaches that sin, being evil, has no legitimate demands upon man, and that sin can be resisted, overcome, demolished, and thus proved to be unreal. On well-nigh every page of Science and Health it is shown that the practise of sin is accompanied by certain punishment, and that this suffering will continue until the practise of sin is abandoned. "While there's sin there's doom." "Does not Science show that sin brings suffering as much today as yesterday? They who sin must suffer" (pp. 40, 37). The belief in a power apart from God breaks the first commandment, and that is sin. Who, then, among the children of men is free from sin?

The first verse in Genesis reads: "In the beginning God created the heaven and the earth." God is Spirit and Spirit is infinite. Being infinite, Spirit is the only substance there is; hence, God created a spiritual heaven and earth. It is being admitted by many of the great thinkers of the day (Huxley among them) that what is called "matter" is not substance at all. In fact, it is being declared, to use the language of Mr. Balfour, formerly prime minister of England, that modern physical science "not only explains matter, but explains it away." Some day it will be universally seen and acknowledged that Mrs. Eddy was right when as far back as 1866 she declared "that all causation is Mind, and every effect a mental phenomenon" (Retrospection and Introspection, p. 24). In referring to the insubstantiality of matter, Christ Jesus said: "The flesh profiteth nothing;" and it might be asked, How much is nothing?

Any one can readily ascertain what Christian Science teaches concerning Christ Jesus, by a careful perusal of the Christian Science text-book, where he will find it stated that "Christ expresses God's spiritual, eternal nature" (p. 333). He will learn that "Jesus was born of Mary." "Jesus was the son of a virgin," and that "Jesus demonstrated Christ; he proved that Christ is the divine idea of God—the Holy Ghost, or Comforter, revealing the divine Principle, Love, and leading into all truth" (p. 332).

Our critic claims that Mrs. Eddy's interpretation of the Scriptures "leaves God out," while in fact Mrs. Eddy believed and taught that God is infinite, that He is All, and that there is naught else besides Him. In the "scientific statement of being" (Science and Health, p. 468), she makes this statement: "All is infinite Mind and its infinite manifestation, for God is All-in-all."

Our critic says the teachings of Christian Science are not new. To this we fully agree, for they are as old as God, and proceed from Him. They were known, in part at least, to the ancient prophets, and they were fully demonstrated by Christ Jesus and his disciples, and extended down through the centuries to about the beginning of the fourth century, when the early church through worldliness lost its ability to heal by the Spirit. Christian Science is now engaged in restoring that divine healing agency, and is daily making proof of its divine origin by bringing blessings into the homes and lives of the sick and sorrowing.

Our critic says: "When Christian Science declares that God is everything, and affirms the allness of God, it links itself with the pantheism of the Buddhist," etc. Christian Science does not declare that God is in matter, or is its author; it does not declare that God is "everything," meaning by that, material things. On the contrary, Christian Science accepts the statement made by Christ Jesus to the woman at the well in Samaria, when he said: "*God is Spirit*" (*Rev. Ver.*). Christian Science accepts the statement that God is omniscience, omnipotence, and omnipresence; that is, all true knowledge, all-power, and all-presence. From this premise a Christian Scientist would find it impossible to conceive of God as less than infinite. Spirit being infinite, all, and matter being the opposite of Spirit, it should not seem difficult to believe that what is called "matter" is insubstantial, illusive, nothingness. When true consciousness is reached, the material sense of the universe will pass away, and the spiritual heaven and earth, or the new heaven and new earth mentioned by the revelator, will appear, never to disappear.

[H. Coulson Fairchild in *Atlantic City* (N. J.) *Press*.]

In the report which appeared in a recent issue of your paper concerning the remarks made by a clergyman, I note that Christian Science came in for more or less of criticism. It is but fair that your readers should know that Christian Science has no kinship with spiritualism, will-power, or systems associated with the power of the human mind so called, and should not be classed with them. It is said "the speaker endeavored to prove what he termed the folly of following false teachings and neglecting the great 'truth' as given in the Word of God." Christian Scientists will agree with the critic in this regard, and call attention to a number of the express commands of the Master, Christ Jesus, which we believe have been sadly neglected, the practical import and the value of which cannot be estimated.

Among these express commands emphasized and reiterated in the Word of God, is the command to heal the sick as well as to preach the gospel. In fact, throughout the Bible the healing of the sick and the destruction of sinful beliefs is indissolubly associated with the history of the prophets as set forth in the Old Testament and with the work of Christ Jesus as set forth in the New Testament. In the 103d Psalm, we learn that it is God "who forgiveth all thine iniquities; who healeth all thy diseases." Again the psalmist says: "He sent his word, and healed them, and delivered them from their destructions." Yet again we read the words of Christ Jesus, "Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil."

In fulfilling the law of God, Jesus healed the sick, destroyed sin and forgave sinners, raised the dead, cast out devils. In thus fulfilling the divine law, Jesus did not dishonor God but gave to Him the honor and glory. He said, "My Father worketh hitherto, and I work." The express command of Jesus to his followers is found in the tenth chapter of Matthew: "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." This has been called "Jesus' great commission to the twelve," but Christian Scientists have every reason to believe, from the Biblical record and in their own experience, that this command was not for a limited time or to a limited number. For instance, the promise of Christ Jesus reads, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

Digitized by Google

Here is a command and promise given in the broadest possible way to all believers and followers of Christ. Elsewhere we are told that Christians should go into all the world to preach the gospel. This would have been a physical impossibility for the twelve disciples. All this is preliminary to the Christian Science argument that the Christian religion originally did and should today include a full salvation here and now, and that therefore Christian Scientists are not "neglecting the great truth as given in the Word of God," but rather reviving the long-neglected practise of primitive Christianity, and hence have not a "fancy product of modern civilization," but the original Christianity.

Mrs. Eddy, the Discoverer and Founder of Christian Science, never advanced the claim that she would rise and appear to persons in this world. She merely stated the great truth as taught in the Bible, and indicated that the ages would slowly work up to perfection when sin, disease, and death shall have been overcome. The fact that the disciples, and St. Paul who was not a disciple, healed the sick, and even raised the dead, yet were not able to overcome the last enemy, is never quoted as an argument against the validity of the Christian religion, neither should the fact that Mrs. Eddy has not to mortal sense risen from the dead, constitute an argument against the teachings of Christian Science. The advent of the resurrection of Christ Jesus is the basis of every Christian's hope and faith. Christians need not fear that they will be led astray by Christian Science, rather will it give an enlarged understanding of the great and practical truths of primitive Christianity.

[R. C. Love in *New Orleans* (La.) *Picayune.*]

A recent issue contained a sermon in which a clergyman takes occasion to criticize Christian Science and its methods of healing. The doctor no doubt felt that he was doing his congregation a great service by building up what he thinks is Christian Science, and then tearing it down with Scriptural citations, in the endeavor to justify his position. Among the many statements made, none could be more misleading than the accusation that it is "seductive." Had he taken time to read only a little of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, it is just possible that this statement would have been left unsaid. The first sentence in this text-book is, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love."

The basic teaching of Christian Science is that God is divine Principle, the one cause and creator, the infinite Mind which governs, directs, and maintains the universe and man. The purpose of Christian Science is to lead mankind to understand Christ Jesus' teachings in this age as they were understood and utilized in the first century. Christian Scientists accept the Scriptures as inspired writings which contain the word of God.

The mission of Jesus was to teach men the truth about God, His universe, and man, the truth about the spiritual and material world. He taught men how to pray and demonstrated how the sick are healed through prayer. No system of ethics, no rule for a standard of right living has ever been promulgated to equal the sermon on the mount. It was not Jesus' personality which healed the sick, but the Mind which he manifested. Preaching the gospel and healing the sick were ever connected in his work. In his ministry Jesus proved what he taught by his works, and to his followers he said, "These signs shall follow them that believe." That Jesus did heal all manner of disease is evidenced by the record of St. Matthew, who writes: "And Jesus went about all the cities and villages, teaching in their synagogues, and preaching the gospel of the kingdom, and healing every sickness and every disease among the people."

The human mind believes in a power of good and evil—in most cases the belief in evil predominates. In Genesis reference is made to this as the fruit of the tree of knowledge of good and evil, and it is declared that this ends in death. To believe in good and evil is to believe in health and sickness, sin and righteousness, and according to material law this terminates in death. St. Paul said that death came into the world through sin, and it logically follows that sickness, which nearly always precedes death, must have entered the world in the same manner. As a fountain cannot send forth both sweet and bitter waters, so God, to be a God of love, cannot be the author of sickness, sin, and death. These are a part of the earthly experience which Jesus said would be overcome by knowing the truth which should make free.

[H. Farmer Hall in *Sussex* (Brighton, Eng.) *News.*]

The interest in the teachings of Christian Science and its unparalleled growth throughout the civilized world are due, in a very large degree, to the physical healings experienced by those who in their need have turned to it when all material remedies have failed. Countless numbers today affirm, with heartfelt gratitude, that through the truths taught in the text-book of Christian Science ("Science and Health with Key to the Scriptures" by Mrs. Eddy) they have been led into such an understanding of the Christ that they have been healed of their physical and moral ills.

It seems somewhat surprising, under these circumstances, that the dean of St. Paul's should find it difficult to discover, in his investigation of Christian Science, "any evidence at all of any phenomenon which suggested supernatural intervention" (I presume that by "supernatural intervention" the gentleman means divine intervention). Nevertheless these are the words attributed to him in your issue of the twenty-first, reporting his sermon at the Brighton parish church. I can only conclude that a perfectly overwhelming number of intelligent and independent thinkers have succeeded where this critic has failed. Further, I fear that it seems not unlikely that the dean and the investigating committee of which he speaks, will continue in their unsuccessful attempt to discover satisfactory evidence of Christian Science healing, while the ranks of the Christian Scientists continue to swell with the numbers of those who have found the Christ a Saviour from disease as well as sin.

Lest, however, the public should be led to misunderstand the teachings and practises of Christian Science, and to conclude from the critic's remarks that these practises are in any way allied to occultism in its various forms, may I be allowed to say that Christian Science does not regard the human mind as a healing agent, but on the contrary perceives that the employment of a so-called mental force which claims to be able to affect its subject both for good and evil, has no relationship whatever with that Mind which was in Christ Jesus, *i.e.*, the divine Mind, through which Jesus accomplished his healing works. Christian Scientists accept unreservedly the teachings of Jesus the Christ.

[Written for the *Sentinel.*]

SENSE-DREAMS.

MINNA MATHISON.

I DREAMT the sea was rough and high,
And rude and wild the wind.
It tossed my bark tempestuously,
No harbor could I find.

I dreamt that through a cheerless heath
I took my lonely way,
And ne'er the home-wind's gentle breath
Upon my brow might play.

I dreamt of loss, I dreamt of wo,
I dreamt of wrong and guile;
Waking, how glad my heart to know
Love held me all the while!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"RELIANCE ON TRUTH."

JUST as in the commercial world, with the ushering in of a new year, men take an account of stock and check up their gains and losses, so we as Christian Scientists, laborers in the vineyard of God, may profitably review the work of the year just closed, count our blessings, and with renewed courage enter upon another "Soul-filled year" (Science and Health, p. 599), another year of work for God, of reliance on Truth to overcome every phase of error.

There is indeed reason for rejoicing in the reports that come to us from lecturers and others who have been brought into touch with the hundreds of Christian Science organizations whose services girdle this great globe with a chain of healing, saving truth, the knowledge of God which the Master declared to be eternal life to him that acquireth it. These reports not only indicate great numerical growth of the movement, but they show that wherever the good seed has been sown the sick are being healed, the sinful reformed, and the sorrowing comforted; and this notwithstanding the many obstacles, the would-be hindrances placed in the way of those who have accepted Jesus' words as true, and his works as the demonstration of his teachings. The Master's injunction to his disciples when he sent them forth "to preach the kingdom of God, and to heal the sick," is being obeyed in all parts of the world today, and the results are as certain as in the days when the twelve fared forth upon their world-wide mission,—the promised "signs" follow "them that believe."

Mrs. Eddy writes on page 167 of Science and Health, quoting Paul's declaration that "the flesh lusteth against the Spirit": "The flesh and Spirit can no more unite in action, than good can coincide with evil. . . . Only through radical reliance on Truth can scientific healing power be realized." With clear-sighted vision our Leader outlines the course from which there can be no swerving, no deviation, if we are to be faithful to our trust. Spirit and flesh must ever be at war; there can be no compromise between Truth and error, and it is because Christian Scientists as a whole have awakened to this truism, that the opening of each new year witnesses an ever increasing throng responsive to the call, "Come out from among them, and be ye separate."

Truly there can be no halting, no half-way stand; there must be a "radical reliance on Truth," or nothing. We have cast our nets on the right side, and now we must let go, launch out into the deep, and know that, whatever the seeming, Truth is equal to every emergency, will meet our every need. Jesus said of old to those who standing by doubted his power to heal the man sick of the palsy: "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" and he proved then and there Truth's power and ever-willingness to heal and to save "them that believe." Mrs. Eddy says: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea" (Science and Health, p. 495), and to the one thus trusting, Truth is unfailing in its resources. When one is facing the issues of life and death, and diagnosis, drugs, and dietetics have proved of no avail, often the very desperateness of the situation will turn him to Truth for salvation from his ills. Thrice happy is he, however, who waits not for the time of distress, but daily, hourly relies on God, divine Truth, as "a very present help" in every need.

ARCHIBALD MCLELLAN.

WITHOUT AND WITHIN.

IT is characteristic of the immature that they live without rather than within; they are absorbed in and dependent upon the objective and phenomenal. Thus the kindergartner begins to teach numbers with grains of corn; she enters the domain of thought through the open eye. Thus, too, Christ Jesus taught the multitude in parables, little word-pictures of outer life which served as scaffolding for the erection of a temple of right thought. Indeed the many, Thomaslike, insist that they must be permitted to lay their hands upon every fact they are asked to accept; and this demand is satisfied today in the healing of the sick through Christian Science, even as it was satisfied by the Master when he permitted the doubting disciple to place his hand upon his pierced side.

Though thus recognized and conceded to by divine grace, this habit of living in the material rather than the mental is rebuked by St. Paul when he reminds the Ephesians that life's real struggle is not a wrestling "against flesh and blood," but against that evil mentality which rules in "the darkness of this world." This is one of the hardest lessons for us all to learn, that evil is not really objective but subjective, and that it is not to be resisted with material means, but with the word of Truth.

The career of the crusader has always appealed to human sense, and the favor with which even Christian men and nations regard this militant attitude is still manifest in their devotion to national armaments. All this gives peculiar pertinence to the teaching of Christian Science that only the inner struggles can be effectual, that every genuine victory is to be won in the mental arena, and this teaching must be understood by those who would arrive at that true and spiritually helpful interpretation of history and prophecy which always saves us from absorption in material phenomena, and enables us to relate the symbol or the historic event to our inner experience.

Emerson did much to awaken thought to the fact that every struggle is but a battle between right and wrong concepts, but it remained for Mrs. Eddy to make clear that in its totality "the suppositional warfare between truth and error is only the mental conflict between the evidence of the spiritual senses and the testimony of the material senses" (Science and Health, p. 288). When the individual has reduced things, all historic facts and phenomena, to thoughts, then he is able not only to interpret them in terms of mental experience, but to "cast down" the evil, by his realization of good; error has in his instance become amenable to Truth.

In this way the story of Joseph or of Daniel comes to have an entirely new significance. We are working out our own problems by understanding and entering into theirs. Thus too the prophecy of the Apocalypse is to be interpreted, not in the characters and events which pertained to the struggle between the early church and the power of Rome, nor yet in the political and ecclesiastical misgovernments and turmoil of later times, but as Science and Health has shown us, in the strife between false beliefs and awakening spiritual perception. St. John's beasts may be seen to represent various embodiments of error, and that fittingly, before we reach through Christian Science their true identification with that materiality and fear from which none of us are yet wholly free.

To live without is to become a prey to the seemings of sense, and though one may be honestly trying to find God, he is sure to be swamped in the contradictions of world experience. To live within is to know no reality save Spirit and its manifestation, perfect God and man in His image; it is to acquire that spiritual insight and point of view which compasses and commands all prophecy and human experience, as the mathematician commands the symbols for number. Then spiritual verities alone are consented to, we have found the kingdom of heaven "within."

JOHN B. WILLIS.

SELF-DENIAL.

THERE are few who would question that self-denial is a Christian virtue, but not many see the importance of practising it constantly in order to be true followers of Christ Jesus. One reason for this is doubtless due to the fact that the real nature of self-denial is imperfectly understood. People have imagined that they could meet the Master's requirement simply by doing without certain things which were pleasing to them, on certain occasions; but this is clearly far from its true meaning. In Matthew, Mark, and Luke we find definite statements by Christ Jesus respecting the necessity for denying self and taking up the cross daily. In each of the gospels we have practically the same statement as to the denial of self, followed by the explanatory words, "For whosoever will save his life shall lose it: but whosoever will lose his life for my sake, the same shall save it."

Now self-indulgence is the antithesis of self-denial, and it is clear from the Master's words that to indulge self means to miss or lose the true sense of life. This of course is not what mortals believe. They talk largely about getting a lot out of life, when in reality the true sense of life is slipping away from them in so far as self is indulged and its demands heeded, and this is true on every line of human endeavor. Our revered Leader says, respecting the success of the Christian Science student: "Self-denial, sincerity, Christianity, and persistence alone win the prize, as they usually do in every department of life" (Science and Health, p. 462). We should never forget that every divine requirement is for our good; not that God needs anything of us, but the divine purpose is that man shall be perfect, and humanity finds that many false beliefs must be given up before perfection is realized by men. The one who lives for self has a miserably narrow sphere in which to think and act. Like a bird with fettered wing, thought constantly returns to its starting-point, nothing having been attained. On the other hand, the one who first makes sure of his own spiritual freedom may do much each day to change the destinies of all mankind, by living the truth he knows and knowing Truth's all-power, and this will of necessity involve the taking up of the cross daily.

It is not enough that we say or do a kind thing each day, though this is certainly required of us, but we must go farther and live up to ideals which are above the mortal standard, and this will always call for cross-bearing. Mortal mind caressingly whispers, "You must take good care of yourself; you must have nice clothes and make a respectable appearance even if you cannot afford to pay for either;" and the one who heeds these specious and deceptive suggestions forgets that "Principle is imperative. You cannot mock it by human will" (Science and Health, p. 329). The stern requirements of Principle are the only true foundation for character, and the self-denial for which they call ever places the spiritual fact before the material demand, and thus leads to real and permanent prosperity. What if one cannot dress as well as some other person. He can at least have self-respect for temptation overcome; and what is more, he will be helping to establish the simple honesty which is so greatly needed in human society. Every true effort at contraction on the material side implies expansion and unfoldment on the spiritual side. Every effort at self-denial means the stopping of a mental leak and the gain of that stability which obedience to Principle invariably brings, with spiritual peace and power,—the true basis of rightful self-government.

It should never be thought that the denial of self applies alone to material things; it must likewise include our time and all our thought processes; and obedience to the Master's teaching on this point will furnish its own proof of divine Science in a larger, more joyous sense of life with all its divine possibilities.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

CHRISTCHURCH, NEW ZEALAND.—We have enjoyed the great pleasure of a visit from Bliss Knapp, who lectured here on Sept. 6 to an audience of over seven hundred. The people who attended the lecture were earnest seekers for the truth, those who went from pure motives, and they were rewarded by the beautifully clear statement presented. I have lived here all my life, and understand the people, and am sure that the lecture has done a great amount of good. I have heard business men say that it was "an eye-opener" to them, and that even had they gone to find flaws there were none to be found. Ours is a very argumentative community, but no letters appeared in our papers in reference to the lecture, it having passed by without controversy, but we have found increased inquiries for our text-book and other Christian Science literature since the lecture. We want to be a church, for we have earned it by years of patient working and waiting, and we also want a lecture every year, and I know we will have both, since in divine Love there is no limitation and in divine Love is our abiding.

The cause in New Zealand is growing. It does not grow so much on the surface, but seems to be burrowing deep below, and I can see that a few years will show a wonderful harvest that will surprise and gladden us all. New Zealand is as large as England and Scotland, with practically a million inhabitants. It is about a week's sea voyage from Australia to Christchurch, New Zealand, the trip between New Zealand and Australia being considered the roughest in the world. It is hoped that next year Auckland and Wellington will be ready to have a lecture, for it is a long way for a lecturer to come to deliver one lecture.—*Correspondence.*

MUNCIE, IND.—A complete transformation from an old dilapidated house, an eyesore to the neighborhood, to one of the prettiest, cleanest, and best located church homes in the city, is the result of work just completed by the members of the Christian Science church in their new building at the corner of Liberty and Charles streets. The work of effecting this transformation was started Aug. 1, and the first service was held in the building Nov. 27. Constructed of white plaster, with a red roof, and builded according to the mission style, the new home of the Scientists makes one of the most imposing houses of worship in the city. The old landmark was purchased for thirty-five hundred dollars, and four thousand dollars was spent in improvements. The seating capacity of the church is about five hundred, with a small gallery. The first practitioner came to Muncie in the autumn of 1897. The first meeting was held one year later in a private house. In 1889, the first public meeting was held at 112 West Washington street. On Nov. 2, 1899, the first Christian Science church was organized in the city, with nineteen members. With an increase in the membership it became necessary, in 1900, to locate in new and larger quarters. They selected the vacant room in the Geiger building in West Charles street, where they remained until the fall of the same year, when they again moved, this

Digitized by Google

time to 108½ West Washington street. Still the quarters proved too small, and in 1905, in the month of October, another move was made to 106 West Washington street. The next year quarters were established at 127 North Mulberry street, where they remained until their present move into the new home.—*Muncie Morning Star.*

ASHEVILLE, N. C.—The new Christian Science church, located at 64 North French Broad avenue, was formally opened Dec. 3 when Virgil O. Strickler delivered an address on Christian Science. This building is one of the handsomest religious structures in the city, and was begun in 1909. It is classically designed, and follows closely the old Roman Doric motifs. It is constructed of stone, with flesh-tinted brick for the superstructure. The auditorium, which is rectangular in shape, is thirty-six feet deep by sixty-two feet wide, and has a seating capacity of about three hundred. The basement is capacious and is given over to the Sunday school rooms. The lot on which the church is situated was bought in 1905, and the building then standing was used as the church for a time. When the new structure was begun, the old building was moved to the rear of the lot and was used for services until the basement of the new church was completed sufficiently to be used. The location is ideal, the church having a frontage of one hundred and twenty feet and facing Margo terrace and the Battery Park hotel.
Gazette-News.

BLACKPOOL, ENGLAND.—First Church of Christ, Scientist, is holding an annual Thanksgiving service tomorrow (Nov. 23). Part of the time is to be given over to testimonies of healing. The Christian Scientists are not afraid of being judged by their works. The meeting is quite public, and it provides a good opportunity for their critics to get a first-hand hearing. Most ill-savored criticism arises from lack of knowledge. Christian Scientists are good propagandists, for they have fixed up the Grand theater for another lecture on Friday, Dec. 6. If the lecture is as good and convincing as the last which I heard, it can only do everybody good, whether Scientists or not. I have met people since who went to that lecture in a very critical frame of mind and who, if not converted to Christian Science, at least came away cured of their tendency to abuse a church whose tenets they had not studied.—"Among the Churches" in *Gazette News.*

SPRINGFIELD, MASS.—A simple service in dedication of the already outgrown edifice of First Church of Christ, Scientist, was held in connection with yesterday's (Nov. 24) services in that church, the church and the recently formed society uniting. Although the building was erected seven years ago, any formal dedicatory service was deferred until all financial obligations connected therewith had been met. This took place a considerable time ago, and yesterday's service was within two days of exactly the seventh anniversary of the completion of the present building. The building at State and Orleans streets has for some time been too small, and the church and recently formed society, which holds its meetings in Touraine hall, are cooperating in the raising of a fund for the erection of a new church building.
Springfield Union.

HOUSTON, TEXAS.—At the Industrial Exposition and the Gulf Coast Land Show of the fourteenth annual No-Tsu-Oh carnival an originally designed booth is that of the ladies of the Christian Science church, which is being conducted under the auspices of First Church of this city. Copies of *The Christian Science Monitor* are distributed to the visitors, and "Clean Journalism" is the motto which is conspicuously placarded.—*Houston Chronicle.*

NEW JERSEY.—New church edifices have been completed during the current year for the Christian Science organizations of Newark (Second Church), Orange, Ridgewood, and Rutherford.—*Correspondence.*

THE LECTURES.

SYDNEY, AUSTRALIA.

Bliss Knapp, who delivered a lecture on Christian Science under the auspices of the Sydney church, was introduced as follows by Robert Nall:—

Your presence in such large numbers this afternoon, especially in view of the fact that this will be the third Christian Science lecture delivered in Sydney within a month, is conclusive evidence that the search for a solution of the problems of life has not lost its fascination; indeed, there probably never was a time in the history of the world when the hunger for a greater, a more satisfying knowledge of God, was more manifest than it is now. Most men have a sense of their obligation to the great creator. That sense, however faint it may be, is the genesis of true religion, and it only needs to be awakened to make them alive to the divine call which at some time or other comes to every man—the call to right thinking, to righteousness; the call to realize in all its fulness what God is to him and what he is to God; the call to a full recognition of his responsibilities as a spiritual being.

When we take the time to ponder over these sacred things, quite a host of questions arise, all of which may be focused in this, What is life and whence comes it? These questions are personal, as fresh today as they were thousands of years ago. We are even at this moment in the midst of a recrudescence of a controversy relating thereto, which nearly fifty years ago made good Christians tremble for the ark of the Lord and cry out in despair for the future of Christianity. And yet, see how wonderful are the ways of God! At the very time when Darwin's "Descent of Man" appeared there was in manuscript a book, very shortly afterward published, which, ushered into the world in the most modest way, has done and is doing more than any other, except the Bible, to unfold the truth to human consciousness, to strengthen men's faith in a living, ever-present God, absolute good, and to prove that a right understanding of God and His relation to man is the key that unlocks the kingdom of heaven to all believers.

That book, known as "Science and Health with Key to the Scriptures" by Mrs. Eddy, the Discoverer and Founder of Christian Science, was and is a challenge to the world to reexamine the basis and the object and the product of its religious faiths. In bold and clear tones it declares for a spiritual concept of the universe, including man. It does not formulate a new religion, but it throws new light on the life, the words, and the works of Jesus. It affirms that God is the only Life; that He is the only cause and creator; that He is the only power, and that there is no power apart from Him. And Christian Science has won its way into every quarter of the globe, because it has demonstrated that it is the truth of God, the truth that has made and is making tens of thousands of our fellow men free in the best and highest sense.

The world was startled—people are startled even now—by the claim of Christian Science that it is possible to be physically healed without recourse to material means; and surprise increases with the declaration that this is the result of the operation of divine law available to every man. That this should be considered to be something new, shows the long distance that religious thought has wandered from the teaching and the example of the master Christian. But Christian Science, while it is wonderful for its physical healing, has a higher mission. It purifies, regenerates, and uplifts the entire man, as many here today can testify. It gives a full and complete salvation from all the ills of the flesh, and in so doing proves itself to be the full-orbed Christianity which Christ Jesus gave to humanity. Because of this it is bringing joy and peace and prosperity to thou-

Digitized by Google

sands of homes. By its simple logic, based on perfect Principle, it reveals to the spiritual sense a God who can be and is the author of only that which is good, and who is ready to welcome a recognition and acceptance of that good by every human consciousness.

I will only add this: The object of these lectures is not to attack, but to remove misconception and ignorance about Christian Science; to declare the truth and let the truth do its own benign work. Any movement which claims to be for the good of humanity is entitled to a fair and unprejudiced hearing, and to an impartial consideration of the justice or otherwise of its claims. You would not be here this afternoon if your hearts had not been touched by some desire to be better than you are, and Christian Science comes to you clothed in the majesty of a religion which has been tested and tried and found to be of God.—*Correspondence.*

TORONTO, CANADA.

A lecture on Christian Science was delivered by Virgil O. Strickler in Massey music hall to a good-sized and very attentive audience. Before the lecture, upward of a thousand *Monitors* of recent date, containing an excellent illustrated article on Toronto, were distributed to the people as they entered the hall, as well as a number of *Sentinels* at the close of the lecture. The lecturer was introduced by Jack M. Jackson, first reader of First Church, who said:—

While Christian Science has doubtless been brought to the attention of the public more by the healing of disease than in any other way, yet not a few observers have remarked upon the improved dispositions which it has wrought for its students and adherents,—old friends have been remade, so to speak; transformed into happy, cheerful, contented, optimistic, and helpful companions and associates, and surely such a result is worth striving for. Doubtless all of us wish to be happy, but it is pretty difficult to be happy, cheerful, or contented on the bill of fare which the mortal or carnal mind is continually forcing upon our attention. Let me say that the happiness which comes to the earnest student of Christian Science is not brought about by any effort of the will nor by the mysterious application of formulas, for the human mind is incapable of preparing a formula or administering a specific which will confer happiness—real, enduring happiness. Rather is the happiness which Christian Science confers that "peace of God, which passeth all understanding,"—the peace and happiness which the world can neither give nor take away. Christian Scientists are proving daily that "the blessing of the Lord, it maketh rich, and he addeth no sorrow with it."

Correspondence.

AURORA, ILL.

The First Congregational church was completely filled with a very attentive audience to listen to a lecture on Christian Science by William R. Rathvon, given under the auspices of First Church of Christ, Scientist. The first reader, Mrs. Ruth C. Beaupre, in introducing the lecturer spoke in part as follows:—

Last winter a dear little girl, who had just recovered from a short illness, said: "Mama, we forgot for a little while that we were God's child, didn't we?" How true it is with us all that we forget, or have not been awakened to realize that we are God's children,—"the sons of God," as St. John says; "heirs of God, and joint-heirs with Christ," as Paul says; his "image" and "likeness," as we find it in Genesis; while Isaiah emphasizes the Lord's saying, "Ye are even my witnesses." If our work is to witness for God, to furnish evidence or proof of God, "to express Him," our desire and need must be to understand God and His infinite manifestation, to discern what is the infinite Principle of the universe, the governing Truth.

Truth is absolute, unchanging, eternal. Each day it comes to every consciousness, and we must be alert that we may receive the truth and bear witness to it. Each individual consciousness, however, must unfold in its own way. In a sheltered nook in the garden is a rose-bush on which a bud is trying to unfold. The branches of the trees and shrubs have so overgrown it that they have practically shut out the light. We cannot and we must not try to unfold that bud,—to force it open or to interfere in any way with its development; but if we cut away the branches and everything which seems to obstruct or interfere with its supply of light, the sunshine will stream in and the bud will unfold in all its marvelous beauty. Christian Science comes to help clear away the thick-growing branches of selfishness, self-pity, self-love, pride, self-justification, sensitiveness, fear, discouragement,—everything that obstructs the light,—so that the sunlight of Truth and Love may come into the consciousness and God's idea unfold in all its wonderful perfection and eternal beauty.—*Correspondence.*

NORTHAMPTON, MASS.

Willis F. Gross, who delivered a lecture on Christian Science in City hall, was introduced by Charles H. Tucker, president of the church, in the following words:—

There is one verse in the Bible which is quoted more often perhaps than any other in connection with Christian Science, and that verse is: "Ye shall know the truth, and the truth shall make you free." All the world is seeking this truth, some in one direction and some in another. The Bible contains more truth than any other book that was ever written, and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, throws more light on the truths contained in the Bible than any other book that was ever written.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Anaheim, Cal.—High school auditorium, 8 p.m., Jan. 13.
Athens, Ohio.—Ohio University auditorium, 2 p.m., Jan. 12.
Bolton, Lancashire, England.—Grand theater, Churchgate, 3:30 p.m., Jan. 26.
Bradford, Yorkshire, England.—Mechanics hall, 7:30 p.m., Jan. 23.
Chicago, Ill. (Sixth Church).—Church edifice, 11319 Prairie avenue, 8 p.m., Jan. 14.
Cleveland, Ohio (Second Church).—Hippodrome, 3 p.m., Jan. 12.
Corona, Cal.—Masonic hall, between 6th and 7th on Main street, 8 p.m., Jan. 11.
Corry, Pa.—Library theater, 8 p.m., Jan. 14.
Cumberland, Md.—City hall auditorium, 8 p.m., Jan. 13.
Davenport, Iowa.—Church edifice, corner Kirkwood boulevard and Grand avenue, 8 p.m., Jan. 16 and 17.
De Kalb, Ill.—Church edifice, 8 p.m., Jan. 10.
Detroit, Mich. (First Church).—Detroit opera house, 3 p.m., Jan. 12.
Fayetteville, Ark.—Ozark theater, 3 p.m., Jan. 12.
Fort Smith, Ark.—Church edifice, 7th and C streets, 8 p.m., Jan. 13.
Glasgow, Scotland.—Queen's rooms, Clifton street, 8 p.m., Jan. 24.
Hannibal, Mo.—2 p.m., Jan. 12.
Ithaca, N. Y.—Star theater, 3 p.m., Jan. 12.
Marquette, Mich.—Opera house, 8:15 p.m., Jan. 17.
Paris, Texas.—High School auditorium, 8 p.m., Jan. 16.
Riverside, Cal. (First Church).—Loring theater, 3 p.m., Jan. 12.
St. Louis, Mo. (Fourth Church).—Church edifice, Page boulevard near Montclair place, 8 p.m., Jan. 13.
Tyler, Texas.—Friday evening, Jan. 17.
Wagoner, Okla.—Court house, 8 p.m., Jan. 14.

TESTIMONIES OF HEALING.

In the fall of 1904, I began the study of Christian Science with the hope that it would help me to control a violent temper. I am glad to say that this disposition has been entirely overcome, and when I had been reading the literature for about four months I was able to lay aside glasses which had been worn a number of years for defective vision and badly granulated lids. My sight is now normal and the lids clearer than they ever were.

I had been studying Science a few years when I seemed in need of a surgical operation, although I found temporary relief from pain several times in Christian Science. But the complete healing of this particular trouble did not come quickly, and after about two years I became greatly depressed and discouraged, and decided to have a physician take the case. With this in thought I went to talk with a Christian Science practitioner, and during our conversation she asked me if I had really given Christian Science a trial. I replied that I certainly considered I had, and she gently asked, "Have you let 'nothing but His [God's] likeness . . . abide in your thought' (Science and Health, p. 495)?" I was forced to answer "No;" and she again asked (quoting from What Our Leader Says), "Do you keep your mind so 'filled with Truth and Love that sin, disease, and death cannot enter'?" and humbly I answered that I did not. Then she told me that until I had followed these directions, I had not given Christian Science a fair trial.

This talk awakened me, and I went home greatly encouraged and resolved to keep my consciousness full of good only. Words cannot tell of the spiritual uplift that I had during this endeavor, in learning passages from the Bible and Science and Health, and in knowing that every word of them was for me. I stayed at home, and did not see any one but my family, for I felt that my time was too precious to be wasted. I was so hungry for the truth, and I was being filled; I was dwelling "in the secret place of the most High" (living on as high a plane as I understood). At the end of two weeks there was no need to go to a physician, as I was well and happy and have been until this day. This spiritual uplift gave me a great desire to learn more of Christian Science, and how to study it in the right way, and in less than a year I received the blessing of class instruction.

Christian Science has met every need of my little daughter and myself during these six years. An attack of measles was overcome in one day and an eruptive fever in three; fear has been destroyed, and every day we have proofs of God's tender, omnipotent care. I am so grateful to Mrs. Eddy for showing me the good in my neighbor as well as in myself. Her teaching has shown me how to approach the high ideals that all desire to hold. I give this testimony that I may encourage some one else as I was encouraged, realizing that as I have freely received, so I must freely give.

MRS. MANA W. FISHER, Los Angeles, Cal.

It is now over five years that I have depended on Christian Science to meet every need which has come to me, and with a grateful heart I give this testimony, with the hope that it will bring help to some one, even as the testimonies in our periodicals have done for me and mine. My little daughter was operated upon by the best medical skill that could be secured, for so-called infantile paralysis, after which she wore a brace for over a year, which left the limb half the size of the other. Then a specially constructed shoe was worn nearly another year, but with no good result. Electricity was next suggested, but after consulting the best authorities in this city, I learned that they could not promise any cure. They, however, continued the experiments.

Christian Science was next brought to my notice, and I cannot tell the eagerness with which I grasped this truth, when I was told that God could heal my dear one. Thank God, the burden was lifted at once, when a chronic bowel trouble, which was in evidence from birth, was overcome. I then felt sure that God does heal, because this was the last question I had put to my doctor and he had said they could not cure this ailment, as it was a result of the condition previously named; but through divine power, my child is now a well, happy girl of ten years, with both limbs perfectly developed.

My heart goes out with deepest gratitude for all that we have received through Christian Science. When the remark is passed, "What a healthy looking child she is!" I answer, "Yes, she is a living testimony to the healing power of Truth." About two years ago we had a beautiful case of instantaneous healing when my child was thrown down by a runaway horse attached to a carriage, and was brought to me unconscious. An hour later, she was out walking with the practitioner who had treated her! This certainly was a revelation to us, and it recalls the words of the 91st Psalm respecting the ever-presence of divine Love, as taught in Christian Science. I could enumerate many instances of healing, all having been brought to us through the understanding of Truth. Among these were cases of fever, colds, earache, convulsions, etc., and a very severe case of mumps; but all were quickly overcome.

For all that I have received in Christian Science,—the spiritual, physical, and financial blessings,—there are no words that can express my gratitude. I pray that my life may prove me worthy of the name Christian Scientist, a faithful witness to the truth which our dear Leader, Mrs. Eddy, has again brought to this age through her works.

MRS. MILDRED HIRSCH, New York, N. Y.

I desire to add a few lines to my wife's testimony, in expression of my sense of gratitude for the spiritual understanding gained in Christian Science. I am today trying to live as a Christian Scientist should, in knowing God. Science and Health has meant much to me; it has given me an understanding of God, and filled my heart with good thoughts, which lead to good acts. I am truly thankful to God for my rehabilitation, also grateful to Mrs. Eddy for Science and Health, which enables us to follow understandingly the teachings of our Master.

I was healed of a severe form of knee trouble, which the doctors claimed could be helped only by an operation. I suffered for two years, then tried Christian Science and was healed. For this and many other blessings I am most grateful to God, who has given us through our dear Leader that understanding of Truth which heals the sick, destroys sin, and unfolds to us everlasting life.

CHAS. S. HIRSCH, New York, N. Y.

Christian Science has done so much for me that I wish to tell of it, hoping thereby to encourage others who are in sickness and sorrow to study Science and Health and be made free. Until I was healed through the truth, in January, 1907, I had never known what it was to be free from pain, and for many years I had seldom been without medicine. I was operated on for appendicitis, an abnormal growth, and other troubles, and exhausted the skill of fifteen kind physicians. I continued to grow worse, and felt that I had not long to stay in this world. This is where Christian Science found me, and it has brought me out of darkness and gloom, out of sickness and sorrow, into God's marvelous light. I have proven that to know God is eternal life, and I am deeply grateful for the better understanding of God which I have gained through the study of this great truth.

I never had better health than at present, and I would like to add that through the study of Science and Health I have been enabled to lay aside glasses, after having used them for twenty years for defective vision, with near-sightedness. This is a proof to me that Christian Science is the truth which Jesus said would make us free. The physical healing which I have received has been great, but the spiritual uplifting is even greater, and I can truly say that the five years

Digitized by Google

which I have spent in Christian Science are the happiest years of my life, and I should not care to live without a knowledge of this truth. I feel grateful to every one who has in any way helped me in my journey from sense to Soul, and I am also grateful that there was one pure enough to voice this truth to a hungering world.

MRS. GILBERT P. MORRIS, Wilmington, Vt.

It is a good thing to testify to the healing power of Truth. While attending a Wednesday evening meeting, and listening to the many expressions of gratitude for healing received from the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, it suddenly came over me that to testify thus was to fulfil the law of Love, to help our fellow men in every possible way to throw off this bondage of error. Always before this I had been filled with fear, whenever I so much as thought of standing on my feet before such a large audience, but moved by love for my fellow men, all sense of fear disappeared into nothingness and I was able to give my testimony. If those of us who have been afraid will realize that it is not only a duty but a privilege to do all in our power toward the regeneration of mankind, and that to testify is an act of love, I am sure we will lose all sense of fear and be able to give our testimonies effectively. The hungry will thus go away filled with a new hope, a stronger faith, and a higher sense of divine Love.

I am truly thankful to God for all that Christian Science has done for me, and grateful to Mrs. Eddy, whose courage in the face of seemingly endless obstacles is a noble example for any one to follow. The blessings I have received are very many, and all have come to me through a knowledge of this healing truth. I have been helped in a number of ways. I was healed of a stomach trouble without being treated for it. All at once it dawned upon me that I no longer had any trouble with my food. In the case of intense headaches I was helped wonderfully. I have also had several instances of the protective power of Truth. While riding a motorcycle some time ago, a dog rushed out and attempted to seize my leg. I was paying attention to him when I heard the vigorous clanging of a street-car bell, and on looking up found myself confronted by two street-cars and a large express wagon. One car was standing still, but the other was coming rapidly down the street and the express wagon blocked my way. An accident was seemingly unavoidable, because I had speeded up to get away from the dog. Just at that instant it flashed into my consciousness that "accidents are unknown to God, or immortal Mind, and . . . under divine Providence there can be no accidents, since there is no room for imperfection in perfection" (Science and Health, p. 424). My machine swerved to the left of the car which was standing still, then around it, and I passed between the two cars, one moving and the other stationary, without a scratch. While going between the two cars, I was conscious that my elbows touched their sides.

I am deeply grateful for Christian Science, and hope to show my sincerity by doing my best to live its teachings.

MARK JOHN BENNETT, Denver, Col.

I feel it a duty, also a pleasure, to tell others what Christian Science has done in our home. The reading of the testimonies in the *Sentinel* has been such a help to me that I trust my testimony may be of help to others. At the time I asked for Christian Science treatment I was suffering physically, also from a deep sense of sorrow. It was wonderful to me how quickly Truth healed my sorrow and helped me to look at things in a different way from what I had been doing. I was healed instantly of rheumatism in the shoulder and arm. I also had a very severe fall, and was healed from its effects after several treatments. Besides this, I had worn glasses for years and had been told by a specialist I would always have to use them; but, while reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, I laid them off, and have never needed them since, my eyes being perfectly strong.

The demonstration in the instance of our baby was wonderful. Up to the time she was four months old she was very sickly and delicate, unable to retain nourishment. We then put her under Christian Science treatment, and in a very short time she was healed. She is perfectly well and happy all the time, being now three years old. I am truly thankful to God for the truth that makes us free; and thankful for the clearer understanding of God which Christian Science gives us. I have also a better understanding of the Bible, and it is a pleasure for me to read it now, whereas it used to be more of a duty than a pleasure. I am truly grateful to Mrs. Eddy for all her writings, which have lifted me above the troubled sea of mortal belief, and it is my desire to press on and gain a better understanding of Truth.—MRS. E. C. VAN VLERAH, Ada, Ohio.

I have long felt a desire to express my gratitude for what Christian Science has done for me, and have often asked myself where I would be today had not this blessed truth been brought to me by a faithful friend. My mother and most of her family, also my sister, had passed on with lung trouble, and I seemed to be following them; but I could not be reconciled to such a fate, could not see why it was God's will to take me from my family, who so much needed me.

I then began to investigate Christian Science and study it. I also took treatment about six weeks. Daily I improved, and am now well. I am truly thankful for the truth that has destroyed so many errors, and for the understanding of a God who is an ever-present help in time of trouble. I have found Christian Science a great help in raising my children. I always had a great deal of fear for them, but many demonstrations have been made, for which I am truly grateful. I am indeed thankful to God, and also grateful to Mrs. Eddy for the many blessings I have received in Christian Science.

MRS. FLOSSIE GORRELL, Crowell, Texas.

[Translated from the German.]

About two years ago material means and medical aid failed in my case. Physicians and sanitariums held out no hope for me, and the former would make no promise as to the possibility of my being benefited. I was told that I had a severe lung trouble which was beyond cure. Medicine was given me in order to afford relief, and I was only allowed to eat light food, which often I could not retain. Besides this, I suffered repeatedly with severe hemorrhages from the lungs. Failing to find help, and being unable to do farm work (I am an agricultural laborer) because of my weakened condition, I naturally was not in a position to earn any money. At that time a kind Christian Scientist advised me to go to a practitioner, and although I felt very poorly I went to Breslau, in order to call upon the practitioner, who kindly took up my case.

After the first treatment I experienced immediate improvement both as to strength and appetite, and all good came to me. My recovery seemed to be retarded by the thoughts of those who knew nothing of divine Science, and I was sent by the doctor of our workingmen's association, to whom I had to submit, to a sanitarium at the expense of the National Insurance Association. I went there, though not with the thought of being healed thereby, as I knew that God would help me. I relied upon Truth's omnipresence and held fast to the thought of the omnipotence of divine Love and Truth, knowing that this alone meant help for me. I soon improved in strength and weight and enjoyed a good appetite. Upon leaving the sanitarium I was again able to take up work, and now I am in possession of

Digitized by Google

my former working ability and perfect health. I rejoice and thank God, also our revered Leader most sincerely, for all the good which has come to me through Christian Science.—ADOLF FRIEDRICH, Creisau (Silesia), Germany.

After serious invalidism for twenty years, the result of an accident, I came to the point where all available medical skill seemed to fail and the doctor's verdict was that I could not live through another winter. Still, as an active worker in a Christian church I believed I could be healed through faith in God if I only knew how to grasp and apply that saving faith. We then heard of Christian Science, and my husband took me to Omaha to a practitioner for treatment. In less than three weeks I was healed, and I knew it was the Christ-power, the same power which Jesus used, that had healed me.

We went home and I did my housework, as our family was small, my husband helping with the heaviest of the work. Especially was he careful to keep the wood-box and water-pail filled before he left home for each day's work. We lived in the upper part of a house, another family being in the basement, and all the water we used had to be pumped by hand from a very deep well near the house and brought up the hill to our rooms. One day when I was alone in the house, I went to get dinner, and found that the water-pail was empty. What to do I did not know, and while thinking about it I saw the man who lived down-stairs come home. I started to ask him to bring some water for me, but before I got to the door it seemed as if a voice said, "Are you going to deny that Christ has healed you?" I audibly said "No," for I knew that I was healed. I waited until I was alone in the house again, then went down to the well, pumped the water, and brought the full pail up the hill as easily as my husband could have done, though I was always called a slender woman and had never done that sort of work before.

This was a very happy experience for me; I rejoiced over my healing as I had not done before, for I had proved that I knew I was healed, and that God was my strength. Though this was more than twenty-five years ago, I have never ceased to rejoice for this one proof. Many seeming trials have come during these years, but my faith in the Christ-power to heal has remained undisturbed. This experience, coming as it did so soon after my healing, taught me the truth of what Mrs. Eddy says in Science and Health, "Whatever it is your duty to do, you can do without harm to yourself" (p. 385). Sometimes I have to stop to think what duty is, and God always guides when I listen to His voice.

I have to watch many times, lest like Peter I deny the healing and saving power of Christ, Truth, when the temptation to do so comes in some new form; then I turn back to that early experience, and thank God for it. My love to God grows daily, for what Christian Science has done and is doing, for me and mine and for the whole world.

AUREL BEACH, Orange, Cal.

Realizing how much I owe to Christian Science, I feel that the least I can do is to acknowledge publicly the benefits received, in the hope that my experience may help some one else. Previous to taking treatment in 1909, I had been a sufferer for years, two operations leaving me with fresh ailments and the prospect of another operation in the near future, the good result of which was doubtful. Christian Science had been brought to my notice some time previously, and a kind friend offered to treat me. So, as conditions seemed desperate, both for myself and husband, we decided to try it. From the first we both realized that this was the truth which sets men free. It has never failed us, and we know it never will so long as we follow it faithfully.

My healing was rapid and perfect, and though the doctor had put me on a very restricted diet, the moment I discarded the medicine he had prescribed and determined to know but one power, and that the ever-present power of infinite Love, I was able to eat whatever was on the table without any ill effects. My friends say I am a marvel. I have gained in weight and enjoy perfect health. I have also been enabled to lay aside glasses, after being obliged to wear them for nearly thirty years, and I am able to do as well without them as when I wore them. What a help Christian Science is in the daily life, only those who have tried it can tell. More important than the physical healing is the spiritual quickening Truth has brought me, the knowledge that God, our Father-Mother, is Love, infinite, perfect, eternal, unchanging Love. My husband has been healed of catarrh, lung trouble, and bronchitis, and from being a weak, ailing man, unable to do exacting work, he is *now* strong, enjoys perfect health, and has never lost a day *through* sickness since taking up Christian Science. He is gaining in weight, and his chest has expanded considerably during the last winter and spring, the added breadth being noticed by many.

We have recently had a beautiful demonstration of divine Love as the true source of supply, when every outlook to mortal sense was dark and financial difficulties pressed heavily. It seemed impossible to obtain steady work here, and my husband had been obliged to go away on survey trips. One day, during his last trip, I was unexpectedly offered a steady position for him, which not only meant work at home, but opened up possibilities of advance and a good position. Not only was the offer made, but the position was held open until his return, which was providentially arranged to fit in perfectly. It was all so wonderful that it seemed like a voice saying, "Be still, and know that I am God." There was nothing to do but be still, and realize that "the Lord God omnipotent reigneth."

We are thankful for all the Christian Science literature, especially the Lesson-Sermons. We are grateful, too, for all the faithful work done for us in bringing us out of darkness into light, and we are anxious to show our thankfulness in our lives. Words fail to express our gratitude to God, also to our Leader for her life and teachings. May we follow her even as she has followed Christ.

MRS. HARRIETT AUGUSTA JOHNSON, Kaslo, B. C.

I take great pleasure in the opportunity afforded me of stating the facts in connection with the healing in Christian Science of our baby daughter in 1907. Within twenty-four hours after birth the baby developed convulsions of a very acute type, these occurring about every hour. This continued for two weeks, and during this time two nurses and several medical men did all that was possible to them, but declared the case hopeless and said that the child could not live under those conditions.

At the end of two weeks, Christian Science treatment was sought and all medical aid, medicines, etc., totally abandoned. The treatment relieved her at once, and with continued treatment the child was completely healed within three months. Christian Science has now a permanent place in our home, and we are thankful for a great many benefits through continued study of its teachings. I wish to express our deepest gratitude to God, also to the many workers in Christian Science who have done so much to bring this great scientific truth into every-day life.

H. E. BROCKWELL, St. Paul, Minn.

Friends have repeatedly asked me why I did not give my testimony of what Christian Science had done for me, and I have come to the conclusion that it is my duty to do so, as it may be the means of helping others who are striving and praying for more understanding, as I once was. It is over two years since Science was first brought to my notice. My husband was then suffering from a very bad hernia, and one day came home from his shop, unable to work any longer. He went to bed very much discouraged and in great pain. The next day he was a little better, so he dressed

Digitized by Google

and went to consult a doctor, but got no help or encouragement. Soon after he came home, an old friend called to see him, and on learning his condition advised him to try Christian Science, saying that it had healed him, and that he had suffered a long time from the same ailment. My husband decided to take treatment, much against my wishes, though I said nothing. I thought it absurd to suppose that Christian Science treatments could heal him, but after the first treatment (he took only six) my husband went back to his place of business, and he has never lost an hour's work through any illness since.

When he went to take his second treatment, he bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and brought it home with him. At first I would not read it, but finally curiosity prompted me to read and see what could be in it, that sensible people had such confidence in. I had not read far before I found it was just what I was hungering for, and through the understanding gained by reading its pages, with now and then an encouraging word from some Scientist friend, I have been healed of an abnormal growth from which I had suffered for years, and from a malignant disease which was more difficult to meet on account of my intense fear. Besides this, I have been healed of neuralgia, headache, a bowel disorder, and various minor ailments.

I was also healed of an error which had caused me many years of unhappiness. My friends would say that I was "too sensitive and self-conscious." I rarely went anywhere that I did not go home unhappy because I thought some one had slighted me or done something unkind. But in Science and Health I learned that we must practise selflessness, self-abnegation, self-immolation, if we wish our steps to trend upward. Then I studied the meaning of the words "sensitive" and "self-consciousness," and concluding that I had caused my own unhappiness, decided that I would overcome this error. Now when I meet my friends and extend my hand in greeting, they grasp it warmly. I hear only words of friendliness, and go home glad that I live in such a beautiful world, where there are such a multitude of dear, lovable people.

Christian Science teaches us that we must not depend on any person, place, or thing for happiness, and I am happy, not so much because of these old-new friends, but because this demonstration proves to me that I am overcoming self; and though I realize that there is yet much to be overcome, that I have only taken the first few steps in the upward journey, I know I shall receive my reward if I patiently press on. I am so grateful for this "Key to the Scriptures," which is helping me to lock the door on self, and to open it wide to God's love and the glorious harmonies of His kingdom on earth.—MRS. S. L. HICKS, Portland, Ore.

[Written for the *Sentinel.*]

FORGIVENESS.

FRANCES A. HALDANE.

"How oft shall I forgive?" Ah! Well-a-day!
How many hearts the ages through have asked!
And yet the Master taught we cannot pray
While unforgiveness in our thought is masked.

"How oft shall I forgive? Till seven times?"
(While yet, perchance, forgiveness is not sought)
And still the answer through the ages chimes:
The debt forgiven hath thy forgiveness bought.

"How oft shall I forgive?" Unceasingly,
Until the deepest depth of Love's revealed.
But know, for comfort on thy Calvary,
Each wrong forgiven hath thine ascension sealed.

FROM OUR EXCHANGES.

[*Continent.*]

What sort of message, then, is the most appropriate Christmas message from the pulpit or from the lips of the Christian who would, man to man, repeat the good news to his neighbor? Manifestly there is nothing else so supremely befitting for Christmas day as that word which is most important to men in every day—that God has through His Son Jesus Christ made a way of escape out of sin and wrong into a life of fellowship with Him. The very best Christmas celebration, therefore, would be what the church has come to call an evangelistic service. Christmas should be "Merry Christmas" indeed, but the merriment which most becomes its hours would be, in any place and in any year, such merriment as prevailed in that home of the Lord's parable, where the patriarchal father stood at the head of the festal board and said: "Let us eat, and be merry: for this my son was dead, and is alive again; he was lost, and is found." Atonement, redemption, forgiveness, salvation—these are somehow judged to be words that belong to solemn Good Friday. But they are equally or even more Christmas words. Redemption comes as much from Bethlehem as from Golgotha.

[*Christian Register.*]

The moment any one thinks about the beliefs hitherto taken as a matter of course, received, as something handed to him, unopened, he begins to be a liberal. It is astonishing what convictions blurt themselves out when people speak unawares what they really think. From the depths of conservatism and ruined opinions there spring these witnesses of independence and progress that refresh us greatly. Just when we despair at the mass of crude and obstinate ignorance which takes the name of faith, comes some such stream of fresh assertion to cheer us with confidence in the victory of truth. Those who maintain the old standards, supported by loyal followers, would be dismayed if they realized how ready many adherents are for revolution, how many opinions are already formed, though in the shell, and at the slightest touch would become alive. Find the church strongest in dogma and put many of its members to the test of unconscious affirmation, and the wonder is why mutiny should not ensue. Only the power of discipline, the deep root of habit, keeps such churches from religious democracy.

[*Zion's Herald.*]

What shall be done with the modern pulpit? Frankly let it be admitted that it is passing through a most critical period. On the one hand are its enemies, who are saying that the day of its power has gone by, that its influence is practically a thing of the past. On the other hand are those of its own household, who, catching this spirit, are trying to "popularize" the pulpit in order, as they think, to make it fit into the life of today. And between the two there is a great mass of Christian believers who know that something is wrong,—though they do not know exactly what,—and they sigh for the glory of other days. Meanwhile in many places the spiritually hungry are starving, while the world goes on its way, beating as a surging mass upon the outside of the church buildings, but entering not. Now these remarks are not mere fancies of the imagination. Any one who has thought at all seriously upon religion and life at the present time, has reached conclusions somewhat similar to these.

[*British Congregationalist.*]

Unquestionably one of the profoundest needs of today is a definite faith. But there is a real solution to the problem, and it is this: Let every Christian exercise such a clear, definite, specific faith in the power of our Lord to impart eternal life to men here and now; to fill them with joy that

Digitized by Google

triumphs over all sorrows; to speak forgiveness and peace to sinful, troubled souls; to bring hope to the despairing and strength to the burden-wearied; to unveil the richness and vitality of another world as far superior to this as the mind of God is to the mind of man; to hold every soul responsible in eternity for its life in time; and such a faith will work like a contagion,—a contagion of Christian health, and hope, and joy, and victory. One man with a definite faith in Christ can successfully contend with a thousand who only guess.

[*Universalist Leader.*]

There are two ways in which a cause or nation grows. One is measured by the extension of territory or the increase of population, or by both. So many states are added to the Union. So many immigrants have come to our ports. So many islands have our flag floating over them. So many millions live under our government. That is one form of growth, but there is another form. There is the expansion of ideas and ideals and influence. There is the widening and deepening of convictions. There is the enrichment of life. There are the tottering thrones of ancient wrong which have felt the thrill of expanding life as the voice of a people adumbrates around the world. The statistician can number our population and our acres. He can tabulate our material wealth. But he cannot draw metes and bounds, diagrams or tables to show whether the vitality of the nation has increased or decreased. This kind of measurement is not by yardstick or multiplication table. It requires something more than mathematical genius to circumscribe it.

[Rev. R. R. Meredith, D.D., in *Riverside* (Cal.) *Press.*]

You are building a Christian church, and building it in a day when the church of Jesus Christ is exposed to a very great deal of adverse criticism. All about us there are large numbers of people who are saying something like this: "I believe in Jesus Christ—believe in following his precepts and example, but I do not believe in the church." There is a vast deal of that talk that has no bottom to it. It is used as a sort of refuge to which a man may fly from his own conscience. There is, however, some ground for the criticism. The church has not adhered to the simplicity of organization and spirituality of purpose that characterized it at the beginning. If all this unrest shall lead the church to go back and study its history once more, and aim at the subserviency to practical ends that characterized the primitive church, it will be a greater gain to Christianity.

[*Christian World.*]

There are teachers today who would persuade us that humanity is a sort of closed circle, with nothing in it that relates to a beyond-human. All our emotions, our reverence, our instinct of worship, our sense of ideal perfection, are in ourselves and ourselves only. The infinite goodness, the infinite holiness, are purely human conceptions, and touch nothing higher than our own minds. However, that may be the verdict of the intellect,—of some intellects; it is assuredly not the verdict of the heart. The heart's instinct revolts at limitations; it leaps beyond the bounds of its own frailties, weaknesses, and sins, and demands a union with what is greater than itself. That has been ever the affirmation of the great religious natures. The divine within calls for the divine without. The spiritual life will be satisfied with nothing less than the highest for its goal.

[Rev. Malcolm James MacLeod in *Christian Intelligencer.*]

Christ's appeal was to the solid and permanent in man. Art and science and economics are fluid things. Spiritual force is at the bottom of all true and lasting reform. Change the hearts of the people and you will change their laws. The best way to reach the lower is to aim at the higher.

SPECIAL ANNOUNCEMENTS

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

Another new pamphlet has recently been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 05 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 15 cents and for all other countries 55 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . .	$ .05	$ .06	$ .07
Twenty-five copies .	1.00	1.15	1.30
Fifty copies . . .	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes. Current year or two years previous, cloth, $2.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

	£	s.	d.	Marks	Francs
$1.20 equals	0	5	5	5.50	6.75

Make all remittances payable to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

A decision holding that the Lake Shore & Southern, Chesapeake & Ohio, Hocking Valley, Toledo & Ohio Central, and the Kanawha & Michigan railroads have combined to violate the Sherman antitrust law, has been handed down by the United States circuit court. An order issued by the court makes imperative the sale of over one hundred thousand acres of the finest coal land in the Kanawha, Va., district, now owned jointly by the Chesapeake & Ohio and the Lake Shore & Michigan Southern railroads and the Sunday Creek Coal Company, which, it was brought out, was owned by the railroads. The sale of the coal lands is ordered at once. The order further states that the joint ownership of the Kanawha & Michigan railroad by the Chesapeake & Ohio and the Lake Shore & Michigan Southern railways must be terminated.

The first sheet of the United States section of the international map of the world has recently been issued by the geographical survey, and it includes Rhode Island and portions of New York, Connecticut, Massachusetts, New Hampshire, Maine, and Nova Scotia, and is known as the Boston sheet. This new and accurate map of the world, recently undertaken by agreement between the leading nations, is being prepared on the scale of one to one million, which is about sixteen miles to the inch. The sheets for the completed millionth map of the world would, if combined, cover an area about one hundred and fifty by seventy-five feet, or a globe forty feet in diameter. At the present rate of progress, the United States portion of the international map should be completed within eight or ten years. The Boston sheet sells for forty cents.

By the joint action of the war, interior, and agricultural departments, extensive land patents of the International Power and Manufacturing Company of the state of Washington have been held up, because of the belief of Secretary Fisher that the company was trying to "free itself from control by the government by securing patents to lands under the guise of mining claims or by railroad scrip filings in combination with a special dam license." The company was planning to build a series of power plants which, it was estimated, would produce two hundred thousand horse-power, having a value of from five to eight million dollars a year. The power site is in the so-called "Z" canyon of the Pend d'Oreille river, situated partly in the Kaniksu national forest and partly in a power site reserve set aside by President Taft.

As a result of the researches of Chairman William E. Cox and Representative J. H. Gouck of the House committee on expenditures in the treasury department, Congress will be asked to pass bills to provide for the payment of interest on public deposits. In the investigation an effort will be made to find to what extent the banks connected with Wall street interests and banks interested in the welfare of influential politicians have profited by deposits of United States money.

Enactment of laws to bring about closer scrutiny of corporations operating as public service companies, effectively to prohibit the merger or consolidation of such companies without the approval of the public utilities commission and an investigation and conservation of the water supply of the state, is recommended in the first annual report of the Connecticut public utilities commission.

The receipts of the United States patent office from fees for applications for the fiscal year ending June 30 were $2,014,953. The total expenditures were $2,025,012 and the net surplus of receipts over expenditures was $98,147. The number of applications for patents for inventions aggregated 69,236.

Legislation to place principal assessors and the first and second assistant assessors of the commonwealth of Massachusetts under the civil service regulations is to be sought by the Massachusetts Real Estate Exchange in the coming session of the General Court.

Five bills have been prepared for the incoming Connecticut Legislature, all aimed to attack the New Haven railroad's trolley monopoly in that state. The bills have support from every city and nearly every town in the state where there are trolley lines.

The navy department's great new wireless tower near Arlington, Va., has succeeded in catching the time signal from the Eiffel Tower in Paris, a distance of approximately thirty-nine hundred miles.

San Francisco's first municipal railway, the Geary street line, extending from Kearny street down town to Golden Gate park, a distance of about four miles, was placed in operation recently.

A bill requiring the Boston & Albany Railroad Company to electrify its lines between Boston and South Framingham has been filed at the State House.

President Taft has definitely made known his decision to accept the Kent professorship of law at Yale.

International.

In view of the unsatisfactory position of the opium question, the Chinese government has issued a manifesto reiterating its desire to suppress the evil and save the people from a life of degradation. The manifesto expresses the fear that, although the government is in earnest, the people are evasive. Referring to the agreement with Great Britain, it points out that the cessation of the importation of Indian opium depends on the entire prohibition of the cultivation of the native article, and that only thus may a conflict over the Anglo-Chinese agreement be avoided. Therefore all the authorities are enjoined strictly to execute all previous proclamations aiming at suppression.

At the formal opening of the special commission appointed by the French government to consider the best means for carrying out the necessary public works, the minister of public works stated that between 1879 and 1910 the government had spent seven hundred and seventy-six million francs on her seaports, and seven hundred and ninety-two million francs on inland navigation. With reference to the proposed new works at the seaports and on the existing lines of internal navigation which had been declared to be of public utility, and of which the plans were more or less completed, it was estimated that it would cost some six hundred million francs for the work to be entirely finished.

The Buriat Borjieff, whose political activities were the immediate cause of the English expedition into Tibet under Colonel Younghusband, has arrived at Urga, Mongolia, from Lhassa with a project, it is reported, of placing Tibet under the protection of Russia and Great Britain. He claims that he has been empowered by the Dalai Lama to negotiate a treaty between Tibet and Mongolia and conclude an agreement by which, in return for Russian and British protection, the Dalai Lama will grant these powers exemption from duty on their goods and the right to exploit the natural riches of the country, construct railroads and telegraphs, etc.

A forest protection league has just been formed in Victoria. Considerable damage has been done to the forests in Australia during the past, while no provision has been made to look after them in the future. In the beach forests timber to the value of from six to ten million pounds has already been destroyed. The objects of the league just formed are to protect, maintain, and extend the forests and forest reserves and to insure their permanent preservation by wise use.

The Council of the Empire last week adopted a law abolishing the last vestiges of serfdom in Russia. When the rescript of emancipation was issued in 1861 the Caucasus was excepted from its provisos on account of special conditions there. This transitional stage now, after half a century, has been terminated, though there was still opposition to its being abolished.

The Chinese budget which shortly will be submitted to the Advisory Council, will reach the immense total of four hundred and fifty million dollars. It will include fifteen million dollars for reforming the salt gabelle, fifteen million dollars to establish a gold exchange standard, fifty million dollars for the conversion of short time domestic loans.

Industrial and Commercial.

A special train of fifteen baggage cars carrying two million dollars' worth of raw silk arrived in New York Dec. 27 after a record-breaking trip from Tacoma, Wash. On Dec. 7 the steamer Bel'erophon left Yokohama with the two million-dollar silk cargo. She reached Tacoma Dec. 20, and the next day her cargo was loaded on the special train and was off for New York. The shipment is said to be the largest ever handled across the continent, and the record for its passage from Yokohama is expected to stand for some time.

Three miles of freighters, filled with millions of bushels of grain, are riding at anchor inside the breakwater of Buffalo's outer harbor, forming one of the heaviest blockades of grain in the history of the port. The total cargo value of the fleet in winter quarters there is estimated at twenty million dollars. The grain will be trans-shipped at the rate of five hundred to one thousand carloads a day during the winter and the remainder will be shipped by canal in the spring.

Men and women garment workers, estimated in numbers at one hundred and twenty-five thousand, went out on strike in New York Dec. 30, tying up approximately four thousand factories. They demand higher pay and better working conditions.

The long expected resignation of J. Bruce Ismay from his position as chairman and managing director of the White Star line has been announced. It will take effect June 30.

The Canadian government has notification of a rich discovery of molybdenum near Wakefield, Quebec. This mineral is used for hardening steel and armor plate.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

DOING OUR BEST.

SAMUEL GREENWOOD.

It is a confession of half-heartedness, in seeking the kingdom of God, that we are so easily satisfied with being and doing less than our best. It may be that we do not yet fully appreciate the fact, in all its bearings upon our experience, that the sense of evil will not be overcome, so far as we are concerned, until we overcome it; and that we can overcome it only through the power of good, not in any abstract sense, but through our own individual consciousness and demonstration. Thinking to do our work in what may seem the easiest rather than the best way, often means that our work is not done acceptably, which practically means that it is not done at all; and our efforts must therefore be repeated. This becomes evident when we remember that no imperfect work or uncorrected error can be left behind in one's progress Godward. Sooner or later each must overcome the sense of evil in himself, not at one stroke or in one day, but through what the apostle describes as "patient continuance in well doing;" that is, doing the best we can all the time.

Behind all one's business, family, and social relations stands the unchanging divine demand for righteousness, for right thinking and right doing, which relatively means our best thinking and best doing. While we may not at the present time be equal to the demonstration of perfection, there is always a nearest point which we are capable of attaining, and this nearest point to perfection is the best that lies within our reach today, and to reach it is therefore today's problem. Neglecting to accomplish this best possible good, is virtually to give place to evil to that extent; and if this is repeated day after day, each day doing a little less than we might, it is inevitable that an accumulation of unused privilege will confront us when we most need the spiritual strength of which our remissness has deprived us. As our Leader has expressed it, "Unimproved opportunities will rebuke us when we attempt to claim the benefits of an experience we have not made our own" (Science and Health, p. 238).

There is always a best way to think or speak or act, and one is not justified in stopping short of that. So many wrong things are thought, said, and done on the impulse of the moment, before one takes time to consider whether the impulse is human or divine, that it becomes simple wisdom to keep one's better self always to the front and on the alert to discover and follow the divine way. To set ourselves steadfastly to do the very best we can, not what we think we can, would lift us beyond present achievement and into a higher realization of man's unity with God. This opportunity to hasten a nearer approximation to the perfect ideal or Christ-man is too obviously open to each one to be lightly or thoughtlessly disregarded. To neglect any available means of spiritual advancement is to linger in needless conflict or agreement with false sense, and it practically amounts to deliberate choice to be not as good as it is our privilege to be. In other words, though we might hesitate to put it in just that way, we lazily prefer to remain a little longer in the grasp of false belief, rather than to work a little harder than we are now doing.

Comparatively few rise each day to their highest possible understanding of the allness of God, and they therefore fail to accomplish their full capacity in right doing. Comparatively few are as loving and just and honest and kind as they are capable of being. We suffer conditions to remain in consciousness which we know are not good, and which we know we can get rid of, and thus grow, perhaps unwittingly, into a sense of tolerance toward evil which amounts to a virtual acceptance of its claims. We all know that this is so, and that with a little more earnestness and real effort we could accomplish more in the working out of our salvation, and consequently more for the good of mankind. Why, then, is it that we do not desire to do better, with the means that are at our hand? or are we satisfied to remain so much longer in the illusion of material sense? Coming face to face with this realization, as we must, how can we ask God for a fuller consciousness of His presence and power than we are willing to strive for? Or how can we expect Truth to respond more quickly to our declarations, while we are content to be so slow in meeting its demands?

Mrs. Eddy teaches that in Christian Science "a perfect Principle and idea,—perfect God and perfect man" is "the basis of thought and demonstration" (Science and Health, p. 259). This should impel Christian Scientists to test their highest capacity in proving man's perfectibility. There is danger of resting too much on the hope of future progress, or of going to the other extreme of mourning over past failure. It is the work of today which decides the progress of tomorrow, hence the importance that today's work shall be done today. When we are willing not to overcome all the error that we may, to do less than God sets before us, it means a dropping behind in the struggle that we shall find it difficult to catch up with. In our spiritual work, mental idleness has its root in love of materiality. That we do not bring the very best we have into God's service, or put forth our best efforts in the overcoming of evil, must surely be that the things of time and of material sense are permitted to hold too high a place in our thoughts and affections.

"A grain of Christian Science does wonders for mortals," writes Mrs. Eddy, but she straightway adds that "more of Christian Science must be gained in order to continue in well doing" (Science and Health, p. 449). In the exuberance of the student's first joy over his new-found freedom it may have seemed comparatively easy to heal the sick, but all must at some time meet the demand above referred to and gain "more of Christian Science." We must work out the problem of being faithful to our highest capabilities, of being more obedient to Truth and less submissive to the claims of error, if we would be found meeting the demands which this advancing age will make upon Christian Scientists. There is no doubt that many of us would today have a clearer consciousness of man's dominion as the son of God, if we had always been true to our understanding of Chris-

tian Science, and had always been in all circumstances the best Christian Scientists we knew how to be.

If we heed the apostle's injunction and "do all to the glory of God," we shall be found seeking the best way to do things. After we have yielded to the evil suggestion, after the hateful thought and unloving word, we realize, perhaps in tears, how much better we could have done; but it is our privilege to think of this first, and so forestall the evil. In our association with others are we as careful as we might be to treat them with the best we have? Do we give them all the love we can? Are we doing our utmost for the cause of Christian Science, and so helping on the redemption of mankind? Are we doing our best in the Wednesday evening meetings, and so helping some weary pilgrim to find the way to health and peace? Or is it the best that we can do to criticize instead of to lend a helping hand; to cherish resentment instead of love; to leave most of the burden to others instead of being willing to do our own full share; to sit down in discouragement over our failures instead of increasing our efforts to apprehend the truth of God's omnipotence?

Christian Science, the demonstrable truth of the infinity of good, is the very best that has come or that can come to the human consciousness, and its natural effect is to bring out the best in its students. Christian Scientists must remember that they stand for the best in everything, and for the doing of things in the best way. They stand preeminently for the reign of righteousness, for the allness of good, and for the religion of love. They stand in avowed opposition to all that would obstruct human progress toward the kingdom of heaven, and in avowed alignment with all that tends to spiritualize and uplift mankind. This being so, does not God rightly demand of us that each day, and in all that we find to do, we shall not stop short of the best that lies within us?

CAUSE AND EFFECT.

FLORA R. TSCHOPIK.

FROM the perspective of mortal vision, the world appears a hopeless jumble. On all sides discord, strife, greed, sickness, and evil are apparently triumphant; and reasoning from effect to cause, the conclusion has been reached that since God is the source of all power, He must be the author of material disaster. Christian Science, however, with the Scriptures to sustain its statements, teaches that it is incongruous that God, Spirit, infinite wisdom, should bring into manifestation a creation other than the similitude of Himself—a universe governed by spiritual law and harmony. Ignorance alone creates discord. It is only ignorance of God, of Life, Truth, and Love, which has produced this seemingly world-wide confusion. The understanding of God brings to light the unity forever existing between man and his all-harmonious Principle, God, which has been veiled from mortal sight by a misapprehension of God and the universe.

Driven by the discords of material sense to find aid in the Science which lays bare the deceptions of personal sense and reveals the actuality of spiritual perfection, one finds himself willing to cast aside bigotry, prejudice, and human theories, and ready to turn to Truth to learn the meaning of life. Discarding centuries-old beliefs, one perceives the true meaning of the Scriptures. There comes the realization that divine Principle, God, being perfect and the only cause of all that actually is, His creation must be perfect; consequently the testimony of the senses is wholly unreliable, for aught which is based on a belief in materiality cannot manifest perfection. Basing our deductions on the allness of God, and holding thought absolutely to the immutability of divine power, one finds that the pains of sense yield to the fact of spiritual government, and harmony is thereby established. In Science and Health (p. 384) we read: "Through this action of thought and its results upon the body, the student will prove to himself, by small beginnings, the grand verities of Christian Science." Instead of a blind acceptance of prevailing thought about God, the awakening consciousness perceives the wondrous power, love, forgiveness, and compassion of our heavenly Father, who, holding His children forever perfect, brings humanity step by step to the fold of spiritual consciousness.

One might have an inheritance of boundless wealth, yet if he were unaware of it, it would be valueless to him. Potentially mankind have the priceless heritage of spiritual freedom, dominion, and perfection; nevertheless, it is only as Christian Science convinces the individual of this glorious heritage that it becomes valuable to him. It is a cause for rejoicing that this awakening has come and that mankind are bestirred to an appreciation of Christian Science which reveals man's true status. Throughout the whole world men are beginning to lay aside their false sense of selfhood and are manifesting some interest in the man of God's creating, although to material sense this change is scarcely perceptible, except in improved physical, moral, and mental conditions.

How long it will be until the perfect man is universally manifested no one knows, but in beginning with God, Spirit, as cause, and reasoning to the spiritual universe and spiritual man as effect, the necessity for active work is seen. In order to realize man's perfect selfhood, one must relinquish the false and live the true. He must yield up all belief in sin, sickness, and other material discords. He must understand and love God, and thus reflect His nature. "God is love," the apostle John declares, and in studying the Scriptures we find that His attributes are justice, mercy, wisdom, goodness, and truth; therefore those who are enlightened by Truth must express all of these qualities in an ever increasing degree.

The conflicts with wrong thoughts which have held sway over mortals may be many and hard, but relying upon God, the great deliverer, one comes forth victorious from the struggle with sense beliefs, and can say with David, "Bless the Lord, O my soul, . . . Who forgiveth all thine iniquities; who healeth all thy diseases," for he knows whereof he speaks. He has proven for himself that our God is not a "God afar off," but a "God at hand." When religion is purely spiritual, a new world unfolds to view; the new Jerusalem, all complete, is revealed, and day by day one is fed and sustained with the bread from heaven, the spiritual facts of being.

Truths which the Bible has taught for untold years are now discerned. Perfect God, a perfect universe, and perfect man are here, the world-model to the contrary notwithstanding. They are the eternalities of life, therefore the journey out of generations of false educational beliefs must be made, that the real man may appear. Perfection will be established in human consciousness as the effect of a perfect God, understood and loved. Built upon this rock of Truth, life becomes not less but more real, and the dominion of man in God's image is proven to be not a fable but an increasingly realized fact, as Truth reigns and error vanishes into its native nothingness. How needless are the suffering and fears to which mankind submit as sent of God, while in truth the harmony of Spirit has always been the grand reality of being. According to the Scriptures, God created the world and called it good, and evil never has been aught but a baseless lie.

Christian Science is based on the irrefutable spiritual facts that God is All; that He is wholly good, and is the only intelligence of man and the universe. This Science, in revealing the perfectibility of man and the universe as the necessary outcome of the right apprehension of cause and effect, is reconciling man to God; and it must, therefore, eventually bring into manifestation God and "His universal family, held in the gospel of Love" (Science and Health, p. 577).

PROMISE OF LIFE.

REV. RICHARDS WOOLFENDEN.

ONE of the compensations of the smoky English town where the writer lives is the spring collection of modern pictures, which is open to the public free during that season of the year, when the promise of life is renewed in many a lesson which these pictures have to tell. Here the crowded denizens of the industrial world may find treasures of joy and hope which their busy life in the mills sometimes seems to have quite exhausted; and here, too, the earnest student of the Science of Life will find food for reflection.

Such was our experience on a recent Sunday afternoon. We were returning from Sunday school, and the day not being favorable for our accustomed walk, at the doors of the art gallery the children turned with the natural request, "Oh, let us go in to see the new pictures." We did so; but who can tell the joy and surprise of our discovery, on coming into the large room, of a picture in oils, hung in a most prominent position, the theme of which was a building that bore the look of familiarity. I could scarcely believe my own eyes, but on borrowing a catalogue from a friend who stood near by, there, sure enough, was the title: "Christian Science Church, Sloane Square" (London). I had not seen the building itself, but was familiar with its outlines through drawings and illustrations, and to find a painting of it in our own public gallery was a joy indeed. It was only the work of a moment to share this unexpected discovery with our friends who were in the room at the time, and to call the children to see another "miracle in stone" (Pulpit and Press, p. 8), which some day will have a larger meaning for them, as it will also for others who may see it in this room for the first time.

Meaning and message both crowded in upon me, as I thought of First Church of Christ, Scientist, London, and the large sum expended for the site and the building, yet an offering of pure gratitude, a sacrifice of love and praise. Then came the lesson which this picture emphasized. On the wall at the left, and separated only by another canvas, was a painting by one of our modern masters, entitled, "The Sentence of Death." It represented a young man sitting in a chair in a doctor's study. The medical man is at his desk, his text-book before him, and judging by the pallor depicted on the patient's face and the far-away look which the artist has put into his eyes, the sentence has been pronounced, and nothing remains but to await his doom. It almost gave one a shock to come across such a picture, and realize what it must mean to the scores of people who would be drawn to see it as a most impressive painting. Then with what gladness did we hail the contrast, for here most truly was an undesigned coincidence, and a lesson which Christian Scientists could not escape. They, at all events, could not be deceived by the last word of *materia medica*, for side by side with this portrayal of hopeless despair was a representation which might well be entitled "Promise of Life."

This church building, situated in the very heart of the great metropolis (along with others which are now rising in our native land), is the expression of a vital faith in the availability of good. It stands for divine Principle, whose power can never be overestimated, because it is the actual basis of all effectual prayer. It stands for the new-old conception of God, who is unfailing good, whose law sends forth no sentence of death, but expresses constant, continuous good for all His creatures. The young man in the painting is manifestly the victim of a disease which to mortal thought is hopeless. As we looked upon his features, so faithfully drawn by the artist, thought immediately turned to the Lesson-Sermon for the week, which had been our topic in the Sunday school class, and there came to mind the revivifying words of the New Testament writer: "For the law made nothing perfect, but the bringing in of a better hope did; by the which we draw nigh unto God." And did not Christ Jesus say, "I am come that they might have life, and that they might have it more abundantly"?

The subject of that Lesson-Sermon was Christ Jesus, whom to know, according to the understanding which Christian Science conveys, is indeed life, not death, hopelessness, or despair. This new understanding of Christ has redeemed many from the cruel bondage of medical law, as the present writer can gladly testify. He was put under the sentence of material belief, after being invalided home from China; but what the official examiner could not do, and what the dear old family doctor failed to do, was accomplished silently, gradually, and effectually, through the study of Christian Science. And now he is glad to use this opportunity to preach the gospel of "a better hope" to any sufferer who may need it.

We all know well the conditions of modern life in which too often, alas, we meet cases of which this is a type, and we rejoice with exceeding great joy in having found the remedy, the sovereign cure, and most eagerly do we turn to page 425 of the Christian Science text-book, "Science and Health with Key to the Scriptures," where we read: "Consciousness constructs a better body when faith in matter has been conquered. Correct material belief by spiritual understanding, and Spirit will form you anew." Such a statement as this inspires the patient with a new sense of being, which in its turn brings freedom from all worry, discouragement, and fear, prompts immediate reliance upon good, and calls forth the largest possible measure of hopefulness. Thus is the lesson of the pictures affirmed! The one shows the depths to which mortal thought has sunk itself in material hypotheses. The other portrays the heights of human heroism rising superior to evil of every description. In every Christian Science church building we may read the message that brings a new outlook on life. We see humanity reaching out for the realization of its highest hopes, rising from depths of despair to heights of illumination and freedom.

So in this collection of modern paintings we find the promise of Life, we read afresh the renewal of hope, the message of perpetual springtime; we see the coming of the kingdom of God, and know that the supremacy of good is at hand, the good which is demonstrable today, and proves that Life, not death, is present everywhere. Again we turn to our text-book to find a picture of life, and there (p. 45) we read these words of our beloved Leader: "Glory be to God, and peace to the struggling hearts! Christ hath rolled away the stone from the door of human hope and faith, and through the revelation and demonstration of life in God, hath elevated them to possible at-one-ment with the spiritual idea of man and his divine Principle, Love."

"TREASURES IN HEAVEN."

MYRTLE B. S. JACKSON.

FAILING the spirit of generosity and compassion within, it is well-nigh impossible to recognize, certainly to appreciate, a manifestation of it from without, even when it is personally presented for our consideration. Because of this lack in human nature, much of the joy and protective love offered to us by our Master, to be realized here and now, has not been discerned; rather has there been that hard and ofttimes cruel tendency to twist his straight and simple meaning into the crooks of sacrifice and the renunciation of some present pleasure.

"Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: but lay up for yourselves treasures in heaven," is one of the Master's sayings which, if really interpreted through the understanding of divine Love, contains a gold-mine of inexhaustible happiness. But who has not felt on reading it a lurking sense that it was a request to invest capital in an unknown concern; that it was far removed

Digitized by Google

from all human experience, and that we might glean a doubtful dividend only when we had passed the ordeal of dying; that at best having treasures in heaven paid the somewhat negative interest on earth of begetting distrust of anything which appeared to be of a bright or happifying nature to us now, pronouncing any such delight material, and preserving the term spiritual to express a phase of existence always tantalizingly out of reach and unlike any concept of happiness we had ever possessed.

Remembering, however, our Master's life of love and devotion, his deep comprehension of human needs and his ceaseless labor to supply them, we may surely feel that he wished us to know the love of God as he knew it; that we should possess for ourselves the sweet and substantial remedy with which to mend all the breakages and bankruptcies of human life. Christian Science makes it clear that we do not need to give up or go without any good thing in order to remove it from earth to heaven, but rather to hold such a true mental attitude toward it, to have such a right and enduring concept of its quantity and quality, that the results may manifest themselves tangibly in the ratio of our true thinking. The objects of our affection will thus be made to symbolize spiritual ideas, although we should never forget the apostle's inspired words: "When that which is perfect is come, then that which is in part shall be done away."

The fact is, we already possess more treasures in heaven, and enjoy them, too, than we are really aware of. There is nothing in legal language adequately to represent the word home. The right to rent a property for a given number of years, and to reside therein, does not in the least express the nature of a home; we all understand the word, however, in its deeper and more sacred meanings. The memory of the loving and unselfish companionship, the sweet familiarity and interchange of thought which constitute home, remains with us long after the favorite pear tree has been cut down, the very house demolished perhaps, or the whole neighborhood taken over by some manufacturing interest. From the very beginning the home was a treasure in heaven. So, too, with friends who have passed from our sight, or owing to the sins and mistakes of material sense are veiled from sight while still in this consciousness,—all the good that they have ever done at any time remains an ever-present, indestructible fact, and in the degree in which we cherish these truths about them, they remain our treasures in heaven.

Indeed, all the present love we know is our celestial treasure, as Mrs. Eddy explains when she writes, "All that is beautiful and good in your individual consciousness is permanent" (Unity of Good, p. 8). These are our spiritual riches which we may spend for ourselves and others now, and without this present knowledge of human love and comfort we should be of all men most miserable; apart from the actual demonstration of good we should be no better off than children who had read books about people and places they had never seen. A description of happiness is of very little use to any one, but to be happy and blessed is to prove that God is good and that He is present with us. Our Father-Mother God is all tenderness and mercy, and He gives us first the happiness we are ready to receive and understand, while gently leading us to higher and higher ideals, up from the passing and finite to the infinite and eternal.

Furthermore, in Christian Science we are beginning to learn that the more mental (and by "mental" is meant a good and pure sense) our concepts of happiness, the more likely are they to be safe and enduring, and that those pleasures which originate and are enjoyed purely as spiritual thoughts, and experiences of the intelligence and heart, serve as mile-stones in our spiritual translation from material sense to Soul. We are beginning to understand how it is that the kingdom of heaven is come nigh unto us, and that since man exists as a perfect idea in the divine Mind, we may at once partake of the kingdom and have all of God's perfect ideas to enjoy. We are beginning to realize that thoughts are the most important part of life, and that the way we think about every matter makes a vast difference to our happiness, whether it concerns our clothes or our servants, our business or our friends; that the possession of cheerful, upright, intelligent thoughts means wealth, and that depressed, grumbling, lazy, or fearful thoughts mean poverty. Our Leader tells us quite simply how to gain greater treasures in heaven. On page 261 of Science and Health, she says: "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts."

EVIL POWERLESS.

ESTHER MURRAY.

My parents were among the early pioneers of South Africa. They arrived in Natal in 1850, and in later years my mother would often tell us of the wild animals which surrounded them in those days, as many as twenty-five elephants being seen in one morning. There were also a great number of snakes of different kinds, some of which were thought to be very poisonous; others, which were considered harmless, we were allowed to play with. One of my brothers had made a pet of a young boa-constrictor. These snakes do not bite, but their power to harm lies in crushing, to do which it seems to be necessary for them to get their tails round a tree or stone or something firm to hold on to. My brother used to allow the young boa to coil itself around his body, but one day he was heard calling for help, and it was found that the snake had its tail around something and was squeezing so hard that my brother showed signs of distress. He was quickly set free, but after that he had to find another playfellow.

Years after, when studying Christian Science, the impersonality of evil was explained to me and I was told to be careful not to attach evil to any one's personality, as by so doing we give it power in belief. I at once remembered about the boa-constrictor, and I hope the little story may help others to see that evil can do no harm unless it is attached to some person or some thing. Mrs. Eddy tells us on page 186 of Science and Health, "Every mortal must learn that there is neither power nor reality in evil;" and again on page 330 we read, "Evil is nothing, no thing, mind, nor power."

[Written for the *Sentinel*.]

GOD-MEASURED.

MARY J. ARNOLD.

ANOTHER year time's loos'ning grasp hath laid
Upon the altar of eternity.
Our gratitude we offer, Lord, to Thee
For gracious blessings through its days displayed.

The new year dawns, and every precious hour
To loving service shall be consecrate:
We would help all to know and celebrate
Thy healing touch, Thy purifying power.

This is our off'ring, which accept, we pray,
In lieu of sacrifice. In fond desire
To manifest Thy love, we do aspire
To know, and serve, more truly every day.

Unfolding good alone shall reckoned be
(Time's measurement forevermore outgrown),
For through the years, God-measured, Thou alone
Shalt guide us onward to eternity.

SELECTED ARTICLES.

[Frederick Dixon in *Hackney and Stoke Newington Recorder*, London, England.]

The reference to Christian Science, in the address by Dr. Saleeby, printed in your issue of the 1st inst., is instinct with the fairness which has characterized every utterance of his upon the subject which I ever recollect to have seen. Christian Science has, of course, been through the usual deluge of abuse which human fear or stupidity rains on every new movement. It has, I believe, been my fate to read them all, from the breathless homiletics of Canon Eyton, in the *Westminster Gazette*, to the blood-curdling utterances of Mr. Paget, hurled from the seclusion of the platform of diocesan congresses.

Out of the welter of this "hare-brained chatter of irresponsible frivolity," the voice of Dr. Saleeby has always sounded a note of strident common sense. I have a suspicion that he has even sometimes met a clergyman whose sermons have not invariably reformed sinners, and perhaps a doctor whose prescriptions have not always healed the sick; and having, as I am sure he has, a sense of humor, has been convulsed by the incongruous immodesty of two critics uniting to wage a "furious hating attack," in the name of Christianity, on Christian Science. Perhaps, too, he reads the papers, and remembers the case of the little shopkeeper recently sent to prison, in Bavaria, for wrapping a herring in a journal containing a picture of a saint.

Dr. Saleeby bears generous witness to the healing capacity of Christian Science. Still, though he has his quiet chuckle over the twentieth-century Johns of Gaddesden and Torquemadas, he says distinctly that Christian Science is, like medicine, only *half* a truth. What I imagine him to mean is that a judicious blending of mental and physical healing would constitute ideal medical practise. By mental treatment I think he means some form of mental suggestion. Now, I admit that you can mix ordinary medical practise with suggestion, though if you are wise you will not, but I deny that you can mix it with Christian Science. Why I say that you will not employ mental suggestion in any case if you are wise, is this. If mental suggestion can be used for supposed good, it can equally be used for deliberate evil. If it can be used openly, with the permission of the patient, it can as easily be used secretly, without the knowledge of the victim. In a word, it is the fruit of the tree of the knowledge of good and evil, and, as Jesus himself declared, you cannot gather grapes from thorns or figs from thistles; the supposititious good which occurs can only be a degree of evil.

Mental suggestion is as old as the human mind. It has its roots in those supposititious mental forces which were employed in the East for centuries, under such names as magic, necromancy, astrology, *et hoc genus omne*. The use of those methods was always considered illegitimate by the Jews, and though, after the return from the captivity, the peculiar form of mental suggestion known as exorcism became prevalent in Palestine, it was always frowned on publicly by the priesthood, no matter to what extent it might be winked at privately. This became abundantly clear when the Pharisees and the high priests were looking for a cause of offense against Jesus. They at once saw the opportunity of confusing the healing done by him with the healing of the exorcists, and they put their charges into the metaphorical language of the day when they declared, "This fellow doth not cast out devils, but by Beelzebub the prince of the devils." The reply of Jesus settled the question of healing by suggestion as a Christian practise once and forever. "If," he said, "I cast out devils by the Spirit of God, then the kingdom of God is come unto you." The kingdom of God never came upon any man by suggestion from a mind torn by human passions and believing now in good and now in evil. The kingdom of God comes to man exactly in the proportion in which he acquires the Mind which was in Christ Jesus, for the possession of the Mind of Christ frees man from a belief in the lie of evil.

In that terrific mental battle with the Jews, recorded in the eighth chapter of John, which ended in the attempt to stone him, Jesus referred once more to the belief in evil producing death, in a way that has generally escaped attention. "Ye are of your father the devil," he said, "and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Speaking in a manner which would be quite intelligible to those he was addressing, he personified evil in a way strange and almost incomprehensible to western ears. Evil, Jesus said, was a murderer from the beginning, from the moment when the eating of the fruit of the tree of the knowledge of good and evil first brought death into the world. Yet, he added, the whole thing is a lie, which abode not in the truth, because there is no truth in it. Take away the imagery of the East, reduce the phrase to the matter-of-fact English of the twentieth century, and what does it amount to but this: In reality, the lie never existed, because there is no reality in it. This is the truth, and the truth in exposing the lie strips it of its claim to reality and power. "Ye shall know the truth, and the truth shall make you free."

Christian Science treatment is the very antithesis of the belief in evil. Insisting that material phenomena are merely the subjective conditions of mortal mind, it declares that any change in them can only be brought about mentally. This change, it teaches, if truly effected, is always effected spiritually; in other words, to make a man every whit whole, he must be made holy. Moral regeneration must proceed simultaneously with physical. This is why Jesus said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" In simple English, healing in Christian Science is wrought by showing how to "let this mind be in you, which was also in Christ Jesus." In accomplishing this, medical aid is bound to be more or less a deterrent, and can never be any assistance, since in teaching a man that the flesh profiteth nothing, not much is gained by assuring him that matter is something, while in insisting that Mind is all, it will not tend to success to make an exception in favor of physic. Christian Science, of course, must be prepared to stand by healing as the demonstration of the truth of its teaching. That was the demand made by Jesus, and that, consequently, must remain the test of a man's Christianity. It must, however, likewise remain the test of the efficiency of medical treatment. Christian Scientists do not draw any comparisons, but they certainly have no need to be afraid of any.

[Olcott Haskell in *Lemoore* (Cal.) *Republican*.]

To cite the practises of a mesmerist which the critic acknowledges were "only an exhibition of the force of suggestion or the action of the law of faith, over a patient in the impressible condition," as in any degree comparable with the practise of Christian faith and understanding as taught in the Bible and reemphasized by Mrs. Eddy, is to misunderstand the nature and modus of Scriptural healing. This critic refers to the "force of suggestion" as underlying many systems of so-called cure, but he surely would not wish to be taken as implying that this was the basis of the spiritual healings wrought by Jesus and the apostles.

If, as the Bible clearly teaches, it was God who healed those who turned to Him in ancient times, why should it be thought incredible that He should continue to save His children from sickness as well as from sin? Or why should a clergyman feel "compelled in the interest of truth and common sense to deny the reality of cures in cases of serious organic disorders"? This critic admits that "sometimes benefit is derived" by "people who are under a delusion" or

Digitized by Google

by "invalids who have been wrongly pronounced incurable." But Christian Scientists recognize that to God no case is "incurable." Deformity, blindness, leprosy, and even death were dispelled by the understanding of Life which Jesus brought to light. Then shall Christian Scientists be censured for attempting to follow the teachings of Jesus the Way-shower? or condemned, when in some instances their understanding is not so clear as that of their Master? Even the immediate disciples of Jesus failed in at least one instance to heal a severe malady; yet Jesus did not condemn their effort, but explained that they needed a greater degree of consecration and spiritual understanding to meet these more stubborn cases. Notwithstanding the marvelous goodness of the Master, and in spite of the healing works which he had wrought, he was tried in court and condemned as a criminal. Must it be said today that some who profess to "preach the gospel" condemn those who are striving sincerely (and to a large degree successfully) to carry out Jesus' command to "heal the sick"? This command in the New Testament is given equal weight with its correlated command to "preach the gospel."

The practise of Christian Science does not consist in the repetition of verbal statements contradicting the evidences of sickness. Mrs. Eddy states: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being" (Science and Health, p. 409). It is a fact well recognized by all who are familiar with the practise of Christian Scientists, that these people are loving and kind to the sick; that they employ good nurses, and do everything they can to promote the comfort of those in their care. It is true that they do not cut out organs or torture the flesh in an effort to make it well, and neither do they experiment with dangerous drugs or inject poisonous serums; but their percentage of cures is very high, even with so-called "serious" cases.

[Charles K. Skinner in *Clinton Republican*, St. Johns, Mich.]

It is unfortunate that the reverend critic should have considered it necessary to attack other Christians in their work for humanity before learning the facts concerning their teaching. The attempt to tear down the foundations of another in order to build up one's own, has never proved a success. The gentleman, like very many critics of Christian Science, deals in generalities. He tells us that Christian Science "is first wicked in its pagan interpretation of the Lord's Prayer, and the cruel construction put upon sin and atonement, the Lord's supper, the resurrection," etc. Is it true that the hundreds of thousands of devout men and women who were considered exemplary Christians in their former church affiliations, had gained so little spirituality from their teaching that they could be misled by paganism? The spiritual interpretation of the Lord's Prayer of which he speaks is never used except in connection with the authorized version as given in the King James Bible. It is to be found on page 16 of Science and Health, and closes as follows: "For God is infinite, all-power, all Life, Truth, Love, over all, and All." Is this paganism?

It is difficult to understand what our critic means by "cruel construction put upon sin," etc. The sharpest condemnation of sin, both in thought and act, is found in many places in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, of which I will here cite one: "Hatred, envy, dishonesty, . . . make a man sick, and neither material medicine nor Mind can help him permanently, even in body, unless it makes him better mentally" (p. 404). Likewise the chapter on Atonement and Eucharist, when read with regard for the spiritual side of the teachings of Jesus, coincides precisely with his words. Even as now, there were skeptics, critics, and scoffers in the time of the Master. His own disciples could not always seem to discern the spiritual application of his teaching, for in one instance they said, "This is an hard saying; who can hear it?" Jesus' reply was, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." And so it is that Mrs. Eddy has written and taught of the spiritual side of man and the universe, her reference to matter in its various phases being designed to show its unreality as compared with the enduring nature of all in the spiritual realm.

The critic also speaks of "Eddyism." There is no such teaching, and one who uses the term does so either thoughtlessly or contemptuously. Mrs. Eddy named her teaching Christian Science because she had discerned the hidden Principle of applied Christianity. She always strove to keep her own personality in the background, though she was careful to protect the purity of her teaching as given in the text-book, Science and Health, in order that it might not become confused or adulterated with that of other mental systems.

Our brother tells us that "the second wicked thing which Christian Science does is to take advantage of the weak and force its teaching on them." Let me state positively that a true Christian Scientist never intrudes his services or his religion upon any one. Having offered the cup of cold water, the message of hope to those disheartened at the failure of all other means, he steps aside and waits. If the message is not accepted, he has performed his duty. He never advises any one to dismiss his physician, for this privilege belongs only to the patient, and the Scientist knows that as long as one has faith in material means, Christian Science treatment would be handicapped.

Our brother bids his brethren to "stand by the church," and this is right when we know what the church really is. It is related that Jesus once asked his disciples this question: "Whom say ye that I am?" Simon Peter seemed to be the only one to discern the spiritual intent of the question, and he replied, "Thou art the Christ, the Son of the living God." Then came the wonderful blessing, with the added words, "Flesh and blood hath not revealed it unto thee, but my Father which is in heaven. . . . and upon this rock I will build my church." This church was to be founded upon the apprehension of the Christ. The Master's words to the woman of Samaria were: "The hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth." Hence the Christian Science definition of "church" is: "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (Science and Health, p. 583).

For any denomination to claim for itself the term, "The church," is at least presumptuous, unless its followers are striving to carry out all the commandments of the Master. Jesus gave but one distinguishing mark by which his followers should be known, and that was: "He that believeth on me, the works that I do shall he do also; . . . If ye love me, keep my commandments," "Neither pray I for these alone, but for them also which shall believe on me through their word," showing conclusively that his teaching and example were for all people and for all time.

[E. M. Ramsay in *Edinburgh* (Scot.) *Evening News*.]

I shall be glad if you will permit me to make a few remarks about the address on Christian Science, recently reported in your columns. Christian Scientists certainly take the inspired word of the Scriptures as their guide to Life, but that does not mean that they accept all the present-day interpretations of the Bible. Every Christian church acknowledges Jesus Christ as the Saviour of the world, but the large number of Christian sects testifies to the divergent interpretations put upon his teachings. The position of our opponent is weak; he is unable to prove his understanding of the Saviour's words by producing those signs of bodily

Digitized by Google

healing which Christ Jesus declared should follow those that believe; he admits that Christian Science heals, yet he denounces the interpretation of Scripture through which the healing is wrought, and expects us to accept his interpretation as the correct one.

Our critic says it is a remarkable thing that the great majority of the members of the Christian Science church in this country were formerly members of churches, or at least professing Christians. From this he infers that they require to be shown how unscriptural is its teaching. We believe, however, that an open-minded public will agree with us that this fact tends to show that Christian Science is truly in accord with the Scriptures, since it has been accepted by so large a number of people well informed as to the doctrines and practise of Christianity. In his first address, the lecturer admitted that Christian Science improves both the health and the morals of men, but he went on to declare that Christian Science teaches people to disregard sin, to say it is unreal, and leave it at that. It is not necessary to be a profound student of human nature to see that a total disregard of sin could not raise the standard of morals. Mrs. Eddy, in all her works, maintains that all the sin, disease, and sorrow in the world is the result of wrong thinking, sinful or ignorant, conscious or unconscious. She shows that in order to escape from sin we must cease to believe in it as possessing power, necessity, or attraction, and that this can only be done by gaining a far clearer perception and a much more intimate sense of God's abiding presence and infinite power.

[Emma J. Leplow in *Continental Times*, Berlin, Germany.]

In reply to "A Query to Christian Scientists" in a recent issue of the *Continental Times*, I wish to say that the intimation about Mrs. Eddy, the Discoverer and Founder of Christian Science, strikingly contrasts with the real facts. One could hardly find a person of her position and importance who has laid less "emphasis" upon "personal aggrandizement" and "personal luxury" than did Mrs. Eddy. Any one who has seen Mrs. Eddy's home has been forced to admit the simplicity of her personal surroundings and adornments. In quiet retirement, assisted by a few chosen adherents, she was wholly absorbed in the noble effort of redeeming suffering humanity.

In the article "A Lecture on Christian Science," which preceded this "Query to Christian Scientists," Mr. Knapp tells us, in the paragraph headed "Mrs. Eddy's Discovery," that her book, the Christian Science text-book, "Science and Health with Key to the Scriptures," was first published in the year 1875. It was several times revised by the author, and has had and is continually having a large sale. From the sales of this book and her other writings Mrs. Eddy derived her fortune, which, after bequeathing generous sums to relatives, she has left in trust to The Mother Church for the promotion of the Christian Science cause and for charitable uses. It is well known that Mrs. Eddy gave large subscriptions to public and private charities, most of which were outside her own denomination. Her selfless life has proved that she was indeed a faithful and humble follower of Christ Jesus, her greatest desire being to emulate him in all his ways and follow his commands: "Preach the gospel," "Heal the sick."

[Marie Hartman in *Soerabaiasch-Handelsblad*, Soerabaja, Isle of Java. Translation.]

Will you kindly allow me some space in your paper for a few remarks about the "Letter from Paris"? Otto Knaap in that letter tells about the work of different magnetic and hypnotic healers, and in that list he includes Mr. Eloff. "That this gentleman calls himself a Christian Scientist," is, according to Otto Knaap, "not important; his performances are based on the same principle as those of Antoine; the power of the human will, as the expression of a strong, unflinching faith."

The description of this treatment may apply to the methods mentioned above, but as an explanation of the *modus operandi* of Christian Science it is entirely wrong. In Christian Science treatment the human will has nothing to do but to obey the will of God, who is Truth and Life. It is a yielding of human desires and wishes to the understanding of the law of God, who never asks of man aught but to express Himself, God, the Principle of life. Being of the same will as the Father, learning to say with Jesus, "Not my will, but thine be done," is Christian Science treatment, is the prayer that heals sin and sickness, and which mankind must learn to "pray without ceasing" in order to attain to better conditions. The study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, will show everybody how to attain this end; by it one begins to understand that the function of prayer is not to change God, or to extort from Him a blessing which He would otherwise withhold, but that prayer in its true sense is a listening to God. The human consciousness only needs to undergo a change; it must give up all belief in evil and in an evil power, and in this way obey the first commandment: "Thou shalt have no other gods before me."

Truth, God, is unchanging and eternal, and upholds all that is true, but nothing else. Truth, as such, excludes any cause or power opposed to itself; this points to the unreality of evil, which cannot be lasting, eternal, or unchanging, and therefore must yield to the understanding of God, divine Principle.

[Ezra W. Palmer in *Denver* (Col.) *Republican*.]

In his manifest attempt to discredit Christian Science, our critic takes the position that the body is beyond the control of God, and cannot be healed by appeal to Him. By taking this position he of course flatly denies the healings accomplished by Jesus, the prophets and apostles, and in fact repudiates the Bible and its teachings. His position is purely materialistic, and can be defended only on the assumption that matter, materiality, is more powerful than God. Since, however, physical scientists do not agree what matter is, and some of them even doubt its existence, the hypothetical character of this critic's assumption is more clearly apparent. His implication that man is purely physical is not upheld by leading thinkers, and, despite his assertion to the contrary, Christian Science has proved to the satisfaction of many thousands that the power of God is available here and now for the relief of man from sickness.

[Written for the *Sentinel*.]

FROM DAY TO DAY.

REV. JAMES J. ROME.

FATHER, give me an understanding heart,
That I may learn to know myself, and see
Where I should spurn the wrong and choose the better part,
And thus from sinful bondage be set free.

Give me, withal, a meek and contrite heart,
That I may learn to quell all selfish pride,
Before Thee bowing, see Thee as Thou art,
And 'neath Thy sheltering wings may safely hide.

And give me, too, a gentle, loving heart,
That I may learn to be more tender, kind,
And with the healing touch each bleeding smart
With Christly bands of love and truth to bind.

And grant me, Lord, that I may ever be,
With every closing eve or morn begun,
Steadfast and true; my heart at-one with Thee;
And this my constant prayer: "Thy will be done."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"LOVE IS THE WAY."

WHEN our Leader, Mrs. Eddy, established the board of lectureship of The Mother Church, she perfected an organization to do what Christian Scientists as individuals had been doing in a desultory sort of way, namely, the correcting of false impressions about Christian Science by telling what this teaching is and what it is doing in behalf of humanity. It is of course impossible, in the short time that is available, to go into the details of Christian Science teaching as would be done in a class-room, but it is possible for the lecturer so to present his subject that he will help his audience to lay aside many of the erroneous beliefs about this Science and its Founder which they had previously held. That this is being done is abundantly proved by the testimony of many who have obtained their first true concept of Christian Science in this way, and that much more can be done is also proved by the fact that in many cities and towns where the lectures are given large numbers who wish to attend are unable to gain admission because of the limited seating capacity of the halls and other buildings available for the purpose.

Because of this condition, which in itself is gratifying because it witnesses to a steadily growing interest in Christian Science, it has been found advisable in some of the larger cities to repeat the lecture on successive evenings until all who desire to hear it have been accommodated. In other places the same result has been accomplished by the giving of lectures at more frequent intervals during the year, and in cities where there are a number of churches a much wider circle has been reached by occasionally giving a lecture in some very large hall, under the auspices of all the churches. All these plans have much to commend them, and good results have followed wherever they have been adopted; but it must not be forgotten that there is still another way in which the good work of the lecturers can be augmented, and that is by the distribution of our periodicals at the close of each lecture. The *Sentinel* and *Journal* are particularly well adapted for this purpose, not only because the teachings of Christian Science are elucidated more in detail than is possible by the lecturer in the brief time at his command, but also because through them authenticated testimonies of Christian Science healing are brought to the notice of those who have not yet realized the fulness and availability of Christ Jesus' teachings in this regard, and thus their newly awakened interest in the possibilities of Christian Science is strengthened, with the result usually that further inquiry is made.

By reference to Section 4 of Article XXXII of the Church Manual, it will be seen that branch churches are not limited to one lecture each year. This is the minimum, but they are at liberty to give as many more as are needed to accommodate all those who are ready to hear of the healing and saving message of Christian Science, and to learn at first hand the truth about its fundamental teachings. When the thought of a community has been directed to the efficacy of Christian Science through the healing work which is like an opening wedge in breaking down the barriers of misapprehension and prejudice, it will be found that thinking people welcome an opportunity to listen to a dispassionate presentation of the truth by an authorized exponent, and to those who are hearing of this wonderful truth for the first time, the *Sentinel* or *Journal* courteously proffered at the close of the lecture often proves a stepping-stone to a desire for further knowledge, and the acquisition of the text-book, "Science and Health with Key to the Scriptures," is usually followed by the study of the Lesson-Sermon and attendance upon the church services, with its consequent benefits.

More and more we are coming to realize how wisely our Leader builded, and with what keen foresight she provided these varied avenues through which the world might come to a knowledge of Christian Science. It is for us to be awake to our privilege in being colaborers in this great cause, awake to that "clarion call to the reign of righteousness, to the kingdom of heaven within us and on earth, and Love is the way alway" (Message for 1901, p. 35).

ARCHIBALD MCLELLAN.

DAILY BREAD.

ALL Christians are familiar with the petition in the Lord's Prayer which reads: "Give us this day our daily bread," the spiritual interpretation of which is as follows: "Give us grace for today; feed the famished affections" (Science and Health, p. 17). This prayer is embodied in what is known as the sermon on the mount, and at the close of the same chapter we find this counsel: "Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof." Some students of Christian Science are puzzled over the last statement, as it seems to imply the necessity for evil as an element of human experience, but the Master's teaching as here given assuredly points in quite another direction. He rebukes in no uncertain terms the "sad countenance" which would symbolize a virtual denial of ever-present Love, and he then calls upon men to avail themselves of the rich provisions of their Father's bounty.

Throughout the sixth chapter of Matthew, as indeed in all his teachings, Christ Jesus makes a clear-cut scientific separation between truth and error, and he shows the utter folly of attempting to "serve two masters;" or, as it might be expressed in terms of Christian Science, of admitting the existence of two powers, the one good, the other evil. Respecting this, our revered Leader says: "Mankind must learn that evil is not power" (Science and Health, p. 102); and the allness of God, good, is the great and blessed message of Christian Science to all humanity. In this chapter the true meaning of daily bread may be said to illuminate every line. The great Teacher counsels us to turn from the material to the spiritual for the supply of all our need, even bodily health being included, as we find in the statement that if with singleness of vision we look toward the light of Truth, the "whole body shall be full of light," a glorious promise surely! We are told that there is no need for any anxiety concerning food, clothing, or shelter, that our striving must be to bring into demonstration "the kingdom of God, and his righteousness," the spiritual realization of these assuring an abundant supply of all that we need.

Here it may be asked, What, then, is meant by the statement, "Sufficient unto the day is the evil thereof"? It can never be admitted that evil is any part of God's plan or purpose for any day. It should be noted that Jesus' admonitions are addressed to those who are in the habit of taking anxious thought about all the problems of life, those of "little faith" (not those who have none). If one has little faith in the certainty of good, it proves that he bases his deductions largely upon matter rather than upon Spirit and spiritual law; hence the reason why evil is taken into account as a factor in his calculations.

This being seen, there is a sort of gentle irony in the Master's closing remark. It is as if he had said: "Why carry the evil beliefs of today, or yesterday, or of last year, into tomorrow? Is it not enough to believe in evil for one day, without carrying it over to the morrow, which your Father has already filled with all the splendid possibilities of good? Why not erase from the tablet of memory every

Digitized by Google

item which does not express God and His idea,—the divine harmony and the realization of man's dominion over the whole earth? If the belief in evil were thus confined within its own narrow sphere, it would not long claim place or power in any day. It could not bind itself to the past and thus claim causation, nor could it project itself upon the future as effect. By giving heed to the spiritual facts of being, we should go steadily forward, the light shining upon our path, "until," as the apostle Peter has said, "the day dawn, and the day-star arise in your hearts."

ANNIE M. KNOTT.

A SONG OF ASSURANCE.

A THOUGHTFUL reading of the ninety-first Psalm brings one a keener sense of the fitness of the union of truth and beauty, of the expression of the highest ideal in the highest art. This realization enables one, withal, to discover a new meaning in the Master's counsel that we "consider the lilies of the field," for we at once relate his thought to that majestic opening of the nineteenth Psalm: "The heavens declare the glory of God; and the firmament showeth his handywork." The thought of the psalmist might have been expressed in unembellished prose, but instead he uses a refined poetic form, and appeals to the reader's imagination in a series of wondrously beautiful figures of speech. First we have the picture of the bird safely sheltering its little ones; then, by contrast, the picture of the impregnable fortress of God, to which all may flee, and then of the angel-accompanied pilgrim who is guided and supported to the end of his journey.

Interesting though it be, the question of form fades, however, when we come to consider the compass and completeness of the salvation from human ills of which divine Love here assures us. There is no darkness or doubt, as we are told, which it will not dispel, no affliction it will not relieve, no assault of malice or hatred it will not defeat, no possible danger from which it will not succor, and Jew as he was, St. Paul must have been thinking of the fulfilment of these rich promises in his own experience, when he said of the manifestation of this divine Love, that he "is able to save unto the uttermost."

The fulness and range of these promises are not more striking, however, than are the conditions named upon which their fulfilment depends, and Christian Science is not only scientific but stimulating in its recognition of these conditions, since it is proving the possibility of meeting them. "The secret place of the most High," in which the beneficiary of these promises must dwell, is the holy of holies of spiritual communion. Into it, under the old order, the high priest alone was permitted to enter, once a year, but today the healing and saving access of all to divine Truth is no longer subject to question. "He that dwelleth" expresses the all-inclusive democracy of the gospel, the freedom and privilege of which are again being made manifest. While the apprehension of the truth of being in Christian Science modifies in no degree the exactions of divine law, a fact which we all do well to remember, it does lead us to see how the conditions of promise may be met. We are freed from our long-time enslavement to ignorance and self-depreciation. Knowledge of the truth has conferred the ability to profit by the truth, and we are no longer impelled to cry out, "It is too hard, I cannot attain unto it!" The identification of man as the divine idea makes his companionship with God a comprehensible experience, and gently leads the spiritually aspiring over the threshold of the Father's house.

More wonderful than all else in this psalm is the calm finality of its witness to the demonstrability of the spoken word. There is no flavor of faltering or uncertainty in the delivery of its gladdening assurances. In his every declaration the writer speaks with the authority of one concerning whom it is said, "I will set him on high, because he hath known my name." More than this, his conscious spiritual identification with God leads him to assume a tone of divine authority: "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee:" and then he removes himself entirely from vision, and God alone speaks—all things have become subject to Him who is "All-in-all." Promise and realization are merged in that epic life which is dead to sin and alive unto God through Jesus Christ, and of which the ascending path is limned in those final words, "With long life will I satisfy him, and show him my salvation."

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

PHILADELPHIA, PA.—Several meetings of the committee for distributing the Thanksgiving number of *The Christian Science Monitor* were necessary to complete the arrangement of planning and laying out the city or county of Philadelphia into fourteen districts with a total air-line distance of one hundred and sixteen miles. Germantown represented a territory of over one hundred miles, and Kensington sixty miles. After the districts were planned, twenty-one hundred wrappers were addressed and distributed in these districts, and then subdivided, to enable them to be laid out in rotation for delivery by automobiles, fourteen of which the committee succeeded in obtaining. On Friday, Nov. 29, a large force of workers met at First Church edifice, 40th and Walnut streets. Tables were erected in the Sunday school room, where the *Monitor* was received in bulk at noon, and at 1:30 the first route was ready for delivery. Each paper and wrapper was stamped "Complimentary," and after being wrapped, was passed to another table for the addressed wrapper; then tied in bundles, with slips of the route attached. Each automobile contained an attendant, with two boys of the Sunday school to assist him. Besides the twenty-one hundred copies delivered in this manner, one hundred copies were distributed in car-barns and fire-houses, and fourteen hundred and thirty copies were mailed from Boston to typewritten names and addresses sent to them for this purpose. Among this number were one hundred and eighty-six monthly subscriptions. This made a total of thirty-six hundred and thirty copies distributed.

Correspondence.

INDIANAPOLIS, IND.—A union service was held Thanksgiving morning by First and Second Churches of Christ, Scientist. It being the first Thanksgiving service held in their completed church edifice, First Church invited Second Church to join with them in making perfect the spirit of the day. Anticipating a very large attendance, First Church prepared for an overflow meeting to be held in the Sunday school room at the same hour as the regular service held in the main auditorium. The expectation was fully realized, as both rooms were filled at the time set for the service. As the large audience left the church, all felt that the combined service was a tribute not only to the great growth in the community of the cause of Christian Science, but that it formed within itself the crowning testimony of the healing power of Truth and Love.—*Correspondence.*

BRADFORD, YORKSHIRE, ENGLAND.—Whatever is to be said for and against the Christian Science movement, it has in Bradford, as we believe in other parts of the country, established itself very firmly. Its beginning was humble enough—just a handful of members meeting at private houses. Then First Church of Christ, Scientist, in Bradford, took a house and fitted it according to their requirements. This accommodation proving inadequate, rooms were obtained in the Westgate hall and later in the Masonic hall, Rawson square. But the gradual accession to their numbers, and a steady development, not only in numerical

Digitized by Google

strength, but also in those things to which the church devotes its attention—and for which the columns of a newspaper are scarcely open to discuss—has enabled the group to take a further step. Accordingly they have taken a house in Eldon place as their headquarters; and in addition to this, in the ground at the rear have built a church capable of seating probably five hundred people. The necessity for this has long been felt by the body of members, the rooms previously available being frequently crowded at the services. Now the society are established in comfortable rooms, and for the first time in the history of the local First Church of Christ, Scientist, they have an actual place of worship to be exclusively reserved for service.—*Bradford Argus.*

DENVER, COL.—Second Church of Christ, Scientist, held its first service in the foyer of the new church edifice, corner South Grant street and Bayaud avenue, on Thanksgiving day. In January, 1909, this organization was effected by members of First Church to meet the needs of residents on the south side of the city. Comfortable quarters were secured in the Masonic temple on Broadway, where all services were held until the completion of the foyer of the church on lots purchased soon after organization. It was truly a day of thanksgiving and rejoicing to all interested in the cause of Christian Science, when the doors of this beautiful church home opened. Construction was made possible through the earnest work of its members, aided substantially by all the Christian Science churches in this field. The Sunday school has grown from small numbers to a large and earnest body of teachers and pupils, each animated with the desire to build in this community that "structure of Truth and Love" (Science and Health, p. 583) defined by our beloved Leader as the true church, to which the sick may come for healing and in which the stranger will find a loving welcome.—*Correspondence.*

DAVENPORT, IOWA.—The handsome new edifice of First Church of Christ, Scientist, congregation, which is being erected on the northwest corner of Kirkwood boulevard and Grand avenue, will be completed by Jan. 1. The cost of the edifice is in the neighborhood of forty thousand dollars. Stucco forms the exterior finish of the building, the interior being all in white. Outside dimensions are one hundred and ten by ninety feet. The auditorium, which is on the first floor, has a seating capacity of seven hundred. The Sunday school room, under the auditorium in the basement, seats five hundred.—*Democrat-Leader.*

LA GRANGE, ILL.—The members of First Church of Christ, Scientist, La Grange, residing at Riverside and Berwyn, have withdrawn from the La Grange organization to form First Church of Christ, Scientist, Riverside, Ill. This move was warranted by the steady growth in attendance at the La Grange services. The new church was organized and its officers elected in the La Grange church edifice.

La Grange Citizen.

AMARILLO, TEXAS.— The work of remodeling, painting, and decorating the building at 102 East Eighth street has been completed, and the Christian Scientists have moved in. The location is a very pleasant and desirable one, and the Christian Scientists of our city are to be congratulated on their good fortune in securing a place where they can meet under such favorable circumstances.—*Daily Panhandle.*

EUREKA, CAL.—First Church of Christ, Scientist, owns a neat little church on the corner of H and 11th streets. This congregation is steadily increasing, and a new and larger church will be necessary before long. The regular services of the church are held here and a reading-room is maintained in the Carson block.—*Humboldt Times.*

THE LECTURES.

LETHBRIDGE, ALBERTA.

The auditorium of the Y. M. C. A. was crowded to its capacity by an audience who listened with great interest to a lecture on Christian Science by Virgil O. Strickler. The speaker was introduced by Dr. Stewart, M.P.P., who said in part,—

It is a great pleasure for me to be present this evening to listen for the first time to an exponent of the Christian Science faith, and to have the honor of introducing the speaker of the evening. Although I am not of your belief, yet I am sure that I will have been well repaid for coming here tonight, as I know I shall receive something which will be of much benefit to me. No man invents his own religion; it is generally handed down to him from previous generations, and no man can keep his religion to himself. If it does not show in his conduct, it does not exist in his heart. If he has gotten in closer touch with God than many of those around him, it is his duty to tell of his benefits. And I am sure that after listening to the lecture tonight I shall have received something from your religion which will enable me to become a better citizen, a truer friend, and a more worthy gentleman.—*Correspondence.*

PITTSBURG, KAN.

A filled house at City Hall auditorium listened to a lecture on Christian Science by Prof. Hermann S. Hering. The lecturer was introduced by F. B. Wheeler, a prominent attorney of our city, who said in part,—

I beg to assure you that I esteem it a great pleasure to stand before you this afternoon and publicly acknowledge the many blessings that have come to me and mine through some slight knowledge of Christian Science. In the very brief time allotted to me I cannot hope to do more than identify myself with this great cause.

It is now ten years since I began to understand this great truth. At that time one of my children was very ill, so ill, in fact, that his parents were greatly alarmed for the little fellow's life. We had done all for him with drugs that it was possible to do. In our despair, and as the last expedient, we turned to Christian Science, but without hope and, so far as I personally was concerned, with no little prejudice against a faith which to me seemed to be the grossest superstition; but even in this frame of mind, divine Love poured out a blessing beyond anything I dared hope for. The healing of my baby boy was complete "from that same hour."

Since then I have proved Science in many ways, with many forms of disease both of body and mind, and always with the result that it has met my every need. It has been "Immanuel, God with us," at all times, and we have been harmonious and happy. True, we have been called upon to prove the faith that was in us, and though it has not always been easy, we have not been confronted with a problem but that we have known that God was with us with all-sufficient power, and underneath were "the everlasting arms."

When first interested in Science, I was what is known as an agnostic, an unbeliever, or an infidel, as you please, but now "I know that my Redeemer liveth" and that we are now the sons of God, and just as much under His love, His care and guidance, as we can ever be, and surrounded with every blessing that we can ever enjoy. Our work is to do the work of God as we understand it. We believe it is the desire of infinite God, good, that so far as we can we shall alleviate all human misery, misconception, and inharmony, and shall teach mankind that no condition is without hope, and that health, joy, and happiness, peace, and harmony is the natural condition of the sons of God, and that God "is no respecter of persons"—*Pittsburg Headlight.*

DIXON, ILL.

Judge Clifford P. Smith, who delivered a lecture on Christian Science under the auspices of the local church, was introduced as follows by Attorney E. H. Brewster:—

The census shows that since 1906 the Christian Science church has been growing much more rapidly than any other denomination. Since then it has more than doubled, and now numbers its converts by the hundreds of thousands. Its magnificent church buildings are located in practically all of the leading cities of the civilized world, and represent an expenditure of many millions of dollars. Its membership is made up largely of well-to-do and cultured people, who have the time to investigate and the ability to understand its teachings. Probably no Christian Scientist would make these statements,—I have never heard one do so; but it would seem that any doctrine, faith, or religion which in these most enlightened years of the world's history could make such remarkable growth, is worthy of and entitled to the serious consideration of every thinking person.

I do not understand that the Christian Science church urges its teachings in any way upon any person. Instead, however, it maintains a board of lectureship whose duty it is to visit the various churches or congregations and deliver a free lecture on Christian Science. All who are interested are welcome to attend these lectures, and as I said a moment ago, it would seem that every thinking person would be interested.—*Correspondence.*

SAN MATEO, CAL.

Frank H. Leonard, at his lecture in Masonic hall on Christian Science, was introduced as follows by Mrs. E. J. Trist, first reader:—

In the eighth chapter of Amos, the prophet said that the time would come when there would be "a famine in the land, not a famine of bread, nor a thirst for water," but a hungering and thirsting for a knowledge of God. This prophecy is being fulfilled, here and now. There never was a time when human thought was so receptive of truth, and never a time when truth was so clearly presented as at the present, a demonstrable truth, as given to us in Christian Science.—*Correspondence.*

SYDNEY, AUSTRALIA.

A public lecture on Christian Science was given by Bliss Knapp in the Warringah hall, Neutral Bay, in connection with the local Christian Science church. The hall was filled by a large and appreciative audience, who followed the lecturer with close attention. Dr. R. V. Morris presided, and on opening the meeting he said he regarded it as a compliment to have been asked to take the chair. He had not studied deeply the subject of Christian Science, and so was not justified in any criticism, but in reading Mrs. Eddy's book, Science and Health, he was particularly struck by one thing with which he was in perfect accord, viz., her constant appeal to the authority of Scripture. In the name of the large audience, he extended a sincere welcome to Mr. Knapp. He (the chairman) was there not as a teacher, but as a learner.—*North Shore and Manly Times.*

JONESVILLE, MICH.

William R. Rathvon, who delivered an interesting lecture on Christian Science in the theater, was introduced by William M. Glasgow, who said:—

Man's relation to God, his creator, has probably been the foremost theme of religious thought from the time of earliest civilization to the present day. The great religious teachers of all races in all ages have sought to unveil the mysteries of creation, and to reveal the handiwork of God in His master production, man. The eternal destiny of man, subsequent to his earthly career, also received limitless attention in the creeds of all religions. Speculation concerning that vast eternity out of which man appears, but to disappear after a brief span of years, so monopolized the attention of religious thought that the problems of actual life, every-day life as we experience it, were sadly neglected.

But in these opening years of the twentieth century religious thought has taken a new trend. The demands for progress which are resulting in new life and energy along political, commercial, and social lines, are also heard in religious circles. Men today are demanding a practical, every-day religion capable of being used seven days of the week. On every hand is heard the cry for a code of life which will insure the greatest amount of happiness; which will make the world purer and better, more of a heaven upon earth. For the effort which Christian Science is making to satisfy this world desire for a practical working basis of life, for the mission it is seeking to perform in making this earth a happier and a better place in which to live, nothing but words of praise and highest commendation can be spoken. May success crown its efforts.—*Jonesville Independent.*

ELKHORN, WIS.

The introductory words of Clarence L. Hangan, in presenting Willis F. Gross, who lectured on Christian Science, were in part as follows:—

It was not the falsity of the ideas promulgated by Columbus, by Galileo, by Harvey, which prompted the masses to call them absurd, it was the want of understanding of the laws upon which those ideas were based that caused the people to arrive at their wrong conclusions. The teachings of Christian Science, differing as they do from some of the accepted doctrines of religion, have likewise been denominated absurd; and they have been so denominated for no other reason than that they are so universally misunderstood. It is, therefore, to explain a few of the fundamental teachings of Christian Science that these lectures are given.

Correspondence.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Austin, Minn.—Auditorium, 8:15 p.m., Jan. 20.
Birmingham, Ala.—Bijou theater, 3:30 p.m., Jan. 19.
Colville, Wash.—Jan. 24.
Dallas, Texas.—Church, Browder and Cadiz streets, 3 p.m., Jan. 19, and 8 p.m., Jan. 20.
Helena, Mont.—Unitarian church, 8 p.m., Jan. 21.
Lampasas, Texas.—Witcher opera house, 8 p.m., Jan. 21.
London, England (Fourth Church).—Library hall, Church street, Stoke Newington, N., 8 p.m., Jan. 30.
Los Angeles, Cal. (joint lectures).—Shrine auditorium, 3 p.m., Jan. 19; Third Church edifice, 734 S. Hope street, 8 p.m., Jan. 20 and 21.
Massillon, Ohio.—8 p.m., Jan. 13.
Meridian, Miss.—Church edifice, 8 p.m., Jan. 20.
Minneapolis, Minn. (Second Church).—Auditorium, Nicollet avenue and Eleventh street, 8 p.m., Jan. 21.
Missoula, Mont.—Elks hall, Jan. 20.
St. Joseph, Mo.—Church edifice, Twelfth and Felix streets, 8 p.m., Jan. 14.
St. Louis, Mo. (Second Church).—Church edifice, 4234 Washington boulevard, 8 p.m., Jan. 14.
San Bernardino, Cal.—Opera house, 8 p.m., Jan. 24.
Sedalia, Mo.—New Sedalia theater, 8 p.m., Jan. 24.
Spokane, Wash. (Second Church).—Auditorium theater, 8 p.m., Jan. 23.
Upland, Cal.—10th street grammar school auditorium, 8 p.m., Jan. 24.
Venice, Cal.—Church edifice, corner Brooks and 2d avenue, 8 p.m., Jan. 19.

TESTIMONIES OF HEALING.

Having received so many benefits from Christian Science, I am earnestly desirous of expressing my gratitude first for the better understanding of God, and of His love for man, which formerly had seemed little more than a beautiful dream. It is now nearly four years since I first looked into Mrs. Eddy's book, "Science and Health with Key to the Scriptures." I was then in a wretched condition, mentally and physically; my husband had just passed on, and my means seemed to me very small to bring up a family. I had fallen into a nervous condition, the nights being a positive dread to me, and the first help which I had in Science was in being able to put out my light at night without the dread of nameless fears and sleepless hours. Later on, a kind practitioner helped me to overcome the worry over supply, and in an incredibly short time, as it seemed to me, all my fears and worries ceased. Though my income is small, it always seems sufficient to meet every actual need, besides having something to spare for others; and though I have had many problems which at first seemed hard to meet, the sense of ever-present Love has always given me strength.

I would also like to tell how at a time of great sorrow Christian Science brought to my home a deep sense of peace and harmony. As I look back, it is wonderful to remember how calm and quiet every one in the house was, although a dear one had passed on. My gratitude to our dear Leader for her work is unbounded, and I hope my testimony may be helpful to others. I would like to add that, with the understanding of divine Truth, I have found the joy of living, both in health of body and peace of mind; also that our supply has been unfailing. I have also had the privilege of helping others as I have been helped. My gratitude to our dear Leader is indeed great for the understanding of the Bible she has given to us through "Science and Health with Key to the Scriptures."

MRS. MARGARET PROTHERO, Glenbrittle, Isle of Skye, Scotland.

I have been interested in Christian Science for more than six years, and during that time I have proved it to be a help in every kind of need. My first proof of its wonderful curative power was with an eruptive disease in my foot, which had troubled me for three years, always during the summer months, but that year it was much worse and did not respond to the medicine which I had taken before, so a stronger medicine was used, which set me to thinking of the probable effect of that medicine on my stomach, as it was taking the plating off the spoon which was used. Besides this, my foot was getting worse all the time and was swollen to twice its normal size.

I had talked to a Christian Science practitioner a few weeks before, but did not think that Science could help me. When, however, the doctor told me that if my foot did not get better, it might be necessary to have it cut off, I made up my mind to give Christian Science at least a trial. I took my first treatment on a Saturday afternoon, and on the following Wednesday evening I went to a Christian Science meeting, the first I ever had attended. The service was very simple, yet I do not believe I ever before had such an uplift of thought and a confidence that I was going to get well of the trouble with my foot. I walked home (the first I had walked for over two weeks), and I did not feel any worse for my walk of twelve blocks. The next I went to work the next day, though doing only the lighter parts, but from that on the healing was rapid.

It is often said that Christian Science cannot be used in cases where broken bones are concerned, and also that surgery is permissible in such cases. I can testify that I sustained an injury of this sort to the skull bone, and that Christian Science was a preventive of a surgical operation for the same. I was on the sidewalk, when without warning a brick fell from a building which was in the course of erection and hit me on the head, rendering me unconscious, in which condition I remained for forty-eight hours. The hospital authorities, the press notices, and the surgeon expressed little hope of my recovery, but when I regained consciousness the nurse explained what had happened and told me that my father had me under the care of a Christian Science practitioner; that I was to remember one thing, namely, that God is Life; that I was in God's hands, and that I had nothing to fear.

The house surgeon came in soon and examined my eyes. He seemed greatly astonished, and said he believed that he would not have to operate on my head for a blood clot, but that he would know by the next morning. However, the clot never formed, and the operation was not necessary. When I first went to the hospital I was told that if I got away in a month's time I would be fortunate, but I was able to leave in fourteen days. I did not use any medicine, and the wound was simply washed with warm water. The nurses were most kind to me, and did everything in their power to help me, even to reading Science and Health; so I feel very grateful to them.

To say that I am thankful for all that Christian Science has done for me is very little, for the true way to prove my thankfulness is to show others by my daily living that I am grateful to Mrs. Eddy for giving us Science and Health, and the Christian Science periodicals, especially the *Monitor*. Its articles on Christian Science have been helpful to me in many ways.—FRANK RYLE, Kansas City, Mo.

I desire to tell of some of the blessings that Christian Science has brought to our home. My husband met with a severe accident in a runaway, being thrown upon the paved street and badly bruised; but as soon as possible, help in Christian Science was sought. He was confined to the house only one day, and in a few days was perfectly healed.

Shortly after this occurrence, I was taken with a severe cold, which developed into acute lung trouble. I suffered intensely, but in less than a half hour after Christian Science treatment was given me, I was greatly relieved. I was confined to the bed for one day, but after that I was able to attend to my household duties as usual. I had, however, scarcely recovered from this illness when I met with an accident, falling down stairs and injuring my arm at the shoulder. In Science and Health (p. 401) Mrs. Eddy writes, "Until the advancing age admits the efficacy and supremacy of Mind, it is better for Christian Scientists to leave surgery and the adjustment of broken bones and dislocations to the fingers of a surgeon." So a surgeon was called, and in the mean time my husband telephoned to Dayton, Ohio, for Christian Science help. No anesthetic was given, Christian Science proving a panacea in overcoming fear and suffering, and the bone was set without any pain. The physician remarked that I would not sleep any that night, but I fell asleep at nine thirty and slept until four o'clock the next morning. There was no inflammation or swelling, and it is safe to state that I did not experience one hour's suffering. Three weeks from the time of the accident I was able to write two letters with this arm, and after the fourth week was doing all my household duties.

The help I received was mostly through absent treatment. One day, when the physician was putting on a new bandage, he remarked, "Of all the patients I ever had with broken limbs, you are the best; you are always cheerful, and never utter one word of complaint, which is quite unusual in such a case as yours." I am indeed thankful to God for the many blessings that Christian Science has brought to us. Not only are we grateful for the physical healing, but far more grateful for the better knowledge of God, a better understanding of the Bible, and a clearer comprehension of Christ's mission, which Christian Science has brought to us.

MRS. LEONA M. PRITZ, Greenville, Ohio.

Digitized by Google

I am glad to have the opportunity of telling others some of the good things that Christian Science has done for me. I came into Science when I was four years old, and with the understanding which I have gained I have found it a help in all the problems that have come to me. I am glad that I know a religion which is practical—which helps one every day of the week as well as on Sunday. I have found Christian Science a great advantage in my school work. More work has been accomplished, hard lessons have been made easier, and many inharmonies have been overcome by the realization of the truth, and by knowing that God is "a very present help" in the little difficulties as well as in the harder problems.

I have proof of the power of Christian Science in the healing of a severe injury. When sitting on a jogging-board with a number of persons, one end of the board slipped out and all of the weight fell on my foot, which was caught under it. My ankle was badly hurt and I could not walk home. It gave me a good deal of pain for a while, but I had Christian Science treatment and did not lose a single day from school. It improved rapidly, and in three days it was well. Another time when playing in a basket-ball game my ankle was again badly injured. I immediately began to declare the truth, and was able to continue in the game. I had trouble with the ankle in the afternoon, but with Christian Science treatment it was greatly helped, and I was able to go on a picnic the next day. I am very grateful for the overcoming of these and many other ills. I appreciate the Sunday school, and am glad that I have the opportunity of attending. I am very thankful to God; and am also grateful to Mrs. Eddy for living a life pure enough to be the messenger of the glad tidings.

MARY NOBLE FAULK, West Monroe, La.

Christian Science has been a revelation to me, and it is a great pleasure for me to testify to its efficacy as a healing and saving agency. I have been helped by Christian Science in many ways, mentally, morally, and physically. My first physical healing was relief from a chronic bowel disorder with attendant aches and pains. This was followed by the laying off of glasses worn for defective vision. These two healings came six years ago, and from that time on Truth as revealed in Christian Science has been my only physician and has never failed.

I am certainly appreciative of these physical benefits, but yet more marked has been the change which has come over my life during the last six years, taking away all desire for those things which formerly seemed pleasurable and necessary. With this change has come a peace, happiness, and prosperity before unknown. In business, where once was fear of results, doubt of my own judgment, worry over petty annoyances of the day, there now is that conscious, constant understanding of the source of supply, and of man's governing Principle, which overcomes all difficulties and brings harmony and success.

For these blessings that have come to me I am truly thankful,—thankful to God for His ever-present, all-powerful, loving, and protecting care, and grateful to our revered Leader, Mrs. Eddy, the Founder of Christian Science and author of our text-book, "Science and Health with Key to the Scriptures," for showing us how to avail ourselves of the loving and protecting care of God in our human needs here and now.—GEORGE M. SPANGLER, JR., Chicago, Ill.

Gratitude for health and happiness gained through Christian Science impels me to send this testimony. I suffered for eight years from what the doctors diagnosed as diseased ankle bones. They could not, however, heal me or give me relief from the suffering, although they treated me for a long time. All agreed that rest and disuse of the limb was necessary to a cure, and at one time I did rest for six months; but as soon as I again stood on my feet, the trouble returned as bad as ever. I was treated in a hospital in England, and also in Canada, the last doctor in Canada saying that I must have the bones scraped and a piece of flesh from another part of my body grafted on to the cavity.

Shortly after this time I got a copy of Science and Health from the Carnegie library, and was so greatly helped by what I read about God and man that the pain ceased and the wound healed. Just about this time, however, a great unhappiness overtook us, and as I had not gained enough of the spirit of Christian Science, I let this fill me to overwhelming with hate and resentment, and soon my old trouble appeared again, nearly as bad as ever. But I had proved the power of divine Truth, and again I turned to Christian Science for help. Through the patient work of a practitioner my ankle bone has been completely healed and is normal in appearance. I can stand or walk for hours with no suffering whatever. Also the trouble that was so cruel has vanished—been blotted out of our lives. A distressing stomach disorder which accompanied all the years of my suffering has been overcome, and my healing through Christian Science was accomplished without my taking one day off for rest.

For all these blessings I wish to give thanks to God first, and then to the noble woman who endured so much in making it possible for all mankind to be healed.

ROSE MORTON, Ottawa, Ontario, Canada.

It is with pleasure that I add my testimony to those of many others, to tell of help received from Christian Science. Before coming into Science I seemed possessed of an abnormal and undefinable fear which made my life miserable, while my false sense of God made everything seem dark and uncertain. The light gained from the study of Science and Health, on these two points alone, has been invaluable, and life would indeed seem a blank to me without Christian Science. I am truly grateful to God for having been led to seek this truth, also to Mrs. Eddy for bringing to the world this teaching, which saves physically and spiritually all who hunger for it and accept it.

MRS. CARRIE D. UPCHURCH, Foley, Ala.

Being very thankful to God for the benefits received through Christian Science, and thinking that some one may be benefited by reading my testimony, I gladly send it. I had been an invalid all my life, and for the last five or six years I had lain in bed for six or seven months out of each year; indeed, the last illness I had I suffered for ten months from nervous exhaustion, my stomach, liver, bowels, kidneys, and heart all being out of order. I could not eat much or sleep well, but I have been cured of all of the above ailments, also of deafness. I had never held a position or worked until I came into Christian Science, but now I am able to work, and am engaged in a motor plant. Since coming into Christian Science I have had many beautiful demonstrations and I am most thankful to God for the truth given us through His messenger, Mrs. Eddy.

LOUIS B. NEWMAN, Bucyrus, Ohio.

I took up Christian Science with the thought of helping my husband, not thinking of becoming interested myself. I was then a member of another church, and seemed very well satisfied, but after reading "Science and Health with Key to the Scriptures" by Mrs. Eddy for a few weeks, I was surprised to find that I was cured of severe nervous headaches, which were very frequent, also of liver trouble. I began to attend the Wednesday evening meetings, and it took me but a short time to see the beauty of Christian Science. I was surely ready, as I was quite willing to accept its teachings, and from the beginning it seemd to me to be the truth.

I am more grateful each day to our dear Leader for bringing us Christian Science, this gift of God, and I can

Digitized by Google

rejoice with the psalmist, who says: "Rejoice in the Lord, ye righteous; and give thanks at the remembrance of his holiness."—CARRIE H. NEWMAN, Bucyrus, Ohio.

I wish to confirm the testimonies above given by my wife and brother. In my own experience I had failed financially, and as a result of worry and discouragement had given myself up to drink, till finally I had no rest by day or night; but through the faithful work of a practitioner I found peace and was healed of the drinking and smoking habit. While I was working out my problem, but had not yet made my financial demonstration, we were directed to move to this place, my wife's old home.

We started a little factory for manufacturing art goods, and as I had lost so much money the thought of fear held me in such bondage that I was afraid to use what was necessary in my work. Through the help of a practitioner, however, I was able gradually to rise above this limiting thought. It was not long until divine Love opened the way for me to go into business for myself, but I cannot ask the space to tell all of the many beautiful demonstrations which I have had in working out my business problem, but would like to tell of some.

A machine was necessary before I could open my business, and mortal sense tried to make me afraid, as I had not the money on hand to buy it; but I knew I could do what was needed, if allowed a little time. Human reason would have me write a rich relative to loan me the money, and I did so only to find that his money was all tied up and my request could not be granted. I told my practitioner, and she said that the need could be met in God's way, and the day I left for the city to see the man through whom I would obtain this machine, I asked the practitioner for help. On the way to the city I could not have felt more peaceful if I had had the money in my pocket, and when I stated conditions to the gentleman, who had seen me only once before, he said: "Why, I have money in the bank that I am not using, and you are welcome to it. I will make the note out in two payments." Before my place was ready for business the machine was here, and when the payments were due the money was ready. In sending a little more to the gentleman to express my gratitude, he said, "No," that he was only glad to do this for me, and would place the amount to my credit, also allowing me special privileges.

I am a grateful and happy man, and owe it all to Christian Science. I am constantly thankful to God, and grateful to our beloved Leader, Mrs. Eddy.

WILLIAM P. NEWMAN, Bucyrus, Ohio.

It was about two and a half years ago that I first became interested in Christian Science. Its teachings appealed to me, although I did not believe that the sick could be healed in this way. However, after hearing and reading many testimonials of healing, I began to wonder if it really was possible that the sick could be healed through Christian Science. My little girl had had from her birth what was pronounced an organic trouble, which the best physicians said nothing could heal. I went to a practitioner and asked her if she thought anything could be done for a young child by Christian Science, and she assured me that God could and would heal my little girl as well as He could any one else. I believed her, and have always been very grateful that I did. I asked her to take the case, and in one treatment the child was entirely healed and has been well ever since.

Soon after this I burned my hand very badly. I was about to apply an old remedy, when the thought came, Now is the time to prove the truth. I went to work with the very small knowledge which I had, and in an hour's time the burn was healed; in an hour and a half there was not even a mark, and no one could tell where the injury had been. My little girl was also instantly healed of malarial fever. I had worn glasses for nine years and was healed during one of the Sunday morning services. Besides this, I was healed of chronic headaches and a bowel trouble. Since then I have experienced a painless childbirth and everything was normal. I was able to be up and around the next day, and have been perfectly well and strong ever since. Another beautiful demonstration in connection with this was that of supply. I had been unable to nurse my other babies, but in this case the realization that God is the only source of supply has met every need, and there was an abundance for my baby.

Above all else I am grateful for the spiritual uplift and the peace and happiness which have come into my life. "My peace I give unto you," the Master said, and indeed we find that peace in the teachings of Christian Science. It is with a heart full of love and gratitude to God that I write this testimony of what Christian Science has done for me and mine.—MARION WELTON KISSKALT, New Haven, Conn.

I wish to express through the *Sentinel* my sense of indebtedness to God, and my gratitude to Mrs. Eddy for Christian Science, the teaching through which I was lovingly and patiently led to the truth. Christian Science lifted me from the depths of human despair (after I had received the medical decree of death), into a life of further usefulness and peace. The happiness I have enjoyed the past eight years is genuine, for it is based on the foundation of Truth and Love.

The disease from which I suffered was called hardening of the liver, and I was not given a ray of hope. After weeks of a miserable existence, sleepless nights and weary days, the truth as revealed in Christian Science brought a gleam of light, and I was most wonderfully helped in one treatment, though it took about six weeks to eradicate entirely the disease. While I am now a wonder to myself and to old-time friends, there are yet many things to be overcome and daily, hourly problems to meet; but I know that with patient, persistent following of the truth these will all be removed, even as Jesus declared: "Every plant, which my heavenly Father hath not planted, shall be rooted up." I have daily proofs of the efficiency of divine Truth in the working out of all problems, be they great or small. These problems at times are small, to mortal sense, indeed they seem hardly worth handling; but when handled in the light of Truth, we discover what they might have been, had they been left to mortal sense.

My daily prayer is for growth in grace, and for understanding; that I may manifest yet greater proofs of Truth's healing power.—MRS. ELLA HENDERSON, Chicago, Ill.

Jesus' words to the father of the little maid, "Be not afraid, only believe," have been a wonderful help to me in the study of Christian Science, for I have learned that fear is indeed one of our greatest enemies. I am truly grateful that I am now able to overcome it, and I wish also to express my gratitude for the many other benefits which I have experienced through an understanding of this truth.

Some months ago I was suffering greatly from severe and chronic stomach trouble. I was taking medical treatment under a specialist, but seemed to be getting worse instead of better. I was unable to eat any solid food, was very nervous and could not sleep. The doctor thought I had ulceration of the stomach, and I became greatly discouraged. At last I was advised to try Christian Science, but I did not have much faith in it. As a last resort, however, and thinking it could not do me any harm, I decided to try it. After three weeks' study, and with the help of a faithful practitioner, I was entirely healed. Headache, rheumatism, throat trouble, and many other ills came up, as if to tempt me, but all were overcome. The truth of this Scripture, "Casting all your care upon him [God]; for he careth for you," is being proven to me each day. My earnest desire is that I may gain more of this understanding, and prove my gratitude to God, also my thankfulness to Mrs. Eddy for showing us the way to our Father's house.

MRS. HELEN M. OLSEN, Los Angeles, Cal.

[Translated from the German.]

A deep sense of gratitude and joy prompts me to tell of the blessings which have come to me through Christian Science, by way of deliverance from sickness of many years' standing. About a year and a half ago (we were living in Düren, Rheinland, at that time) I became so weary of life through heart trouble, anemia in a severe form, and other ills, that I had but one desire, namely, that death should put an end to my misery. I was then led out of deepest darkness and error, into the understanding of the truth, through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had never heard of Christian Science before, but through the patient and loving help which I received, the truth of being soon became clear to me, and this realization did for me what medical treatment, extending over a period of years, had failed to accomplish. I was freed of all my ailments, and today I am a healthy and happy woman.

Through assiduous reading of the text-book and *Der Herold der Christian Science*, I have attained to where I am able to overcome minor ills myself, whenever they come up. Having been seized with violent toothache on one occasion, and taken with spasms of the heart on another, I did not seem to succeed in dispelling the illusion, and therefore applied for absent treatment. With one treatment the pain disappeared, and I once more realized clearly that there is not, nor can there be, any evil in God's kingdom. I thank God with all my heart that through Mrs. Eddy the truth has again been given to us in all its healing power.

KÄTHE KUTSCHWALSKI, Leipzig, Germany.

I would like to relate a recent experience which proved to me the ever-present help of God, divine Truth. I had just returned from a Wednesday evening meeting, and on reaching my room was suddenly attacked by a very severe internal pain. So bad did this seem, that I could only throw myself on my bed; but I remembered a testimony given that evening by one who told us how, when feeling very ill, she could only reach out her hands to God for help. I did this, and almost at once my maid came to me from another room to make some inquiry. On seeing my apparent distress, she came to me with words of comfort, assuring me that nothing but God, good, was with me and that I had nothing to fear. I then tried to realize that "Life and intelligence are purely spiritual" (Science and Health, p. 14). Immediately I lost all consciousness of the body,—as a cloud it seemed to disappear from sight,—and I knew that as the belief of pain had come to thought, so it had disappeared out of thought, and I was healed by the realization (even for one moment) of the truth of being. The next day a sense of weariness came to me, but I quickly realized that as the pain had only been a false belief or dream, there was no cause for any ill effects, and that as God's child I was and always had been in perfect health.

I am truly grateful for all that Christian Science has brought to me,—the knowledge that health is ours always to manifest and to enjoy the peace of God which passeth understanding and of which my life before had seemed so devoid, and above all else the joy, the great and lasting joy, of being able to declare this glorious truth to others who are weary and heavy laden with false beliefs, and so bring to them the health, peace, and happiness which is the birthright of all the sons and daughters of God. I am truly grateful to God, and also to our dear Leader, Mrs. Eddy, for making the way of Truth so clear to us.

FRANCES C. OAKES, London, England.

Love is the greatest thing we can give each other. We must always be giving each other bread, or money, or jewels, or books, or counsel. But love is the real gift, no other can take its place, but it can take the place of all the rest.

M. KENDALL.

FROM OUR EXCHANGES.

[*Continent.*]

There is no doubt that churches ought to present a united front to the evils of the day. They ought to federate to accomplish the real work of the church. There is no reason why there should be a host of little temperance societies, when the churches could come together in one mighty agency and make a strong impact upon the evil of intemperance. The work of rescuing the ruined and lifting the fallen certainly is the work of the whole church. Why should not all the churches come together, unite in that sort of thing, and present to the world the spectacle of one host working for one end? That would mean the destroying of various little starveling societies that are trying to do the work. It would mean reduction in the cost of administration. There simply is no theoretical advantage you can speak of that does not appear in this union of all the churches for the legitimate work of the whole. We do not see how any group of Christian men could fail to agree on that principle; nor how any convention could vote anything else; nor how any plan for work could be drawn up which would not include this.

The same thing appears again in the manifest Christian duty of helping the distressed. Who does not know that that is the business of us all? Do we not agree that the door of hope ought not to be shut in the face of an ex-convict; that a fallen woman, who wants to come back to honor and social place, ought to be welcomed in her effort; that a forger, or a thief, when he wants to reform, ought to have his chance? Could any body of Christian men be got together who would not agree heartily on all this? And yet how utterly abstract that ex-convict is, who is thought of in terms of the "ex," and not in terms of flesh-and-blood men, with all the frailties he has brought with him!

Now what all this comes to is, not that we shall have less big talk but that we shall keep our big talk vital with small achievements—that we shall perpetually demand that our theory be put into practise in the things that do lie at our hand. Not less big talk then, but more small deeds.

[*Western Christian Advocate.*]

We are coming to see for the first time in the history of Christendom that man's indifference to man is more damnable than man's inhumanity to man. This indicates that we are approaching more nearly the teaching of Christ. He admonished that the unpardonable sins were inhumanity and implacability. It is the selfish worldling who cares, like Dives, for nothing but his own comfort, who goes to the place of woe. It is the unforgiving man whom the Father in heaven does not forgive, and as we witness the condemnation of the unforgiven we come upon the unjust steward.

This doctrine of Christ is becoming more and more congenial to our age. Somehow we are getting to see that love is the central truth not only of God, but of man. On this rests his eternal destiny. It is his supreme duty and virtue, while the opposite, a loveless spirit, appears above all things hateful and detestable. The age in its moral conscience is seeking to stand, though unconsciously, by the side of the great Teacher. Is this not something to be thankful for?

[*Watchman.*]

In one's own neighborhood the changes for the better may not be discerned if they are looked for every morning. But after generations have passed, one may surely detect some signs of "a new earth" and be enabled to await with growing confidence "a new heaven."

It is this "patient continuance in well doing," universally practised, that might be each one's contribution to the fulfilling of the great mission that Christ came to inaugurate. His birth and death have a world-meaning just in proportion as he is allowed to live in and control each human will. If we think that Christ should save the world in a day, he

Digitized by Google

evidently has not done it. And yet he has done it, so far as his part is concerned. He has shown mankind what the saved life is like, and then called on each one to work out his own salvation. This is not exclusively a duty for the twenty-fifth of December. It covers the whole year.

[*Christian Register.*]

What is this vitality that comes to us from a Galilean peasant, unless it be the reality of the human soul? But how did Jesus get at this life of God? How did he manage to get away from the bigotries and religious conceits of his day? Was he intellectually of a larger mold than of anything that has appeared in history? No wonder that he was misunderstood and deified by his contemporaries and followers. They thought they could understand supernaturalism better than the natural, and for that reason did not stint at all in reconstituting and describing Jesus as something quite out of nature. They lost him for hundreds of years. It is the glory of our age to rediscover Christ, to know the beautiful Master and Teacher as our companion. The friendship of Jesus is something we cannot afford to lose. And yet, and yet, as Christmas comes and Christmas goes, we are overwhelmed with the problem. How comes Jesus here at the heart of modern life? Nothing seems able to displace him. In fact, we are seeking individually and socially more and more him who trod the gardens of Palestine, simple and unafraid, because he loved man and loved the truth.

[*Christian World.*]

The new movement in religion which is to meet the want of our time must be for one thing a clearing movement. The Reformation, that grand revival of the sixteenth century, swept away a vast accumulation of rubbish that barred the free access of man to God, that choked the higher aspirations of the soul. That process today has to be carried farther. At its head must be teachers who are experts in disentangling the temporal from the eternal, the kernel which is for all time from the husks which enclose it. Religion will win when it founds itself on facts,—facts of history, facts of the soul, facts of the spiritual experience, facts of man's moral need and of its supply. The ship of faith in fighting its new battle must clear its decks.

[*Universalist Leader.*]

The secret of the concentration, directness, and simplicity of the life of Jesus, is in the absolute loyalty with which he accepted and obeyed the primary spiritual convictions of his soul. If we were as ready to heed the divine voices in us, we would soon learn that there are certainties of consciousness which touch the bottom and the top of things. Our doubts and fears and uncertainties are almost entirely the result of weak-willed and half-hearted obedience to the things which we already know to be true.

[*British Congregationalist.*]

It is altogether a healthy thing that Christians should very generally have ceased to find comfort simply in hopes of a future life and reward. It is not to a second coming of the Lord in the heavens that they look, so much as to a coming here and now; to a new heaven and a new earth, not in some far future state, but under the conditions of our present life. If the church works toward the kingdom as her end and goal, it is because she hopes to see the development here on earth of that city of God whose pattern is in heaven.

[*Zion's Herald.*]

Especially at this season, when the old year is about to take its flight, the thoughts of men are recalled to the inner life, and many are searching their hearts, determining so far as they can the direction and quality of their morality, and, where such introspection reveals wayward impulses or unlovely traits, confessing the failures of the past preparatory to amendment in the future. It is a wholesome exercise.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Results" has been translated and is now printed in German (Die Christliche Wissenschaft: Ihre Resultate). This pamphlet contains 35 pages and is for sale at the prices of all the regular pamphlets as shown on the opposite page.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

Digitized by Google

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883 1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Secretary of War Stimson has returned to the Senate committee on commerce the bill for the development of the water-power of the Connecticut river at Windsor Locks. The bill has been amended so that it is satisfactory to the administration, to those who plan to invest capital in the work, and to the conservation association. The principal change is that which gives the government the right to charge a rent or royalty for the use of the site on the power developed. The income from this source, it is planned, will go to the improvement of the stream for the purposes of navigation. If Congress passes the bill in this form, it will set a precedent for future water-power bills and will establish a principle for which conservationists have long contended.

A measure proposed by the register of deeds of Suffolk county, Massachusetts, materially shortening the legal forms involving transfers of titles to real estate, was enacted into law last year and has just become operative. This will result in a saving of time for those examining the records, economize storage space, and reduce materially the cost to the county for transcribing the records. The register is planning to introduce a bill to the Legislature providing a short form for cooperative bank mortgages, and is considerinig the feasibility of suggesting legislation to make unnecessary the use of seals on instruments presented for record.

For the purpose of organizing the Chippewa Indians of Minnesota into a corporate body to enable them to act in unison for the protection of their property and for obtaining their dues from the government, all chiefs and leaders of the tribes have been invited to attend a great council to be held at Cass Lake, Minn., Feb. 4. The movement was started at a general council of Chippewas on the Fond Du Lac reservation. It is proposed to adopt a constitution and by-laws at the great council and to establish a permanent headquarters.

The supreme court of the United States, in the famous Patten "cotton corner" case, decides in effect that under the Sherman law pools or corners in commodities can be prevented, and the persons responsible therefor punished. The decision does not determine the question of the guilt of Patten or the other defendants, but sends the case back to the lower court for trial on the facts, with the important principle of law established, that if a corner in cotton is proved, the Sherman statute is violated.

The "smoke nuisance" has been attacked by the federal government, and the United States bureau of mines is out with the authoritative statement that the smoke of cities can be largely reduced and perhaps entirely prevented. The basis for this statement is a series of experiments conducted at the Pittsburgh (Pa.) station of the bureau, where for more than two years a power plant has been run without objectionable smoke.

What Secretary Fisher believes to be the beginning of the electrification of all transcontinental railroads, was marked by a grant last week to the Great Falls (Mont.) Power Company to transmit, over public domain under strict government regulations, power for the electrification of four hundred and fifty miles of tracks of the main line of the Chicago, Milwaukee & Puget Sound railroad between Harlowtown, Mont., and Avery, Idaho.

What will probably be the last large sale of public lands in Texas will take place during the first six months of this year, according to official announcement made by J. T. Robison, state land commissioner. A total of 1,308,854 acres will be placed upon the market during that period. The greater part is in the semi-arid region of western Texas. Some of it is suitable for agricultural purposes, but the greater portion is grazing land.

The Cuban Congress, the last Congress under the domination of President Gomez, will convene this week. Within a few weeks after its adjournment, April 1, the new president of the Cuban republic, Mario Menocal, will take office, sworn to put an end to graft and corruption in the island, to investigate the acts of the Gomez administration, and to prosecute the offenders, whoever they may be.

The first of the sluice gates for the spillway at Gatun dam, Panama canal, was placed in position on Dec. 12, and two others were placed on the following day. These gates weigh forty-four tons each, with seals and bearings attached. Fourteen gates are required for the Gatun spillway and eight for the spillway of Miraflores lake.

The Supreme Court holds that contracts limiting to small sums the liability of railroads and express companies for loss of shipments are not subject to state laws but to interstate laws. It is further held that contracts limiting liability to a small sum, in return for a low rate, are not in violation of the interstate commerce laws.

How the United States can save millions of dollars through administrative reforms recommended by the economy and efficiency board, was pointed out by President Taft in a special message transmitting to Congress the commission's report. Larger and continued appropriations for the commission are asked.

The Georgia state department of entomology announces the discovery and development of a strain of cotton which will circumvent the boll weevil by comparatively early maturity, resist black root or wilt disease, and, at present prices, bring around twenty cents a pound on the market.

Postmaster-General Hitchcock, in his forthcoming annual message, will recommend, it is confidently expected, that the government take over and operate the express business of the country.

Gifts for philanthropic purposes in the United States the past year amounted to $282,572,222.

International.

Postmaster-General Pelletier, after having sent several officials of the department to the United States to watch the workings of the parcel post, is said to be preparing a zone map for Canada, dividing the country into five zones, and is about ready to promulgate an order establishing a parcel post system in Canada.

A bill is being introduced by the government of New South Wales to provide for the dissolution of the present trust which supervises the great irrigation enterprises, and the appointment of a commissioner who will supervise and direct the various irrigation schemes of the state, as well as the water service schemes more or less associated with irrigation.

The bill providing for the amendment of the fundamental election law of the state has been passed by the House of Commons of Denmark. The purpose of the bill is to grant the franchise to men and women over twenty-five years of age, with certain qualifications of character and property.

All records for railway construction in the western provinces of Canada were broken last year. The three principal roads built altogether nineteen hundred and seventy-five miles of new lines at an expenditure of thirty million dollars.

The meeting promoted by the British committee for the celebration of the hundredth anniversary of peace among the English-speaking people, was held in the Mansion house recently with the lord mayor in the chair.

The increase in steamship traffic in the port of Amsterdam has necessitated the extension of quays in different sections of the harbor. The average increase in quays has been a length of about eight hundred feet per annum.

New nickel coins of five and ten centime denominations, which are to replace the copper coins, have been put into circulation in France. In order that they may not be confused with silver coins, they are perforated in the center.

The cost of running the United Kingdom for the next twelve months will mount to the colossal sum of one billion dollars. The navy estimate alone will reach an aggregate of almost two hundred and fifty million dollars.

The British government post-office department has recently taken over the telephone business in addition to the letter post, parcel post, and telegraph.

For the first time on record London was without newspapers last Christmas day.

Industrial and Commercial.

A plan for abolishing icebergs is to be laid before Congress. Its originator, C. L. Ricker, a Brooklyn engineer, says he would obstruct the Labrador current by laying a steel cable ten inches in diameter across the Grand Banks, where the ocean bed is a level plateau, against which the current would deposit sand and form a ridge extending for two miles to the east of Cape Race. He declared that this would be sufficient to shift the current so that the warm gulf stream and the cold Labrador current would commingle, melting the ice in the latter, eliminating icebergs not only from the region of the Grand Banks, but also from the entire Arctic circle. Greenland, he maintained, would be transformed into a garden, and England would be surrounded by a current as warm as the Caribbean sea. Mr. Ricker declared that however wild this project might seem at first sight, it had received the indorsement of many engineers, and even the United States hydrographic office had considered it feasible. He estimated the cost at twenty million dollars.

Record increases in the trade of the United Kingdom are shown by the board of trade figures for the year ending Dec. 31. With total imports of $3,724,482,570, and total exports of $2,437,170,010, the aggregate increase reaches the sum of $490,268,455.

The Baldwin locomotive works built sixteen hundred and eighteen locomotives in 1912.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

NO MATERIAL LAW.

WILLIAM D. MC CRACKAN, M.A.

THE belief that man is material, that the universe is physical, that there is such a thing as material law or that material wants and desires are actualities in the scheme of creation,—this mistaken belief keeps agitating mankind to look for satisfaction in matter. From this erroneous concept of man and the universe springs the clamor for material remedies, for physical hygiene and sanitation. Even many religious ceremonies have been established to respond to the human desire to express physically that reverence and awe which the thought of Deity inspires. Fear likewise is born of belief in a material life, fear of supposed powers inherent in matter, of the destructive forces of the material elements. Thus it is that mankind can be terrorized by the threat of pestilence and famine, calamity and catastrophe. The materialist trembles before the manifestations of nature because he imagines nature to be both powerful and ruthless, and therefore unapproachable through any avenue of mercy or reason. The world at large still believes in nature as an unscrupulous energy operating through merciless law, which can only be opposed with a modicum of success and that solely by using physical force or human ingenuity.

In "No and Yes" (p. 42) Mrs. Eddy states that "mortals are not compelled to have other gods before Him, and employ material forms to meet a mental want." These diseases which mankind so greatly dread, these laws which are supposed to set them in motion and regulate their activity, these accidents which seem to rush unheralded out of a clear sky, these sorrows, failures, and losses, all are mental in origin and nature and need to be met by mental means. Here, for example, is one lying sick of a fever. Let us probe the cause in order to destroy it. Many reasons for the fever may be advanced by *materia medica*, but they can all be reduced to some supposed physical law productive of the fever. The general assumption is that this law is something which must be met by material means. But physical law is an impossibility. No one has ever seen or touched the law which is supposed to be responsible for the disease. It is simply a mental belief, albeit a false one, and is not physical at all. Hence the cure for this mental something must be a mental process, in which true thinking destroys false thinking.

Sometimes mankind believes that certain disease-producing laws are malevolent agencies attempting to destroy man; sometimes it is argued that such laws are really good because designed to discourage men from exposing themselves to untoward conditions. This latter kind of law is sometimes declared to be God's law. The expression is frequently used of such and such a one, that he deserves to be sick or to suffer because he infringed a law of nature, meaning thereby a law of God. This worship of a penalizing and punishing law as God is sometimes found to be the survival of a morbid religious sentiment. Mentalities which have found it impossible to accept the illogical and inconsistent God of conventional orthodoxy not infrequently transfer their worship to an idol which they imagine to be the inexorable law of nature. There is not much to choose between the false concept of God as the author of evil and the equally false concept of a ruthless omnipotent law cutting down without distinction the individual engaged in helping others, the innocent babe at the mother's breast, or the unrepentant criminal, because they have all been exposed to some law of destruction. Christian Science sweeps away this false concept of divine law, and shows that God's law is always protective of the good, and destroys only that which is evil and which does not express God.

Christian Science teaches that salvation is individual, and no disease or death-bearing law can embrace in its ruthless action the innocent and the guilty, the receptive thought and the rebellious, the spiritually-minded and the carnally-minded. Men can work out their own salvation, and they are not the helpless victims of irresistible doom. The law of God is merciful. It decrees life and liberty; it means health and happiness. The "secret place of the most High" is a condition of mind, not a locality; and heaven means the consciousness of the omnipotence of good, not a place reserved for future reward only.

As a matter of eternal fact, all that humanity desires is primarily mental or spiritual, because man's origin is in the divine Mind and his nature is not material. But some one uninstructed in the eternal verities of being may question, How can this be? Is not that material which I see and handle? Let us reason together and be sure to begin at the beginning. Christian Science does not deny the existence of a single object in the universe which expresses reality, but it does destroy the material sense of these objects. When we begin at the beginning in our reasoning, we straightway find God, the source of all that is real, to be Spirit or Mind, and then inevitably conclude that His creation, like Himself, must be spiritual or mental in its nature. So long as we hold to the belief in matter and material law, and refuse to accept the spiritual fact of divine law and the divine Lawgiver, we miss the protection which comes to all who turn away from the material and cling to the spiritual. At every step of the way we must choose between that which reveals God, infinite intelligence and power, and the frailties and falsities, whatever their nature, which have so long deceived and enslaved mortals.

For our encouragement, however, we have all the way the words and works of the Master, and our obedience will enable us to comprehend what it means to worship "in spirit and in truth." Those who are instructed in Christian Science are able joyfully to recognize this imperishable spiritual universe as the only real universe governed by spiritual law, and man made in the similitude of the Father-Mother God, hence eternal and indestructible. The truth of being when scientifically understood is the basis of the healing work of Christian Science. Divine Principle—Life, Truth, Love—presides over the universe; and to every one, sooner or later, must come the glorious assurance which came to Mrs. Eddy, namely, that this "divine Principle of the universe must interpret the universe. God is the divine Principle of all that represents Him and of all that really exists" (Science and Health, p. 272).

"SUFFER LITTLE CHILDREN."

DAISY BEDFORD.

As one reads the grateful testimonies from mothers all over the world of the blessing that Christian Science is proving in their home-life,—of their little ones restored to health, of crooked limbs made straight, those condemned to invalidism set free from the rule of material law,—one's heart goes out in love to the earnest woman who rose above the mists of self-pity, the contemplation of her own wrongs, to find her happiness in pointing out the way to others.

To Mrs. Eddy there was revealed the secret of all true happiness, for she says in "Science and Health with Key to the Scriptures" (p. 57): "Happiness is spiritual, born of Truth and Love. It is unselfish; therefore it cannot exist alone, but requires all mankind to share it." At the present time much is being done for the education of mothers. Classes are being held where they may learn how best to care physically for their little ones; but as one reads the reports of this work, excellent as far as it goes, one realizes it is a very small and inadequate way of meeting the children's needs. For from the moment the tiny clinging fingers reach out for the love we pray may never be denied them, their need is that from the first dawning of consciousness they should not be forbidden the Christ, the knowledge of the truth which shall set them free from all that is unlike God.

The question we need to ask ourselves is, How are we to perform this duty? Who are we that we should take this responsibility of never (mentally) hurting one of these little ones? It is not an easy task. It means the daily consecration of one's life to God, omnipotent good; it means that we shall check hour by hour the angry thought or gesture, the uncontrolled irritability, that in all we say and do we shall bear witness to the fact that man is made in the image and likeness of God and reflects infinite Love. How often are little ones punished simply because the mother's temper has not been controlled, and the little one is powerless to stem the outbreak which relieves her feelings, and which, until Christian Science comes to set the victim free, sears into the childish consciousness, like a hot iron, the sense of injustice, leaving an indelible mark.

It were well for parents to remember Jesus' words: "Whoso shall offend one of these little ones which believe in me, it were better for him that a millstone were hanged about his neck, and that he were drowned in the depth of the sea. . . . Woe to that man by whom the offense cometh!" In "Miscellaneous Writings" (p. 51) Mrs. Eddy says: "If you make clear to the child's thought the right motives for action, . . . if you educate him to love God, good, and obey the golden rule, he will love and obey you without your having to resort to corporeal punishment." But we can do this only by living close to God, by abiding "in the secret place of the most High," "under the shadow of the Almighty." Seeing the true light shining, the children will not reflect aught of the darkness of error.

It would be a wise rule never to correct a child until we have first examined our own mental attitude. Children are imitative, and if they are naughty or disobedient, who is responsible? Surely those who have not shown them the higher ideal. If the prodigal had never tasted anything but the husks of materiality, he would never have wanted to arise and go to seek his father's forgiveness. Fathers, mothers, hundreds of little hands are held out to you, asking for "the bread of life," the knowledge of the absolute good, the guidance which shall lead them to the understanding of our Father-Mother God and of man's true being. Will you give your children the stone of materiality? It is for you to decide. It is how you live your life today that will help your little one tomorrow to overcome evil.

Is it worth the overcoming of self, the striving to dwell always in the pure atmosphere of Spirit, the rising in consciousness above the mists of self-seeking and selfishness in all its forms? Surely yes! and so we shall escape the denunciation voiced by our Leader in these words: "His own spiritual barrenness debars him from giving drink to the thirsty . . . mental penury chills his faith and understanding" (Science and Health, p. 365). May we so faithfully recognize our privilege in the caring for these little ones, that when Truth asks of each one, "Is it well with the child?" we can with glad hearts, knowing it to be true, answer, "It is well." Then, on every hand, we shall see evil deprived of power, false fears manacled, human character purified, peace and harmony reigning, because of our true love for the children.

ATONEMENT.

LOUIS A. GREGORY, LL.B.

THE unceasing freshness of Christian Science for the student often lies in the ever-extending application of some of the simple truths of the Bible which are made clear for the first time through the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. An instance of this kind is the teaching, in the second chapter of Science and Health, that the essential element of the doctrine of atonement is contained in the simple, obvious meaning of the three syllables of the word—at-one-ment. The first two syllables, "at-one," are simple English words, and their obvious meaning when used together is that of unity or oneness. The last syllable, "ment," is a common suffix denoting a condition or state of being; for instance, the word "contentment" means the condition of being contented. Thus analyzed, atonement means a condition of unity.

Recognized authorities in defining "atonement" usually give a general use of the word that differs somewhat from its common religious significance. In general use it is represented as having very much the same meaning as concord or agreement, while its religious significance is given as synonymous with expiation or reparation. These and other authorities show that most of the denominations of the Christian church today agree, at least to that extent, upon the meaning of atonement. While concord or agreement denotes a condition of unity or at-one-ment, reparation or expiation describes a means of changing from a condition of division or discord to a state of unity or concord. The distinction between the two uses of the word is vital, and is characteristic of the differences between scientific Christianity and what is generally termed orthodox Christianity. This Science teaches that of necessity the real or spiritual man is and always must be in harmony with God, infinite Mind, and there is neither occasion nor opportunity for the restoration of harmony. The teaching of most modern churches is that man is out of harmony with God now, and that he must resort to some means, described as atonement, in order to regain his proper state of accord with his Maker.

The fact that the Christian Science use of the word is in closer agreement with the authoritative modern use than is the orthodox definition, is parallel with the fact that Christian Science more nearly accords with advanced philosophic thought than does the prevailing religious teaching; but neither agreement nor disagreement with advanced thought or with prevailing opinion weighs any more with Christian Science than it does with any logical or scientific system. It is readily demonstrable that the Christian Science doctrine of atonement is logical. That God is infinite good is fundamental in all Christian teaching. Nothing exists apart from or out of harmony with infinite good; therefore man, as God's reflection, cannot be out of harmony with Him; cannot be otherwise than in at-one-ment with Him.

This conception of atonement as unity with God is susceptible of unlimited practical application, through the unavoidable conclusion that it ascribes to man existence and character in harmony with infinity. It is apparent that sin,

Digitized by Google

sickness, want, any evil, is no part of the being and experience of the man who is at-one with God, and the realization of this condition of at-one-ment effects the destruction of all conjectured evil and its asserted outcome. This conforms with and approximates the admonition of Jesus, "Be ye therefore perfect, even as your Father which is in heaven is perfect." More important still, it seems, is the fact that this teaching is in harmony with the works of the Master and is effectual to fulfil his promise, "He that believeth on me, the works that I do shall he do also," for it operates to destroy all evil. We are thus led to the recognition of the fact that the Christian Science doctrine of atonement is based upon the life and works of Christ Jesus rather than upon his crucifixion. This detracts in no way from his experience on Calvary, for the crucifixion and resurrection show the control of Spirit over man's entire being, proving as they do that man is spiritual and demonstrating eternal life. This teaching, however, puts the atonement theory upon a rational and practical basis.

Mysticism pervades the teaching that the crucifixion of Jesus served to expiate the sins of the world, and that all may avail themselves of this relief from sin simply by believing that he "died" for their sins. It is mystical because it is not logical or humanly demonstrable. The crucifixion of Jesus did not eliminate evil from human experience, neither does mere belief in his sufferings destroy the seeming power of sin over mortals nor the ill effects on them of sinful indulgence. Invincibly logical is the scientific teaching that the sinless life of the Master is the atonement, and that it is effectual to destroy the supposed dominion of evil just so far as it is understood and emulated. The supposed vicarious power of Jesus' suffering has failed to bring practical results, because reliance on it does not free from sin or disease; so the proponents of the doctrine have resorted to vague theories concerning its effects on the future life. These claims, which include the promise of unending harmony hereafter to professed believers in the dogma of vicarious atonement, are at least unconvincing in view of their present powerlessness to deal with human problems of sin and disease.

In its spirit the Biblical teaching on the subject of the atonement is consistent throughout the sacred writings. When Abraham led forth his people from the environment of a religion which practised the sacrifice of human beings, the sacrifice of animals was substituted. This transition was represented in Abraham's ordeal, when he attested his faith by preparing to sacrifice his son, but was led to substitute a ram. Mrs. Eddy says, "Moses advanced a nation to the worship of God in Spirit" (Science and Health, p. 200). Moses always sought to arouse the Israelites to the conception of the spiritual truth back of the material sacrifice. Isaiah inveighed again the practise of merely sacrificing animals in the worship of Deity, declaring that right living was more acceptable than the fat of rams. That the supreme manifestation of spiritual power resulting from the crucifixion was a reversion to the discredited pagan sacrifices of human life is preposterous, yet that is the effect of the doctrine which would rely on Jesus' death for freedom from all evil. Nothing else but the human sense of life could possibly have been touched by this cruel persecution; it could not by any possibility have affected the great Teacher's consciousness of Life, God.

"The accusation of the rabbis, 'He made himself the Son of God,' was really the justification of Jesus" (Science and Health, p. 203). The effort to make himself as the Son of God would be a complete justification of any man; and it is the practical, actual atonement. That this is attainable for the individual man only so far as he perceives the truth about all mankind, is shown by the declaration of the Saviour, "The Son can do nothing of himself, but what he seeth the Father do." Seeing that the Father knows man as created and maintained in God's image and likeness (at-one-ment), the son's awakened spiritual consciousness replaces the false concept of man as physical, sinning, and dying, with the true concept, which is spiritual, perfect, and eternal (at-one-ment). This true consciousness, the child of God, really cannot conceive of man, individually or generically, as differing in any way from God's perfect conception of him, and when men undertake to do this, they are doing that which is manifestly not at-one with divine consciousness, and the result is to confuse the sense of atonement. The true teaching "reconciles man to God, not God to man" (Science and Health, p. 18). It does not seek to change God or His creation to effect atonement, but it does tend to elevate him who realizes it to the true status of man, "unto the measure of the stature of the fulness of Christ."

TRUTH UNVARYING.

HELEN L. MOSS.

In Science and Health we read that "divine Love always has met and always will meet every human need" (p. 494). Once again the truth of our beloved Leader's statement has been demonstrated to me, and my heart is so full of thankfulness that it wells forth in this expression of gratitude and praise,—gratitude to her whose purity and love caused her to be the chosen messenger of divine Truth to a waiting world; and praise to God for the revelation of Himself to mankind in Christian Science. In an hour of darkness, struggling with a material sense of irreparable loss, through the passing on of one very dear, the *Sentinel* came, bringing me sweetest and truest comfort in an article which took away all sense of death's power to sever those who truly love God, good. Often has my hunger been satisfied by the spiritual food supplied through the columns of our periodicals, and I would fain add my crumb to the feast.

Before I studied Christian Science I was not grateful. When things went smoothly and pleasantly I took it all as a matter of course; and when they did not I was apt to worry and feel aggrieved. I worried greatly over all kinds of things, often fearing and anticipating troubles which never came. How very thankful I am to have cast aside this unreal burden through some understanding of Love's omnipresence. Then, in the old thought there were many questions connected with religious faith which puzzled me sorely, and to which I could never get really satisfactory answers. Such a one was the forgiveness of sins. While studying a recent Lesson-Sermon, which seemed specially to bear on the subject of repentance and forgiveness, I realized as never before how clear and simple these things become in the light of Christian Science. I remembered how, when a member of another church, I had gone to a service and repeated in all sincerity the general confession, and partaken of the holy sacrament; but time after time I had come away feeling very doubtful whether my sins were really forgiven, whether I were really sorry enough to have earned God's pardon. Moreover, I was by no means sure that the next time temptation presented itself I would not again fall into sin. Then, too, it was often hard to know whether certain things were really sinful, when I saw others, less strictly brought up than myself, doing them as a matter of course.

Now these questions have assumed a very different aspect, viewed in the light of Christian Science, and I can see that it is the change in my concept of God which has cleared things up. When I thought of Him as a kind of glorified ruler, who bestowed or withheld pardon in an arbitrary manner, I never knew how I stood; but when I came to know Him as the divine Principle governing man and the universe, absolute and unchangeable good, I could always be sure that whatever did not measure up to the demands of Principle was sin, and that it was forgiven only when it was cast out of consciousness and the truth of being, the good, put in its place. Thought traveled back to the time when the expression "Principle" as applied to God had puzzled me, and I remembered how the oft-cited parallel of

Digitized by Google

mathematics made it clear to me how God could forgive sin and heal sickness while having no consciousness of either, and why divine Principle, Love, never forgives error until it is corrected.

Mrs. Eddy writes: "Principle is absolute. It admits of no error, but rests upon understanding" (Science and Health, p. 283). This is acknowledged in mathematics; its law governs all numbers, and is perfect and immutable; no one thinks of questioning its unvarying requirement. The child who makes a mistake in working out his problem, cannot come into harmony with the basic law of mathematics until the mistake is seen and corrected, *i.e.*, the truth put in its place. Just so is it with man. Because his divine Principle, Love, is Truth, it cannot cover up, gloss over, or condone error any more than mathematics can be made to do so; because there is no place in Truth for error, and the harmony that is the result of sin corrected is forgiveness.

What a priceless blessing to have a scientific religion which leaves nothing to blind faith! Many beautiful demonstrations of physical healing, some of them instantaneous, have come to me during the nine years which have elapsed since I began to study it, to prove the truth of Christian Science teaching; and in that time I have never taken any medicine or used any material means for the ailments which have arisen, Truth having been found all sufficient.

INDIVIDUAL REFLECTION.

WILLIAM B. HAINES, B.S.

DURING a recent eclipse of the sun, the writer's attention was attracted by the unusual appearance of the shadow of a tree. As the sun shone through the network of leaves, there was figured upon the ground a number of bright patches of light, each having the shape of a thin crescent. This phenomenon is readily explained by simple physical laws, and from it the student of Christian Science may learn several significant lessons. The science of optics shows that when a separate ray from the sun shines through a small interstice, it reproduces on the ground a complete image of the sun's disc, and not, as might be supposed, an outline of the aperture itself. This accounts for the patchwork of bright discs reflected on the ground, which is commonly observed when the sun shines through a curtain or the leaves of a tree. In the particular case mentioned, the peculiar appearance was simply due to the change in shape of the eclipsed sun. The apparent change from a full circle to a crescent was reproduced in each image on the ground.

Mrs. Eddy has frequently used the simile of the sun and its rays in the endeavor to make clear the scientific relationship between God and man. In Science and Health (p. 250) she writes: "Like a ray of light which comes from the sun, man, the outcome of God, reflects God." Each separate ray gives a complete individual image of the sun. So we learn in divine Science that each man is an individual, spiritual image of his Father-Mother or creator. The simile enables us to grasp this truth more clearly in its various bearings. The fact that each image faithfully reproduced all the apparent changes in the shape of the sun's disc, typifies man's reflection of the activities of the parent Mind. Only that which has its place and origin in this Mind can find its expression in the real man.

Thus is uncovered the error of believing that sin or disease is any part of man, and the way is made clear for their disappearance as baseless falsities. All that is evil in our experience is eliminated just in proportion as this real man is put on. The process is a change of human consciousness, as described by Paul in the words, "We all, with open face beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory." Thought must turn wholly to God, reach out to know and to obey; then the real man is put on spontaneously. The attainment of spiritual manhood should not seem to be veiled in obscurity. Life, Truth, and Love shining into the purified consciousness bring forth their own image and likeness, which is man. So man will be revealed if we first seek God as our All-in-all.

Yet more is to be learned from this lesson in individual reflection. It shows us the possibility as well as the necessity of laying aside all sense of timidity and self-distrust, even though they masquerade as humility. Each ray is self-complete in its ability to manifest the full image and likeness. No one is above another, no one is lacking in any respect, each and all of God's ideas are perfect and complete. As Mrs. Eddy says, in a paragraph which beautifully explains this point, "Each of Christ's little ones reflects the infinite One" (Pulpit and Press, p. 4). The discernment of this truth about man leaves no room for covetousness or rivalry, and rebukes the limitation of oneself or others. It makes us a loving brotherhood, joyfully proving individually and collectively that we are indeed "complete in him" (the Christ-likeness).

THE TRUE WITNESS.

E. A. BLOOD.

IN studying Mrs. Eddy's book "Retrospection and Introspection," I found one section of the chapter entitled "The Human Concept" to be of great help not only in banishing a severe pain, but in giving me a clearer understanding of the real man. On page 67, Mrs. Eddy says, "In the ratio that the testimony of material personal sense ceases, sin diminishes, until the false claim called sin is finally lost for lack of witness." One dictionary defines the word "witness" as "evidence: one who sees" or has "direct knowledge of." I then began to think of God, Mind, who is All-in-all, eternal good, and of myself as an idea, a thought, or a witness of that Mind. But, the question arose, how did I really know that I was a witness of Mind? Of course I did know that the Bible says man is made in God's image and likeness, and that Science and Health explains this clearly by the use of the word "reflection;" yet there was still the question in my mind, Do I actually know this, or only believe it?

I reasoned that I must at some time, when I have been healed or have had any spiritual light or visions of Truth, have also been a witness to Truth. Recognizing this fact, I realized that as a true witness I could never give false evidence. When, however, I turned again to self, I found that false evidence was exactly the thing I was giving at that very moment. Material personal sense was making me believe in or be a witness to sin manifested in pain. But what more could I expect from sense testimony? I knew it never had made, never could, and never would make one witness to Truth. Why then should I believe it could tell me, an idea of Mind, the truth about myself? Why should I be its witness, and furthermore, a witness to what? Did I not know material sense to be the instrument of mortal mind? and I had just said that the divine Mind is All-in-all, yet at the suggestion of pain I was quickly becoming a witness to and agreeing with that which I knew to be untrue. I knew it to be untrue because Jesus said it was "a liar, and the father of it." He not only said this, but proved it true by overcoming all false evidence, and told us to do the same through the same divine Mind. Could I then afford to break this command, be false to God, the only Mind, and to my own true self as a witness of this Mind? Could I afford to believe in, to witness the lie, the nothing? No! I could not, because it was not there even to witness. When, some time after, I became conscious of this grand truth of God's all-ness, the pain was no longer felt, because mortal sense had ceased to talk and I to listen.

This little illustration showed me much more plainly than ever before the unreal character of error; how it only claims reality by hiding behind the truth; but the most glorious thing of all is that when the truth about it, namely, its falsity, is uncovered, it ceases; its claim to be vanishes, because its foundation is gone; it lacks a witness.

SELECTED ARTICLES.

[Frederick Dixon in *Aldershot News*, Aldershot, England.]

Few people can have done more to keep Christian Science before the public than Mr. Paget. In the intervals between the arduous labors of inducing an unresponsive public to regard vivisection as humane, he has always been ready to urge a forlorn argument against Mrs. Eddy's teaching. What is necessary to demonstrate the brotherly love demanded in the New Testament, is, it appears, that the church and the medical profession should engage in a "furious, hating attack" on Christian Science. He does his share. No diocesan meeting is complete without him. It is there that he proclaims the discovery of the twentieth century: "Prayer cannot reach the cells of the liver."

One of the first rules of Christian Science, this critic gravely announced, was that nothing was real except God. You might just as well insist that one of the first rules of the Church of England was that there was a Trinity. It is perhaps unnecessary to say that Christian Science teaches no such thing. It lays down as a fundamental truth the statement that the only reality is God and His spiritual kingdom. In doing this, it has on its side a better authority than the critic, namely, the fourth gospel; and if he doubts this, he had better study the works of that great scholar, Dr. Westcott, bishop of Durham. Dr. Westcott explains that the apostle draws a distinct line between "the truth" and "truth," and that he used the former to denote the actual, that which is.

Then the critic went on to say that Christian Science taught that sin, pain, disease, and death are not really real. If they are not real, they are naturally not really real. Of course, what Christian Science says is something quite different to what he says it says. It says that evil of any sort is ignorance of God, and that the ministry of Jesus was given to proving this. Jesus himself destroyed sin, pain, disease, and death, which he certainly could not have done if they had been realities of God's creating, of what Dr. Westcott points out the fourth gospel means by the absolute truth, that which actually is.

From this, the critic arrives at the conclusion that Christian Science healing is accomplished by people who are in pain thinking they are not in pain. He need not have taken the trouble to show so completely his generous ignorance of what he was talking about. "Sickness is more than fancy," Mrs. Eddy writes on page 460 of Science and Health; "it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." This right apprehension is not gained by sitting down and pretending something you do not believe, but by gaining that knowledge of the truth, of the actual, which comes only as any one overcomes the carnal mind, and gains instead the Mind that was in Christ Jesus.

It would be tedious to follow this critic through the whole gamut of his misstatements, nor is it possible to demand the necessary space. It is always a much shorter process to make a misstatement than to correct it. Still, some one ought really to see that the gentleman reads Science and Health before he lectures on it. When he turned from theology to medicine, he was equally unhappy, for his views of evidence are as peculiar as Mr. Weller's knowledge of London. He talks airily of two hundred insignificant cases which he has examined. As a matter of fact, it must be obvious to anybody who thinks at all, that if Christian Science healing had really been confined to an infinitesimal number of cases of headache and indigestion, the movement would have collapsed long ago. As for the failures to which he alludes, if anything were to be gained by raking up failures, enough could be raked up against the medical profession to dispose of it forever; and the medical profession has the power to keep dark its own failures in a way impossible to any other body of people. No matter what mistakes may be made, a doctor has only to give a certificate, and there is an end of the matter. As a gentleman very clearly put it, at the close of the proceedings, a Christian Scientist is absolutely unable to give a certificate, and therefore, in the few cases in which he fails, there is an inquest. If there were an inquest on all the cases in which doctors fail, there would be thousands of inquests every day.

The critic declares that if people dug down to the roots of Christian Science, they would find some very ugly things. Some time ago, an attempt was made to advertise for the victims of Christian Science. The efforts of the advertisers were not rewarded by a single success. At the same time, it is possible, without any trouble, to find some extremely ugly facts in the records of medical practise. Most people know of an inquest which took place not so very long ago, on a patient in whom a doctor's forceps had been sewn up after an operation. This sort of argument is about the most childish proceeding anybody could indulge in. There was an ugly incident in Palestine, two thousand years ago, when Judas betrayed Jesus of Nazareth. That might just as well be used as an argument against the teaching of Christianity as the sewing up of a forceps in a patient's body against medical practise, or as some chance incident, which has never been specified, against Christian Science.

The fact is that Christian Science is growing, and growing in an extraordinary way, in spite of futile attacks, like that of this critic. It is growing, not because it has healed two hundred cases of indigestion and headache, but because it has healed millions of cases of every sort of sickness known to man, and of every kind of sorrow and misery, and every description of sin. The critic asks his audience to believe that innumerable thousands of people in every country in the world have been imposed upon by the healing of two hundred backaches. Such an idea is simply ludicrous. The Christian Science movement has its churches in every country. It numbers in its ranks men and women of all sorts and conditions; members of the legislative chambers of the world, great soldiers and sailors, merchants whose names are a guarantee of their ability, artists and engineers, writers and musicians, men whose lives have been devoted to the study of natural science, and, besides these, workers in the shops and factories of the great industrial cities, and in the mines and on the ranches of five continents. When this critic learns to think outside the parish, he will begin to know that Christian Science is a world movement, and he will come to understand that bundling from platforms of diocesan meetings to church schoolrooms is about as likely to drag upon its wheels as a stick of firewood attached to the stern of an Atlantic liner.

[Paul S. Seeley in *Portland* (Ore.) *Oregonian*.]

In an interesting editorial today on "Good Cheer," you dwell at some length upon the methods adopted by the Roman Stoics, the primitive monks, and Epicurus, in order to secure for themselves this desirable state of mind. In your further discussion of the subject, and its relation to the teachings of Mrs. Eddy with regard to the attainment of happiness, you write: "Her rule was to treat matter and its belongings as non-existent theoretically. In practise this amounts to about the same thing as the old Stoic doctrine of living indifferent to material happenings, perhaps, but she gave it great vitality by making it a part of a religious cult."

I am glad you used the word "perhaps" to qualify your statement of the relation between the teachings of Christian Science and Stoicism. In truth there is no relationship between the two systems of thought. Mrs. Eddy's writings do teach that matter is non-existent, not merely in the realm of theory, but that as a practical every-day problem, the laws of matter, the temporal and the finite, may be overcome and destroyed by the realization of spiritual truth, the law of eternal being. This, however, does not amount to or

Digitized by Google

have any connection with the doctrine of the Stoics, who tried to live indifferent to material happenings.

Mrs. Eddy has discerned with a clear vision that now and in the eternity of time there is but one God, and she has accepted the teachings of the Bible that God is Spirit, divine Love. She has faced the dilemma of explaining the existence of both good and evil by showing that evil, matter and all its accompaniments, ignorance, fear, sin, and sickness, are no part of God's universe, and therefore have no real existence, for God is good and He is All. In this way alone does Mrs. Eddy point the way to "good cheer." The stolid indifference of the Stoics to material conditions, while failing to recognize them as temporary phenomena, the withdrawal of the primitive monks from one worldly condition into another, or the vain attempt of Epicurus and his followers to find happiness in a sense of mental poise and equilibrium, without knowledge of the vital Principle and underlying cause of all life, have no attraction for the individual who has learned from the study of Mrs. Eddy's teachings that God is only good, and that as we keep our minds filled with Truth and Love, sin, disease, and death cannot find entrance.

Mrs. Eddy has revealed the secret of happiness and pointed the way to good cheer through the discovery of that Mind "which was also in Christ Jesus." As we make our thoughts and our lives conform more nearly to his own, we shall find the vicissitudes of material experience becoming less and less and our store of good cheer becoming scientific and permanent. The vitality of Mrs. Eddy's teaching has not been due to the organization of a new religious cult, but rather to the fact that the truth of her teachings has been proven by works. To the sick, to the sinning, to the man without a God or to the one with an imperfect conception of Him, Christian Science offers a scientific religion capable of proof. It is this fact, proven in the face of the most bitter persecution and resistance, that has given the teachings of Mrs. Eddy such great vitality and is causing them to be regarded more and more as the message of "on earth peace, good will toward men."

[H. Farmer Hall in *Brighton* (Eng.) *Herald*.]

In your issue of recent date, I find a considerably fuller report of the Dean of St. Paul's sermon delivered at the Brighton parish church than I had before seen. In this sermon it appears that the dean spoke at some length on the subject of spiritual healing, and in so doing criticized Christian Science, which, he says, among other methods he has investigated, has not produced one case of healing of organic disease. From this it is evident that either the Christian Scientists have failed to heal any cases of organic disease, or the dean has failed properly to investigate the facts.

The Christian Science movement has been increasing to such a degree during the last forty years, that it has attracted the wonder and attention of the whole world, and that which stands out prominently as its particular claim on public attention is that it finds the teachings of Jesus the Christ apply not only to the destruction of sin, but also to the destruction of all the physical ills to which humanity is heir. On this basis, and on its ability to make good these assertions, the world undoubtedly judges Christian Science. It is quite impossible to believe that, had Christian Scientists utterly failed in this endeavor, a single Christian Science church would at this day be in existence; but the facts prove that on the contrary its increase has been unprecedented, and today more than ever it continues to gain adherents.

Under these circumstances it is most difficult to treat the dean's contentions seriously. He has against him the evidence of hundreds of thousands of honest, intelligent persons who have been healed of all kinds of diseases, irrespective of whether they were organic or functional. One is, however, able to gather from the dean's remarks something of the mental attitude with which he approaches the subject. He is credited in your paper with the astounding statement that pain, suffering, and death are parts of God's will for His creatures, and therefore proceeds to investigate from a basis which can never be ready to recognize the divine law that heals the sick, but is ever ready to attribute any healing that may be presented to other causes. Will you then permit me to consider briefly the possibility that God is the upholder of sickness, in the light of the teachings of Christian Science?

It is acknowledged by all Christian believers that God is good. Not only good in His actions, but intrinsically good in His nature. They also admit that this God, who is by nature good, created all, and without Him "was not any thing made that was made." It must therefore be recognized that that which is the outcome of the divine being must be of the same nature as the creator. Now the creator is admittedly conscious of His own universe, and He sees in this perfect creation the work of His own hands, and it is very good. This divine consciousness of the creation is the fact or truth about it, and it was to this truth that Jesus undoubtedly referred when he declared that "ye shall know the truth, and the truth shall make you free," free from belief in all that is not the truth of being.

At this point the question naturally arises, If God is not the creator of sickness and death, in what light are we to regard these evils? One cannot do better than to refer to the Master's own treatment of this subject. In a certain place it will be remembered that Jesus healed a woman who had been bound by an infirmity eighteen years, and in reply to the objections of a ruler of the synagogue Jesus explained that Satan had bound her, and ascribed the infirmity, as he did all other manifestations of disease, to the workings of the evil one. It is extremely interesting to read in connection with this declaration the further elucidation of the meaning of Satan or devil as given by Jesus in John viii:44. Here we find devil described as "a murderer from the beginning," who "abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." From the above description of evil as a lie and liar, we now can more clearly discern the Master's meaning when he spoke of the woman bound by Satan. Was not this a simple declaration, easily understood by those present, that this woman was the victim of a lie, from which she was freed by a declaration of the truth of her being as a child of God, which Jesus perceived? Sickness was thus disclosed to be a lie, without any real or God-given existence, which the truth of being could destroy, thus making it clear that it was never the outcome of the divine will.

It was through divine Mind, or consciousness, as opposed to the lie of material sense, that Jesus healed the sick; and Christian Scientists are, in a degree, able to follow in his footsteps. This divine consciousness is the Mind which is referred to in Mrs. Eddy's writings as being that through which all Christian Science healing is accomplished. The dean, however, refers to another method which claims to heal the sick through suggestion or hypnotism. Of this method the dean apparently approves. The question then arises, Has this human mind any relationship whatever with the divine Mind? For an answer to this inquiry it is only necessary again to refer to the nature of God; and we find that this forbids our having any consciousness that includes the knowledge of good and evil. Christian Science teaches that this human mind is not a healer but is the producer of disease, and that the divine Mind alone overcomes sin, disease, and death. Let it then be clearly understood that Christian Science methods are in no way allied to hypnotism, mesmerism, occultism, and the like.

The day is coming when every man will find his true selfhood apart from all human mortal conceptions, and will recognize the fact that he lives, moves, and has his being in God, sees as God sees, knows as God knows; in fact, that he

Digitized by Google

is the image and reflection of God. Then truly will the vision of the revelator be fulfilled and the presence of God realized as depicted in the following verses taken from Revelation xxi: "And I heard a great voice out of heaven saying, Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be their God." Let us note the necessary result of this realization of God's presence: "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

[G. H. S. King in *Oregon City* (Ore.) *Courier*.]

As for the mental attitude of Christian Scientists, the writer is entirely right in his observation that they are a happy and contented class of people. But they would not be if they were so extravagant as to "say that to be sick is the greatest sin in the world"—as the writer affirms they do. Science and Health teaches (p. 411) that "the procuring cause and foundation of all sickness is fear, ignorance, or sin." It will be seen that Christian Science associates sin and disease only in the same degree that they are associated in the Bible (see John v: 14). The writer is also mistaken in stating that with the Christian Scientists there is "no effort about it"—that is, in making "troubles vanish" and reaching "a state of perfection."

To state the case more accurately, the typical Christian Scientist is merely engaged in the exercise of practical, genuine piety. He has ingenuously accepted the injunction of the Master, "Be ye therefore perfect," as addressed directly to himself, and courageously commits himself to its realization, though often with fear and trembling; and he enjoys the teachings of Christian Science because they simplify the matter for him, enabling him to swing his careless and often wrong mental attitudes around into alignment with the spiritual attitude indicated in the Bible, helping him to "fight the good fight," so that he can finally say, with the psalmist, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; . . . so that thy youth is renewed like the eagle's."

[W. E. Fell in *Yorkshire* (York, Eng.) *Herald*.]

Will you kindly permit me to correct some remarks made by the Rev. C. C. Bell upon the subject of Christian Science in an otherwise excellent sermon, which should do much good? Christian Science is in full accord with all that he has said with regard to the impossibility of the "carnal mind," the human mind he calls it, understanding the things of Christ or Truth. How can that mind understand the things of God when, as Paul declares, it is "enmity against God: for it is not subject to the law of God, neither indeed can be"?

Let me, however, respectfully inform this critic that Christian Science is not a "little system which seems to threaten his dominion," nor is it a "rival" in any sense of his own denominational religion or of any other. Christian Scientists accept all that the churches have formulated concerning God, only they insist that these attributes of the creator should not be merely believed in an academic sense, but brought right down into the street and the home. Christian Science acknowledges God to be omnipotent, omniscient, and omnipresent, and it declares that if these attributes mean anything at all, they stand for the fact that God, good, is all the power there is, all the presence and all the science or knowledge there is or can be; therefore Christian Scientists go to God in their sickness and in their sin, and they have "no other gods," whether those gods be called *materia medica*, drugs, or hypnotism.

Christian Science is bringing a full salvation in the way of Jesus the Christ, a full salvation from sickness as well as sin. Why should the sick man be worse off than the sinner, why should he have to rely upon human aid when the sinner can go to God for purification? Is this rivalry to the Church of England? Nay, it rather is a gift to that great church, something added to that which it already holds; it is the restitution of the healing power of Christ Jesus, who himself said, "Lo, I am with you alway."

[Ezra W. Palmer in *Denver* (Col.) *News*.]

In a recent issue there appeared an article which announced a series of public lectures by a gentleman who was formerly a Christian Science practitioner. It was stated in this article that the reason this individual left the Christian Science movement was because "he decided that the followers of this faith placed a limit on human strength by confining their attention to the mental." If this is the reason the gentleman left the Christian Science organization, he left because of a misconception. If by the term "mental" is meant human mentality or the human mind, it can be stated that Christian Scientists do not rely upon it at all as a source of strength or inspiration. Christian Scientists know that all action, movement, and power is vested in the divine Mind, and that in so far as they understand this divine Mind they gain inspiration and divine strength.

Neither do Christian Scientists rely on human strength, as this article infers. They know that God is omnipotent and that "in him we live, and move, and have our being," as the apostle Paul states; and this is the source to which all Christian Scientists look for their strength. Since God is infinite in power and wisdom, it is difficult to see how Christian Scientists limit themselves when relying wholly upon Him, as this critic declares.

The article further states that this critic "was a Christian Science practitioner for seven years and met with tremendous financial success." Genuine Christian Scientists do not enter upon the work of healing humanity from its diseases and saving it from its sins because of any financial reward that might thereby accrue from their labors. The motive actuating a Christian Science practitioner must be love for God and man as a basis of his labor, and any element of avarice or greed would defeat his healing work and nullify it. Any person who enters upon the work of a Christian Science practitioner with the motive of making "a tremendous financial success" of it has mistaken his calling, and will inevitably fail in his work because his motive is selfish, and the sooner he retires from it the better for mankind.

"KNOCKING."

KATHARINE T. PORTER.

I USED to knock with face half turned away
From there where I would entrance find; had eyes
Alone for all the world did think and say;
Knocked feebly at the door; expressed surprise
It ope'd not to my call,—that call so faint and low
I scarce heard it myself,—the world engrossed me so.

As time went on the clamoring din of earth
Oppressed my spirit sore—it seemed so cold
This world which once for me was filled with mirth—
And peace was more to be desired than gold!
And then I knocked again, with piteous cry and wild:
"O Father, Father, hear me! Open to Thy child!"

And still the door was closed to me, till prayer
Whole-hearted, pure, in humble trust arose
From my still heart, and silenced fear and care
In childlike peace—that peace alone which knows
That it the pleasure of our heavenly Father is
Freely to give the kingdom to each child of His.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"COME UNTO ME."

It is often asked by those who criticize Christian Science why so much space is given in Science and Health and in our periodicals to the subject of healing, and why this subject is referred to so frequently in our midweek meetings and in the conversation of Christian Scientists. In reply it may be said that it is for the selfsame reason which led the writers of the four gospels and of the Acts of the Apostles to chronicle so many of the healing works wrought by the Master and his disciples; indeed, St. John notes at the close of his gospel that "there are also many other things which Jesus did, the which, if they should be written every one, I suppose that even the world itself could not contain the books that should be written." It is because there were then, as there are today, multitudes of sick and suffering ones who came to Jesus for succor from their ills, just as present-day sufferers, having exhausted all temporal means of relief, and often as a last resort, turn to Christian Science and are healed.

That these inquiries are made in good faith there can be no doubt. That they show an utter lack of understanding of the connection between the words and works of our Master is equally apparent, for they imply a belief that the mighty works of this master Christian were but the exhibition of a specially conferred power which he used to attract the attention of the multitude, rather than in demonstration of Christian teaching. Rather would we regard them according to Matthew's chronicle, as the outpouring of a loving heart, "moved with compassion on them, because they fainted, and were scattered abroad, as sheep having no shepherd." Their hearts may have been hardened against the gospel of the kingdom, which Jesus had come to make known unto them, but there was no gainsaying the proofs he adduced in support of his teaching, the "signs" which followed, and which he declared should follow, "them that believe."

That it was the Master's intent his disciples should continue the healing work is shown by his sending them out, by two and two, to the neighboring towns and villages "to preach the kingdom of God, and to heal the sick;" and that there was a general understanding they were in turn to teach others, is evident from Paul's counsel to Timothy: "The things that thou hast heard of me among many witnesses, the same commit thou to faithful men, who shall be able to teach others also." The faithfulness with which these commands were obeyed during the first three centuries is attested in the writings of the early fathers of the church, who noted the wonderful works wrought by the early Christians, as they not only healed the sick, but even raised the dead. Well might Paul demand of King Agrippa, "Why should it be thought a thing incredible with you, that God should raise the dead?"

It was the Christianity of these early centuries of the Christian era that Mrs. Eddy sought to reinstate, following her discovery of the divine Principle through which these healing works were wrought. Even as did the great Exemplar, when the world greeted with scorn and contumely her enthusiastic advocacy of the efficacy of this new-old teaching to heal the sick as the natural concomitant of sin forgiven because forsaken, she proved the truth of her statements not only by doing these healing works herself, but by teaching and sending out into the field, "white already to harvest," students who were able "to teach others also" the modus of the healing work.

The Master said: "If ye love me, keep my commandments," and Christian Scientists, through the light that has come to them from the study of their text-book, "Science and Health with Key to the Scriptures," are daily striving, as did those earlier disciples, to be faithful to his command to preach and to heal. Less than forty years have elapsed since Mrs. Eddy gave to the world this healing truth, and today The Church of Christ, Scientist, is represented in every civilized land throughout the globe. And this splendid result has been achieved because teaching and demonstration have been held as inseparable as were the Master's words and works. Sin-sick and burdened humanity are everywhere clamoring for relief, and it is because Christian Science is leading them to him who said: "Come unto me, all ye that labor and are heavy laden, and I will give you rest," that from thousands of hearts there wells forth unbounded gratitude for the truth which has indeed made them free.

ARCHIBALD MCLELLAN.

GENUINE LIVING.

St. Paul framed an immortal sentence when he wrote to the Philippians, "For me to live is Christ;" and in striking contrast with this definition, we may recall the last words of Rabelais: "Ring down the curtain, the farce is ended!" If one could bring together all the interpretations of life that lie between these two estimates, the one of a saint, the other of a cynic, if he could place side by side the concepts of the learned and the ignorant, the wise and the foolish, the generous and the miserly, the good and the bad, the happy and the wretched, what an interesting collection of contradictions it would prove!

Regarding this, and all other topics, the thought of the Nazarene is sovereign. He knew life as has none other, he demonstrated its highest ideal, and speaking of its *nature* he said that to live is "to know God," a definition which Christian Science but rephrases in its declaration that "spiritual sense is a conscious, constant capacity to understand God" (Science and Health, p. 209). In a most poetic way, Jesus further defined life, with respect to its normal manifestation upon this human plane, when he said of the growing grain, "First the blade, then the ear, after that the full corn in the ear." This is an epitome of the life which every true Christian Scientist is endeavoring to bring into demonstration. He has learned to think of it as a thing of beauty, as having an orderly unfoldment, and as bringing forth abundant fruit.

Beauty is inseparable from the life of the springing corn. The rich color, the polished surface of the leaves that move and glint in Gothic lines, its sturdy upright anchorage in the soil, and its no less free response "in gentle curves of courtesy" to the summer breeze,—truly it is a picture for a poet's pen, and this natural beauty pertains no less to growing men than to growing grain. To express the Christ-ideal is to be chaste, refined, unselfish, joyous, Christlike, and it is withal to be prophetic of and prepare the way for a harvest. "First the blade, then the ear." There is unfoldment, but there is no separation between cause and effect. The ear is potentially present at every stage of the process and the blade is meaningless without it. The overcoming of every evil and the exhibition of every grace of the Spirit is embraced in all true faith and aspiration. This is the insistence of Christian Science, that we are not to consent to a theoretical life, not to say in our living, "First the leaf, then more leaves." And yet how content you and I have been with this travesty of the Master's teaching!

Because the true life has the infinite behind it, it must speak for continuous growth and achievement, the two things which most people, perhaps, would say have been conspicuously lacking in their own religious history. This is the world's saddest picture, Christian men and women who are barren, pitifully barren, as they know so well, of even the semblance of fruit. There was a promise, perchance a good purpose of life, but they did not lay hold upon

Digitized by Google

the subsoil of Truth, they were not students of the Word, they did not look up and welcome the light. "Content with the seeming," they speedily became dwarfed and shrunken from want and listlessness, and in the heat of trial they could not hold up their leaves, much less bear fruit. Surely we cannot hope to gain the wisdom and strength in which spiritual efficiency is grounded, if we do not, day by day and hour by hour, appropriate and utilize the sunshine and soil of our inheritance and privilege as the seedlings of Truth.

This is the secret of the field: every least plant is at-one with both soil and sun. It calls vast forces to its aid, it has a genius for appropriation, and it never forgets its goal, "The full corn in the ear." This, too, is the secret of genuine living in Christian Science. It is to be deeply rooted in the demonstrable truth of being. It is to be thoughtful ever of God; that it is ours to express the beauty and power of immortal Life. It is to rejoice in the sun, the Love that is man's unfailing light. It is to make manifest the Mind that was in Christ Jesus and daily do his works.

JOHN B. WILLIS.

"WHAT OF THE NIGHT?"

IN the ninth chapter of John's gospel, which is truly a gospel in itself, containing as it does a statement of Principle and its idea, Truth and its demonstration, we find these words of the Master: "I must work the works of him that sent me, while it is day: the night cometh, when no man can work." This was followed by the declaration: "As long as I am in the world, I am the light of the world." In the prophecy of Isaiah we find the question, "What of the night?" which is answered by the admonition, "Inquire ye: return, come." Throughout the Scriptures we find many references to night and darkness, most of which are figurative, but in St. John's description of the new heaven and the new earth we read that "there shall be no night there." Mrs. Eddy states that in divine Science "God is revealed as infinite light. In the eternal Mind, no night is there" (Science and Health, p. 511).

In view of all this, we may well inquire what the Master meant when he warned his disciples of the approach of darkness in which no one could work. In the religious teaching of our earlier days we believed that the night to which Jesus referred was the coming of death, indeed many Bible commentaries sustain this view; but this could not have been Jesus' meaning, as he ever directed thought away from death to life, with all its glorious opportunities. At the same time, his words respecting the approach of night are clearly a solemn warning which all his professed followers would do well to heed. They were spoken at a time when the enemies of Truth were blindly and maliciously seeking to quench the light of Life and Love which was illuminating earth's darkness through the healing ministry of Christ Jesus, and he undoubtedly saw that only those who were willing to walk in this light would stand the crucial tests which were coming to "try" each and every disciple, even as it is today.

The Master said that even he could do the works of the Father only "while it is day," and we should never forget that this high demand rests upon us at all times, for, as Paul has said, those who accept the truth are "children of light," "not of the night, nor of darkness," therefore we must "watch and be sober." The whole question is really made clear by the declaration, "I [Christ, Truth] am the light of the world," and the requirement that we abide in him. If we at any time heed the seductions of sensuous mortal mind, then for us the clouds of sense will gather and the night come wherein, the Master taught, "no man can work." Nor can any one work truly and effectively in Science whose thoughts are filled with theories of disease and sin, or whose reckonings are made largely from the standpoint of belief in matter and material law.

At the very time Christ Jesus declared he was the light of the world, he spat upon the clay which symbolized the belief of life and sensation in matter, and then proceeded to give sight to a man blind from his birth. He had to prove to his own disciples that the belief in sin had no power to hinder the healing of the man, nor had the assaults of error power to prevent him from avowing openly his faith in his deliverer. For Jesus it was always the day of Spirit, which Mrs. Eddy defines as "the irradiance of Life" (Science and Health, p. 584). All those around us may declare for the darkness of fear, the night of error and terror, and this belief may seem to make our work more difficult, but if we deny the darkness and declare the ever-presence of "the light of the world," we shall realize the truth spoken by the prophet: "Then shall thy light rise in obscurity, and thy darkness be as the noonday."

ANNIE M. KNOTT.

LECTURE IN THE MOTHER CHURCH.

The First Church of Christ, Scientist, in Boston, Mass., announces a free public lecture on Christian Science by Virgil O. Strickler, C.S., a member of the board of lectureship of The First Church of Christ, Scientist, in Boston, Mass., in the church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Boston, Friday evening, Jan. 31, 1913, at 8 o'clock. The public is cordially invited.

AMONG THE CHURCHES.

CURRENT NOTES.

LOS ANGELES, CAL.—Eighth Church of Christ, Scientist, has filed articles of incorporation preparatory to securing church property. This church, although counted one of the city churches of the Christian Scientists, is located at Gardena, and has been holding services in a hall for several months.—*Los Angeles Tribune.*

NELSON, BRITISH COLUMBIA.—We held our first services Nov. 24 in our own church, which we have just purchased from the Presbyterians, and we feel that we are going to grow very rapidly from now on. We have, we think, the best church location in the city, and a nice little church that will seat two hundred.—*Correspondence.*

SAN FRANCISCO, CAL.—The property of the Christian Science church at the southwest corner of Sacramento and Scott streets has been sold for twenty-three thousand dollars. It was bought by the church and improved with a large frame structure known as Christian Science hall, after the fire, but now that the new edifice at the northeast corner of California and Franklin streets is nearing completion, the up-town holding will not be needed.

San Francisco Chronicle.

RAPID CITY, S. DAK.—Christian Scientists of Rapid City feel they have made an advance step in establishing reading-rooms in the down-town business district, as the new rooms are more centrally located and much larger and nicer than was the old one. The greatly increased sale of Science and Health and of our literature proves it to have been a move in the right direction. Close upon this demonstration the way appeared for the opening of a room at the local fair. This room was attractive and exceedingly well patronized, and quite a number of copies of the *Sentinel, Journal,* and daily *Monitor* were distributed.—*Correspondence.*

TAMPA, FLA.—The Christian Science church has acquired the property of the Christian church, which is located at Henderson and Florida avenues, the price paid for the church and lot being forty-five hundred dollars. The dimensions of the lot are fifty-two by ninety feet, and the present building is a small brick structure. The trustees of the Christian Science church are also looking about for a suitable place for reading-rooms. When these have been secured, an up-to-date library will be established, which will be open to the public at all times.—*Tampa Tribune.*

Digitized by Google

REDONDO BEACH, CAL.—In the year 1905 two persons met in a private home Sunday mornings, to read the Christian Science Lesson-Sermon. Very soon others came to listen to the reading, and in time it became necessary to organize as a society. A notice was published in *The Christian Science Journal* of April, 1907, recognizing us as such. This society has recently purchased a lot on South Broadway, near the beautiful grounds of Hotel Redondo and within a short distance of two car lines, and is planning to build a church home in the near future. On the evening of Dec. 12, 1912, sixteen members of this society met at the home of one of their number for the purpose of incorporating as First Church of Christ, Scientist, of Redondo Beach.

Correspondence.

LINCOLN, NEB.—For the improved lighting conditions which are beginning to be noticed and encouraged in church edifices throughout the land, the general religious body is largely indebted to certain enterprising denominations whose places of worship have been characterized by all that is most modern in construction and equipment. A faith of good cheer and happiness should certainly have in its temple a high degree of cheerful illumination. Furthermore, the comfort of a congregation can be augmented by careful application of those illuminating-engineering principles which contribute to the protection and conservation of vision. A complete scheme of indirect lighting has been used throughout the new hundred-thousand-dollar structure of First Church of Christ, Scientist, at Lincoln, Neb., with the exception of a few bracket fixtures which mark stairways, etc.—*Electrical World.*

TRINIDAD, COL.—The services of the Christian Science church are being held in the rooms at 105 West First street, which the church has recently leased and is now fitting up as chapel and reading-rooms. The services have been held in the Elks club rooms, but the membership so increased that larger quarters were necessary.

Trinidad Advertiser.

THE LECTURES.

FLUSHING, MICH.

At a lecture on Christian Science delivered by Virgil O. Strickler, he was introduced by the Rev. J. H. Callender, who said in part,—

Some of you may perhaps be surprised to see the pastor of the Baptist church here to introduce a Christian Scientist, but I desire to say that while I am not a Scientist, I am in sympathy with any and every movement that will benefit the race, either physically, mentally, or spiritually. And there are none here this evening but what must admit that they have known of those who have been benefited by Christian Science. I think the audience this evening can be divided into at least three classes: some are believers in the doctrines of Christian Science, some are honest inquirers, and others, perhaps, are prejudiced against its teachings; but, whatever our position, we must admit, in the language of one of old, that

> There are more things in heaven and earth, Horatio,
> Than are dreamt of in your philosophy.

I am reminded, too, that the divine man, when he was here on earth, said, "By their fruits ye shall know them."

I am happy to say that I number among my personal friends quite a large number of Christian Scientists, and of course am acquainted with many others, and among them all there is not one who uses tobacco, or alcohol as a beverage, or goes about with a long sour face as if he were out of harmony with all mankind, and I submit to you the question, Is not this good fruit?—*Correspondence.*

VIRDEN, MANITOBA.

There was a good attendance at the Christian Science lecture in the Auditorium, when Virgil O. Strickler explained the fundamentals of Christian Science. The speaker was introduced by Alderman D. M. Handy, who spoke in part as follows:—

The lecturer comes to us as a man of undoubted sincerity and earnestness, and as such he should command our sympathy, of whatever creed or belief he may be. Not as a Scientist, for I am not one, but as a man who has lived and loved, known somewhat of the joy of success and felt the pain of failure, and who yet would be ever hopeful, endeavoring to meet the problems of each new day unabashed and unafraid, I am an admirer of Mrs. Eddy—of her life and of her work. I place her among the men and women of our time, and of all time, who have influenced us for good,—Titans, all of them, who worked their philosophy up *into* life; the type of men and women who jostle the world out of its ruts.—*Empire-Advance.*

OMAHA, NEB.

Prof. Hermann S. Hering, who lectured on Christian Science for First Church of Christ, Scientist, in their new edifice, was introduced as follows by Carl E. Herring, first reader:—

Christian Scientists have no missionary workers in the sense that term is usually understood. Our missionary work is confined to a sincere desire and effort to place before the world the foundational truths which, carried into daily living, have brought health, hope, and benediction into unnumbered homes. As this desire to impart to others the great good that has come into our own lives springs from motives of pure gratitude, we have no purpose other than to correct wrong impressions as to what Christian Science really is, and to present to the inquiring mind the opening pathway toward the study of this Science, immeasurably the most important of all sciences, since it pertains to Life itself. It is not a science for a life to come, nor a science for a life that is past, but for the life that is now, a science that is as capable of being put into immediate daily practical use, from the beginning of the understanding of its Principle, as the science of mathematics can be employed by the novice from the moment he understands the rule of addition.

One of the pleasing facts connected with this age of civilization is our willingness to listen fairly and to judge without prejudice, and while we accept truth only as it comes with convincing force, we open wide the receptive thought to catch its higher meaning.—*Correspondence.*

FORT SCOTT, KAN.

At the lecture on Christian Science in the Davidson theater, delivered by Francis J. Fluno, M.D., the introduction by County Attorney Chester A. Ramsey, was in part as follows:—

By observing the history of great movements we learn that new beliefs and doctrines which have swayed the ages and have marked the successive steps of progress have been of slow and steady development. Truth does not manifest itself through the emotions, but through the intellect. Science has disclosed and manifested new truths to mankind throughout the ages through the agency of men who delve and search for knowledge. Mrs. Eddy, the Founder of Christian Science, says: "Seeking is not sufficient. It is striving that enables us to enter. Spiritual attainments open the door to a higher understanding of the divine Life" (Science and Health, p. 10). If mental application and consecration and striving can help us to a fuller understanding of the teachings of Christ, and can bring us the richness of God's blessing, that time will come as man arrives at a more perfect understanding of God's laws.

Correspondence.

Digitized by Google

THE HAGUE, NETHERLANDS.

Bliss Knapp delivered a lecture on Christian Science in "Pulchri Studio" to a large and closely attentive audience. The speaker was introduced by Col. Ret. W. J. Giel, who said in Dutch:—

Throughout all ages mankind have had the desire for protection against evil, and for the attainment of an harmonious condition of life. This struggle for that which man thought to be happiness has continually been the cause of bloody wars between nations, of which, alas, we have, even now, an example, and of many a quarrel between families and individuals. But more tragic than these wars, which generally do not last long, is the ceaseless war with self, the struggle for happiness, that which cannot possibly be attained except by getting rid of sin and by deliverance from sickness and sorrow, and it is this victory over self which will settle all quarrels and discord.

Christian Science strives to deliver mankind from sin and sickness and from all hindrances to spiritual, social, physical, and economic progress. It is the message of peace to every heart, and therefore to all mankind. Although it heals sickness without material remedies, it is not hostile to medical science, but it honors the physicians who with all their skill and love try to alleviate physical suffering. It does not condemn the process of medical science, but does not follow it, because the adherents of Christian Science know that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). They know God to be the source of all goodness, therefore of all harmony; and that if man reflects this harmony in his own thought, the harmony in his body will certainly be reestablished. Although in its concept of God, the divine Principle of being, it differs from other religions, Christian Science is not hostile to them, considering them as coworkers in the endeavor to improve mankind spiritually. Christian Science only asks to be respected in its endeavors, while itself respecting the labors of people differently minded.

Christian Science is not a new religion, but a repetition and explanation of the message which the great Nazarene brought. He commanded his followers to "preach the kingdom of God, and to heal the sick," and Mrs. Eddy, the Discoverer and Founder of Christian Science, has taught us scientifically how every one who strives to do good is able to follow that command now, though men's thoughts and their interpretations of Scripture may have changed since Jesus' appearing. As Mrs. Eddy herself declared, she did not expect the world to be changed immediately, or sickness and sin to disappear at once, but after some years of blessed labor it could be stated that "ethics and temperance have received an impulse, health has been restored, and longevity increased" (Science and Health, p. 348). And many among you can certainly bear witness to remarkable physical healings and moral uplifting by Christian Science, either of yourselves or of your friends and relatives. If such are the present fruits, how blessed and abundant will the harvest be when this Science is more generally understood! And how we can obtain this full harvest, the lecturer of this evening will kindly explain to you.—*Correspondence.*

LEOMINSTER, MASS.

Nearly four hundred persons filled to overflowing A. O. U. W. hall, Leominster, to hear a lecture on Christian Science, given under the auspices of First Church of Christ, Scientist, Fitchburg. The speaker, William R. Rathvon, was introduced by Mrs. Jennie M. Stevens, first reader of the Fitchburg church, who spoke as follows:—

It is with pleasure that I welcome you here this afternoon in the name of First Church of Christ, Scientist, Fitchburg. Your very presence bespeaks a desire to know more of the great religious movement which is today encircling the globe. We do not offer you a new religion, but restore to you the one which Jesus taught and practised on the shores of the Galilean sea. Paul said, "Let every soul be subject unto the higher powers." Thousands upon thousands throughout the entire world who were subject unto the seeming lower powers, such as fear, worry, malice, resentment, and material laws, have become "subject unto the higher powers," going forth to their life-work with pulses throbbing with health, lives purified, and dispositions kind.

I believe the Christian Science churches are the greatest charitable organizations in the world today, because they do their work in the most effectual manner, healing the sick and sinful, thereby enabling them to dispense with charity. After ten long years of helplessness from an inherited disease, most of the time being confined to the bed, without one ray of hope from material remedies, I took up the study of Christian Science, and through its teachings gained a knowledge of God, who "forgiveth all thine iniquities; who healeth all thy diseases."—*Fitchburg News.*

ZANESVILLE, OHIO.

The eighth annual lecture under the auspices of the local Christian Science society was given by Judge Clifford P. Smith at Gold hall. The lecturer was introduced by E. E. Lorimer, who spoke in part as follows:—

It gives us pleasure to greet so large and representative an audience, indicating an ever-growing interest in the subject to be discussed; and why should it not be so, since Christian Science, rightly understood and practised, affords a practical solution for every problem that confronts human experience? It brings to our understanding a God "who forgiveth all thine iniquities; who healeth all thy diseases," who is as kind and merciful to the sick man as He is to the sinner, and it brings to our consciousness a Christ whose salvation is broad enough and loving enough to include both.

Zanesville Times Recorder.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Bakersfield, Cal. (First Church).—Church edifice, 3 p.m., Jan. 26.

Boston, Mass. (The Mother Church).—Church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, 8 p.m., Jan. 31.

Centralia, Ill.—Pittenger opera house, 2:30 p.m., Jan. 19.

Chambersburg, Pa.—Trust Company building, fifth floor, 8 p.m., Jan. 28.

Cœur d'Alene, Idaho.—Rex theater, 3 p.m., Jan. 26.

Glendale, Cal.—Masonic hall, Brand boulevard near Broadway, 8 p.m., Jan. 23.

Hanford, Cal.—Hanford opera house, 2:30 p.m., Feb. 9.

Houston, Texas.—Prince theater, 3 p.m., Jan. 26.

Indianapolis, Ind. (Second Church).—Murat theater, 3 p.m., Jan. 26.

Kansas City, Mo. (First Church).—Church edifice, Ninth street and Forest avenue, 8 p.m., Jan. 30 and 31.

London, England (Second Church).—Tolmer institute, Drummond street, London, N., 8:30 p.m., Jan. 28.

Meadville, Pa. (Second Church).—Unitarian church, 8 p.m., Jan. 28.

Montpelier, Vt.—Kellogg Hubbard hall, evening, Jan. 28.

Newark, N. Y.—8 p.m., Jan. 27.

Newport, N. H.—Opera house, 8 p.m., Jan. 30.

Oskaloosa, Iowa.—Armory hall, 8 p.m., Jan. 23.

Pensacola, Fla.—San Carlos hotel auditorium, 8 p.m., Jan. 28.

Portland, Ore. (First Church).—Church edifice, Everett, between 18th and 19th streets, 3 and 8 p.m., Feb. 2, and 8 p.m., Feb. 3.

St. Petersburg, Fla.—Auditorium, 8 p.m., Jan. 31.

Shreveport, La.—City hall auditorium, 8 p.m., Jan. 23.

Tampa, Fla.—Greeson theater, 8 p.m., Jan. 30.

Victoria, B. C.—Victoria theater, 8:30 p.m., Jan. 31.

Vineland, N. J.—Auditorium, 3:15 p.m., Jan. 26.

TESTIMONIES OF HEALING.

[Translated from the German.]

It is with a heart full of gratitude that I wish to tell others how Christian Science has helped me in time of need. My wife had often suffered with headache as a girl, and had to take medicines on account of several ailments, which remedies, however, in time lost their effect. Her attention was then called to Christian Science, and she applied for treatment. Within a short time her health was restored, thus enabling her to perform her work without experiencing any discomfort; moreover, she grew much stronger. At the birth of a son, Christian Science again wrought wonders. Seven months later, when the child was taken with what is known as "rickets," accompanied by cramps, he was healed through Christian Science, and we knew that we owed this healing to its ministration alone.

I myself had often been ailing formerly, and on one occasion was taken with acute lung trouble. Having witnessed the success of Christian Science in many instances, I decided to apply it in my own case. In the position which I hold a medical certificate must be presented in cases of sickness, thus making it necessary for me to go to the physician for an examination. He stated that I had pleurisy, and said the disease would last from three to four weeks, but that I should come to him again in a week. As already mentioned, I then applied for help in Christian Science, with the result that after the first treatment the pain disappeared, and I felt perfectly well on the fourth or fifth day. At the end of a week I went to see the physician, and he told me that the disease had disappeared, as after close examination he was unable to find any trace of it. In order to prevent a relapse, however, he said that I ought to stay at home the rest of the appointed time, and take care of myself. This I did, though it consisted in familiarizing myself with the teachings of Christian Science.

In another instance I suffered from abscesses, one of which appeared on the neck, another on the hand, and the third on the leg. Previous to my knowledge of Christian Science I had been afflicted in the same way, and taking a material view of things, as I did at that time, I experienced much suffering. This time I asked for Christian Science treatment, and after the first treatment the abscess on the leg disappeared entirely, while the one on the neck was drying up; that on the hand became painless and after the second treatment opened without causing any suffering, whereupon it healed up within a short time.

About a year ago our little son was bitten on the forehead by a fly. We at first paid no attention to this, but a couple of days later the child's face presented an alarming appearance, and there was great pain, attended by fever. We applied for treatment in Christian Science, with the result that the child immediately became more restful, the fever left, and the boils softened and gradually opened without pain. The treatment as given in this instance was particularly helpful to us; indeed it seemed like a confirmation of the truth of the gospel narrative given in the fourth chapter of John, where Jesus' healing of the son of a certain nobleman is related, and how "the father knew that it was at the same hour, in the which Jesus said unto him, Thy son liveth." In this case Jesus showed that in truth there is no such thing as distance; that the divine power is ever present. This was proved in the case of our child. The practitioner to whom we applied for treatment at that time was far away, but the child's condition improved immediately after the message had reached her.

It has been proven to me that not only the reading of Christian Science literature, but also the attending of the meetings may bring healing. One day I experienced some difficulty in going to the meeting, owing to a light attack of rheumatism. I was, however, particularly impressed by the reading that night, and found upon returning home that I experienced hardly any pain, and on the following morning the trouble had disappeared altogether. My wife and I thank God for having been led to Christian Science, and we are also grateful to our revered Leader, Mrs. Eddy, for showing us the way to Truth.

HEINRICH GEILKE, Breslau, Germany.

For many years I was a sufferer from nearly all kinds of diseases, to the extent of having sixteen physicians, besides using many remedies; but they all failed, and I was given up. I then turned to Christian Science, though I had heard little about it at that time. I called a practitioner, got a copy of Science and Health, and in two weeks I was able to travel fifteen miles on the train, and from there drove six miles in a hack. Since that time I have done my own work and have found peace and happiness.

On one occasion we called a practitioner to help my daughter in a case of childbirth. She got along finely, and within two weeks she moved thirty-eight miles, took care of three little children, and did the work for five, including the washing. Besides myself and daughter, my husband was healed of several ailments. In a case of injury a doctor was first called, but could not help him. The condition appeared to be very serious before he had Christian Science treatment. He was also healed of a fever, and a badly injured limb.

With the help of divine Love I am able to do the work for ourselves and others. We are truly glad to read the good works of our beloved Leader, Mrs. Eddy. She has been so faithful that one may well strive to follow in her footsteps and rejoice to call her Leader.

MRS. S. E. DAVIS, El Reno, Okla.

As I do not live where I can attend the Wednesday evening testimonial meetings, I take this privilege (and it is a great pleasure) of telling others through the *Sentinel* what Christian Science has done for me and for my family, also that God lets the glad light of Truth and Love shine through me to heal others. I was a great sufferer for years, till at last my attention was called to Christian Science by a friend who was just coming into the truth. My first healing was in a case of bowel trouble, which was completely overcome in twelve hours. I have also been cured of tubercular disease of the lungs, and a severe throat trouble, besides other ills.

I live thirty-five miles from Portland, Ore. (and that is the nearest Church of Christ, Scientist, to me). I go down to the Sunday service once a month, and I enjoy it very much. I live alone with God up here in the Cascade mountains, and I have a great deal to be thankful for, having had many good demonstrations of Truth's power. God is everywhere, and I am so rejoiced to be counted with the followers of Christ. For all this I am thankful to God, and grateful to Mrs. Eddy.

MRS. FRANCES C. PRINDLE, Prindle, Wash.

I have long wished to express my gratitude for Christian Science, and take pleasure in doing so through the *Sentinel*. It is now over ten years since I placed myself under the care of the "great Physician," and during these years I have had many opportunities of proving God's constant care and wonderful protection in every time of need. Through the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have been healed of severe headaches. I had suffered for years from these headaches, and had tried many material remedies, but could get no permanent relief; in fact, they became more frequent and severe. When, however, I took up the study of Christian Science, I soon learned that I was losing the fear of a great many things which had troubled me, both financial and physical problems.

Some time after this I attended a Wednesday evening

Digitized by Google

meeting in a city at some distance from my home, and a lady who was present testified to the healing of headaches such as mine. She said that she had been healed by a few treatments in Christian Science and that her healing was permanent. As I was returning to my home that night, I was thinking, while on the train, about the beautiful and helpful testimonies I had heard, and the one just mentioned was recalled, when like a flash the thought came, "Where are your headaches?" I then recalled my last experience with this trouble, and found that it was more than two years since. I had not even thought of those headaches in all that time, and there has never been any return of the trouble.

For this healing and the many other blessings which have come to me in Christian Science, I am most thankful to God. Words cannot express my gratitude to our loved Leader, Mrs. Eddy, for giving us this spiritual interpretation of the Bible, by which we can be made free from all the ills that flesh is heir to.

MRS. FLORENCE JOHNSON, Riverside, Cal.

I wish to testify to the healing I have received through Christian Science. I was a sufferer for nine years, and was told by six different doctors that I could not get well; but I did, as I was completely healed through Christian Science in four weeks. I was treated by a friend who had gained her understanding from her study of the Bible and Science and Health. Before coming to Christian Science I had two operations, and was ruptured twice. The rupture was very large, but was perfectly healed. I thank God for these blessings, and I am grateful also to Mrs. Eddy for the truth which she has declared. It is the truth that makes free from sin and sickness, and it may be found by every honest seeker.—MATILDA L. BROWN, Beulah, Col.

Mrs. Eddy tells us in "Science and Health with Key to the Scriptures" that "Science can heal the sick, who are absent from their healers, as well as those present, since space is no obstacle to Mind" (p. 179). This was proved true in my own case. Over five years ago, while living in Detroit, Mich., my left eye became ulcerated, and physicians told me that I ought to have it treated by a specialist, for they said I was in danger of losing the eye if I did not attend to it. I saw a specialist, though I did not let him treat me. However, I tried material remedies for about two weeks, but receiving no help, decided to try Christian Science, and wrote to a Scientist in Boston, stating my case, and asking for treatment. When she replied that she would treat me, I threw away all material remedies, and within ten days my eye was cured, and I have had no return of the trouble.

Soon after this experience I became more interested in Science, and since then have been able to demonstrate the healing power of Christ, Truth, for myself many times, and somewhat for others. I am very thankful to God for all I have received through Christian Science, and grateful to Mrs. Eddy for bringing to the world anew this truth which makes men free.

WILLIAM A. JUDSON, Jamaica Plain, Boston, Mass.

Words cannot express how thankful I am for what Christian Science has done for me. About two years ago I was suffering from a stomach disorder and extreme nervousness. I was absent from work about nineteen weeks, having been under two doctors but not getting much benefit. I had become greatly depressed when a friend recommended Christian Science to me. Very reluctantly I consented to try it. I called at the reading-room one afternoon, borrowed a copy of Science and Health, and after a conversation with a friend and a fortnight's treatment under a Christian Science practitioner, I was able to go back to my work as a mechanic. I have not had to leave off since, and have ceased to use any drugs or medicine whatever, of which I had previously taken a considerable quantity.

For the blessings received in Christian Science I am very grateful, and my only wish is to know more of this wonderful truth which is setting me free.

BEN HOLT, Rochdale, England.

I wish to testify in regard to what Christian Science has done for me. About seven years ago I seemed, according to mortal sense, to be losing the use of my left hand and arm. It pained me all the time and I could not get any rest, but through Christian Science I was perfectly healed. I am very grateful to God for Christian Science, and for dear Mrs. Eddy's teaching.

ALICE FORD WILLIAMS, Chicago, Ill.

For several years I have had abundant reason to be thankful for the healing and saving doctrine of Christian Science, and I have occasion every day to rejoice that I was led to investigate its beneficent teachings. More out of curiosity than for any other reason, I attended a Wednesday evening meeting at the invitation of a friend, and I little realized then what would be the result in my life of so doing. What I heard there convinced me that the people who spoke had something I did not possess, something I wanted, for I had become dissatisfied with the doctrines of the church in which I had been brought up and was looking for a religion that promised more practical results.

After reading Science and Health, I was still further convinced that here at last was the very thing for which I was looking, as in spite of the fact that many statements seemed incomprehensible and not a few aroused my antagonism, I nevertheless was compelled to admit the invincible logic of Mrs. Eddy's reasoning. I soon had opportunity to prove for myself whether what I had read was true, for I was taken sick with a severe attack of stomach trouble. Help was asked from a practitioner, and in a surprisingly short time the malady disappeared and there has since been no return of it. More strange than the physical healing at that time, was the wonderful spiritual uplift that accompanied it, although I now know that this is the inevitable result of healing by the divine Mind.

As I continued to study the text-book, the desire grew for a better knowledge of the truth it contained, and one by one proofs of its healing efficacy multiplied. Slowly it began to dawn on me that I must conform my life to the Principle revealed through this book, and at first there was the temptation to rebel, for I thought it would be hard to have to give up my pipe, glass of beer, and "good times" with the boys. Sometimes I wished I had never seen the book, for I thought it demanded too much, and yet I knew that Christian Science must be the truth, or else there was no such thing as absolute truth for mankind to know. It was slowly unfolded to me that Christian Science states facts, what actually exist, and if I seemed to get pleasure from anything which was not in harmony with those statements, it could only be a false sense of pleasure where no pleasure really is. As I got to this point the desire for those things gradually faded out, and in its place came a sense of freedom and of peace, and a keener delight in and appreciation of the clean, wholesome enjoyments of life, of the kind that "addeth no sorrow with it."

Periods of doubt and trial, such as probably come to all earnest truth-seekers, came to me, but with the loving help of friends I was enabled to plant my feet more firmly on the Rock which is Christ, and now I can say with Paul: "I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

Digitized by Google

This testimony would not be complete without some account of the physical healing I have received. For over eight years I have taken no material remedy of any kind, and during this time I have been enabled to overcome numerous minor ailments, such as colds, stomach and throat trouble, also headache. I was healed of a severe attack of pleurisy in three days' treatment, and two years ago I was healed of a severe case of poisoning. This last was a remarkable evidence of the power of Truth to heal, as it is certain that under medical treatment I should have had at least two of my toes amputated. In business I have repeatedly demonstrated that a correct understanding of God and of man's relation to Him, will straighten out difficulties and remove obstacles. I am increasingly grateful for the strengthening influence of the many things which have been provided for our help,—the weekly Lesson-Sermons, the lectures, and the literature generally.

As I think of all that Christian Science now means to me, my heart is filled with gratitude to the noble woman who with sublime courage and an unselfed devotion not only gave to the world the truth which had been revealed to her, but proved by her own example "what the understanding of God brings to man" (Science and Health, p. 496). Christian Science has given us a clear understanding that God is Love, and we therefore "love him, because he first loved us," and for this fact my life will have to attest my gratitude.

A. G. POTTS, Salt Lake City, Utah.

I have long wished to express my deep gratitude for all the benefits I have received from Christian Science. I had been more or less delicate all my life, and in 1897, shortly before hearing about Christian Science, I had a complete breakdown from enlarged glands, etc. I had also suffered ever since I was a child from neuralgia, bronchitis, stomach and bowel troubles. I also suffered every winter from chilblains, which caused me much discomfort, and for which I tried many material remedies without finding any relief. With Christian Science treatment I was healed in a fortnight of the bowel disorder, the severe headaches and swollen glands, and later of the chilblains. Though I am sometimes attacked by bronchitis and neuralgia, they are quickly overcome by Christian Science treatment. I have never taken any material remedies since then, though before that I had to take medicine every day. A few years ago I had nine teeth extracted, but with the help of a kind practitioner I did not suffer afterward, and experienced scarcely any discomfort or soreness in my mouth.

I am deeply grateful for the physical healing, but am more so for the happiness which Christian Science has brought into my life, and for the spiritual understanding of the Bible. I belonged formerly to the Church of England, and though I always loved the Bible, it was very difficult to understand how God could be just when there was so much misery and sin in the world. I am truly grateful to Mrs. Eddy for all that she has done, and for our Christian Science literature, which is such a help and comfort to me in my daily life.

VIOLET D. GALTON, London, England.

Trusting God to guide my thought, I will endeavor to tell others a few of the many blessings which have been mine since coming into a knowledge of Christian Science. I have been healed of ills too numerous to mention. I had been under medical treatment and taking medicines for over ten years, and had the best of care from a kind husband, who spent many sleepless nights with me; but all was to little or no avail, till man's extremity was proved to be God's opportunity.

In what seemed a roundabout way, we heard of Christian Science, and I was led to this truth which heals and saves. Now I know that God is an ever-present help to those who put their trust in Him and who realize that He is the only intelligence. I would like to mention a demonstration which I had in my own case, over a very bad injury to my foot and ankle. I was up-stairs, and came down in great haste. It being somewhat dark, I took two steps at once and twisted my foot so that I was not able to set it on the floor any more that day. This was about ten o'clock in the morning; and after supper I was still unable to put my foot to the floor. In the evening, when all was still and I was alone with God, I again proved the truth of this teaching of our beloved Leader: "Have no fear that matter can ache, swell, and be inflamed . . . when it is self-evident that matter can have no pain nor inflammation . . . were it not for mortal mind" (Science and Health, p. 393). Besides this, fever, whooping-cough, colds, and serious injuries have been overcome for my family, by the power of Truth as made known in Christian Science.

I write this testimony to the glory of God, and with much gratitude to Mrs. Eddy. My daily prayer is for more understanding, that I may do what God would have me do.

MRS. NANCY A. PRIEST, Winfield, Kan.

It is with unbounded love and thankfulness to God, and corresponding gratitude to our dear Leader, Mrs. Eddy, that I express my appreciation of the blessed teaching of Christian Science, which has healed me of many ills of the flesh and given me such a spiritual uplift that I cannot find words to express my gratitude. It is, however, my greatest desire to show my thankfulness by my life. A short time ago a great trial came to me, but with it came also the realization of the presence of divine Truth, and the demonstration was so complete that the thought of death never entered my consciousness. For this proof of God's constant care of His own, and for the great kindness and love shown me in my hour of need by the members of the Christian Science church, I am indeed grateful.

MRS. MARTHA E. CHILDERS, Lima, Ohio.

The Discoverer of Christian Science has said, "If pride, superstition, or any error prevents the honest recognition of benefits received, this will be a hindrance to the recovery of the sick and the success of the student" (Science and Health, p. 372). I had felt for some time that there was something I should do, and one afternoon I took up our text-book with an earnest desire to know what it was. I also took up a copy of the *Sentinel*, and in a few moments I read the testimony of a friend who was healed about the time that I was. The command then came: "Go, and do thou likewise."

In order to give any correct idea of what Christian Science has done for me, it will be necessary to tell something of my condition at the time it was brought to my notice. Physically I was almost blind with a painful and (according to medical science) incurable disease of the eyes. For years I had been a great sufferer from nervous troubles and many resultant ailments. I was a widow, and had the entire care and support of three children. Although the struggle had been a desperate one, I had succeeded in maintaining my independence, when suddenly, through what seemed to be the selfishness of another (in availing himself of an unfair advantage) my business was broken up. Thus my physical and financial conditions were distressing; but by far the most pitiable feature of the case was my spiritual status.

I had been reared by pious parents, and was taught that although we could not understand why adversities came, they were from God and we must be resigned. Although I was a young woman, I had followed father, mother, two brothers, and four sisters to their graves, and had been resigned. When my only remaining sister, embodying my greatest help and comfort, passed on (after two years of suffering), I rebelled. I did not even ask to be resigned, but went mechanically about my duties, sad of countenance and bitter—oh! so bitter at heart. For three years I carried this weight (until Christian Science set me free), wondering

Digitized by Google

always why God had dealt so harshly with me. Many times I tried to pray, but found no God to hear me. This would seem quite enough, but the bitterest experience of my life cannot be recorded here, nor can I tell what I suffered from being misunderstood by loved ones.

I had tried earnestly to pray to God for relief in some way, when a friend called on me and told me of her healing in Christian Science, and I lost no time in going to the practitioner who had treated her. I shall never forget her words, "It is no more God's will you should suffer, than it is your will to suffer." I went home filled with a new hope. The mystery was solved; after all, it was not God who was punishing me. Then came the assurance that if God wills for us nothing but good, there is no other power that can force me to accept any other thing; and with this conviction I was free. My healing was not instantaneous, but within two weeks I left off the glasses which I had worn for twelve years, and I have not needed them since.

My healing took place in Danville, Va., two and a half years ago. Since that time Christian Science has been my only physician, my only remedy for every discord, and I am healthier and happier than ever before. Within a few months after my healing, the way was opened for me to take class instruction, which has been a great help to me. I am trying to prove my love and gratitude to God and His Christ by feeding His sheep, by giving words of cheer and comfort to those who need them. I also try to augment this by sending Christian Science literature to those who will read it.—MRS. CORNELIA MOORE, Richmond, Va.

Thanks to the teachings of Mrs. Eddy, I have found in my business life that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). One year ago I changed my vocation, and with no other help than Truth I have realized a great advance. After a business life of twenty years, full of strife and worry, material aid has been proved inadequate; but by leaving all to God, I have been able to accomplish in three months what it took twelve months to do before. Depending wholly upon divine Mind, free from the old dread of what the day would bring forth, I am enabled to demonstrate that each succeeding day is full of good for me, that "to those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii).

Since Christian Science has come into my life, I daily find better and bigger things coming into my experience, with worry, fear, and anxiety dropping aside and leaving me. This truth makes me a better husband, father, and business man. Words seem inadequate to express my gratitude to God, and my thankfulness to Mrs. Eddy, who has shown us the way. My earnest desire is to know more of this blessed truth myself, and to help others to become acquainted with it.—F. C. MILLARD, Los Angeles, Cal.

[Written for the *Sentinel.*]

DARKNESS DISPELLED.

CHARLES C. SANDELIN.

IN Love no darkness is—there shadows flee:
Thou mayest rest secure in Love's embrace;
Love ever present may thy refuge be,
Love's morning beams may all these dreams erase.

See 'mid the darkness that soft beaming light!
Thus to thine eyes Truth's light doth first appear,
Increasing with the dawn till blazing bright
The full-orbed sun of Spirit's day is here.

A day undarkened by the fears of sense,
Unchilled by the cold blast of worldly care;
Thou mayest walk therein with confidence,
Thou mayest dwell there peacefully fore'er.

FROM OUR EXCHANGES.

[*Continent.*]

When we hear a great public evil denounced, how do we feel about it? Will some of us applaud the preacher and urge him to go after the rascals again? Will some of us oppose the preacher and quote solemn proverbs about shoemakers' sticking to their lasts? But the work has not gone very far unless we, and men like us, grow serious and want to know what we need to do ourselves to keep clear of the evil, and then to clear the land of it. As there is danger of a man's seeking applause, so there is danger of hearers' feeling that they have done their part when they have approved what was said. It is a dangerously virtuous feeling that we have when we declare that a sermon has really expressed our own notions. The real question is, whether those notions of ours are tending to change our lives. Applauding proves nothing except that we know our responsibility. It may betoken a good state of mind, but it says nothing about the state of will.

[*Christian Register.*]

Christmas is the least theological of all the Christian festivals, though the central theme of Christian theology, because it allies itself with so many sides of human experience and presents its teaching in so thoroughly human shape. The most orthodox doctrine affirms that a man was born into the world, and the most extreme independence bows before the mystery of the event. In what is most human and in what is most divine, human nature is equally responsive to the Christmas spirit. We do not have to subjugate our reason or set aside our science or upset history or soil paternity to honor the child in whose name children rejoice, to revere the wonder of his life.

[Rev. W. E. Orchard, D D., in *Christian Commonwealth.*]

Religion, it is frequently said, is constitutionally opposed to change, dreads new conditions, votes blindly for things remaining as they are, and is the natural enemy of all social advance. It is at this point in the catalogue of its crimes that one is aware that something has gone wrong. If religion is guilty of an unsocial attitude, then it has somehow perverted its own essence. It cannot be religion that is here to blame, but something that has gradually been substituted for it while still retaining the shelter of its name. For, at all events, religion had a social origin. The earliest manifestations of religion found expression in social customs.

[*Advance.*]

Mere wishing will not bring in the millennium. But the millennium will never come unless it is wished for, and that very earnestly, and by a great many people. Wishing for it and doing nothing to bring it may be counted distinctly unprofitable; but wishing for it, and going to work unselfishly to bring it in, is about the best combination yet discovered. It takes only a thousand happy new years to make a millennium. If we make this year as happy as it ought to be, who knows but it may be the beginning of a thousand such years? And if the reign of righteousness and peace is too far off for that, at least let us make one year happy!

[*British Congregationalist.*]

History teaches us much of the sureness, as well as of the slowness, of God's operations in the world, and it is the office of faith to recognize that His will is being done in spite of appearances to the contrary. Faith, however, is never really strong save in those whose works accompany and follow it. The pessimists in the Christian host are never found in the front rank of the fighters. The call of the moment is for more fighters and fewer camp-followers and

Digitized by Google

laggards, whose nature it is to croak. If every man and woman who really wants to be on the side of progress would put in some spade work and be ready to make the sacrifice required of them, there is no doubt that the coming of the kingdom would be nearer.

[*New-Church Messenger.*]

It is given to some to perceive that all true progress is from the descent of the kingdom of light and love, the gradual coming of the promised kingdom of the Lord. All things begin and end in Him who was, who is, and who is to come. Spiritual truth is the cause of which outward progress is the effect. Since the uplift of the world has its cause in things spiritual, in the knowledge of genuine truth, and in the will to do as truth teaches, the church in which the Word is opened must be to all progress as the sun in the center of its system. It not only must share in the general uplift, but also share gloriously in uplifting the world.

[*Universalist Leader.*]

The spirit of the world is always at war with the spirit of its prophetic souls. The kingdom, which to Jesus was the most real thing on earth and in human experience, was to his disciples, and is to most of them still, a will-o'-the-wisp, a fancy of imagination, a breath of sentiment which the first wind will blow away. And so we go on trying to bring in a kingdom of our own conceits which is not and cannot be the kingdom of Jesus' soul and faith. The inwardness of it all escapes many of us, as it escaped those who insistently urged Jesus to locate its boundaries for them.

[*Churchman.*]

If any of us would understand what meekness means, let him trust the nature of the Master, look into his eye, ask no other power than the power of his divine love; let him cease to rely upon the crass dominance of wealth, of arms, of place, of force, and throw himself upon the might of gentleness, the compelling and all-subduing influence of kindness, of self-forgetting service, even of self-sacrifice, and then learning of him, the prince of the lowly, he shall find rest unto his soul.

[Rev. Dr. Polemus H. Swift as reported in *Baltimore (Md.) News.*]

Empire builders in every realm have been men of faith. I do not mean to say that they have always subscribed to the half truths that have been expressed in the creeds; but they have believed in God and caught their inspiration from Him. The advance movements of the race have been consequent upon the activities of men who have heard and responded to the call of heaven. Life on high levels cannot be lived without loyalty to God. Without spirituality man will be less than half what God meant him to be.

[*Pacific Baptist.*]

Has 1912 brought us greater insight, greater virtue, greater poise? Are we more wise, more just, more kindly, more serene today than we were twelve months ago? No matter what the old year has brought us, if it has not brought us a richer store of these qualities it has impoverished us.

[Prof. David S. Cairns, D.D., in *Hartford Seminary Record.*]

The finality of Christianity does not mean that our conception of it is final. It means only that Jesus Christ is greater than all the centuries, past, present, or to come; so great that faith in him demands also faith in the continual unfolding and revealing power of his Holy Spirit.

[*Western Christian Advocate.*]

We have little patience with the dismal prophets of despair. The mental and spiritual attitude of anticipation for the best is the most reasonable and helpful for the men of today to hold. It has in it the promise of victory in the present year and in all years.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Results" has been translated and is now printed in German (Die Christliche Wissenschaft: Ihre Resultate). This pamphlet contains 35 pages and is for sale at the prices of all the regular pamphlets as shown on the opposite page.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Make all remittances payable to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

It is likely that books and other printed matter now handled as third-class mail at eight cents a pound will be made mailable as parcel-post matter. Steps have already been taken to induce Congress so to amend the parcel-post act as to permit this. Reports received for the first ten days from fifty leading cities of the country are said to indicate success of the parcel-post project at the start. The number of packages sent through these fifty post-offices was 1,983,687; and as these cities handle about one half of the postal business of the country, postal officials estimate that between three and four million parcel-post packages were mailed from Jan. 1 to Jan. 7.

Senator Nelson's bill prohibiting the taking of testimony behind closed doors in suits brought by the United States under the Sherman antitrust act, has passed the Senate. The bill was introduced soon after the institution of the United Shoe Machinery suit in Massachusetts, as a result of the order of Judge Putnam for secret proceedings. According to the measure, in taking testimony in antitrust suits and in hearings before any examiner or special master appointed to take testimony therein, "the proceedings shall be open to the public as freely as are trials in open court, and no excluding the public from attendance on any such proceedings shall be valid or enforceable."

Utilization of the Patuxent river in Maryland as a source of the future water-supply of the District of Columbia, and the installation of a plant and conduit system costing $5,583,000, to bring the water to the city, are conditional recommendations contained in a report submitted to Congress. The condition accompanying the recommendations was the probability of the development of the Great falls of the Potomac as a means of furnishing power to produce electricity by which the streets and public buildings of Washington could be lighted.

Claims to the amount of more than ten million dollars have been filed against the White Star line for damages for loss of life and property on the steamship Titanic. The line contends that its entire liability is limited under the United States statutes to less than one hundred thousand dollars,—the value of recovered wreckage and passage money,—and this contention has been upheld in the American courts. American claimants allege that this limitation is invalid, because the line was itself responsible for the loss of life by reason of negligence.

Election of United States senators by popular vote became a certainty for New York state when the Senate passed the Wagner constitutional amendment by a vote of 43 to 4. The Assembly passed the amendment the day before, and Governor Sulzer will sign the measure as soon as it is presented.

Congressman John W. Weeks has been elected as the junior senator from Massachusetts, the successor to Winthrop Murray Crane in the United States Senate. He was the nominee of the Republican caucus on the thirty-first ballot.

The House rivers and harbors committee has brought in its annual appropriation bill providing forty million eight hundred thousand dollars for the improvement of rivers and harbors throughout the country.

President Taft has named the members of the industrial commission which was created by Congress to investigate working conditions and endeavor to make more amicable the relations between capital and labor.

Judge Robert W. Archbald has been removed by the Senate from the commerce court by a vote of 68 to 5 upon the first of the thirteen articles of impeachment.

The army appropriation bill, carrying $33,830,177, an increase of nearly three million dollars over the amount appropriated last year, has been reported to the House.

The validity of the Chicago ordinance fixing the size of loaves of bread, has been upheld by the United States Supreme Court.

International.

Jerusalem is becoming modernized. She already has a new American road machine, is getting ready to install an electric lighting and telephone system, and the construction of a city tramway has begun. People have been moving into the old city so numerously of late that building space could not be had within the walls, and the construction of houses has begun outside the walls. This has led to the discontinuance of the ancient practise of closing the city gates at night, and is the main occasion for starting a tramway. The construction of a port and landing quay at Jaffa is said now to be actually pending.

The road planned and ordered to be made by Lord Kitchener between Cairo and Alexandria is only the first of a vast scheme for roads all over Egypt. It is announced by the under secretary of state for public works that Lord Kitchener has under consideration maps and plans at the present time for a complete series of main arteries north, south, east, and west across the land. By this means districts will be opened which through lack of communication have hitherto been useless, and country will be cultivated and developed which at present depends entirely on slow river transport.

In the detailed financial report that the minister of finance has submitted to Parliament, is an item denoting the cost to Italy of the Italo-Turkish war. This is reckoned at one hundred and ten million dollars, although a further sum of about forty million dollars will be required before the account can be closed.

The French highroads, which up to ten or fifteen years ago held a position of preeminence among European highways, are, owing to the heavy motor traffic, deteriorating rapidly. Steps have been taken by motorists to obtain some amelioration in the up-keep of the public ways.

The German government has been asked to take immediate measures to counteract the high price of coffee brought about by the Brazilian valorization. The budget committee of the imperial Parliament passed a unanimous resolution calling on the government to take action.

M. Raymond Poincare has been elected the ninth President of France.

Industrial and Commercial.

Control of the Central Pacific, with its fifteen hundred and sixty-one miles of track and a considerable additional mileage of branch lines, is to pass from the Southern Pacific to the Union Pacific, through a plan for the reorganization of the Union Pacific system now in process of elaboration by Attorney-General Wickersham and the Union Pacific managers. With the transfer of this control, Mr. Wickersham contends, will be made effective the intention of Congress when it aided the construction of the Pacific lines. There will be under one control a railroad running through the middle of the West from the Missouri river to the Pacific.

The aim of a bill to be introduced in the Oregon Legislature is to harness the current of the Columbia river two miles above the lower entrance of the Celilo canal, thus developing a minimum of one hundred thousand horse-power, the project to be prosecuted and operated by the states of Oregon and Washington for the benefit of the municipalities in the two states tributary to the river. The bill will embody a memorial addressed to the Washington Legislature asking that body to appoint a commission to work with the Oregon commission in the development of the enterprise.

Differences between the Rock Island railroad system and the city of Memphis with reference to the building of a bridge across the Mississippi have been settled, and an ordinance is now in process of adoption by the city commissioners covering the details agreed upon. Work is to begin in July on the new bridge, which, together with the terminals to be constructed by the Rock Island system, will involve an expenditure of about five million dollars.

The report of the New South Wales department of mines states that during the financial year ending last June, diamonds worth four thousand and sixty-four pounds were won from diamond fields in New South Wales. The yield was wholly obtained from the deposits at and near Copston and represented 5,771 carats. The value of the opals won in New South Wales during the same period was fifty-seven thousand three hundred pounds.

The second largest railroad repair shops in the world, those of the Canadian Pacific railway, near Calgary, Alberta, are being built. They will cost two million five hundred thousand dollars, and will be completed within twelve months of the day when the prairie was broken and work began, April 1 last.

As a result of the recent cold wave, it is estimated that California fruit-growers will lose $10,167,880; shippers will lose $4,722,000, and the Southern Pacific, Santa Fé, and Salt Lake roads will suffer to the extent of $1,765,000. Fruit-shippers have canceled orders for thirty thousand five hundred cars.

Exports from the United States to South America have grown from thirty-eight million dollars in 1902 to approximately one hundred and thirty-eight million in 1912.

More than forty million dollars' worth of agricultural implements were exported from the United States to foreign countries in the calendar year just ended.

The fire loss of the country for 1912 is computed at $225,320,000. This is nine million dollars less than that for the year 1911.

India's present cotton acreage is more than one million acres greater than at this time last year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"REJOICE EVERMORE."

IRVING C. TOMLINSON, M.A.

PERHAPS no comment about Christian Scientists is more frequently made than that they are a happy people, and this abiding joy is explained in great measure by the fact that a permanent radiance must needs be reflected in the face of those whose consciousness is filled with hope and gladness. They are faithful to the Bible injunction, "Rejoice evermore." There is no surer sign of fidelity to the Scriptures and loyalty to the life of the Master, than the reflection of peace and good cheer by his followers. It is significant that the Bible contains something like forty different Hebrew and Greek words for joy, happiness, and their synonyms, and a reader of the Psalms readily recalls how many of these songs are devoted to praise. Few incidents in Mrs. Eddy's career seemed to bring her more joy than her gift to her followers of Christian Science hall in Concord, and on the walls of the upper room in this beautiful temporary church home, remodeled from an old mansion, she had these lines inscribed:—

Daughter of Zion, awake from thy sadness;
Awake, for thy foes shall oppress thee no more;
Bright o'er thy hills dawns the day-star of gladness;
Arise, for the night of thy sorrow is o'er.

The writer recently had an opportunity to put in practise this Christian Science thought of rejoicing evermore, when a weighty sense of burden, which in the old way of thinking might have been described as a feeling of depression, seemed manifest. A simple yet instantly effective antidote was found in applying a thought of gratitude for the many blessings bestowed by divine Love. To recall what a happy people Christian Scientists are, is to recognize the reason for their joy. Indeed, it is not natural nor normal that any child of God should manifest anything but joy. Emerson's happy faith led him to say, "All I have seen, teaches me to trust the creator for all I have not seen."

In God there is only life, love, peace, and joy; therefore His child is the possessor of naught else but good cheer. Doubt, gloom, and impatience can be banished by reflecting the good, for their manifestation, not being of God, cannot be real. We need to know that we cannot be imposed upon by any darkened sense, and that in reality eternal life is our heritage. We shall confidently abide in the light when we fully recognize the realities of God's creating; for truly beholding these, we can have no consciousness of darkness. In Genesis we read: "God said, Let there be light: and there was light." Remembering his blessings, in this way one can lift his head "above the mist" into the sunshine of light and joy, and become a member of the glad company who "rejoice evermore." To the joyous, sufficient for each day is the good thereof; and the psalmist's words are ever theirs: "Thou art the God of my strength."

Humanity are not infrequently robbed of the joy which belongs to them through false fears of misfortunes which they anticipate without sufficient reason. The earnest and sincere students of Christian Science have learned to trust in the supremacy of divine Love, hence their joy abides. Their experience leads them to appreciate that wise and witty aphorism of the American poet, who says: "Let us be of good cheer, remembering that the misfortunes hardest to bear are those which never happen." Recalling the misfortunes of those who have not the light of Truth, we should seek with renewed earnestness to use the privilege which is ours: of bringing comfort, joy, peace, and health to "those who sit in darkness," and thus, as the poet enjoins,—

Make some other life more happy
By the life you live.
Make some other heart more steadfast
Through the help you give.
Through the gladness shed around you
Yours shall be the gain,
For the life for others given
Is not lived in vain.

"PUT OFF THY SHOES."

ELSIE L. WIGHTMAN.

MOSES, an exile from his early home, was going about his daily duties—tasks which might seem unworthy of one who had occupied the status which had been his at Pharaoh's court. Nevertheless, in his present position the vision was possible that had been veiled from his sight when more closely surrounded by earthly splendors. He had passed from the bewildering glare of mortal greatness, through the wilderness, through "loneliness; doubt; darkness," until he came to the back of the wilderness, "the vestibule in which a material sense of things disappears, and spiritual sense unfolds the great facts of existence" (Science and Health, p. 597), thence to emerge into the way which led to the promised land of communion with God and the companionship of His spiritual creation. So to his consciousness came the command: "Put off thy shoes from off thy feet, for the place whereon thou standest is holy ground."

The vision was not that which was to be worshiped, nor was it to be examined with curiosity or open-mouthed astonishment; it was to inspire the recognition of the omnipresent and all-creative divine Mind—a God confined not within temples nor to the heights where His servant at some future time would speak with Him face to face, but ever-present, to be worshiped in "the place whereon thou standest." Here Moses gained a first glimpse of the truth that "God is All-in-all; and you can never be outside of His oneness" (Unity of Good, p. 24); therefore the attitude demanded must be not a temporary but a permanent one. The outward act was but the human sign of spiritual unfoldment, and because human it was changeable and impermanent. The spiritual fact, however, was unchanging. What was then discarded had been in reality put off forever, and progress was the acknowledged law of his being.

Have we not found, when about to advance from some former condition of thought into a portion of the land of promise, unveiled before our eyes by the teachings of Christian Science, certain mental reservations subtly presenting themselves as safeguards, to protect us from dangers

Copyright, 1913, by The Christian Science Publishing Society.

which may assail should we cast human props aside and unreservedly, unconditionally take our stand upon the all-power and ever-presence of good? This suggests another deep meaning in the command given to Moses. What a strange behest! How unusual for a shepherd to go barefoot on the hillside. For what purpose did he wear those shoes save to protect his feet not only from being defiled or bruised, but, more important still, from the stings of scorpions and poisonous bites of serpents which he expected to encounter on his way. Are not the shoes here representative of the belief that man needs mortal inventions because there is another power and creator besides God, good, against which divine Mind is supposed to be unable to protect him without the assistance of material aids? Such protection may appear requisite to one who is encased in the theory of life and intelligence in matter, but cannot be needed or desired by him who treads holy ground, for "there shall in no wise enter into it any thing that defileth;" and "they shall not hurt nor destroy in all my holy mountain."

In stepping from the material sense of life into the secret of God's presence, the material modes and demands of society—those things which can suffer defilement and destruction—must inevitably be cast aside as useless; they are no part of man; they have no place in the divine consciousness. The shoes imagined to be necessary for his safety have also formed a barrier between the individual and a sympathetic appreciation of his surroundings. Who that has one day crossed some well-known moor barefoot, has not found himself awakened thereby to a closer kinship with all its beauties and wonders; his former acquaintance seems to have suddenly ripened into close friendship. So the pilgrim who, like Moses, turning from sense testimony to make that sacred experiment, resolutely puts off self-sufficiency and a sense of man's ability to protect himself independently of God, puts off the sense of separation from his Maker, and his own narrow conceptions of God's creation with which he has been shod, steps forth into a revelation of "the glorious liberty of the children of God," into a truer sense of the Spirit-formed world in which the Father placed the man of His creating. This reverent, fearless, intimate contact is essential to a fuller comprehension of the truth of being.

After this experience Moses was prepared to lead his fellow countrymen out of Egyptian bondage. When an individual who, though bound by material beliefs, still had supposed he stood on holy ground, comes forth unshod, unfettered, he pauses awhile, in the solemn hush that follows as he passes from the clamor of earth's multitudinous calls through the portal of a new understanding, absorbed in the contemplation of Truth and Love, revering its majesty, enraptured by the glorious illumination, listening with bated breath to the grandly tender, pulsating throb of the everlasting harmony; then pursues life's way transformed, so that it will be said of him as of the great Wayshower: "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace."

AN ASCENDING PATH.

A. B. FICHTER.

"If any man will come after me, let him deny himself, and take up his cross, and follow me." Thus spake he who came that we might have life, and that we might have it more abundantly, and whose birth announcement was the angelic message of great joy. Ignoring the promise of life and joy, the world has for many generations preferred to read this passage as though it were a sad restraining call, away from gladness into the gloom of self-denial, cross-bearing, penance, hatred of life, and all but complete renunciation of the joys of existence. The weight of superstitious dogmatism has so colored it that even the many glorious gospel texts which glow with confidence, hope, and triumph, could never have lifted the shadow had not Mrs. Eddy's inspired insight caught the note of dominion underlying the Nazarene's whole career.

If Jesus was "the best man" and "the most scientific man that ever trod the globe" (Science and Health, pp. 52, 313), his words should not be considered from a merely emotional, sentimental, or superstitious view-point; they must be regarded as the statements of a universally active law, helpful indications toward a fuller understanding of a positive and scientific rather than a haphazard mode of life. This enhances their value to us, and we gain the right to expect and probe for their more practical meaning. Wherever a text may gain this scientific significance by a more expansive interpretation of its wording, we can assert our right to it, even though it become necessary to gain it by a better understanding of the original Greek, since words disclose in their construction the history of their developed meanings. The verb "to follow," for instance, generally understood to mean a coming-after with sheeplike stupidity, thoughtlessly, resignedly, may include the more dignified thought of succession, which not only means to follow in the footprints of a predecessor, but to succeed to his activity, to be guided by the Principle by which he was actuated, to do the acts he inaugurated, to expand and improve the work instituted by him, increasing the fruits of his initiative by demonstration and logical development; all of which seems to be justified by the Greek word employed, as well as by Jesus' own reference to "greater works."

What in the English is translated "take up," has been rendered in the German as "take upon himself," which seems to weaken somewhat the sense of the phrase. As the sense of the Greek words comes out most clearly in these English words, "let him take up his own cross," with a special emphasis on own, it is probably this which the German translator wished to bring out. No matter how translated, the Greek phrase implies some act for each and every man to accomplish, and not a passive toleration as it is generally understood. Both the German and the English words can be used in a more active sense, such as to take up or undertake some new task, some line of work for the sake of getting acquainted with it and with the method of its uses, and of eventually mastering it. To "take up" may mean to handle, to lift, to raise, or even to remove, nor does the Greek word here employed forbid any one of these interpretations, as it seems to imply a standpoint of willing, conscious, and obedient endeavor, with a view to mastery.

The English word "cross" is graphic enough and suggests many meanings, including the wooden cross of execution. When we are admonished to crucify the flesh, we understand that we are bidden to bar out whatever to us the word "flesh" may stand for. The significant part of the cross *is* the cross-bar, a crossed purpose, a thwarted opportunity, that which hinders progress, obstructs the upward tendency. The Master demanded the removal from out of our own eye or concept, of the beam which hinders or bars us from obtaining the proper view of our brother, or the right aspect of our own experience. All material concepts, according to the teaching of Christian Science, bar out the possibility of our perceiving spiritually; they are our own cross-bars, our own crosses, and these certainly we can lift up, and even remove. Can any one imagine the effect on universal experience of the removal of at least all individual false concepts, prejudices, hatreds, and falsities?

The Greek word used for cross is so suggestive of some of the historic facts of man's inhumanity to man, that it seems to stand particularly not only for death, but for murder, cruelty, annihilation, the blotting out of the image and likeness of life. The belief that death is a supreme power and that man has the power to kill, is an obstacle barring out immortality,—the promise, hope, aspiration, and innate expectation of all living. In the resurrection Jesus smote this belief and proved it powerless, so far as he was concerned, and thus he could encourage men to take up even

Digitized by Google

this their own cross, since by man came death, their own beliefs in the power of death over man's divine right to life; and no matter how much of heroism its working out may involve, this task is so glorious that it is really more of a privilege.

The working rule toward the attainment of the mastery over these world-wide, ingrained beliefs, and the gain of the power to lift the cross, is found in the words "let him deny himself," a call not for the surrender of things that please and satisfy, all of which are to be replaced by things unpleasant, sad, and negative (although many passages in the Bible are so interpreted), but rather a call for that complete self-surrender which is probably more objectionable to most people than the giving up of any mere pleasure. The Greek phrase in this instance might well be translated, Let him deny his selfhood, his independent existence, the sense of a mind and life apart from God, which has been gained at the tempter's suggestion, "Ye shall be as gods, knowing good and evil." To many this might be equivalent to losing all sense of existence. In many passages Mrs. Eddy makes it clear that this is the requirement of the Science of being, and properly considered, did not Jesus' declaration, "I can of mine own self do nothing," imply that he claimed for himself no other condition? He whom the Bible calls "the Son of God" could of his own self "do nothing," a statement which, in order to give a stronger sense of the utter powerlessness of self, might read, "not a single thing."

Scaling the heights of the spiritual life, the beatitudes gain in practical value if we read them in this sense. "Blessed are the poor in spirit,"—they who claim no spirit of their own, mourners who find no pleasure in self, the meek with no honor of their own, those hungry for righteousness not their own, and who contemplate the glorious promises attached to these conditions. The kingdom, inheritance, satisfaction, and comfort are not promised in return for sacrifices of money, pleasure, time, or earthly pursuits, not as a reward for self-torture. No matter how unpleasant all these might be to a sense of self, they still would imply a self-assertion, a self-righteousness, a self-goodness and virtue not from above. It is the Father's good pleasure to give the kingdom to those who are willing to claim no selfhood independent of Him, the source of all good. Only they are the pure in heart who gain the beatific vision of real existence in God, their eternal Principle, a vision which replaces the limitations of material selfhood with the glorious liberty of the sons of God. Instead of narrow-minded self-will, they find the expression of the perfect will of Love. The assertion of insufficient personal opinions pales before the affirmations of the wisdom of divine Mind. Presumptuous self-righteousness falls before the rightness of eternal Truth. For inadequate self-sufficiency they can gain the sufficiency of the power of ever-present Spirit. Self-glorification yields to the glory of divine Principle, and self-gratification melts before the manifestations of complete being in the Life which knows no opposite.

In the blaze of this light the remaining troop of self-considerations must fall away. Self-condemnation, self-debasement, self-torture, and self-pity find no object to debase, condemn, or pity, where self is replaced by the reflection of Spirit. Finding the true state of man by the denial of a false selfhood, must reveal this exalted state as belonging to all of God's children. It removes the concept which crosses God's eternal purpose, and thus gives that correct view of man which, as Mrs. Eddy tells us (Science and Health, p. 477), enabled Jesus to heal the sick. This true following of Jesus, this healing work, the fit sequel to his liberating activity, was hardly considered a possibility before Mrs. Eddy discovered its Principle. The road to God's eternal kingdom is not a painful way through sorrow, disappointment, weakness, woe, and misery. Christian Science shows the road of self-denial and cross-bearing to be an ascending path, in which hope, endeavor, and overcoming bring us to the full joy and dominion of the Christ-idea.

IDEAL AND IDOL.

RICHARD P. VERRALL.

THE word ideal, as defined by Webster, is "a conception proposed by the mind for realization or attainment." Thus the realization of the only true God, and man as His likeness, should be the aim and end of all true Christian attainment. An idol, on the other hand, is "a representation or symbol of a deity made as an object of worship; hence, that on which the affections are strongly and improperly set; a person or a thing greatly loved or adored." In short, an idolater is "one who pays divine honors to that which is not God."

It is evident, from the foregoing, that sooner or later each individual of the human race must determine which of these two he will serve, for he cannot serve both. The Hebrew law forbade the making of "any graven image, or any likeness of any thing that is in heaven above, or that is in the earth beneath." And further, "Thou shalt not bow down thyself to them, nor serve them." In spite of this, however, not only the Israelites, but all mortals, seem to have fallen into the popular mistake of worshiping the creature more than the creator. Abraham, as a marked exception to the general rule, met this test, when asked to lay Isaac on the altar. Jesus also, when tempted in the wilderness, said, "It is written, Thou shalt worship the Lord thy God, and him only shalt thou serve." Saul, David, and Solomon all failed in some respects to meet the temptations of sensuous idolatry, and thus fell short of attaining the spiritual ideal.

The failure of the Jews to perceive the true source of the greatness of their ancestor Abraham, prevented them from ultimately beholding the one even greater than he; and being joined to their traditional idols of ceremonial worship, they crucified the very highest exponent of the spiritual idea. In process of time, Christendom fell into precisely the same error as did the Jews, by going directly to the opposite extreme, and through deifying Jesus as the personal Saviour, the real message of the impersonal Christ was obscured.

The Nicene creed, written early in the fourth century, and now regarded by Catholics and Protestants alike as the nearest approach to ecumenical authority, boldly asserts that Jesus is consubstantial with God. In spite of his oft-repeated protests to the contrary, this creed actually elevates Jesus to the plane of Deity, and proclaims him "God of God, Light of Light, Very God of Very God; Begotten not made, Being of one substance with the Father." It must be obvious to all thinkers that the ecclesiastical despotism which still holds mortals in bondage, is just as effectively crucifying the Saviour now as of old. The zealous adherents of these man-made beliefs fail to realize in our day, as did the Jews before them, that they have set up a theological idol in the place of the ideal, and have mistaken a personal teacher for the Principle that he revealed. In order to forestall a possible repetition of this oft-repeated error, Mrs. Eddy has patiently and persistently pointed out the dangers and deceptions produced by "personal contagion." In deprecating all forms of personal idolatry, she does not except its application even to herself, and says, "To think or speak of me in any manner as a Christ is sacrilegious. Such a statement would not only be false, but the absolute antipode of Christian Science, and would savor more of heathenism than of my doctrines" (*Sentinel*, Feb. 16, 1899).

As we grow in Christian Science toward the realization of the ideal man, it is not at all surprising that our human affections should center at times upon those who have helped us to gain this understanding. While this is pardonable at first, it must nevertheless be overcome, for it is a subtle temptation produced by a mistaken sense that all must learn to detect and resist. It is in fact the starting-point of all personal idolatry, and in the words of Mrs.

Digitized by Google

Eddy would ultimate in losing sight of "the Principle in its accessories, cause in effect, and faith in sight" (*Sentinel*, March 2, 1899). It will thus be seen that there is a very distinct dividing line between the ideal and the idol. When properly regarded, the ideal acts as a stimulus toward higher attainment, and serves as a finger-post pointing away from the limitations of human sense to the divine idea. So long as an instrument keeps our attention fixed upon the Principle which it represents, it is both useful and legitimate, but so soon as it becomes an object of worship, it is thereby transformed into an idol so subtle as to mislead and deceive the very elect.

PRACTICAL APPLICATION.

VERA G. CHISHOLM.

UPON being asked to teach the ten commandments to a class of little ones in the Sunday school, I felt the need of studying these commandments very thoroughly myself, that I might be able to get the spiritual as well as the literal meaning of the laws. One evening during the week following the first Sunday, I was troubled a great deal with a bad cold in the head. I breathed with difficulty, but was indifferent to the physical condition, as I knew that it was only a temporary sense.

After reading over the Lesson-Sermon, however, I chanced to take up the commandments again, and read the first; then I came to the second. What did it mean! "Thou shalt not make unto thee any graven image." What was a graven image in this day and age? I read on: "or any likeness of any thing that is in the heaven above, or that is in the earth beneath, or that is in the water under the earth." I again read: "Thou shalt not make unto thee any graven image, or any likeness of any thing that is . . . in the earth beneath." What was in the earth beneath? Why, sin, disease, and death; colds, for instance. It is common for mortals to have colds, and so I was imaging a cold, expressing something that is of the nature and quality of error,—believing it and bowing down to it and serving it.

Here was my answer, and I saw the truth so clearly that the inflammation and congestion gradually left, but so that I could feel it go, just as a mist rolls away; and the next day I was free. So much for my first week in trying to teach, demonstrate, and live the ten commandments.

"SEEDTIME AND HARVEST."

EDWARD F. BURNS, D.D.S.

A RECENT experience confirms the writer in the opinion that as Christian Scientists we should ever be sowing the seed—be diligently about our Father's business. One day I boarded a crowded railway train and was immediately recognized by a lady who had spent several weeks at the same sanitarium at which I was six and a half years previously. She at once inquired about my health, and said she had often wondered how I was and if I had recovered. My reply was that I was well; in fact, better than I had been for twenty years, as she could see if she had known me that long.

Our conversation then became general, during which she told me she had spent from several weeks to several months at a time in the same sanitarium since I was there. Just before we came to her station, she said that her family was contemplating moving to a town only a few miles from my home, which is in a much newer and less settled part of our state; then, as if the thought came to her mind suddenly, she exclaimed, "But what do you do when you want a good doctor?" She read her answer in my confident smile, for before I could say what came to my mind, viz., that my doctor was always with me, she exclaimed, "You are a Christian Scientist!" As the train rolled into the station she hurriedly told me she was sorry we had not talked about Christian Science all the time, as she was discouraged with *materia medica*. She also asked where she could get treatment, as she knew no Christian Scientist near her home.

It is my custom, when away from home, to carry in a convenient pocket those pages of the *Journal* which contain the names of practitioners in our state. I slipped these into her hand, also one of the pamphlets recently issued by the Publishing Society, and then helped her off the train. I consider it a blessed privilege to point any one who has exhausted all that material systems have to offer in a vain search for health, as this lady had done, to the great Physician. In doing this I believe we are doing God's work—sowing the good seed. And if we do this faithfully and constantly, who can say that the harvest will not be plentiful, for "God giveth the increase"?

TRUE SYMPATHY.

ELIZABETH EARL JONES.

IT is by no means uncommon for Christian Scientists to be condemned, by those who have but a superficial knowledge of this teaching, for their so-called lack of sympathy. Perhaps they are unsympathetic from the worldly point of view, and yet they have a practical way of expressing sympathy which is certainly deserving of commendation, in that it lovingly and tenderly removes the occasion on which the sufferer bases his appeal to his friends. This course is in accord with our Leader's teaching on page 367 of Science and Health, where she outlines the method to be followed with those to whom sin and its resultant penalty, disease and death, are all too obvious facts; namely, that "the tender word and Christian encouragement of an invalid, pitiful patience with his fears and the removal of them, are better than hecatombs of gushing theories, stereotyped borrowed speeches, and the doling of arguments, which are but so many parodies on legitimate Christian Science, aflame with divine Love."

True sympathy, then, as understood in Christian Science, is love tenderly descending to the human sense of need and lifting it into a consciousness of the infinite goodness of God. It is not difficult to picture to oneself the loneliness and longing for human society and humanly loving care which must have rent the heart of the poor leper of Palestine, isolated from his friends and kindred, though daily in sight of them. Wherever he went he must ring a bell, cry out the hateful words, "Unclean, unclean," and see his fellow creatures flee in terror. When he saw Jesus, hope welled up in his heart. There flashed before his vision a glowing picture. He saw himself restored to health, his return to home and loved ones, only to see the picture fade away because he would not be permitted to approach Jesus. In despair he sent forth his pitiful appeal: "Lord, if thou wilt, thou canst make me clean."

And what did Jesus do? He saw in a moment the leper's need. He approached the poor sufferer and laid a brotherly hand upon him, saying: "I will; be thou clean." Can we not imagine the heart healing, as well as the healing of body, which followed that Christly human touch? And is it not ours, through the understanding of God gained in Christian Science, to repeat this true sympathy, such as Jesus exercised, this ministry of blessing, in the instance of every one who will accept it?

The neglect of the English Bible incapacitates the rising generation to read and appreciate the masterpieces of English literature from Chaucer to Browning, and it strikes out of their consciousness one element, and for centuries the controlling element, in the production of your civilization and mine.—NICHOLAS MURRAY BUTLER.

SELECTED ARTICLES.

[Frederick Dixon in *Sheldrake's Aldershot Military Gazette*, Aldershot, England.]

Mr. Paget's lecture on Christian Science, reported in a recent issue of the *Gazette*, though he has been delivering it now for some years, cannot be said to have accomplished much in the way intended. It is true that he has not met with all the appreciation he might in his own profession.

It was, I think, at the Diocesan Conference of Bath and Wells that this new Peter the Hermit first called on the church and the doctors to unite against the Christian Scientists. It at least showed his respect for his opponents. For every five thousand representatives of the orthodox churches, there was perhaps half a Christian Scientist, and for every five thousand believers in medical practise, another half, but he did not believe in taking chances. If he could only get the tens of thousands into the field against the units, he felt the situation might still be saved. If in some village there had come to live a lady who believed that prayer could "reach the cells of the liver," she might be routed, the united eloquence of the pulpit and the surgeons would show that this was only possible for a pill. What was wanted, cried the new Peter, was "a furious, hating attack" on Christian Science; and he went on to show the heretical tendencies of the movement, without staying to reconcile the orthodoxy of "a furious, hating attack" with the command to love your neighbor as yourself. Some one in this critic's audiences should however insist that he read Science and Health before criticizing it.

Now Christian Science teaches that God, divine Mind, is the Principle and First Cause of spiritual creation, that consequently, God and His creation constitute all reality, and that consequently mortal mind and its subjective condition, the physical universe, are simply the negation of divine Mind and its creations. This is clearly what Jesus meant when he said to Nicodemus, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit;" and it is the distinction drawn by the apostle John in contrasting "the truth" spoken of by Jesus, with Pilate's question as to mere "truth." By "the truth," writes one of the greatest scholars who ever sat on the Episcopal bench, the evangelist means the absolute truth, the actual, or that which is, as opposed to the relative sense of truth conceived by Pilate.

The critic also went on to launch a charge of heresy against Christian Science. Now, of all the silly charges it is possible to get hold of, heresy is surely the silliest. Heresy is only another way of spelling progress, and the best definition of today's orthodoxy is yesterday's heresy, just as the best definition of heresy is tomorrow's orthodoxy. Jesus of Nazareth was the greatest heretic the world has ever seen. Berkeley was a philosophic heretic, Napoleon a military heretic, and Laennec a medical one. Did not coxcombs vanquish the first of these three with a grin? Did not Austrian generals complain that the second won by breaking the rules? Did not the leading medical papers sneer at the third for introducing a piece of wood into the sick-room? Human intelligence is inherently heretical, otherwise men and women would still be dancing round monoliths, with their bodies painted pink and green. The crest of the Society of Apothecaries is Apollo astride of an alligator with a hippopotamus overhead.

Orthodox Christianity has gone through as many changes as anything else. The Christianity of one century has never been the Christianity of the next. Our critic is as much a heretic in the eyes of Cardinal Bourne as Cranmer and Latimer were in the eyes of Cardinal Pole, and the act "*De heretico comburendo*" has not been disavowed. Naturally, the heresy of Christian Science horrifies this critic essentially in its medical aspect. Yet here, as on its theological side, it is in strict conformity with the Bible. The healing practised in Christian Science is, as a matter of fact, simply the demonstration of its theology, in strict accordance with the command of the gospels, "He that believeth on me, the works that I do shall he do also." If that sentence means anything at all, it means not that orthodoxy is to be tested by an acceptance of theological dogmas, but that the only proof of a man's understanding of the Christ is his ability to demonstrate that knowledge in the way demanded by Jesus.

Christian Science healing has been going on for approaching half a century. During that time, millions of cases of sickness, sin, sorrow, want, and misery of every kind have been mastered and destroyed, with the result that Christian Science has become the world movement of today. It contains members of the legislative chambers of the world, able soldiers and sailors, men who once belonged to the church and the medical profession, well-known business men, brilliant lawyers and men of science, writers and scholars, as well as a host of workers in the shops and factories of the great cities, or on the countryside. To give the inference that all these people are deceivers or self-deceived is simply as puerile as the idea so charmingly enunciated by another critic, that they should be stopped thinking by coercion.

The critic's ideas of evidence are as curious as those of the other critic respecting freedom of thought. He has collected a certain handful of cases which he relies on to prove his case. He gives them to the world without a particle of substantiation, or means of identification. As a matter of fact, those it has been possible to identify have no connection with Christian Science. When it is pointed out to him that this is not evidence, he asks naively why his word should not be taken. Picture the language of a judge, faced by the demand that the *ipse dixit* of a witness should be accepted as demonstrated truth.

As for the failures of Christian Science, the critic omits two interesting facts. First, that an enormous number of cases only come into the hands of Christian Scientists as a last resort, after the doctors have failed. Second, that no matter what mistakes a doctor may make, no one is any the wiser, and he gives his own certificate. If there were inquests on all those who die under medical treatment, most of the world would be impounded every day to sit on coroners' juries. Finally, his dark hint at horrors is a little unfortunate. In spite of the power of doctors to grant their own certificates, incidents occasionally get into the papers. We all know the often quoted case of the forceps which, sewn up in the patient, produced death. It is not apocryphal, and the details may be found in the *Times*. The fact is that this critic has set out to check the course of Christian Science armed with Dame Partington's mop. The higher the tide of Christian Science rises, the more actively he skips from the stage of the Diocesan Congress to that of the Parish Hall, trundling his mop all the time. Let him remember the dénouement of the allegory: the ocean advanced.

[W. C. Ferguson in *Albertan*, Calgary, Alberta.]

The Bishop of Edinburgh, in an address reported in a recent issue of the *Albertan*, upon the subject of "Suffering as one of the Difficulties of a Christian's Faith," made reference to Christian Science as follows: There are "three ways in which we can regard pain: 1. The short cut put forward by Christian Science; that only our minds create it. Every doctor knows that certain diseases are liable to be removed by a healthy imagination. This is a truth which we ought to use more than we do."

It would be difficult to say where the bishop obtained the information that Christian Science healed the sick by means of a healthy imagination, but it certainly was not from "Science and Health with Key to the Scriptures" by Mrs. Eddy, for on page 460 of that book she says: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through

Digitized by Google

right apprehension of the truth of being." It will be seen, therefore, that according to the teaching of Christian Science it is not a healthy imagination which accomplishes the healing work, but an understanding that man's true being is spiritual and harmonious.

The bishop is further quoted as follows: "But how are accidents to limbs, gunshot wounds, etc., created in our mind? No, Christian Science only covers a very small part of the difficulty." The teaching of Christian Science upon this seemingly difficult problem of human woe and suffering is very concisely put on page 188 of the text-book above referred to: "Mortal existence is a dream of pain and pleasure in matter, a dream of sin, sickness, and death; and it is like the dream we have in sleep, in which every one recognizes his condition to be wholly a state of mind. In both the waking and the sleeping dream, the dreamer thinks that his body is material and the suffering is in that body."

It is through the recognition of the different discordant conditions of this human existence as nothing more than an erroneous sense experience, and the perception of spiritual man as the only reality, that the healing work is done in Christian Science. And since all mortal phenomena are a part of this dream-existence, "accidents to limbs, gunshot wounds," as well as the less serious discords, it will be seen that, in place of covering a very small part of the difficulty, Christian Science offers a solution to every problem of sickness, pain, and worry to which mortals are heir. That this is not mere theory is proved by the lives of thousands, yes, hundreds of thousands, of people who, after trying every other means of relief, have turned to Christian Science and been healed.

[W. E. Fell in *Sheffield* (Eng.) *Daily Telegraph.*]

In the *Telegraph's* report of the Sheffield church revival, Archdeacon Madden quotes Sir Oliver Lodge, with marked disapproval, as saying that sin was a thing not to be worried about, and that this was the attitude of the higher man today. Also that Christian Scientists regarded sin as a matter of the imagination. To leave the latter statement as it stands would be to convey a wrong impression of the teaching of Christian Science on this important topic. Christian Science awakens the sinner, and teaches him that he is forgiven only as sin is forsaken and destroyed. To the carnal mind, that mind which St. Paul declared to be "enmity against God," sin is by no means a phenomenon of the imagination; it is only too real. The apostle, however, explains in the eighth chapter of the epistle to the Romans, that the false mentality or carnal mind is no real part of the spiritual man in God's image and likeness,—"is not subject to the law of God."

Jesus said to Nicodemus, much to his astonishment, that he, the carnal-minded, must be born again, of water, purity, and Spirit, or he could not see the kingdom of God. People are every whit as much astonished today, when Christian Science reiterates this demand of the Master, as was Nicodemus two thousand years ago. Jesus declared that sin, or the devil, "abode not in the truth, because there is no truth in him;" and that he is "a liar, and the father of it." Positively, that which has no truth in it cannot be described as real. Evil is a negation, a belief in the absence of good, but good is omnipresent, for God is good, and there can be no other presence than the all-presence.

Just so long as we believe in the reality of evil, and therefore fear it, we are under its suppositional dominion. Evil has no more power, presence, or knowledge than we permit it in our own consciousness. God, good, is all the power there is, all the presence there is, and all the knowledge or science there is, else His attributes are meaningless jargon. If evil is real or part of His universe, God created it, for the Bible tells us that "all things were made by him; and without him was not any thing made that was made." Either God made evil, or evil has no existence in the realm of the real. If God made evil, man's case is hopeless, for the nearer he approaches to God the nearer must he approach to evil and its baneful train,—sin, disease, and death. The Scriptures inform us, however, that God is of too pure eyes to behold evil, and cannot look on iniquity. We can here and now prove the unreality of evil by ceasing to sin.

[George Shaw Cook in *Beacon-News*, Aurora, Ill.]

A contributor says in a recent issue: "The assertion made by Christian Scientists that God is All-in-all, is destitute of meaning;" and then adds, "so far as mortals can comprehend it." Perhaps in that last clause he has in a measure at least answered his own question. For it will be remembered that Paul in his first letter to the Corinthians said: "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

It requires no study of the context to see that Paul referred in this passage to the difficulty which mortals experience in discerning the truth about God. Your correspondent is not the only one who has found it difficult to understand the various definitions of God contained in the Scriptures as interpreted by Christian Science. Yet this interpretation, while difficult for some to understand, is easy for others; and no one need despair who is earnestly seeking to know the truth about God and man. Indeed, this very desire for truth makes it possible for the light of spiritual understanding to penetrate the darkness of human ignorance. This divine light, coming into the human thought, removes prejudice and other mental conditions which obscure the vision of mortal man. Through this process he gradually acquires the true spiritual discernment, without which, as Paul says, one cannot know the things of God.

God, according to the Scriptures and as defined in "Science and Health with Key to the Scriptures" by Mrs. Eddy, is Spirit. He is also described as infinite and *omnipresent.* That which is infinite and omnipresent is necessarily all inclusive, and therefore includes all that exists. That which is all inclusive is obviously All-in-all. On page 468 of the Christian Science text-book we further read: "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all. Spirit is immortal Truth; matter is mortal error. Spirit is the real and eternal; matter is the unreal and temporal."

This passage may not be clear to your correspondent, but it is understood by hundreds of thousands, who have made it their basis for separating the chaff from the wheat. They have been able in this way to eliminate from their present experience many of the ills which are due primarily to a false concept of God. By gaining through Christian Science the spiritual understanding of God as divine Mind, and of man and the universe as the infinite manifestation, or reflection, or evidence, of that one infinite, divine cause, they have become able to a considerable extent to separate the false from the true. In this way they are beginning to learn that even though the evils of mortal existence may seem real to human sense, they are not like God, Spirit, Mind—the only cause; therefore they are not real and eternal, but are, as Mrs. Eddy says, "unreal and temporal." This knowledge of the fleeting insubstantial nature of evil and matter is enabling Christian Scientists to gain greater dominion over all the ills to which mortal flesh is heir.

[Olcott Haskell in *San Francisco* (Cal.) *Call.*]

The article by Dr. Walsh in a recent issue on "The Dread Disease" sounds a note which may profitably be heeded, viz., "The worst troubles are those that never happen." This gentleman admits that fear of sickness "is probably more common now than it used to be, partly because people know more about . . . disease."

Dr. Walsh concludes his article with the statement: "What these patients need is the courage to be well, the

Digitized by Google

confidence in a physician who knows enough to be able to tell them that they have nothing serious the matter, and then such occupation of mind . . . that they have not time to think of themselves."

Is any human judgment equal to the task of filling the sacred office of "a physician who knows"? And what hope is offered for those who have diseases which are considered real and incurable? Such questions are answered by the fact that some have found the great Physician—the Physician who never lost a case and who said: "Fear not," "the truth shall make you free." "Nothing shall by any means hurt you."

From the citations given by Dr. Walsh it would appear that even the history of charlatans and of the most "irregular therapeutics" can throw some light upon the working of the human mind and its needless picturing of disease; but if the doctor would read carefully the text-book of Christian Science he would find in it a system of emphatically "regular" therapeutics to which the term "Eddyism" is no more applicable than would the term "Newtonism" be to the law of gravitation, for this Science is based not upon empirical experiments, but upon Principle, upon the fundamental relations of God and man.

This study of God, and of man's true being, not only tends of itself to establish health, but furnishes such occupation of mind that the patients have not time to think of themselves. The Founder of Christianity said: "If any man will come after me, let him deny himself," and Mrs. Eddy emphasizes the same thought where she writes: "We should forget our bodies in remembering good and the human race. Good demands of man every hour, in which to work out the problem of being" (Science and Health, p. 261).

[Frank C. Barrett in *Express-Advertiser*, Portland, Me.]

In an issue of recent date an article under the caption, "Does God Fix the Death Rate?" contains the statement that "the Christian Scientists who close their eyes to the possibilities of material aid, which may often so potently be added to the psychotherapy they are employing, swell the death rate."

For the benefit of those who may have gained an erroneous impression of the teachings of Christian Science from the statement quoted above, it is only fair to state that Christian Science bears no relation whatever to "psychotherapy," *i.e.*, mental suggestion, hypnotism, faith-cure, etc., which is the exercise of the mortal or carnal mind. We read in Romans: "For to be carnally minded is death; but to be spiritually minded is life and peace." Here are mentioned two opposite states or conditions of mind, the one attended by evil results, the other by the very best possible results, which it is plain cannot be attained by "material aid." Near the close of Jesus' ministry he said: "He that believeth on me, the works that I do shall he do also; . . . because I go unto my Father." It is evident from this that Jesus expected his example to be perpetuated by his followers throughout all time, because he was going away; but his teaching he left for all. He did not use psychotherapy, which is only a new name for will-power, etc., and he proved for all time that it is God who "forgiveth all thine iniquities; who healeth all thy diseases."

Christian Science teaches that those who would follow the Master in his works must have that "mind" in them "which was also in Christ Jesus," which is quite a different thing from the carnal mind which is employed in psychotherapy. So we can pardon our critic for thinking that material aid might be useful in psychotherapy (which he mistakenly assumes is the practise of Christian Science), because psychotherapy itself is a very material theory which doubtless needs material props, since it is likely to do more harm than good. Christian Science, on the other hand, avoids the necessity for material aid by adopting the same method that Jesus and his disciples used with such unparalleled success in the first century, and which, as it is applied in Christian Science, has during the last forty years healed many thousands after every material aid had been employed in vain.

Thus, through the practise of Christian Science, the death rate has been quite perceptibly lowered, and there is no doubt but that when God is better understood and given an opportunity, the death rate will become obsolete, for it was the Master who said: "Verily, verily, I say unto you, If a man keep my saying, he shall never see death."

[Willis D. McKinstry in *Parsons* (Kan.) *Eclipse*.]

It is unfortunate that a clergyman in his endeavors to help humanity has found it necessary to attack other Christian organizations, that he might build up the one with which he has associated his faith. In his attempts to do good, our reverend critic might profit by the words of the great Jewish counselor, Gamaliel, who said: "Ye men of Israel, take heed to yourselves what ye intend to do as touching these men. . . . Let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

For one to be a true critic he must have a thorough knowledge of the subject criticized. By reason of our critic's misconception of Christian Science, he is unable to demonstrate its teachings, and his attack does not disprove that Christian Science is the word of God demonstrated to this age. Christ Jesus demonstrated that the sinner and the sick are healed by the same process when he said (regarding the man sick of the palsy): "For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" It was Jesus' understanding of the spiritual law of cause and effect that enabled him to perform his ministry in the healing of the sick as well as the saving of sinners; hence the importance of his words to him that believeth: "The works that I do shall he do also."

Truth is unchangeable, and a spiritual knowledge of God as Truth, as unchanging Life and Love, perpetually and eternally governing all that He has made (and He is the only creator), must necessarily perform the same works today as in Jesus' time; hence the command, "Go ye into all the world, and preach the gospel." "Heal the sick," is as imperative now as when spoken by the Nazarene. The Scripture also says, "By their fruits ye shall know them."

[Elizabeth T. Bell in *News and Courier*, Charleston, S. C.]

A review in the *Sunday News* of "A Life of Jesus," by Major S. H. M. Byers, after repudiating the book as incorrect in historical statement and false in its teaching, suggests that the author may be a Christian Scientist. Why guess at his religion? Why not let him decide for himself what he really is? We know neither the book nor the author, but we do know that Christian Science demands exactness in action, speech, and thought, and careless or suppositional statements such as this book is said to contain have no place in its work. We heartily agree that "the best 'Life of Our Lord' is to be found in the four gospels." In quoting the Christian Science text-book, we find these statements: "The term Christ Jesus, or Jesus the Christ (to give the full and proper translation of the Greek), may be rendered 'Jesus the anointed,' Jesus the God-crowned or the divinely royal man." Again: "The reappearing of Jesus was not the return of a spirit. He presented the same body that he had before his crucifixion, and so glorified the supremacy of Mind over matter" (Science and Health, pp. 313, 45). Christian Science has nothing whatever in common with spiritualism. Such mistaken conceptions of religious teachings emphasize the fact that when criticizing another's statements we should be sure of the correctness of our own.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

PRECEPT AND PRACTISE.

RECENTLY the time seemed opportune to refer in these columns to the support which should be accorded the newspaper and magazines which Mrs. Eddy established as the official publications of the Christian Science movement, attention being specially directed to a request which our Leader had made in November, 1908, in behalf of *The Christian Science Monitor*. Perhaps this request had not heretofore been seen by many who have become Christian Scientists during the past four years; perhaps others had forgotten it. Still others, even with Mrs. Eddy's request before them, were not awake to the possibilities for good through the circulation of a clean and wholesome newspaper. That the *Monitor* is proving to be the leaven which Mrs. Eddy intended it should be in the newspaper world, is proved by the favorable comment it has received from newspaper men in all sections, and there can be no doubt that its usefulness in this way will be greatly broadened as its circulation is increased. It is gratifying, therefore, to find, through letters which have since been received at this office, that many *Sentinel* readers were grateful for having had their attention called to Mrs. Eddy's request, and one of them gives such apt expression to this gratitude that we take pleasure in sharing it, having been accorded the necessary permission by the writer. The letter is as follows:—

"I wish to thank you for the merited yet unwitting rebuke for me, contained in your editorial concerning the *Monitor*, 'Blessing and Blessed,' in the *Sentinel* of Dec. 28, 1912, and I am glad to make slight amends at this time by enclosing my check for a year's subscription to the *Monitor*.

"For years I was engaged in the newspaper business, either as department manager, general manager, or publisher of one or another metropolitan daily newspaper, and had long recognized the influence for good that a newspaper might exercise such as Mrs. Eddy proposed when she offered to the public a daily publication that should 'injure no man, but . . . bless all mankind;' though, in common with publishers generally, I lacked the courage to launch such a publication. Although I was one of the first to welcome and subscribe to the *Monitor*, and long took keen delight in perusing its beautiful columns of clean, wholesome reading matter, yet after two years error stealthily crept in, and finally I persuaded myself that, what with the *Journal*, the *Sentinel*, the *Monitor*, and the daily *Lesson*, I was surfeited with Christian Science literature, having no sufficient time for the local newspapers and other desirable reading matter.

"Your editorial reminded me of my fourteen years of suffering, during which I was repeatedly forced to retire from business on account of my physical condition, and when much of the time I had little desire for reading matter of any nature. It also reminded me that during those fourteen years I expended a fortune with the medical practitioners, in medicine and in travel, and in all ways that promised relief, in the mean time consistently refusing the entreaties of friends that I try Christian Science; only at last to admit to myself, as the doctors had already admitted to me, that there was no longer a possibility of my recovery. So I concluded I might as well please those friends by submitting myself to Christian Science treatment, though convinced at the time that there was no hope of any actual help from such a source for a man really ill, as I was. It reminded me, too, that the splendid health I have enjoyed for the past nine years, the peace, happiness, success, and friends, —these have come to me because Mrs. Eddy lived, studied, suffered, worked, was spiritually-minded, and yielded herself to the injunction to 'let this mind be in you, which was also in Christ Jesus.'

"And I was again reminded of my very great debt to her. As quoted in your editorial, Mrs. Eddy said, 'My desire is that every Christian Scientist and as many others as possible subscribe for and read our daily newspaper.' How small a thing for me to do to be obedient to this request! So small for *every* Christian Scientist! I know that no one factor has done so much as the *Monitor* to elevate and purify both the news and advertising columns of the press of the world. Its standard has worked wonders for purity, and its success has been marvelous to publishers generally. Its potency for good is beyond measure. I rejoice in its glory, and again I would thank you for your editorial."

On page 201 of Science and Health Mrs. Eddy says: "The best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death." We are indebted to our correspondent for a concrete illustration of this precept.

ARCHIBALD MCLELLAN.

CLINGING TO EARTH.

MRS. EDDY says: "When mortal man blends his thoughts of existence with the spiritual and works only as God works, he will no longer grope in the dark and cling to earth because he has not tasted heaven" (Science and Health, p. 263). How many are there who can honestly assure themselves that they are striving to do what is here demanded, that is, making the spiritual the basis of all their thinking and doing? Is there not a wide-spread tendency to cling to materiality in the vain attempt to spiritualize it, when the Master taught in unmistakable terms that it must be denied and given up? The sad thing is that this *clinging* to earth and earthliness robs those who do it of the joys of heaven, which are attainable by all who consistently and steadfastly refuse to be defrauded by the counterfeits of mortal belief. Paul declared that the things seen through material sense were "temporal," and that we should turn away from them, throw off the burden imposed by this false sense, and find the things which are "eternal in the heavens."

For the same reason the beloved apostle bids us "love not the world, neither the things that are in the world;" to which he adds: "If any man love the world, the love of the Father is not in him;" a strong argument, surely, for letting go of the mortal and material sense of things. Now it sometimes happens that students of Christian Science are unwittingly led to cling to materiality by their well-meant but mistaken efforts to help an inquirer into the kingdom by some other way than the one which is strait and narrow. The questioner, who possibly is very critical of the teachings of Christian Science, asks, "Would you have me deny all the beautiful things which I see around me, and try to imagine that the universe is an empty void?" This would of course be far from the teaching of Christian Science, and the danger comes when the student tries to explain that in reality all things are spiritual. In his effort to help a struggler he may go beyond his own depth and make it appear that material things are all right if only you try to think of them as spiritual, which is far indeed from the truth as given to the world by Mrs. Eddy, who says plainly (Science and Health, p. 337) that "temporal things are the thoughts of mortals and are the unreal, being the opposite of the real or the spiritual and eternal."

We thus see that material objects are not even a reflection of the real, but a counterfeit presentation of reality; and this brings us back to Paul's statement that eye hath not seen, nor ear heard the things of God, and that these must be spiritually discerned. True it is that Jesus bade us consider the lilies, but how many are there who have done so in his way and learned the lesson they have to give? How

Digitized by Google

many see in their purity the rebuke of Spirit, remember that only the pure in heart can see God, and who therefore see good at every step of the way? How many understand that the kingdom of God is inseparable from His righteousness, and that neither can be attained while we "cling to earth"? We should never forget that the joys of spiritual existence more than compensate us for giving up that which is at best fast slipping away from us.

Jesus had much to say about the joy which is inseparable from holiness, spiritual consciousness. He said to his disciples, "Your joy no man taketh from you," and he said this when error was making its fiercest attacks upon him and the little band of faithful followers. Paul tells us that the sufferings of our testing period "are not worthy to be compared with the glory that shall be revealed in us" (not alone to us) when we cease to cling to earth and its delusions. As we let go of the material sense of things and grasp firmly the spiritual, we find freedom, health, strength, peace, and plenty, with the joys of heaven.

ANNIE M. KNOTT.

"YE ARE MY WITNESSES."

THERE was never a time, surely, when the world was in greater need than it is today of witnesses to the truth, those who in humble walks and ways make it convincingly appear to men; and whatever our own sense of delinquency, we may rejoice that consecrated Christian Scientists are bringing this about, and that every one of us may have a part in this great achievement for God.

In the early days of Christianity some of the most effective ministers were plain, unschooled commoners. They were quite innocent of the wisdom of the schools, they made no pretense of being anybody, and yet from these Christ Jesus selected those who were to assume the greatest responsibility and receive the highest commission ever assigned to men, namely, to preach his gospel and heal the sick. Despite this fact, however, Christian ministry is thought of by most Christian people today as the prerogative and distinction of a limited class, and this at once places it under a handicap. The appeal of the ecclesiastic can but be the less effective, in so far as his activity is thought of as professional, as being prompted by a motive which is not wholly disinterested, and this prejudice often gives the business man *entrée* where the clergy are practically excluded.

That every Christian Scientist should be ready to give a reason for the hope that is in him, is therefore a matter not only of primary importance to his own growth and satisfaction, but it immediately concerns the dissemination of the truth for which he stands. It is the individual demonstration that sickness and sin can be healed through "faith in God," and the consistent testimony thereto by Christian Scientists in their business and social contact with men, which counts for the advance of this cause, and the adequate "minister of Christ" is he who has proved the verity of the Master's teaching and who is wise and tactful in presenting it to others. As Mrs. Eddy has reminded us on page 37 of Science and Health, the declaration "Ye are my witnesses, saith the Lord" is nothing less than the call of God to each and every one of us to exercise and enter into the joy of all the privileges of Christian priesthood. Theoretically, Protestantism has always stood for this idea, but in denying that the believer can do the Master's works today in proof of the truth of his teaching, it not only does not inspire men to make the effort to fulfil this individual ministry, it practically interdicts the undertaking. Christian Science is a return to the faith and habit of the early Christians in this regard, and the world is rapidly recognizing it as such.

Illustrations of this new-old order of Christian living and doing are to be found today in every human relation and avocation, and they are reviving as could nothing else the universal hope expressed in the prayer "Thy kingdom come." To cite a single instance: In a large engine repair shop, not long since, one of the workmen became deeply interested in Christian Science, and his firm stand for it among "the boys" became known to the superintendent, who in a spirit of good-natured raillery said to him one day: "How is it that you can take up with this fool-idea that when a man's sick he don't have to have a doctor? When an engine goes wrong on the road, the thing to do is to bring it into the shop, so that we can look it over and fix it up. You know that, and when a man gets out of whack why shouldn't he be treated in the same sensible way?"

This gave the beginner his opportunity, and his thought was clear enough to take advantage of it. "Yes," he said, "you're right, boss! If an engine goes wrong, the thing to do is to haul it off and put it in shape; but you wouldn't take it to another imperfect engine, would you, to have it fixed up? If a man's sick, he needs repairing, sure; but instead of sending him to another person who at his best knows mighty little about disease and less about its cure, I'd send him to God who, as the Bible says, healeth all our diseases, wouldn't you?"

This straightforward, common-sense query had but one answer, and the superintendent saw it. He had heard the gospel "preached with power," and it was the more convincing because it came from a man who, as he knew, had been doing better work and more of it, ever since he had become possessed of this "new idea."

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

ATCHISON, KAN.—As the construction of the new Christian Science church, at Fourth and Santa Fe streets, nears completion, it discloses an imposing structure of the Grecian Ionic order. While a small church, it will compare in beauty with the famous Christian Science churches of the larger cities. Atchison people have little idea of the magnificence of the interior. Its style and richness will prove a revelation. The auditorium will seat four hundred, and this can be increased to five hundred by throwing open the commodious foyer. The contractor has promised to have the church completed for use Easter Sunday.—*Atchison Globe.*

BROOKLYN, N. Y.—The first large Christian Science temple erected in Brooklyn was opened informally Nov. 17. It is First Church of Christ, Scientist, and is at New York avenue and Dean street. The old building has been outgrown by the congregation, and it was deemed advisable to hold the services in the new structure, which is not quite finished, at the earliest possible date. The church is of white stone, and seats ten hundred and thirty-six persons. Payment is being made as the work progresses, and the outlay so far has been two hundred and forty thousand dollars.

Brooklyn Times.

MOOSE JAW, SASKATCHEWAN.—An object of much interest to passers-by has been the beautiful little structure at the corner of Sixth avenue and Oxford street. It is the new Christian Science church and will be opened Dec. 22. It would be hard to find in Moose Jaw a building where so much originality and taste have been shown in design and interior economy. The meetings formerly held in the Odd Fellows' hall will now be held in the new church, which financially is wonderfully well fixed. The society in Moose Jaw owns property with a frontage of one hundred and forty feet on Sixth avenue and one hundred feet on Oxford street. Forty feet of the frontage on Sixth avenue is now occupied by the church, while the hundred feet on both streets is held in reserve. The Moose Jaw congregation was organized on Oct. 23, 1906, and has been steadily increasing in number ever since.—*Morning News.*

MILLIKEN, COL.—A Christian Science service was held here for the first time, on Dec. 8, according to a letter to the committee on publication for Colorado. Milliken is a new town about two years old and about fifty miles north of Denver, on the Denver and Northwestern railway.

ATLANTA, GA.—Plans are complete for the new Christian Science church to be erected at the northeast corner of Peachtree street and Peachtree circle. The church will cost something near one hundred thousand dollars, and it is expected that work on it will be started not later than early spring. The seating capacity of the church will be nearly one thousand. The lot was bought several years ago for sixteen thousand dollars, and the church has refused various offers up to thirty thousand dollars. The lot is held to be worth fifty or sixty thousand dollars.

Local Christian Scientists started their meetings in halls and later had rooms in the Grand building, then the Baker Street church, and still later leased the present quarters on North Broad street, near Peachtree.—*Georgian.*

FITCHBURG, MASS.—According to information gathered from officials of First Church of Christ, Scientist, Fitchburg, as a result of the generosity of Henry F. Coggshall, who bequeathed five thousand dollars to the building fund of the church, as set forth in his will offered for probate, this religious organization is likely to have an edifice of its own before a great while. For several years this body has worshiped in Wallace hall, but the growth and prosperity of the church, it is said, has recently made apparent the necessity of procuring a building of its own. A building fund has been accumulating for that purpose for some time, and a committee has been appointed by the board of directors to consider the matter.—*Fitchburg News.*

CANTON, OHIO.—First Church of Christ, Scientist, has purchased for a church home a property on North Cleveland avenue, in one of the best residence portions of the city. The lot is seventy by two hundred and twenty and is just north of the Harter estate. This location was unanimously agreed upon by the church at a recent meeting, and the purchase was completed the past week. The church is much gratified over this forward step, but the unity expressed regarding it is still greater cause for rejoicing. It has not yet been decided whether the present building will be remodeled for immediate use, or work commenced on the edifice which is to be erected on the site. The church has practically outgrown the hall in the Erwin block, South Cleveland avenue, it has occupied for the past two years, and the need of more commodious quarters, which has been apparent for some time, resulted in the present purchase.

Correspondence.

BLACKPOOL, ENGLAND.—First Church of Christ, Scientist, is making wonderful strides in Blackpool. It is only some six years ago that a little band of enthusiastic adherents gathered together to found the church in Blackpool. They numbered half a dozen then. Now there are three hundred odd who have embraced the new form of Christian faith, and they meet in a very cozy sanctuary in Egerton road, North Shore. The services are all well attended, and no doubt whatever can be entertained that both spiritual and physical benefit has attended the movement in Blackpool. Unlike most branches of the Christian church, the cause is growing, and growing rapidly.

The annual thanksgiving service, which is in the nature of an anniversary celebration, was held on Saturday afternoon [Nov. 23]. The church was filled with worshipers, so that there was not a seat to spare. In Christian Science the promises of God are claimed literally, and in all parts of the world testimonies are given of healings as miraculous as in the days of old. And, as in the days of Jesus and the apostles, it is looked upon as an essential part of true religion that public acknowledgment of blessings received should be given.—*Blackpool Times.*

THE LECTURES.

CHICAGO, ILL.

In introducing William D. McCrackan, M.A., who lectured at Fifth Church on the subject of Christian Science, John S. Coonley said:—

Among the many admonitions that come to us from the Bible, none is more important than that which St. Paul gave us in his epistle to the Philippians, when he said, "Work out your own salvation." From that day to this there has scarcely a person lived who has not endeavored to follow out this command. But how to do this has been the great and apparently unanswerable question. In the cycles of time one did appear whose spiritual perception was big enough and keen enough to apprehend the way of salvation as *taught* and practised by Christ Jesus; and in our text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy has set forth these spiritual laws so that any one who honestly desires may study, assimilate, and apply them, and immediately see the results in more abundant health, greater happiness, and a more courageous outlook on life.

We are privileged this evening to listen to one who speaks on the subject of Christian Science with authority. By reason of what is said here this evening, some measure of fear, discouragement, or whatever it is that seems to bind or burden, will be lifted from each heart, and we shall go forth with a greater assurance of the ever-presence of God and of His availability.—*Correspondence.*

ST. JOHNSBURY, VT.

The remarks of the Rev. B. F. Butler, Universalist minister, in introducing Clarence C. Eaton, who lectured on Christian Science in the Colonial theater, were as follows:—

It is my privilege and also my pleasure to speak a word of introduction regarding the speaker of the evening. For several reasons it is my pleasure to do so. It is a pleasure in the first place because he comes representing a people of whom I think as fellow members of the household of Christ, as fellow Christians. For to be a Christian, as I understand it, is not a matter of assent to a certain number of intellectual propositions, dogmas. It makes no difference whether those propositions are the especial property of the Methodist, Baptist, Presbyterian, Universalist, Unitarian, or even Christian Science church, but to be a Christian is first of all a matter of character, Christlike character. And I have seen among you a sufficient number of those possessing this, so that I can without reserve address you as fellow members of Christ's household.

Again, I am pleased to speak this word because you as Christian Scientists and we as Universalists walk so far together along the same pathway of Truth. The heart of that which you emphasize is precisely the same as the heart of that which we emphasize, the immanence of God; we are also here to say, "This is none other but the house of God, and this is the gate of heaven;" unseen by the eye of flesh, yet in Him "we live, and move, and have our being." We are also here to say that God is one whose nature as well as name is Love. Consequently you have a right to think and we have a right to think that we in common are teaching the world a message we may well call "the good news and glad tidings." We bid you Godspeed as you stand with us to emphasize this.

Again, whenever any individual is of sound mind and has in his heart the love of God and man, he is entitled to a hearing and fair judgment, whatever may be our conclusion as to principles laid down. So far as our paths may diverge, I trust we are sufficiently large in spirit to say "diversities of gifts," interpretations and administrations, but the one God and Father, the one Lord and Master.

Correspondence.

BELLINGHAM, WASH.

The Metropolitan opera house was crowded to hear the lecture on Christian Science by Virgil O. Strickler. The introductory address by W. H. Patchin of the Normal faculty was as follows:—

You have assembled here this evening to listen to the discussion of a subject which attracts the attention of the civilized world. Only a few decades have passed since the Discoverer of Christian Science, Mary Baker Eddy, announced her new thought, yet in that time it has gained substantial support and won thousands of followers. I think no man is truly educated unless he is informed as to the principles and objects of all great movements working for the advancement of humanity,—those great forces operating to alleviate suffering and misery. Christian Science does profess to go to the very foundation of all discordant conditions by substituting for superstition and belief a better thought, a correct concept of God, man, and the universe, and their relations to each other.

Your presence here indicates that you are seeking after truth. We that have been healed and redeemed by the tender ministrations of Christian Science believe we have found the truth,—we can truly testify that life has assumed a better, nobler, purer, healthier, holier outlook by reason of our study of this Science and an honest attempt to embody its teachings in our living.—*Correspondence.*

IOWA CITY, IOWA.

Frank H. Leonard addressed a deeply interested audience at the Englert theater on Christian Science. The lecturer was introduced by Postmaster Henry G. Walker as follows:—

While I am not a Christian Scientist, it gives me no small amount of pleasure to be called upon to introduce to this audience the speaker of this afternoon. Present-day religious thought is characterized by an openness of mind and a search after truth capable of demonstration. To this attitude of mind and to this pursuit of knowledge may be attributed, in large measure, the marvelous growth of Christian Science, which in less than a generation, without seeking to add to its own strength by attacking other creeds, without attempting to attract the impressionable by spectacular public display, without even an endeavor to increase its membership through solicitation, has grown to be an institution far greater than is indicated by its fifteen hundred churches and approximately two hundred thousand members.—*Iowa City Press.*

GENEVA, SWITZERLAND.

Bliss Knapp gave a lecture on Christian Science in the Casino de St. Pierre, before an interested audience, three quarters of whom were French-speaking people. Mr. Knapp was introduced in French by Charles E. Vouga, first reader, who said in part,—

There is a law governing each group of Christian Scientists in the world, and unless this law, which is taught by Christian Science, is being demonstrated and proved, there can be no successful mission, no vitality for any of them. The fact that at the present moment there are more than fourteen hundred Christian Science churches and societies, which bring together twice a week thousands of listeners, and also the fact that Christian Science is spreading all over the world and is in no way hindered by the seeming barriers of race, language, and temperament,—these facts prove undoubtedly that demonstration of this law is being constantly made. They also indicate that Christian Science can be demonstrated with absolute accuracy, provided one is willing to study it thoroughly and put it into practise.

Christian Science brings us the understanding of God which Christ Jesus had, an understanding which the world has almost entirely lost. Nineteen centuries ago, Jesus said to those who were willing to listen to him: "Ye shall know the truth, and the truth shall make you free," and he went through Palestine proving his words by healing people of their moral and physical diseases, freeing them from their bondage, their errors, and also accomplishing acts that short-sighted mortals called miracles. Jesus said also: "This is life eternal, that they might know thee the only true God;" and he demonstrated this saying by his resurrection, showing tangibly that man's true being, which is spiritual, never dies. This truth, this knowledge of which Jesus spoke, is taught to us again by Christian Science.—*Correspondence.*

SHARON, MASS.

In introducing Prof. Hermann S. Hering, who lectured on Christian Science in the Unitarian church, Howard D. Kenyon, first reader, said:—

During the month now closing, we have again observed the anniversary of the discovery of America. To the people of medieval Europe there was no such thing as a western continent, and the possibility of its existence did not enter their minds. The discoveries of Columbus did not make an American continent, but they proved conclusively that there was one. Every truth has and will continue to have an existence that is absolutely unaffected by our knowledge of it or by our acceptance or rejection of it. To be of service to humanity, however, there must be an individual to perceive the truth, demonstrate its worth, and present it to the world.

Nearly fifty years ago, through a spiritual understanding of the Scriptures, Mrs. Eddy discovered the great truths which have resulted in the Christian Science movement. Like Columbus of old, she created nothing new, but her discoveries have revealed to hundreds of thousands in this country and abroad a world of great possibilities for good wherein the morally and physically imperfect begins to pass away.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Alpena, Mich.—Temple theater, 8 p.m., Feb. 6.
Berkeley, Cal.—High school auditorium, Grove street and Alston way, 8 p.m., Feb. 3.
Cumberland, Md.—City hall auditorium, 8 p.m., Jan. 31.
Daytona, Fla.—Palmetto Club house, 8 p.m., Feb. 3.
Galveston, Texas.—Hotel Galvez, 8 p.m., Feb. 3.
Grangeville, Idaho.—I. O. O. F. opera house, 8 p.m., Jan. 27.
Huntington Beach, Cal.—Odd Fellows hall, Main and Ocean avenue, 8 p.m., Feb. 3.
Jacksonville, Fla.—Morocco temple, Newman and Monroe streets, 3 p.m., Feb. 2.
Jamestown, N. Y.—Samuel's opera house, 3 p.m., Feb. 2.
Key West, Fla.—Church edifice, corner Division and Georgia streets, 8 p.m., Feb. 6.
Manchester, England (Second Church).—Free Trade hall, 7:30 p.m., Jan. 31.
Miami and Cocoanut Grove, Fla.—Auditorium new school building, Miami, 8 p.m., Feb. 4.
Oxford, Mich.—Oxford opera house, 8 p.m., Feb. 4.
Payette, Idaho.—8 p.m., Feb. 7.
Peekskill, N. Y.—Colonial theater, 3 p.m., Feb. 2.
Port Huron, Mich.—Society hall, White block, 8 p.m., Feb. 7.
Saginaw, Mich.—Masonic temple, Washington avenue and Johnston street, 8:15 p.m., Feb. 3.
San Francisco, Cal. (Fourth Church).—Dreamland rink, Post and Steiner streets, 3 p.m., Feb. 2.
Winlock, Wash.—Mutrie hall, 8:15 p.m., Jan. 30.

TESTIMONIES OF HEALING.

It is not long since the healing truth taught in Christian Science unlocked my prison door and made me free, and what this has meant to me words can never tell. From a little girl I never knew what it was to be well. I was always ailing, and as I grew up my ailments increased with each year, so that I had to give up my studies entirely the second year at high school, and also the one ambition of my life at that time, graduation.

A year later I went East to school, in the hope that the change would help me, but again I had to give it up. I was ill for many weeks, and the doctor who was attending me said he could do no more for me. Another doctor was called, and he advised an operation. This was performed, and for a while I was better and able to go home; but I suffered greatly with my back and pain in my limbs, and walking at times was a hardship. The doctor said I was going into a decline and would never be well. After I was married I tried another doctor, and he said I had spinal trouble. For some time I had electric treatments, but I kept getting worse and the pain more severe. I was an invalid after the birth of my son, and another operation was performed. Still I was no better, and had one ailment after another until I experienced nervous collapse, which left my eyes in such a condition that it was necessary for me to go to a specialist, who said I would always have to wear glasses. That summer I had to be taken to the hospital and operated on again, and this time I was to be a well woman; but it was the same old story of "no better," and I again went East, hoping that change of scene would help me. I returned in April, believing that it was only to die, for eight doctors had failed to help me and my strength was almost gone. The doctor said he could do no more for me, and that if my heart held out, my spine was diseased, nerves shattered, and I was indeed a wreck. I took to bed, and became so weak that I could not feed myself and was taking wine for nourishment.

On the morning of May 29, 1911, the nurse came to me with a copy of the *Christian Science Sentinel*, saying a neighbor had sent it to me and that on the cover was the telephone number of a practitioner. The nurse read some of it to me, then I asked her to give me the paper, and after reading a while I asked her to call up the practitioner and have her come to see me. The doctor came at twelve, shook his head and left. An hour later the practitioner came, and she brought with her such a flood of divine Love that I was lifted from depths of misery to heights of joy. She left me about three, and immediately I asked for my clothes, got up and dressed and walked, free, with not a sense of anything but perfect health! At night I had dinner with the family, the first meal I had eaten for months. It was indeed a time of rejoicing, and our home was turned from sorrow into joy. The next day I went about my usual duties, and have ever since. No one can realize what it meant to me to be able to walk perfectly, for I had been lame for nearly seven years. Oh, the joy to know God and feel the warmth of His wondrous love, and to have such peace—peace which the world cannot give.

I had been greatly reduced in weight, a mere shadow, but in less than six months no one would ever think but that I had always enjoyed perfect health. I have also been able to discard my glasses. Each day I am learning the truth of our Leader's words, that "to those leaning on the sustaining infinite, today is big with blessings;" and that "divine Love always has met and always will meet every human need" (Science and Health, Pref., p. vii and p. 494). The 121st Psalm has been a great help to me, for when reading it I do know that God is my keeper, that my strength comes from Him, and so I am able to do whatsoever my hand findeth to do. It is impossible for me to express in words my gratitude to God for Christian Science, for by it we are given a new sense of life and joy; we learn that "with God all things are possible," and that divine Love is ever ready to encircle us all. May this testimony help to lighten the way for others, that they too may learn that in God "we live, and move, and have our being;" that God is All-in-all.

MRS. LILLIAN B. MANN, Hamilton, Canada.

My first impression of Christian Science was that it is the same kind of religion as other orthodox churches had, and I had no confidence in it, as I was virtually an infidel. I had no use for any of the different churches, their beliefs, or the God they worshiped, as they all seemed to me to be bowing to something they knew not what. Yet in all these years I had been a seeker for the right kind of religion, a religion from which I might have some good without having to die to get it.

In an out-of-the-way place, among the roughest of men, I met some people whom I found to be Christian Scientists, and upon closer acquaintance they seemed quite different from other religiously inclined people. The first paper which I read on Christian Science was a *Sentinel*, and I thought such things as were mentioned therein were worth investigating. I soon discovered that there was something about Christian Science which was different from any religion I had ever known before. A friend who also became acquainted with these Scientists, had been afflicted with a severe cough for twenty years. He took treatment and was cured—cured in such short time that it was astonishing; I could scarcely believe it. I watched different cases which presented themselves, and came to the conclusion that there must be something more in Christian Science than blind belief.

Shortly after that time I became so afflicted with frost-bitten feet that I could hardly walk, and I suffered greatly, so I thought I would try Christian Science treatment. I did so, and in a few days I was cured and have not suffered with the ailment since. I also was a habitual smoker, having used the weed from childhood up, and I fairly worshiped my pipe. I believed I could never quit smoking, but after a while I decided I would take treatment for the habit. I did so, and I am cured, as it has been over three years that I have had no desire for tobacco in any form.

For this I am certainly very grateful, but I am especially grateful for the spiritual betterment I have received. Being of a very revengeful nature, I enjoyed above all things the thought of "getting even." Thank God, I am relieved of that terrible feeling, and I love my fellow men more and see more good in life. I am glad that I found a God who is Love, a God to whom I can go with my troubles and find the "Peace, be still," of Christ, Truth.

JOHN R. ZIELOWSKY, Ione, Wash.

Out of gratitude for the great good I have received through Christian Science, I give my testimony, and hope it will be a message of cheer to some one who is as full of fear as I was before knowing this teaching. From infancy I was always ailing; then came lung trouble, and I felt that this was the beginning of the end, two in the family having passed on from this complaint. I did all I could, however, to gain strength, even to drinking bullock's blood twice weekly; but I did not improve, and was getting tired of taking all sorts of nauseating things in the effort to do so. Man's extremity was, however, God's opportunity in my case. I was told of Christian Science and a Scientist offered to help me. I shall never forget the great kindness and love shown to me. After my first talk with her I felt that I wanted to know God as she knew Him; fear seemed to leave me, and I went home determined to give Christian Science a fair trial. I gave up all my material remedies, and only once after this did the hemorrhage return; but it soon disappeared. I now go out in any kind of weather, do any kind of work I want to, and have no fear of bad results.

Digitized by Google

Friends can hardly believe I am the same woman; only lately a friend said, "I remember I once thought you were not long for this world, you were looking so dreadfully ill."

I also had treatment at the birth of our little girl. Though I was unable to have the same practitioner, I received much help and kindness, and the truth of Christian Science was again proved to us. At one time things did not seem to be going on rightly, so we wired to the practitioner, who came and stayed some hours but had to return to Southampton that night. It was beautiful the way that all fear left those in the house after she came; my husband, who is not a Scientist, did not even mention a doctor. The baby arrived the next morning, I was up the second day, and at the end of the week was quite myself. The nurse told me that had I had *materia medica,* it would have been a case for instruments, and that the child would perhaps not have been alive. It was a wonderful case to her. I also used to suffer greatly from ulcers on the eyes. This too has left me since I have known of Christian Science.

It would take pages to tell all that Christian Science has done for me. Needless to say, I am very grateful for the healing I have received, and words cannot express the gratitude I feel to our dear Leader for the understanding which I am daily getting of God's love and goodness to His every child. The Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy are my two greatest treasures, and my sincere desire is to let my light so shine that it may be the means of bringing others to know of this blessed truth.

EDITH BLADES, Wimborne, Dorset, England.

I wish to give my testimony of what Christian Science has done for me and my family. About four years ago my little girl had a fall which injured her hip and spine. It did not, however, give any trouble for several months afterward, and when she became ill the accident had been forgotten. We called in a doctor, who said she had rheumatism. He treated her for some time, but she got no better, so we finally called in another. By this time she could not raise herself up without crying out in pain. This doctor said she had kidney trouble; but after a little time she got better, and began her first term of school. A few months later, however, she had another spell, and the doctor said we would have to take her out of school, as she had hip trouble. Her limb had stopped growing and she walked very badly. She would cry with the pain every night, and more than once we both cried. I finally thought of the fall and spoke to the doctor about it. On examining her back, he found a very serious condition of the spinal column and then he said she had spinal disease.

I was greatly worried and did not know what to do, as besides the little girl's illness I was just then coming out of an attack of rheumatism (which usually lasted from two to six weeks), so we decided to go East for a few months. We did so, and both seemed to be much better. After we had been at home a short time, the little girl began to go to school again, but she had gone only one month when we had to take her out. It was then that my husband and I decided to try Christian Science, although we did not know anything about it; but we thought it could do her no harm. I went to see a practitioner, and she said that the child could be healed. To our joy she was healed in one treatment, although the Scientist gave her one more to satisfy me, as the healing was so sudden that I could hardly believe it.

It is now over two years since the child was healed. Afterward the practitioner treated me for a skin disease, from which I am now entirely cured, and the rheumatism has left me through the reading of Science and Health and learning the power of Truth. My husband was also healed from poisoning caused by a nail piercing his foot. Is it any wonder that I am thankful to God, who has thus freed us from sin and disease!

MRS. CLARA WARREN, Center, Col.

I feel it a duty as well as a great pleasure to tell what Christian Science has done for me. On Christmas day, 1910, I was taken with a very severe headache. I had, however, been subject to these attacks for years, and thought it would soon pass; but instead it kept growing worse, until at the end of the week I went to a doctor. He talked to me for a while, then told me I had a very severe case, but that he would prescribe some medicine which would help me. After taking the medicine I felt better, but was so weak that I was hardly able to walk. When the doctor came I told him how ill I felt, and he said he expected this; that it was the after effect of the illness and that it would last about six weeks. I waited patiently for the six weeks to pass, but at the end of that time I felt worse, so I concluded to change doctors. After examining me, the second doctor told me that I had organic heart trouble, that I was in a very bad condition, and that if I wanted to live any length of time I would have to take good care of myself.

I also had a cough, which was terribly annoying for weeks. I felt uneasy about this, and when I asked the doctor about it he said I would never get rid of it. I went to this doctor several times, but he gave me very little encouragement, and the last time I went he said that my lungs were affected, after telling me just two weeks before that my lungs were sound. I then lost all faith in *materia medica,* and turned to Christian Science for help. I had heard a great deal about it and thought I would give it a trial, so I bought a copy of the text-book, "Science and Health with Key to the Scriptures," also a Bible, and began to study very earnestly. My cure was almost instantaneous; the cough left, my appetite improved, I had no more sleepless nights, and today I feel just as well as I ever did. I had also had a bowel disorder of more than fifteen years' standing, for which the doctors could only give me temporary relief; but this, too, is permanently cured.

Words cannot express my gratitude to God for Christian Science, through which has come my physical healing, and it is my earnest desire to learn more and more of this truth each day.—MRS. T. L. PETOT, St. Louis, Mo.

It is over eight years since I received my first healing in Christian Science from a chronic stomach difficulty, through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I then gave up my daily doses of material remedies, which had failed to heal. I have also experienced the healing power of divine Mind in a case of accident, in which my foot was injured in such a way as to be quite painful; but this was entirely overcome the same evening, while reading the Lesson for the following Sunday.

I am, however, even more grateful for a better understanding of the Bible and the spiritual and moral uplifting that I have experienced, than for the physical healing. In proportion as I have learned to apply Christian Science, I have found it always available and efficacious in overcoming inharmony of any kind.—CHARLES J. TURNER, Chicago, Ill.

I was healed through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I herewith bear testimony to the power of God to overcome every ill that flesh is heir to. I have been healed of what was called hereditary heart trouble, also a throat affection from childhood, rheumatism, etc., besides depression, discouragement, fear, hatred, prejudice, selfishness. By nature of a rather retiring disposition, I little thought that at the root of this cherished attitude was a host of evils which were masters of my moods, but Christian Science is the light that penetrates into every crevice, scattering the hosts of evil and giving us in exchange the noonday of Truth. St. Paul advised us to "work out" our salvation, and through obedience to this injunction I owe all I have today of health and harmony. I love the daily study of the Lesson-Sermon, and the Bible

Digitized by Google

has been revealed as a constant necessity. Its many lessons furnish a feast of good things, and all tend to spiritual advancement.

Lifted out of the dungeon of false material sense into the sunshine of Truth, I breathe today the free air of a liberated child of God. Our Leader's ever-faithfulness in making known the presence of Love, is seen in the well-appointed Lesson-Sermons; and in her Message to The Mother Church, June, 1898 (p. 12) she says: "The altitude of Christianity openeth, high above the so-called laws of matter, a door that no man can shut." I am so grateful for this beautiful thought and all it reveals. That door which no man can shut is the foundation upon which today Christian Science is absolutely established, its infinite Principle being God. How grateful is the heart that throbs in unison with this great verity,—to dwell in Truth, Life, and Love, knowing that always about us are the "everlasting arms." It is indeed a noble calling to serve God alone, and happy are the obedient followers of Christ, Truth. He who lightens the burdens of the struggling brotherhood of man, with the most tender compassion and patience, typifies the great Exemplar, for the heart must be generous enough to cover the need.

The heart that rejoices to help a brother gives the dew of heaven. When the sun comes out, it strengthens humanity and leaves its glory everywhere. This gift is ours today through the patient, unselfed love of our revered Leader, Mrs. Eddy, and we rejoice in the infinite blessings of Truth in exchange for the bondage of matter.

SADIE GARRATT-HUGHMARK, Chicago, Ill.

A good many years have passed since for the first time I experienced healing in Christian Science, and since then I have had many demonstrations of the power of God to heal the sick and to destroy sin. Ever since I can remember I loved the Bible and its promises, believed sincerely in prayer, and that a just and loving God did exist. A great sense of love and good would come with the study of the Scriptures, but I wondered why I could not be healed of physical ailments through prayer, and help others in the same way, when Jesus had said: "He that believeth on me, the works that I do shall he do also." I prayed more earnestly to be shown the way, to be given more faith and understanding of divine Truth, and in 1900, after what seemed long years of suffering, without relief from pain for more than a few hours at a time, I was given a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy to read, and immediately began the study of it. I shall never forget the confidence in God that came to me, after the first two hours of careful reading of this wonderful book, with a renewed sense of love and peace. It also brought the joy of knowing that God had answered my prayers, and that this was His way of revealing the truth to me.

During the months and years that followed, the Bible teachings became clearer to me, and since then I have wakened to see the power of God and to understand in some measure the Christ-idea which was so plainly manifested in Jesus. Christian Science has taught me to rely wholly upon God for healing, and for eleven years I have used no material remedy whatever. Before I was entirely healed, sometimes the pain would seem very severe, but at these times I would take Science and Health and read a sentence or two about God. This brought light and healing, for while thinking these thoughts, even for a few moments, I have been able to get up from my bed, all sense of pain having vanished from consciousness, and in place of it I had a sweet sense of happiness, rest, and peace. At these times I was invariably alone, all material remedies having been tried in my case for so many years that those with me had become accustomed to my suffering; and the doctor, who had shown me much kindness, found that his efforts to help me were useless. He told me during his last visit that there was no hope, that I would always suffer pain, and he named the disease spinal neuralgia, which he said meant pain in every part of the body. After a short time, however, through Christian Science, that man-made law was broken, and I was completely healed, it being proved that God is the only lawgiver.

No words can ever express my gratitude to Mrs. Eddy for giving Christian Science to the world in her book, that all may benefit from its teachings. The years of patient and loving endurance for the sake of others, in order to bring this message of truth to the sick and suffering, must have its sure reward. I lovingly quote her own words in Science and Health: "A louder song, sweeter than has ever before reached high heaven, now rises clearer and nearer to the great heart of Christ; for the accuser is not there, and Love sends forth her primal and everlasting strain" (p. 568).

HON. EILEEN O'BRIEN, London, England.

About the middle of June, 1911, I discovered that I had a left inguinal hernia, and although it daily grew larger, I did not give it much thought till about a week later, when one day it caused me considerable pain and annoyance, and I realized that it must receive attention. I asked a Christian Science practitioner for help, and after four absent treatments had been given me, the manifestation entirely disappeared, the usual tests showing normal strength to have been regained.

Fifteen years ago I had a similar difficulty on the right side. I consulted a surgeon, who told me that the "radical cure" (an operation) was the only satisfactory treatment. I demurred at this, however, and was recommended to a recognized expert in surgical appliances who might give me temporary relief. The expert promised that if I *would* follow his directions he would cure me; and I did so with the result that I had a week of torture, a month of acute discomfort, and six other months of continual annoyance. At the end of that time I was pronounced cured, and the surgeon had to admit it, although he expressed doubts as to the permanence of the cure. A year later I entered the employ of this surgical appliance expert, and was with him for several years, during which time I became familiar with hernia in all its forms and with the opinion of the medical profession concerning it, having called on over three thousand doctors in his interest. I have recited the above to show that, when I say that on a Wednesday night I had a well-developed case of hernia and on the following Monday I was unable to find a trace of it, or even of weakness, my experience makes me competent to speak as to both diagnosis and cure.

The foregoing is merely one and possibly the least important reason for my gratitude to Christian Science. It has also relieved me from the tobacco and drinking habits, removing all desire in both instances before I gave up the practises. With tobacco, particularly, I used to wonder why I could no longer find a cigar that tasted good, until I discovered that the appetite for tobacco had been destroyed, and my freedom from that habit was immediate. While I have enjoyed many proofs of the healing power of Truth and of its ever-presence, that for which I am most deeply grateful is the change I recognize in myself—in my character, my ambitions, and what I now regard as essentials. These changes may possibly not be perceptible to others, but they loom large on my mental horizon and there is no dodging the issue, namely, that the study of Christian Science, as taught by our dear Leader, Mrs. Eddy, has wrought them.

Daily I have cause to rejoice in Christian Science, to thank God for this manifestation of His love, also to be deeply grateful to Mrs. Eddy for her unselfish devotion to the uplifting of mankind.

BENJ. F. CHANDLER, Savannah, Ga.

I came to Christian Science for the healing of sorrow, as my only daughter had passed on and I was left alone. In 1897 Christian Science had been explained to me, and I felt it was the truth and asked for treatment for my daughter; but after a few weeks, as we saw no change, we went back to medicine. Seven years passed and we again asked for treatment; but the results were the same, to our sense, and again we went back to medicine. Shortly after this, my daughter passed on, and in deep sorrow I again turned to Christian Science for relief. Each day I read part of our Lesson-Sermon, and with an earnest longing for an understanding of Truth, I determined that I would never give up, as I felt certain help would come. It did come, for as I sat in our service on Communion Sabbath, a peace came to my heavy heart, and the cords of tense feeling were loosened. On reaching home and opening the Bible, it seemed illumined; Science and Health was also much clearer to me, and the burdened sense never returned as before. I kept on reading the Lesson-Sermon and Science and Health, and two years later the opportunity came that for many months I was free to spend most of my time in studying our literature. Later the privilege of class instruction came to me. I feel that I am on "the way," and recently the third step pointed out in Mrs. Eddy's article with this title (Miscellaneous Writings, p. 355) is opening and I begin to know how to love as Jesus did. My life is full of peace and joy; my only desire is to be about our Father's business and to help others out of the bondage of belief in sin and disease. My heart is filled with gratitude to God, and I am thankful to our beloved Leader, Mrs. Eddy.—FLORENCE E. BARBER, Waterloo, Iowa.

It is with great rejoicing that I acknowledge God to be the giver of all good gifts, and Mrs. Eddy as the Discoverer in this age of the "pearl of great price," Christian Science. Through its teachings I have been helped physically, mentally, morally, financially, and spiritually.

There is one healing in particular for which I am very grateful, that of an acute form of eye trouble, on account of the spiritual quickening which I received at that time. While in itself the disease was not painful, this healing meant more to me than did other healings in attacks of lung trouble, a chronic throat difficulty, escape from the operating-table, and the overcoming of many lesser ailments. The healing of the eye was instantaneous, and the treatment an absent one. The throat trouble was overcome by the faithful study of our text-book, "Science and Health with Key to the Scriptures." Words fail to express the joy I experienced at that time. I felt that I had indeed been resurrected, and I discerned, in a degree, "a new heaven and a new earth." On page 487 of Science and Health Mrs. Eddy says: "There is more Christianity in seeing and hearing spiritually than materially."

MRS. KATE LUCILLE REINSTEIN, Boston, Mass.

[Written for the *Sentinel.*]

GIVING.

STELLA E. SAXTON.

LET me but give, dear Lord,
Out of my store,
What Thou hast given me—
I ask no more!
Even as sunbeams fare
Forth from the sun,
So may I, too, reflect
Love's sweet guerdon.
Shine into some dark heart,
Scatter its fears,
Reveal the stars again,
Hidden by tears.

FROM OUR EXCHANGES.

[*Advance.*]

Let us carefully note the fact that with all Christ's supernatural power he refused to use it in the interest of sudden achievements or easy victories. With all his intense love for men and zeal for human welfare he proposed no short road to great blessings. Not all the iniquities of the dreadful pagan empire or the entreaties of a chosen and suffering people could move him to change the state by a stroke of power. On the contrary, his doctrines were germs, his propositions processes, his favorite illustrations the field, the sower, the seed, the grain of mustard, the leaven. He was in the world to set nothing aside, but to fulfil, to fulfil all beginnings, all promises, all laws, even the laws of nature, the laws of development, the laws of the human mind and of human growth. He came in the fulness of time, and did nothing out of time or without time. We need to note this fact and feature of Christ's method the more carefully now because we are in danger of becoming impatient of its spiritual processes. Troubled humanity wants a quick and easy remedy. There is a strong yearning for a "presto change." The desire to have Christianity change the state and society at a stroke is almost as passionate and impatient today as it was when Christ healed disease with a touch, but refused to revolutionize society by the same short process. The world is as eager to cast out that word "fulfil" as the Jews were to cast out him who used it, while classes of men would like to see a kingdom of prosperity brought in without reference to the troublesome conditions which hedge about all good kingdoms.

Strike to the center of much of the agitation of the day and the core of it is nothing more or less than a demand for profit, prosperity, and comfort, without going through the prosy process of putting away wasteful vices and destructive habits and of cultivating careful economies and prudent forethought. So far as the laboring classes are turning their backs upon Christianity, it is for much the same reason that Israel rejected Christ, because it fails to give them a kingdom without repentance and faith. And over on the other side is another class who would like to have a secure state and a peaceful, pleasant kingdom, without casting out the devils of selfishness, avarice, pride, and wantonness, a kingdom which will make one half of society meek and submissive without making the other half humble, generous, or brotherly.

Even the church has not yet rid itself of the error of looking for the full coming of the kingdom by some short and easy method of miraculous dispensation. Whole congregations, many prayer-meetings, and Christian families without number, pray for the conversion of the heathen world without once seriously thinking of dedicating a son or a daughter to the work, or denying themselves the luxuries of life in order to make greater gifts. But a careful study of those early days cannot but make it plain that the kingdom will never come along the way of self-indulgence or easy achievement. The Christianity of Christ is at heart, and in every limb and fiber of its being, a religion of self-denial and sacrifice, and a religion of spiritual means to spiritual ends. The kingdom of heaven must be within us before it can be round about us. It means new-born men and women, born to faith, to service, and to the everlasting hope.

[*Christian Intelligencer.*]

The fact that the world is full of unrest, striving after better things; that the air is full of conflicting opinions strenuously vociferated; that free discussion and investigation abound, sometimes treating rudely what should be esteemed sacred; that the masses are tossed to and fro like the storm-tossed sea,—should not awaken the least discouragement. These characteristics of the age are full of

Digitized by Google

encouragement. In the searching and sifting going on, the proving of all things, the wheat will be separated from the chaff, and the chaff will be blown away in the agitation. There is safety in free discussion, danger in the repression of it. Never before did men say so freely and fearlessly what they think or imagine. Never has the individual counted for so much. In the contention, error will be exposed and the truth will be attained, and in the end will be heartily accepted because it is the conclusion of untrammeled investigation and debate.

In the light of all the past, duty is plain. It is to hold fast to the Bible, to declare it clearly and confidently, to embody it in our lives, to surrender ourselves to it, and allow it to do in us and for us what it has always done for those who have enthroned it in their hearts. Many storms have raged around it, and it has emerged unscathed from them all. It has come to this generation through fire and flood. God has been with it, in it, and for it. It has been "the sword of the Spirit," the gospel of redemption through the Lord Jesus Christ. It is the word of Christ, the all-wise healer and the almighty deliverer. It has been the mainspring of the world's progress, has created the world's unrest, begotten its longings, revealed the better life and the universal kingdom of righteousness, peace, and joy, and it, and it alone, is competent to guide to the attainment of the hopes it warrants.

[*Continent.*]

If the name of God is invoked to unite the people for the safety of the nation, those who invoke it must be ready to receive in simple Christian brotherhood all who are thus drawn to unity with them, no matter how alien otherwise. The atheistic blasphemy of these revolutionists [at Lawrence, Mass.] would be totally vain among the immigrants, if the churches they knew in their home land were not in spirit aristocratic churches—churches, that is, whose concern for law and order is mainly an anxiety to keep the common people from upsetting the privileges and comfort of the great and pious. The God these European peasants have been asked to worship must have seemed to them a God interested only in maintaining a comfortable world for the upper classes. But America cannot ask them to be patriotic in this country for God's sake, unless it makes them know a different God. This aristocratic God is what they came here to escape. A friendly God, a God who bends down to help the struggles of the poor and means that life shall be something abundant to every man who lives it right, even the humblest,—that God introduced to the immigrant in America will make the immigrant the nation's right-hand stay. But there is only one way for that introduction to be effected—through friendly Christians showing this same divine friendliness.

[*Christian Register.*]

As we stand at the beginning of a new year, it is a brave new world which appears to all those who are children of the light. There were never so many "doers of the word" as there are today. Still, we must remember that some of the noblest thoughts that inspire the workers today came into the minds of prophets and seers twenty-five centuries ago and have been slowly working through the ages to bring us to the point of progress which we have attained. The process is slow, but the outlook is glorious.

[*Universalist Leader.*]

Many have lost the opportunity for which they were praying, through throwing away some experience just because it hurt a little, when really it was the gripe of a leading that seemed cruel, but really was kind in its cruelty. There is nothing lost or wasted in the divine economy, but we are so far from the divine point of view we make scrap-heaps of the most priceless jewels. There is something in every day of the coming year that is worth facing.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Results" has been translated and is now printed in German (Die Christliche Wissenschaft: Ihre Resultate). This pamphlet contains 35 pages and is for sale at the prices of all the regular pamphlets as shown on the opposite page.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, 105 Falmouth street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.03; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. *Price*, single copy, *32* cents; twelve or more copies, *25* cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 29 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Make all remittances payable to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second class matter.

ITEMS OF INTEREST.

National.

Seven corporation bills, favored by President-elect Wilson in his capacity as Governor of New Jersey, have been introduced in the Legislature. Explaining the bills, Edwin R. Walker, head of the chancery court, the highest in the state, who prepared them under the direction of the Governor, said: "These acts are designed to put an end to trusts and monopolies under the laws of New Jersey, and Governor Wilson confidently predicts that they will accomplish that much desired result. They emanated from Governor Wilson and have been drawn for the purpose of preventing monopolies by corporations, firms, and individuals." The bills make violation of the proposed laws a misdemeanor punishable by imprisonment for not more than three years or fine of not more than one thousand dollars. The measures provide that any combination between two or more corporations, firms, or persons to create restrictions in trade, limit production, prevent competition, transportation, or selling, fix prices for purposes of trade control, or make any secret oral agreement, shall be a misdemeanor. One bill provides that *bona fide* values in money or property must stand behind all stock issued; that stock shall not be issued against anticipated profits; that when stock is issued in exchange for other stock, no more shall be issued than was actually paid for the other stock; that no purchase may be made of a concern of different character from that doing the buying. It also prohibits one corporation buying into another for the purpose of restraining trade or acquiring a monopoly.

The forest service is considering a plan which, if adopted, will make the federal government the timber broker for all homesteaders who have stumpage for sale. The scheme is aimed at the relief of settlers in the national forest reservations in Montana, Idaho, and other western states. Complaint has been made that the government is selling stumpage to the great lumber companies which operate within the reserves at prices as low as one dollar per thousand feet. This timber is condemned by the forest service where growths become too thick, or when the trees are injured by storms, forest fires, or rot. It is then put up at auction and the government accepts practically any bid, no matter how low. Settlers living within or near the forest reserves point out that the prices at which the government sells its timber make it impossible for them to compete in the sale of their private timber. As most of the settlers rely on the sale of timber for their living while they are proving up on their homesteads, they very naturally protest.

The concentration of most of the timberlands of the United States into the hands of a few powerful interests has created a problem so grave for the nation, in the judgment of Luther Conant, Jr., commissioner of corporations, that he has recommended to President Taft that the existing national forests not only be retained by the federal government, but increased as far as practicable. He urges that the forests of Alaska be included in reserve, as well as all timbered lands recovered in forfeiture suits. He advises a further searching inquiry into land grants of the past, with the view of instituting additional forfeiture suits if the facts justify the procedure; while he warns us that attempts are still being made to "secure the transfer of public timberlands to private owners under the same pleas of settlement which in the past often proved wholly specious and insincere."

Articles of incorporation for the so-called "Rockefeller foundation" to administer a philanthropic fund of one hundred million dollars to be donated by John D. Rockefeller, were passed by the House, 152 to 65, after scattered opposition. The object of the foundation is "to promote the well-being and to advance the civilization of the peoples of the United States and its territories and of foreign lands in the dissemination of knowledge, in the prevention and relief of suffering, and in the promotion of eleemosynary and philanthropic means of any and all of the elements of human progress." The bill contains a provision prohibiting the foundation adding to the capital fund of one hundred million dollars and forcing the expenditure of the entire income from that fund currently.

One division of the garment workers' strike of New York city was settled amicably when the manufacturers' and employees' committees of the waist and dressmaking trade came to an agreement under which twenty-five thousand workers have returned to the shops. The strikers were granted their demands for general increase in wages on a sliding scale, better hours, and fire protection. The manufacturers in the association that agreed to these terms control about seventy-five per cent of the waist and dressmaking shops affected by the strike. The remaining shops are operated by independent manufacturers. Their employees will remain on strike until they agree to the same terms accepted by the association.

Declaring that in all the suits brought by the government the people of the country are the plaintiffs, and should therefore be accorded free access to the taking of all testimony in such cases, the House committee on the judiciary has favorably reported the Nelson bill to prohibit secret hearings in antitrust suits. The bill has already passed the Senate, and the committee is eager that the House should take action upon it as soon as possible and send it to the President, who is said to favor its enactment into law. With the Nelson measure was reported a duplicate bill embodying the same provisions.

The rivers and harbors appropriation bill contains an appropriation for a survey of the Naugatuck river with a view to plan the barge canal between the Housatonic basin at Derby and Ansonia, Conn., and at least this much of the project for a canal between Derby and Waterbury is likely to go through. The survey will include the Housatonic river from Derby to Long Island sound, which is believed to be able to carry a much larger tonnage than at present, with some deepening of the channel.

One of the largest gatherings of representative business men ever held in this country by the Chamber of Commerce of the United States, closed its annual session at Washington last week. A resolution was passed that there be conveyed "to President-elect Wilson the felicitations of the chamber upon the high honors accorded to him by the American people, together with the expression of the earnest desire of the organization to be of service to the incoming administration."

The total number of parcel-post stamps printed and distributed amounts to more than four hundred million, and the total value of the stamps distributed is more than twenty million dollars. The bureau of engraving and printing is sending out the stamps at the rate of twelve million a day.

International.

Lord Kitchener's great scheme for the drainage of the lower delta of the Nile and the gradual reclamation of a large tract of land is well on its way to realization. The delta of Egypt may be roughly divided into three zones: the southern, or upper zone, stands at a sufficiently high level above the sea to drain itself by gravitation; the middle zone, including the districts which have become water-logged from the increased water supply, since the inauguration of the system of perennial irrigation was completed by the opening of the Assuan dam; and the northern, or lower zone, where drainage has all along been practically impossible, much of it being actually below the sea-level. The proposal is to construct a great network of government main and secondary drains covering the whole of the middle and lower zones, which will provide not only for the more efficient drainings, and therefore the gradual restoration of the lands in the middle zone which have suffered in recent years from water-logging, but also for the new drainage and subsequent reclamation of great areas to the north which have never been cultivated at all. The cost of the complete drainage works alone will probably exceed ten million pounds.

The United Farmers of Alberta, Canada, are opposed to war, and are also against Canadian naval policies. They would have Canada lead the world in the international disarmament movement, and have so declared in an anti-naval resolution adopted recently. In all the six hundred delegates there were but twelve dissenting votes. "This convention, representing fourteen thousand farmers of Alberta," the resolution says, "places itself on record as firmly opposed to any expenditure whatever of public moneys for the consolidation of naval armament, but is decidedly in favor of Canada encouraging to the utmost the movement toward international peace and disarmament and the settlement of international difficulties by arbitration, such as is proposed by the United States."

The English House of Commons passed the home rule bill for Ireland by a vote of 367 to 257. The bill is now in the House of Lords, where it is expected it will be rejected. If passed by the Commons in three successive years it may then, in spite of its rejection by the Lords, become law by virtue of the so-called veto act recently passed.

The attempt of China to negotiate with the six-power group a loan of one hundred and twenty-five million dollars has not yet been successful.

Industrial and Commercial.

A group of Spokane capitalists have combined to organize a five hundred thousand-dollar concern to market directly the crops of the surrounding country. Articles of incorporation give the organization power to handle all problems of marketing and storage, all horticultural and agricultural products, and large cold-storage facilities will be provided in Spokane to care for the products while awaiting shipment. Organization is being perfected by forming smaller societies in the various sections of the surrounding country, all centering in the larger body in Spokane. It is probable that only apples will be marketed this year, the aim being to reduce the price to the consumer and to increase the returns to the grower by eliminating the profits of the middleman.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MORTAL OR IMMORTAL?

CLARENCE W. CHADWICK.

ASK the average person whether he is mortal or immortal, and he will usually admit that he is mortal. His fathers and forefathers were mortal, consequently he must be. The only excuse offered for such an assumption is that his physical senses uphold him in it. This fact betrays the weakest point in the consciousness of humanity, an innate or inherited tendency to accept the dictum of the physical senses, to admit that man is material and in consequence mortal, a tendency which is only intensified by the educational systems of the present day.

Christian Science comes to "replace mortality with immortality" (Science and Health, p. 495), and in doing so it uncovers to humanity the great mistake of accepting sense testimony in place of the supersensible evidence of Spirit or Mind. It makes demonstrably clear the fact that physical sense never has seen and never will see God, and consequently that obedience to such sense means human bondage instead of "the glorious liberty of the children of God." From this bondage, regardless of what form it may assume, humanity must sooner or later be emancipated. Some are leaning on the thought of time and death to bring the desired haven of rest, while others are waiting patiently on the Lord to reveal to them here and now a fuller meaning of the deathless Christ, Truth, which comes to abolish death and to bring to light immortality. How shall belief in death be abolished?

The abolition of the arch enemy must necessarily take place in each individual consciousness. It will be accomplished only as humanity learn to think true scientific thoughts, thoughts of Life, Truth, and Love. This cannot be done from a material basis; hence the necessary first step of recognizing and admitting that man is spiritual. The individual who presumes to approach God with the thought that he is a poor helpless mortal, and who wants God to use him as an instrument for good, is doomed to disappointment, for God has no use for any belief in mortality, nor does He ever make Himself known through any such belief. God must be approached with the scientific recognition that man is immortal, and through this understanding God makes Himself known to His creation; and He will continue to do so. Christ Jesus declared that his mission was to bring life "more abundantly" to all who were willing to accept his teachings, and Christian Science shows us how we may avail ourselves today of all that he taught and demonstrated.

God is the preserver of man, but not of mortality. Mortals, however, when they begin to turn from matter or mortality to Mind, which is immortal; when, through the influence of the Holy Spirit, they begin to reverse sense testimony and to accept the truth of spiritual sense, like Joseph of old, they experience the protecting care of an all-wise, loving, and merciful creator, divine Love. But before the realization of God's power and presence there must be that "higher sense of Truth rebuking mortal belief, or error, and showing the immortality and supremacy of Truth" (Science and Health, p. 589). God's law of preservation must and does extend to His entire spiritual creation, man and the universe. This law recognizes no belief or admission of mortality. Being a law of exclusion to every belief pertaining to mortality, it demands the complete subjugation of every such belief, so that the so-called mortal, in turning away from self to the Christ, experiences the transforming and redeeming influence of Spirit. Through the conscious recognition and admission of man's immortality, the so-called mortal is denied and "put off," and the idea of immortality is more and more in evidence, the advancing steps being marked by health and holiness.

An intelligent recognition of man's immortality marks the advent of the Christ, Truth, in individual consciousness. He who can honestly say that the Christ has appeared to him, will no longer be found thinking that man is mortal. Only as the idea of immortality replaces the human concept does the individual acknowledge and understand that the coming of Christ means the destruction of sin, and therefore the healing of sickness. So long as the belief of mortality is allowed to remain a normal factor in the premises of human reasoning, every conclusion therefrom will crucify the healing Christ-idea demonstrated by Jesus and again made available to humanity through the teachings of Christian Science.

Humanity's progress heavenward will be measured by its willingness to exchange human conception for the divine creation. A spiritual God and a material or mortal man do not go together. Eternity itself will never unite them. "I and my Father are one" was a scientific declaration that transcended all human thinking. This acknowledgment of man's spiritual sonship with God enabled Jesus to prove to humanity man's God-given power over all mortal or material conditions. Had he admitted man to be mortal and God his Father, his earth career would have been devoid of healing works. His was an immortal foundation, and it must be ours before healing will become universally spontaneous and the earth "be filled with the knowledge of the glory of the Lord, as the waters cover the sea;" a condition which was foretold in the Bible by more than one of the prophets of an earlier day.

The world of religious unbelief looks on and seems content to think that Christian Science healing is simply an attempt to make healthy and happy sinners, whereas it is the unmistakable call of the Christ, Truth: "Let the wicked forsake his way, and the unrighteous man his thoughts;" it is the clarion call of Spirit: "Awake thou that sleepest" in the belief of man's supposed mortality, and "put on the new man"—the understanding of man's immortality —here and now, for "the children of the flesh, these are not the children of God." Those on the watch-towers of Zion are feeling the touch of the Christ-healing, are rapidly assimilating its immortal harmonious tones, and will eventually acknowledge that "Truth is revealed. It needs only to be practised" (Science and Health, p. 174). Christian Science shows us how this can be done.

FAITHFULNESS REWARDED.

HELEN WARD BANKS.

CHRISTIAN SCIENCE sends its students directly to the Bible, and teaches them to seek in it, not dogmas to support man-made theology, but the deep spiritual truth underlying commandment and beatitude, history and poetry, preaching and parable, the truth of God's omnipotence and of man's oneness with God.

Among all the familiar Bible narratives the story of Daniel carries special significance to Christian Scientists. Viewed in the light of this teaching, it is almost an epitome of Christian Science demonstrated, and no longer merely a thrilling story of a courageous life. Our first meeting with Daniel shows us that he has already found the Principle of life, and is guided by it. A youth, carried away captive from Judah to Babylon, he at once refused to share in the luxury of the king's table, choosing rather to retain his Hebrew simplicity of diet. For years after that he was at court, a favorite with the reigning monarch, but always living a calm, cheerful, helpful life, untouched by the dissipation and indulgence around him. In a heathen land, he held to his own God and prayed to Him openly.

Finally, Darius, king of the Medes, became ruler of Babylon, and the master as well as the friend of Daniel; but almost at once the king's affection aroused the error of jealousy, that unsuspected stirrer-up of so much discord. If men would but trace all their critical thoughts of others back to their own hurt pride or selfish jealousy, how much nearer the realization of brotherly love we should be! Error then, as now, was too subtle to declare itself the hatred it really was, and assumed the form of zeal for the king. Daniel's manner of living was irreproachable, but error strove to destroy him by his own steadfastness and by the hand of the king who loved him. Error approached the king in the line of least resistance; it attacked him through his vanity. "O king, live forever," it said; and went on very pleasantly to extol his greatness above that of any god or potentate, demanding that all men should worship only Darius, and that any one who refused should be cast alive into the den of lions. The king, thinking only of the delight of receiving adulation, and not at all of consequences, gave his consent to this edict, the unchanging consent of the Medes and Persians.

Then error's representatives rejoiced. They had not learned that evil's only power is to destroy itself; they thought to overthrow the omnipotence of Love and to destroy good through good's own virtue. "Let Daniel then be thrown to the lions!" they declaimed. "Daniel prays to another God than thee, O king." The situation foreseen by the subtle plotters but not by the king, had developed. Daniel would never recant. The king could not take back his word. Was not Daniel's destruction certain? Too late Darius saw whither he had been led. The side-path of vanity had looked pleasant, but its end was disaster. He, too, knew that Daniel's steadfastness could not be shaken; the only hope lay in Daniel's God, of whom Darius had at least learned something.

Did Daniel quail when the king's edict was made known to him? Was he tempted to outline the way by which God should deliver him by leading him aside from the lions' den instead of through it? However this was, he did not falter in his reliance on God. He had always lived by immutable Principle, and he went forward now without fear. It was not a matter of shutting his eyes to circumstances. It was the unshaken and unshakable confidence which was the result of constant living with good till good possessed him and he and animality had no attraction for each other. He would never throw himself needlessly into the lions' den, but if forced to take that path, he would walk it fearlessly.

Darius, his one hope an almost hopeless clinging to Daniel's God, parted sadly from his friend. "Thy God whom thou servest continually, he will deliver thee," he declared, and went mournfully to his chamber, where, sending away his singers and refusing his evening meal, every material distraction put aside, he prayed as best he knew, through that long night, to the only power that could deliver Daniel. And at the same time, with surer understanding, Daniel was praying to the God who had not kept him out of the dungeon but was preserving him in it. As early as possible in the morning, the king hastened to the lions' den, and called out his eager question: "Daniel, is thy God able to deliver thee from the lions?" How his heart must have quivered as he waited for Daniel's calm answer: "My God hath sent his angel, and hath shut the lions' mouths."

What lessons had Daniel learned through that long night of prayer, when God had sent His angels, "pure thoughts from God, winged with Truth and Love" (Science and Health, p. 298), to rule where fierce hate stood ready to devour! Could Daniel ever do less than trust God? And then the king's orders were turned against the error which had sought to destroy good. The conspirators were thrown to the lions, and were destroyed root and branch. Evil could not touch good, but it was obliged to fulfil its own law of self-destruction; and the greater the seemingly overwhelming power of the evil, the more complete was that destruction.

In working through his problem unswervingly, Daniel had not only found his own salvation and destroyed error, but he had glorified God. Darius issued a new royal decree, not to exalt the king this time, but to extol the power that could accomplish so great a deliverance; and it read: "I make a decree, That in every dominion of my kingdom men tremble and fear before the God of Daniel: for he is the living God, and steadfast forever, and his kingdom that which shall not be destroyed, and his dominion shall be even unto the end."

CHRISTIAN SCIENCE HEALING.

DAVID ANDERSON.

THE writer has abundant reason to be grateful for Christian Science. The best day of his life was that on which he was led, even as a skeptical critic, to peruse the Christian Science text-book, "Science and Health with Key to the Scriptures," and the health and strength and power to labor which he enjoys today, he owes to the study of that wonderful book and the other writings of Mrs. Eddy, together with the elucidating and helpful articles which are always to be found in the periodicals issued by the Publishing Society.

Christian Science healing is mental. Mrs. Eddy says, "Its pharmacy is moral, and its medicine is intellectual and spiritual, though used for physical healing" (Science and Health, p. 460). There is and can be no real healing, in Christian Science or out of it, which has not its foundational basis in the healing of erroneous thought; and Christian Scientists learn that the root of all wrong (diseased) thought is a belief of being apart from God; the belief of life, power, and intelligence other than in omnipotent Mind; the belief of mind in matter. They experience also, in varying degree, that as the understanding of this fundamental healing becomes gradually fixed in consciousness, moments occur in the daily life which bring heaven to earth, when the truth of being shines as clear as a beacon-light or the noonday sun; moments, as Ballou writes,—

> When God is seen with men to dwell,
> And all creation makes anew.

Such moments are gleams of divine light in which the heaven of universal harmony becomes apparent as a present-day possibility, and it is recognized that Christ Jesus bequeathed no valueless heritage to his followers when he said, "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid."

It is for some slight understanding of this truth of being,

Digitized by Google

and for occasional moments such as these, that the writer is supremely grateful. It is the gradual attainment of this spiritual understanding, with its resultant wholeness of thought, that enables the Christian Science student to smile quietly, and with pitying regret, at the want of knowledge of such as may speak unkindly of that brave and revered follower of Christ who has done so much for sick and suffering humanity. It is this same understanding of Truth which enables the Christian Scientist to show an unruffled front when subjected to personal ridicule because of his faith, by those who know practically nothing of what they presume to criticize.

This attitude of serenity under reproach of friend or attack of opponent, is ever becoming more easily maintained as it becomes more clearly evidenced that the trend of general thought, as manifested in the press and current literature, as well as in the pulpit and in the arena of natural science, is daily becoming more leavened with the spiritual metaphysics taught by Mrs. Eddy. The ranks of old-time metaphysical writers and thinkers are being added to by numerous present-day imitators, but it remained for the Discoverer of Christian Science to introduce and steadfastly adhere to the divine metaphysics which assigns all causation to infinite Mind, omnipotent good. "Already the shadow of His right hand rests upon the hour;" and the time predicted by Mrs. Eddy is fast approaching when "the healing elements of pure Christianity will be fairly dealt with; they will be sought and taught, and will glow in all the grandeur of universal goodness" (Science and Health, pp. 233, 329).

TANGIBLE AND INTANGIBLE.

KATE W. BUCK.

TRAINED, as most of us have been from earliest childhood, to look to the outward things about us for pleasure and profit; to watch the body lest it become diseased and therefore troublesome; to fear the slightest touch of pain lest it develop into something "serious;" to be tucked up and coddled on the slightest provocation by our anxious parents, —it is small wonder that the visible and tangible things, of which we hear much, seem real, and that the invisible things, of which we hear but little, seem visionary and unreal.

This proves a stumbling-block to most adults when seeking the truth which Christian Science so faithfully presents, reiterating, as it does over and over again, with unswerving assurance and by different modes of expression, that it may reach different classes of thinkers, the allness of the spiritual, the nothingness of the material. People frequently claim that the Christian Science concept of God is vague, far-off, intangible; they cry for something definite, failing to realize that in this very desire they prove that they are looking for something which can be taken in through the five senses. Along this line Mrs. Eddy writes: "The Israelites centered their thoughts on the material in their attempted worship of the spiritual. To them matter was substance, and Spirit was shadow. They thought to worship Spirit from a material standpoint, but this was impossible" (Science and Health, p. 351).

To such a seeker, from whose lips the words tangible and intangible were often heard, earnestly seeking in the only way he knew, came a revelation through the eyes of a dog to whom he had shown a kindness. The dog came to him and, putting one paw on his knee, looked up at him with such an expression of love, gratitude, and loyalty as there was no mistaking, and he thought: "They call you dumb, and yet you are speaking to me as few human beings have spoken,—and how? Here is an intangible expression of affection, yet one which is perfect, unmistakable, complete; one which I fully recognize and cannot doubt." Then the thought of love, as manifested by the dog, took full hold upon him, and the bugbear of tangibility and intangibility began to disappear.

An enumeration of the qualities most prized by mortals proves that they all belong to the intangible class,—love, with its activities, sacrifices, and heroisms; justice, forgiveness, courage, and, in fact, all things which make for the good, the happiness, and the betterment of mankind. On the other hand, most of the things which are tangible can be gathered into a heap and destroyed. This point being reached, all thought as to the vagueness of the concept of God which Christian Science proclaims must vanish. Since all things that have real intrinsic value are intangible, so must of necessity the great source be from which all these recognized good things come and of which they are the eternal attributes.

At this stage Christian Science steadfastly leads us back, as little children, to the beginning, when "God saw every thing that he had made, and, behold, it was very good"—Spirit the creator, the creation therefore spiritual. Thus an unchanging Principle maintains all things good forevermore, regardless of outward manifestations, teaching mortals to turn away from the insistent, visible things, falsely claiming to be so much, and by that very turning and longing to climb up higher, finding the "fruits of the Spirit" which alone can satisfy. Having once tasted these fruits and found them good above all others, former things fail to satisfy, and we know we have found the only path to abiding peace, contentment, and happiness.

In Science and Health (p. 312) we read: "How true it is that whatever is learned through material sense must be lost because such so-called knowledge is reversed by the spiritual facts of being in Science. That which material sense calls intangible, is found to be substance. What to material sense seems substance, becomes nothingness, as the sense-dream vanishes and reality appears." One keeps to the chosen pathway, at times, only by much valiant, persistent striving,—such are the temptations that assail; but at last, because of the promises, we needs must lay hold upon reality and cling to the spiritual facts of being, which never express aught but health, happiness, and harmony.

BETTER BELIEF.

JULIA C. LEONARD.

ARE personal sense and mortal mind never to be redeemed and never to be saved? In reply to this question we need but refer to Mrs. Eddy's writings to become acquainted with the fact that all which is mortal and material is not the reality of existence, but an illusion from which there must some time be a great awakening. This awakening through the realization of the truth of being is the yielding of personal material sense to spiritual understanding, by which erroneous beliefs are destroyed in the appearing of a better belief, until the belief of a material existence apart from God, of life and intelligence in matter, yields to the understanding that all life and intelligence are included in God and His manifestation.

In Science and Health (p. 485) Mrs. Eddy says: "Emerge gently from matter into Spirit." Mortals cannot expect to advance from sin to holiness at one bound, and faithful students of Christian Science have learned that it has been only by gradually overcoming the old beliefs, and having in their place better beliefs, that they have been able to reach that understanding which enables them to go to the bedside of the sick and suffering and speak the word which brings deliverance. From the beginning, material existence has been a struggle to get rid of sin and sickness, and Christ Jesus showed mortals that they were to overcome these ills, not by reliance upon material remedies, but by the power of Spirit. Of evil he said: "When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."

Respecting this declaration by the Master, Mrs. Eddy says: "Jesus treated the lie summarily. He denied it, cast

Digitized by Google

it out of mortal mind, and thus healed sickness and sin" (Christian Science vs. Pantheism, p. 5). Jesus thus proved that all evil is unreal; that it is not true, for it is not of God. The understanding of the scientific fact that God is the only cause and creator, is the basis of Christian Science healing, and it enabled Jesus and his disciples to heal the sick. The creator of good could not be a creator of evil, and the Bible tells us that "God saw every thing that he had made, and, behold, it was very good." When mortals cease believing that there is a creator of evil as well as of good, they will cease believing in evil and gain a better belief, and thoughts of sin and sickness will become less and less real.

Christian Science has presumably to do with thinking. Wrong thinking causes every discordant condition, and right thinking corrects it, and Christian Scientists are learning how to maintain right thought all the time, thought which is so true, so scientifically and demonstrably right, that they too can say: "Whereas I was blind, now I see." Whereas I was sick, now I am well. Improved health and character go hand in hand. With better thinking, old thought processes are put off and the new put on.

As human sense gives up its false beliefs, the bodily condition improves and pain ceases. Only as thought progresses can error disappear and immortal Truth become the All-in-all of existence. Advancing spiritually through better thinking, having higher ideals, holding constantly in thought spiritual models, mortality is put off and immortality put on. As this change in mortal thought takes place and a higher and broader understanding of Truth is gained, the material sense of existence vanishes, and spiritual sense reveals the facts of God's creation.

TRUE HEALING.

ELMA E. WILLIAMS.

On pages 230 and 231 of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, there is an explanation of the cause and cure of disease which is concise, clear, and direct. But so deeply fixed seems the mortal belief that matter is both cause and cure, that not infrequently the Christian Science practitioner hears doubts expressed by those he is trying to help, as to whether the cause of their troubles is mental after all; and when an ill once met seems to return, this doubt sometimes assumes an aggressive aspect and leads the patient to indulge in complaint, or even to turn away, for the time being, from Christian Science.

Some months ago the writer was taken ill with what seemed a serious difficulty. The fear was great, and so intense was the pain that help was asked for from another practitioner. In endeavoring to remove the fear this practitioner said, "Do not be alarmed; it is fermentation in thought." Relief was quickly experienced, and after the second treatment the trouble was overcome. About a week later, on returning from Sunday evening service, the same physical disturbance reappeared in a much aggravated form. The first impulse was to call for help, but the practitioner's reference to "fermentation in thought" was recalled, and a search was made within for the mental cause. Instead of finding a sweet sense of love for and loyalty to good, there came to light a critical attitude of thought, unloving and unkind. As a result of this uncovering, the resolution was made to dig up and destroy this habit of criticism, then and there, if it took all night. In a very short time the victory was won; a sweet loving sense of God's allness was realized, and hatred was overcome. The illness, too, had entirely gone, and has never returned; neither indeed can it, for the cause was "obliterated through Christ in divine Science" (Science and Health, p. 231).

Some one may ask, "Why was not the healing done in the first instance when it disappeared?" The answer is, that it seemed necessary in this case for the wrong thought which was operating as cause to be seen before it could be cast out. This habit of scoffing at and criticizing others had been lifelong, and even after membership in the Church of Christ, Scientist, was attained, self-righteousness had ofttimes reserved to itself the privilege of criticizing. Those with a demonstrable knowledge of Christian Science know that many cases are healed in Christian Science without the specific cause of the trouble being known to either patient or practitioner. Without doubt instantaneous healing is the aim of every loyal practitioner, but for the healing to be not only instantaneous but permanent, that which seems to operate as cause must be removed; and if an uncovering of the wrong thought to the patient is necessary in order to accomplish this result, the healing will be more rapid *if the* patient joyfully welcomes the discovery, resolves to overcome the false belief, and rejoices in God. We then *gladly* agree with our revered Leader in saying that "Love is the liberator" (Science and Health, p. 225).

TEXT AND CONTEXT.

MABEL IRMA LEES.

An article in the *Sentinel* which revealed broadly the relationship between the words text and context, impressed me greatly. The writer called attention to the fact that "to get at the meaning of the text, it is imperative to consider the context," the article as a whole encouraging careful study and emphasizing its great value. Heretofore even the similarity of the words text and context had never been observed, although both are very familiar to any student of Christian Science. Take, for instance, the expression "golden text," which viewed in this light meant more than its repeated use had ever before brought out. I was impressed that if all in the Sunday school would, as they repeated the words, pause so that it could be mentally weighed in the balance of values, there would be a gladsome, heartfelt emphasis on "golden;" it would shine more brightly in its setting, and as we followed farther the context of the Lesson, its "golden text" would be like the name on the entrance gate to a beautiful land of joy.

As the "golden text" is learned and repeated, and in turn we follow through careful class study the subject of the Lesson, or context, more light is gained, and inside this gate we find more beautiful unknown things than had ever been thought of, things which we cannot forget and bring out with us through the same entrance. Before going farther, it is well to read again the "golden text" in the light of the context, or Lesson study. So doing, we find it contains much more than was at first apparent. The words are the same and are few, but the thought has grown, and it means to each individual just what he has learned from close attention and obedience. This text has a value all its own, and we should always be sure to note this value before leaving it. Thus it will prove a passport to that realm of wealth which the diligent searching of the context revealed.

I may not tread the paths he trod
In famed Judea's land,
But I can walk as near to God
As those who touched his hand;
I may not climb the vine-clad hills,
Nor stand on Olives' height,
But when his truth my vision fills,
I see a grander sight!

Tho' to my gaze may be denied
The light of Orient skies,
No distance can from him divide,
If Love anoint mine eyes.
With Christ the thorniest shrub that grows
Burns with celestial flame,
And duty blooms like Sharon's rose,
For Christ dwells there "the same."

A. N. Whitmarsh.

SELECTED ARTICLES.

[Frederick Dixon in *Letchworth Citizen*, Letchworth, England.]

In a recent issue of the *Citizen*, under the heading of "The Theosophical Society," there is a reference to Christian Science which I am sure you will allow me to correct. It is not my purpose in any way to criticize theosophy, nothing could be farther from my thought. What I do wish, however, is to explain that Frank Merry, in his lecture on the development of the Aryan race, introduced a reference to Christian Science which was completely, though I know unintentionally, misleading.

He explained that Christian Science is the counterpart in modern philosophy of the doctrine of Maya, promulgated by the Vedantist teachers. "The Vedantist," he explained, "endeavors to realize the unity of all things; and because man's nature reflects all principles that are in the universe, the constant endeavor is to shut out the lower planes, so that he may gain the experiences of the higher. Everything but this is to him illusion or Maya." Now, to anybody thoroughly grasping the teaching of Christian Science, this would be sufficient to explain that Christian Science and the Vedantic philosophy are poles asunder.

Maya is the belief in that fictitious energy which, in conjunction with the supreme self, produces the cosmic soul, and it is always personified by a female form of celestial origin, created to beguile. It would be difficult to imagine anything more completely contradictory of Christian Science than this. Christian Science is founded on the New Testament, and when Jesus personified the lie of evil, the illusion of matter, he personified it, not as a celestial being, but as the devil. "Ye are of your father the devil," he said, "and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." So far from Christian Science teaching anything approaching the doctrine of Maya, it teaches the exact reverse. The doctrine of Maya is expressed in this idea of fictitious energy which, in conjunction with the supreme self, produces the cosmic soul. Christian Science teaches that the only supreme self is divine Mind, and it uses the term Soul as a spiritual synonym for the divine Mind, or God. Matter, evil, whatever concrete shape illusion may seem to take, it describes as Jesus described it, as a lie, and as such, as something not producing, but entirely unknown to Soul or God.

The term soul is used in so many senses that it sometimes is difficult to understand exactly what is meant by it. In the Bible, it is in a few specific cases used as the synonym for God, but in the enormous majority of cases, it is used simply for sentient matter. The Old Testament term *nephesh*, in the psychology of the Hebrews was not peculiar to man. It was the supposed principle of life and sensibility of any animal organism, and ultimately it was transferred to the sentient organism itself. In the New Testament, the word in Greek is *psuche*, and in Latin *animus*. These words also mean mere animal life, and, like *nephesh*, have no spiritual significance whatever. Mrs. Eddy, face to face with this double meaning, accepted the term in its spiritual significance, instead of its material, and has used it (capitalized) in Science and Health invariably as the synonym for God. It is easy to see from this that the Vedantic doctrine of Maya admits a connection between the real and the unreal, between the spiritual and the material. This was the very difficulty presented by the doctrine of the absolute unreality of evil, which led to the growth of Gnosticism in the primitive Christian church, and it is a dilemma which orthodox Christianity never has faced, and never can be induced to face, but always turns aside from with the remark that it is not to be comprehended by man.

Christian Science faces the difficulty instead of avoiding it. So far from regarding Spirit as the ultimate of matter, it declares plainly that there is no connection whatever between the two. So far from admitting the power of evil, it declares plainly that evil is not power, but an illusion. This illusion, however, is a very different thing, as has been shown, from the doctrine of Maya, and though it is, of course, quite open to anybody to contend that the teaching of Christian Science is mistaken in its view of evil, it is not possible to contend that it is a similar teaching to the doctrine of Maya.

[Editorial in *Quincy* (Ill.) *Herald*.]

There has been a great deal of talk lately about medical freedom, and people wonder what it is. Why, bless you, it is just like any other kind of freedom. It is not a question of doctors or drugs; it is simply a matter of vital importance to every individual citizen; it is the fundamental basis of all our liberty in this land of freedom. The question is whether you or I or any citizen may have the right to select and employ that method of healing which we believe in and which we think or know from experience will cure.

It seems like a very simple proposition, which could not be opposed reasonably by any person or school; and yet there are certain elements so unfair as to be making every effort to deprive citizens of their individual right of choice. When looked at in a broad, liberal way, untrammeled by any personal consideration, it would seem as if every fair-minded man would be as disposed to grant every one the privilege to choose a healer as to grant him the right to pick out his own butcher or baker or grocer or undertaker. The opposition to such freedom is entitled to no standing; and the only way this opposition can be explained, is that the element of personal gain has crept in and blunted the sense of justice and fairness which is innate in every unbiased citizen.

[George Martin in *Federal Independent*, Sydney, Australia.]

On several occasions I have been asked to give my reasons for leaving the Congregational church and its ministry in order to take up Christian Science. With your permission I would like to do so through the columns of this paper. In the mental journey from matter to Spirit, from sense to Soul, which all are making, there are many stages before the spiritual ideal—perfect manhood in Christ Jesus—is reached. Several of these stages had been reached and passed by me at the time I found myself a minister of the Congregational church. I loved this church; I valued its basic truths; I enjoyed the freedom it gave from creed and formula, and I gave it the best service I could render. While in one of its country charges, for several years I traveled extensively, often doing four thousand miles in the course of the year in preaching and visiting. But all this time I was mentally restless, seeking for something, I hardly knew what. I loved the Bible, and gave much time to its study. I read the patristic writings, spent many hours with the mystics, followed the holiness movement, as expounded from its Keswick platform, and for years held faithfully to the doctrine of the second advent, but with it all there was something lacking.

In due time this something became defined to me. It was the lack of a proper understanding of, and a growing conviction of my inability to give, that concrete expression of Truth and Love so graciously manifested by the great Exemplar, Christ Jesus. It was becoming very clear to me that I, as a preacher of the gospel, should be able not only to expound its ethics, but also to demonstrate its fundamental teachings; not only to voice its commands, but to be an example to others as to what obedience to these commands meant. I could tell men that Christ Jesus healed the sick, and commanded his followers to do the same, but I could not say how it was done, nor could I go and do likewise. To quote his words were easy; to give concrete examples of his works seemed impossible. That Christ Jesus was the

Digitized by Google

mediator, or Wayshower, I believed, but how to follow him in the way of his commandments I knew not. If I, as a public expounder of his life and words, did not know, how could I teach others? To be true to the Master, I must accept all he said and copy all he did. But this seemed to be asking too much; for the first I would not do without question, and the second I could not, I did not know how.

Not that I doubted the truth of his statements,—the gospel story was too beautifully simple and divinely natural for that, and withal it was so emphatic and authoritative; and it all seemed so far above me. Those who heard him declared, "Never man spake like this man;" and also, he spake "as one having authority, and not as the scribes." Concerning his own words he could say, "Heaven and earth shall pass away, but my words shall not pass away." Apparently he knew without a shadow of doubt that he was knowing and doing the Father's will, and this will seemed to be to destroy sin, sickness, and death as it came before him. I read in John's gospel: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." I also read in Mark: "Go ye . . . and preach. . . . And these signs shall follow them that believe: In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." I knew this was the commission Christ Jesus gave to his church, a commission where word was wedded to deed, and precept was not to be divorced from practise, where saying and doing were to go hand in hand, and healing the sick was to be the proof, or fruit, of preaching the gospel. But I also knew only too well that the church had not only ignored and disobeyed this commission, but had torn it in two, reserving to itself the preaching, or the ethical and the easier portion, and delegating to *materia medica* the healing work, or the practical results which are the natural outcome of the former, thus separating the cure of souls from the cure of bodies; using the power of Truth to heal the one, but leaving the other to be healed by mindless matter, thus adopting means to bring about results, which the Master neither used nor sanctioned.

And it seems to me that this separation between what has been called the secular and the sacred has brought about conditions which the church is never weary of deploring and sometimes denouncing, but for which she has herself to blame. Another thing which impressed me deeply was the fact that the healing of the sick and the raising of the dead had been performed by others, both before and after the Founder of Christianity. The prophets before his day did this work, and the early church for three centuries gave glorious witness to the healing and saving power of the impersonal Christ, or Truth. And the question naturally came to me, Why are these things not done today? Is it because, as the theologians tell us, God has withdrawn His power to heal from the church, and the college of surgeons has fallen heir to it? Or is it because of moral blindness and unspirituality of thought? My reading and thinking had brought me to this conclusion: that, as God is no respecter of persons, and as He never withdraws any gift He bestows, there must be some law; it must still exist in operation; and if I could find it nothing could hinder me from going and doing likewise. Then I must search for this law until I found it.

I had reached this stage in my mental journey when I heard of Christian Science for the first time. I found a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy in a house where I was staying for a holiday. At my first reading I was not impressed. Several months later I had this book loaned to me, and I resolved to study it seriously. I had not gone far when I became convinced that I was on the right track. I was determined to put it to the test. A member of my family had met with a serious accident,—concussion of the brain,—which did not seem to yield to medical treatment, so I asked a Christian Science practitioner to take up the case. This was readily done, and within a week all trace of the trouble had vanished, which was further confirmation that I was working in the right direction. Gradually my consciousness opened to the light of God, the divine Mind or Principle of the universe, and man as the idea or perfect expression of this Mind, was daily becoming clearer. As the truth unfolded itself to me, I began to see the secret of the Christ-power and its mode of operation. I also found the explanation of the Christ-healing, and how it was accomplished. And now there stood clearly before me "the law of the Spirit of life in Christ Jesus;" my search was ended, and I entered into rest. After thirty years of desert wanderings I had reached the borders of the promised land of spiritual understanding—man's oneness with his God.

Naturally the truth as I now understand it began to manifest itself in my preaching. I sought to lift the thoughts of my congregation to the Christian Science standpoint, as I then understood it, but failed to make any impression. After eighteen months of earnest effort I could see there was nothing for me but to resign my charge, which I did. What Christian Science has meant to me is more than I can tell. The spiritual understanding of God, the conscious presence of the Christ, the reliance upon divine Love as the source of supply, the realization of the reality of good and the unreality of evil, are some of the many blessings which have come to me through my understanding of Christian Science.

[Paul S. Seeley in *Klamath Falls* (Ore.) *Northwestern*.]

Your recent editorial on the unique subject "Does God Fix the Death Rate?" bears witness to the fact that thinking people are rapidly repudiating the time-worn theory that conditions of human suffering are decreed by a cruel Deity. Let us hope that all the world will soon agree with your sensible conclusion that the mortality table is not regulated by the hand of God. In following your discussion of the causes contributing to the death rate, I regret to observe your wholly erroneous statement relative to Christian Scientists and the effects of their practise. You write, "The Christian Scientists and other faith-'healers' who close their eyes to the possibilities of material aid, that may often so potently be added to the psychotherapy they are employing, swell the death rate." May I be privileged to present a few facts which I hope will help to correct your mistake and remove any misconception in the minds of your readers relative to Christian Science and the points involved?

First, Christian Scientists are not faith-"healers," nor do they practise psychotherapy, a word indicative of mental treatment practised by those who believe in the power of the human will or of mortal mind to heal their physical ailments. Christian Scientists place sole reliance upon God, divine Mind, who, as the psalmist has said, "healeth all thy diseases." They believe implicitly in the Bible and in the teachings of Christ Jesus, who demonstrated to mankind the power of God, divine Love, to heal the sick and cast out all evil through a scientific understanding of Him. Christian Scientists believe that the Master knew what he was talking about when he said, "Ye shall know the truth, and the truth shall make you free," and as a proof of this, that he healed "all manner of disease" and commanded his followers to go and do likewise. The faith of the Christian Scientist binds him to the higher and purer understanding of God and His creation as perfect and good, so enabling him to overcome disease and evil of every kind. Is there hope apart from God? Not once in all his earthly career did Jesus place any reliance upon drugs as material remedies. "The Father that dwelleth in me, he doeth the works," was his explanation of his healing power. His promise to his followers was, "The works that I do shall he do also; and greater works." It is by the same divine power that Christian Science is

Digitized by Google

accomplishing its multitudinous cures and attracting to it the sick, the sinning, the sorrowful, and those who seek a scientific and demonstrable understanding of God.

The teachings of Christian Science have been tried and proven, for it brings to the world a message of hope through a demonstrable knowledge of God and His unchanging law of love and truth. Mrs. Eddy has written on page 390 of "Science and Health with Key to the Scriptures," "It is our ignorance of God, the divine Principle, which produces apparent discord, and the right understanding of Him restores harmony." In the fuller realization of this great but simple truth, sin, sickness, and death, "the last enemy," will be overcome, man in God's likeness will appear, and the death rate finally be extinguished.

[Ezra W. Palmer in *Boulder* (Col.) *Camera.*]

A sermon delivered in your city entitled "The Breaking Point," and recently circulated in pamphlet form, assumes the position that bodily weakness may be fought off for a season, but that a time arrives when "an unmanageable physical breakdown occurs which Christian Science is very foolish to deny," and adds that "the day will come when the physician or surgeon will have to be called in." The above quotations are a curious illustration of the extent to which a materialistic conception of the universe will lead one astray from the plain teachings of Jesus Christ. Of course if one accepts the dictum of the material senses much inductive evidence can be gathered which would indicate that death is inevitable. But this evidence is purely tentative and empirical. To illustrate, a person ignorant of music might contend that discord in music is inevitable and unmanageable, his sole reason for so declaring being because he could not bring out concord, not knowing its laws. A great multitude might believe the same thing, inevitably shutting themselves off from the wonderful beauties of musical harmony. But let the master musician appear and all the reiterated declarations and beliefs of the multitude are set at naught.

Jesus Christ was the master musician. He knew the infinite concord of eternal God, who governs the universe harmoniously. What was his attitude toward so-called "unmanageable physical breakdown"? Did he weakly throw up his hands before such a condition? By no means. He knew the infinite love of omnipotent God for all His children, and knowing that human ills never came from God and that no power could be "unmanageable" in His sight, he healed the multitudes of all manner of diseases. The skeptics of his day, to hide their lack of faith in God, might have declared that the man with a withered hand had "an unmanageable physical breakdown," but Jesus knew better. He said to the man, "Stretch forth thy hand," and the hitherto unmanageable weakness disappeared.

What did Jesus teach about the so-called inevitableness of death? He never taught that death is inevitable, neither did his disciples. On the contrary, he declared that man could escape from death. He raised Lazarus from the dream of death, overcame it himself, and declared without reservation, "If a man keep my saying, he shall never see death." Where in this is there room for a so-called inevitable breakdown or the necessity for the doctor's drugs or the surgeon's scalpel? St. Paul points out in the eighth chapter of Romans that ignorance of God is the cause of death, and that a right understanding of Him brings harmony. He says: "For to be carnally minded is death; but to be spiritually minded is life and peace."

Christian Science lays hold on "the deep things of God." It teaches the might and majesty of God, and that a right knowledge of Him brings us man's primitive and eternal heritage as the "sons and daughters of God," where sickness, disease, and death are unknown. Christian Scientists know that before the omnipotence of God there is no such thing as an unmanageable power. They do not claim that at the present time they can prove their entire mastery over all the ills of the mortal or carnal mind, but each lesser victory over sin and sickness proves to them that they are on the right track.

[John M. Dean in *News-Scimitar*, Memphis, Tenn.]

That Christian Science "is one of the doctor's best economic assets" is a novel argument, and exactly the reverse of most statements given out under such circumstances; for it is self-evident that if *materia medica* had even approached a sure method of cure, there would have been little or no demand for Christian Science as a healing agent. The fact is, that comparatively few people turn to Christian Science until all medical means have been exhausted and man's extremity has become God's opportunity. Though as a class Christian Scientists are healthy and happy, having neither need nor desire to return to outgrown and discarded systems, they nevertheless have a deep respect for conscientious practitioners of every school of medicine, and these are largely in a majority; but the rash and sensational diatribes of a noisy minority too often pass current with the casual public as being proven facts. It is only such as these who seem to delight in maligning Christian Science, and nothing in this article is intended as a criticism of the noble medical fraternity as a whole. It is a good thing for any group of people not to have to stand sponsor for the foolish words and acts of isolated individual members, and the medical profession is no exception to this rule.

[From *Sebastian County Bulletin*, Fort Smith, Ark.]

We do not pretend to understand this divine philosophy which brings healing on its wings to the sick, wounded, and bereaved of earth, but we say, Blessed be the name of that greatest of modern women, Mary Baker Eddy, who took faith as her staff, chart, and compass, and the Bible as her field notes, and boldly went into the wilderness of conflicting beliefs to trace out and resurvey the ancient paths of righteousness and peace which millions of mortals are now dimly following in the inspiring hope of universal peace, righteousness, and good will among mankind on earth.

[Written for the *Sentinel.*]

SINGING BELLS.

STELLA E. SAXTON.

THREE stemlike towers soar far above
The noisy street,
And there they flower in singing bells;
While hurrying feet
Along the path of striving men,
Pause on their way
To grapple with the beckoning day,
As deep-toned swells
The message of the singing bells—
Strikes "faith," strikes "hope," strikes "courage"; then
Strikes "courage," "hope," and "faith" again!

Toward home, how swift the speeding feet,
For night draws near;
Already in the western sky
Shines a lone star!
Along the path of faithful men—
A blessed way—
They hasten at the close of day,
And sweet-toned swells
The benediction of the bells—
Strikes "peace," strikes "joy," strikes "love," and then
Strikes "love" and "joy" and "peace" again!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"FAITHFUL OVER A FEW THINGS."

We read in the gospels that when Jesus chose those who were to carry on the work of preaching and healing which he was about to inaugurate, they forsook all to follow him, and throughout the time he was with them we find him impressing upon them, again and again, the necessity for faithfulness in their high calling, even to that sorrowful rebuke to Peter, "Couldest not thou watch one hour?" Every Christian Scientist is in a certain sense called to the healing work, and those who have forsaken all to follow the Master's calling, who have consecrated their time and endeavor to the carrying on of this work, are doubtless sensible of its sacredness and importance, and yet a word as to the special responsibility incurred by those who are publicly known as practitioners, a reminder of the requirements attaching to this office, may not be amiss.

Occasionally—we might almost say frequently—complaints are received by the Christian Science Publishing Society that, notwithstanding the announcement which appears regularly in the *Journal* in connection with the practitioners' cards, it is sometimes necessary for a person needing immediate help to call upon several practitioners before finding one ready to respond to his need. The announcement referred to reads as follows: "It is expected that practitioners will be found regularly at the addresses published in their cards," and the object of this announcement is to impress upon practitioners the need for regularity in their work, and especially that, having made known their willingness to help those in need of Christian Science treatment, they should hold themselves in readiness for this work during the time specified.

It would of course be unreasonable to expect a practitioner always to be at home or at his office, because it is necessary for him to go to see those who are unable to call upon him; but even this duty should not be allowed to interfere, except in emergencies, with the keeping of the office hours specified in the practitioner's card in the *Journal*. Should such emergencies arise, there should be no great difficulty in arranging with some competent person to respond to calls which may come in the absence of the practitioner, either by having some one present to give treatments, or at least to refer callers to some other practitioner with whom arrangements have previously been made. When the practitioner is to be absent a whole day or several days, an arrangement of this kind would seem to be absolutely necessary.

The work of a Christian Science practitioner is not something to be lightly taken up or lightly regarded, and Mrs. Eddy's words in "Miscellaneous Writings" (p. 116), "Obeying the divine Principle which you profess to understand and love, demonstrates Truth. Never absent from your post, never off guard, never ill-humored, never unready to work for God,—is obedience; being 'faithful over a few things.' If in one instance obedience be lacking, you lose the scientific rule and its reward: namely, to be made 'ruler over many things,'"—are as applicable to those who have undertaken this work as they are to those who have been selected to do the official work of the cause in general or of the branch churches. It is well to remind ourselves that wherever we are and whatever the task assigned us, we are one and all workers in the field "white already to harvest," and the fruits of our labors will be in proportion to our faithfulness to the trust committed to our care.

Archibald McLellan.

STRENGTH AND STRUGGLE.

If one were to ask the average twentieth-century business man how to win success, he might elicit the single word "Hustle." If a professed Christian, he might answer, "By prayer, pluck, and persistence," and the fact that he would thus assign so large a share of the credit to one's exhibition of insistent energy, would be due to the very general acceptance of the teaching that the struggle and tragedy of human life is a natural and inevitable order.

In their every-day life some Christian people emphasize St. Paul's urgency that we rely on "the whole armor of God;" others give prominence to St. James' consideration for good works, but practically all think of their struggles with temptation and sickness as working together for good and therefore as having their place in the educational scheme appointed for their betterment. They think that courage, patience, endurance, etc., are to be acquired in this way; that they pertain to the technique of that fine living which develops the muscle of true manliness; that strength always means struggle.

In a sense all this is true. St. Paul correctly describes the attainment of spiritual good as a wrestling. There seems to be no excellence for most people without great labor, but we do well to remember that this struggle is for the most part imposed by human ignorance and not divine requirement. It is a seemingly severe saying, but quite true, that "only fools have to learn by experience." "A prudent man," saith the proverb, "foreseeth the evil, and hideth himself; but the simple pass on, and are punished." In the teaching of Christ Jesus and Christian Science it is made clear that true progress comes through obedience to divine law and not through the experience of hard knocks, and when one compasses this fact he begins to give his attention to this law of intelligence, and is instructed thereby. In Science and Health Mrs. Eddy writes: "Through toil, struggle, and sorrow, what do mortals attain? They give up their belief in perishable life and happiness;" and she further says that "when understanding changes the standpoints of life and intelligence from a material to a spiritual basis, we shall gain the reality of Life, the control of Soul over sense, and we shall perceive Christianity, or Truth, in its divine Principle" (pp. 536, 322), thus strikingly contrasting negative and positive good.

The thought of struggle as not only inescapable but beneficent in itself, tends to make people content with a life of endurance, and this can but deaden one's instinctive responsiveness to that ideal life of spiritual demonstration which means not struggle but triumph. The struggle typified in the wrestling of Jacob is a struggle with an error the claims of which as a power apart from God are as yet conceded, and from which God's good angel delivers us at the Peniel of understanding prayer. If struggle is essential to scientific progress, it is the true way of life; hence the call, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," would seem out of keeping. While recognizing the certainty of struggle in the transitional stages of spiritual aspiration, Christian Science points to the overcoming life as the ideal, the life which brings into illustration "the unlabored motion of the divine energy" (Science and Health, p. 445). It makes clear to human apprehension the vast truth that God is the only doer, and that it is ours simply to prepare "the way of the Lord." It leads to the restfulness of repose in eternal Truth, that of which we can but think as infinitely capable. We are thus saved from the enslavement to self, which is equally disabling whether manifest in a sense of self-sufficiency or a sense of insufficiency.

The sovereign consciousness of Truth expressed in the Master's words, "The Father that dwelleth in me, he doeth the works," speaks definitely for the fact that the human sense of struggle is the index of an aspiring but incomplete spiritual consciousness, and it must disappear in the measure of our realization of the presence and power of Truth.

POSSIBILITIES.

IN the gospels we find a number of strong statements as to what is possible to those who let go of the mortal, material sense of things, and lift their thoughts to God as the source of all that is real and harmonious. Luke tells us that when Mary questioned the angel's annunciation of the birth of the "holy child Jesus," she was assured that "with God nothing shall be impossible." Later, we read that Jesus himself declared the same truth to the sorrowful father of the epileptic boy when he said, "If thou canst believe, all things are possible to him that believeth;" that is, in the all-power of God. Many times this assurance was given by Jesus, and on one occasion he said to the disciples, "The things which are impossible with men are possible with God." In Mark's gospel we read that in his brief but decisive struggle in the garden Jesus declared, "Abba, Father, all things are possible unto thee;" and Mrs. Eddy says of the final result of this experience upon the disciples that "it helped them to raise themselves and others from spiritual dulness and blind belief in God into the perception of infinite possibilities" (Science and Health, p. 34).

The Christian Scientist's point of view should ever be that of man's infinite possibilities, and this of course means the man of God's creating, for the unreal, sinning, suffering mortal concept is nothing to be "accounted of." The vital question for each to consider is whether he is "with God" in all his hope, aspiration, and endeavor. If he is, then he has the assurance that the things which are impossible to mortal sense are possible when one "blends his thoughts of existence with the spiritual and works only as God works" (Science and Health, p. 263). We can hardly estimate the chilling, deadening effect of a denial of man's divinely bestowed possibilities upon those who are trying to gain their freedom from bondage of some sort, especially that of disease. It therefore rests with the one who has had a glimpse of Truth's infinite power to know and declare for himself, as did Paul, "I can do all things through Christ which strengtheneth me."

Many miss to a large extent the meaning of man's infinite possibilities as scientifically understood, and the uplifting power which accompanies such an understanding, because they hold thought down to the low level of material transactions and mere worldly success. Here some one may ask if it is not perfectly legitimate to apply our understanding of Truth to all our human problems. To this it may be answered that the rays of Truth penetrate all human conditions and show how they may be bettered, but the spiritual law of progress is that we shall seek first the things of God, work with God to divine ends, and we shall then find all good will inevitably come to us if we keep close enough to the Father, who knows our needs better than we do ourselves and cares for us with infinite tenderness. Our greatest need—our only real need—is to reflect God, for this means the possession of health, holiness, happiness, with strength to be and to do. Mortal belief denies and ever has denied that such a consummation is possible, but the truth stands unshaken throughout the centuries, and will until mortal belief is forever silenced.

To God, and hence to the Christ-idea, evil is impossible, as Peter boldly declared on the day of Pentecost when he told the listening multitudes how God had raised Jesus from the tomb, "having loosed the pains of death: because it was not possible that he should be holden of it." Peter also urged them to avail themselves of the promise that the Spirit would be poured out upon all flesh, a promise which is reaching its broadest fulfilment in the healing ministry of Christian Science. What if the senses press heavily with their evidence of disease or even of impending death? To one in such a condition who reaches out for the aid of divine Truth the resurrection may begin at once, if he but grasp and hold to the eternal fact that with God all good is possible, and this in God's eternal now.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

PORTLAND, ORE.—To take care of the rapid growth of the Christian Science denomination in Portland, the three Christian Science churches of this city have unanimously decided to divide the city into four church districts. This plan will prevent overcrowding, and by providing four places of worship in different parts of the city, will give opportunity to many people to attend the service who have heretofore been unable to do so on account of the distance from their homes. This plan will not compel those living in a particular district to worship at the church in that district. Although the plan has been unanimously adopted by the church members, most of whom will undoubtedly affiliate with the church in their respective district, residents of every part of the city will always be welcome at any of the church services.—*Spectator.*

FORT WAYNE, IND.—The Hon. Charles McCulloch, president of the Hamilton national bank, has sold his homestead at the northwest corner of Wayne and Ewing streets to First Church of Christ, Scientist. The deal has been pending for some time, and the consideration was sixteen thousand dollars. Possession of the property will be given May 1, and the present homestead will be remodeled. The building and property measures one hundred feet square. The congregation of First Church of Christ, Scientist, has long been in need of a suitable edifice for worship. For years it has occupied a small building at the rear of the Jewish synagogue on Harrison street. The congregation has grown in membership, however, and this building is now entirely too small.—*Fort Wayne Sentinel.*

BAY CITY, MICH.—A church built without the giving of a single entertainment or bazaar to raise money, built entirely from the free-will offerings of its members and its congregation, a church opened for its first service without any special ceremony and without the presence of some speaker noted for his ability to arouse giving enthusiasm on the part of the audience,—such is the Christian Science church in which services were held for the first time yesterday, the closing Sunday of 1912. [The corner-stone was laid Dec. 11, 1911.]—*Bay City Times.*

EASTLAND, TEXAS.—This society was organized in October, 1908, and first held its meetings in a residence. With the growth of the society it moved to Yeoman hall, where services are now held. At the last business meeting a committee was appointed to buy a church lot. The growth of the organization is steady, and there is a good attendance at the services.—*Correspondence.*

QUINCY, ILL.—About eight years ago a loan library in connection with the reading-room was started with two old copies of Science and Health which had been donated to the room. This library has been increased each year, and now includes over forty copies of the various works by Mrs. Eddy, besides the Bible, the Science and Health Concordance, several copies of "Life of Mrs. Eddy," etc. During

Digitized by Google

the past year these books have been loaned to one hundred and eighteen persons, most of whom knew nothing of Science. Twenty of this number have since bought Science and Health. The books are loaned for a period of three weeks, and may be renewed for a similar period. At each Christian Science lecture either *Sentinels* or *Monitors* are distributed. In each paper is placed a slip calling attention to church services and reading-room and library privileges. A slip is also placed in books loaned, and in literature mailed out or distributed by the committee on distribution.

During the past year the reading-room and committee on distribution have distributed and given out a total of 2,087 pieces of Christian Science literature, including 1,174 copies of the *Monitor*. The *Monitor* has been placed in the county jail, Masonic Temple, Hotel Newcomb, public library, club room of street railway employees, Gem City Business College, Adams county farm, House of Correction. All the lawyers in Quincy (fifty) were sent a copy of the *Monitor* containing the decision respecting Mrs. Eddy's will.

Correspondence.

WHITE PLAINS, N. Y.—Between January and November, 1912, about one hundred Christian Science items have been printed in the local papers. The *Record* during that period printed fifteen *Monitor* editorials, forty-five humorous remarks from the *Monitor* editorial page, and eleven general items. The *Westchester News* printed five items, the *Argus* about twenty, the *Eastern State Journal* four. Our spring lecture was printed in full by the *Record* and in part by the other publications. Our recent lecture was treated generously by the press and printed in full by the *Westchester News*. In connection with the lecture, five hundred copies of the *Monitor* containing a special article on White Plains were distributed.—*Correspondence.*

MINDEN, NEB.—Our recent lecture was a step upward. A most attentive audience was present and favorable impressions and increased interest in the cause of Christian Science are some of the results. It was a demonstration over limitation in every way. The society feels that much good has come of its effort to spread anew the message of "on earth peace, good will toward men."—*Correspondence.*

JANESVILLE, WIS.—The beautiful new house of worship of the Janesville Christian Science congregation will be completed and ready for occupancy some time in February, according to the present estimates of the builders. Finishing is being done as rapidly as is commensurate with good workmanship, and as the arrival of needed material permits.

Janesville Gazette.

SAN FRANCISCO, CAL.—First Church held the opening service in its new church home, California and Franklin streets, Sunday, Jan. 5.—*Correspondence.*

OSSINING, N. Y.—The Christian Science Society of Ossining announces the opening of its new rooms at 164 Main street, Baker building.—*Correspondence.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

REGINA, SASKATCHEWAN.

At a lecture on Christian Science delivered in the auditorium of City hall by Virgil O. Strickler, the speaker was introduced by J. Frank Bole, member of the Legislative Assembly, who said:—

I can assure you that it was with a great deal of pleasure that I accepted the kind invitation to preside at this meeting tonight. Not that I am a Christian Scientist, but any one who is awake to what is going on around him must recognize that Christian Scientists are fast becoming a potent factor in the religious and social life of the world. When new ideas are put forward, ideas that are not in line with what is generally considered orthodox, we are likely to get a wrong impression and do not give them the proper reception. Any supposed weakness is exaggerated and attacked, instead of accepting the best that is in them as another great force for the betterment of the world. I am satisfied that after hearing the lecturer tonight many of us will carry away a different impression from that formerly held.

Correspondence.

WHITE PLAINS, N. Y.

William R. Rathvon delivered a lecture on Christian Science at Newell's theater before a large audience. Mr. Rathvon was introduced by William W. Porter of New York city, who said in part,—

I am particularly appreciative of the opportunity which has been accorded me to introduce the speaker of the afternoon, for the reason that it was my privilege to sit in a White Plains hall something like ten years ago, and listen to a lecture on Christian Science. At that time I knew very little of this great subject, which all over the world is awakening men and women to better, happier, and more profitable living, and there were in my thoughts many misconceptions concerning the teachings and works of Christian Science. These misconceptions were to me, in some instances, of serious import, and it was disclosed to me during the lecture in question that many of the views which I had heretofore held regarding Christian Science were wholly and simply my own erroneous concepts. When I learned at that lecture something about what Christian Science really is, what it teaches, and what it does, it was just as impossible for me to repudiate or refuse to accept the truth expressed in Christian Science, as to repudiate and refuse to accept the exact assurance of a mathematical conclusion which reflected clearly the principle of mathematics. Today the healing and regenerative effect of Christian Science is widely and generally recognized, and the inquiring mind, having recognized this healing and regenerative power, is seeking to understand something about the operation by which this healing and regenerative work is accomplished.

White Plains Argus.

OAK PARK, ILL.

A large audience was present at the Warrington to hear the lecture on Christian Science by Francis J. Fluno, M.D., under the auspices of Second Church of Christ, Scientist. The speaker was introduced by Mrs. Grace Wilbur Trout, whose remarks were in part as follows:—

For Mrs. Eddy's unselfish labors, for her interpretation of the Scriptures, for the new hope and new liberty and new joy which she brought into the world, we are filled with a gratitude too deep for words, and we honor and reverence her memory. We ask those of you who know nothing of Christian Science, but who want to know, not to be discouraged because we, who are Christian Scientists, sometimes make mistakes through lack of understanding. Do not condemn the great Principle of Christian Science if we

Digitized by Google

fail to demonstrate all of its teachings. No intelligent individual would condemn the principle of mathematics because some fail to solve their problems.

Christian Scientists are pushing on toward the light, and ever before them, like a pillar of cloud by day and a pillar of fire by night, is the vision of a greater future and a higher destiny for all humanity. We know that God's work is done, but we know, too, that we have our work to do. We are taught in Christian Science that evil, in order to be destroyed, must be uncovered and recognized as evil—recognized as something apart from God that has no reality or power. We know that if one is doing right, no matter how the powers of darkness may threaten, no matter how dubious or how doubtful the outlook, there is nothing to fear, for if God be for us, who can be against us; and God is not far away, remote, inaccessible in His heaven. God is here now, infinite Mind, infinite power, infinite Love, ever present, sustaining, guiding, leading us on.

Health, happiness, and goodness are the divine heritage of every human being. The words spoken by the greatest Teacher who ever lived are just as true today as when he uttered them ninetten centuries ago: "Blessed are they which do hunger and thirst after righteousness: for they shall be filled."—*Oak Leaves.*

FAIRBURY, NEB.

Frank H. Leonard delivered a lecture on Christian Science in Steele's opera house to an attentive audience. The speaker was introduced by George W. Hansen, who said:—

We are afforded an opportunity to listen to a lecture this evening by a gentleman who speaks with authority on a subject which is largely misunderstood by the general public. In order to remove these misconceptions, and to state clearly and correctly the beliefs of Christian Science, this lecture has been arranged. Although not a member of the organization myself, I know that into the lives of many who are near and dear to me there has come through its ministry a large measure of comfort, peace, health, and happiness. The subject is worthy of our most serious consideration.

In the field of material science wonderful results have been obtained in recent years,—time and space have been annihilated in the transmission of intelligence by electrical devices, and we are now witnessing demonstrations of the conquest of the air. But the Christian Scientist looks forward with an unfaltering faith to even greater conquests than these. If the hope of the Christian Scientist is to be realized, all the achievements of man since the dawn of creation will be transcended by the conquest of fear and hate, of sickness and sin, thus transforming into a paradise a selfish and a sordid world.—*Correspondence.*

YATES CENTER, KAN.

A lecture on Christian Science was delivered in the Auditorium by William D. McCrackan, M.A., to a very attentive and appreciative audience, many of whom were from the surrounding towns. The lecturer was introduced by Frank P. Casey, secretary of the Gas Company, who said in part,—

Public interest in the subject of Christian Science is widespread. The many wonderful healings, resulting from the application of the teachings of Christian Science, have enlisted the attention of our best thinkers. There never was a time, as now, when proofs were so much demanded in support of the claims of any new doctrine. Jesus said: "Ye shall know the truth, and the truth shall make you free." We do not know this truth, and we have not this freedom, in so far as we are yet in the bondage of sin and disease. Christian Science teaches that an understanding of this truth, and this freedom, may be gained here and now; even as the Scripture saith: "Behold, now is the day of salvation."—*Yates Center News.*

NEW YORK, N. Y.

A lecture was delivered in Second Church of Christ, Scientist, by Willis F. Gross. The audience was a large one, completely filling the auditorium, and the lecture commanded the marked attention and interest of all present. Mr. Gross was introduced by Hugh H. Tweedy, first reader, who said:—

These lectures are given in order that Christian Science may be presented to the world in its true light, and to correct any false impressions or preconceived ideas which may be entertained concerning its teachings. Our revered Leader, Mary Baker Eddy, in providing these lectures was animated by the thought which governed her whole life, that of helping and elevating mankind. When organizing the board of lectureship with this idea in view, Mrs. Eddy placed thereon those who had proved in some measure the divine Principle which heals the sick and sinning, as taught and practised by the Master, and upon which the Christian Science church is founded. This church then is essentially a healing church, and it is made strong not merely by the number of those who believe, but by the faithfulness of its followers to the teachings of Christian Science and the commands of the Master: "Go ye into all the world, and preach the gospel to every creature." "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."—*Correspondence.*

BERLIN, GERMANY.

Bliss Knapp, of Boston, U. S. A., delivered a lecture on Christian Science in the Oberlichtsaal. He was introduced by Budd D. Gray, who said:—

I am certain that what Mr. Knapp has prepared for us will prove to be not only extremely interesting, but highly instructive and beneficial; that for those who are beginners in the study of this wonderful truth, this new-old religion again brought to the attention of the world by Mrs. Eddy, some perplexing problems will be made clear; that to the more advanced students, an added incentive will be furnished for still greater efforts toward the attainment of that perfect understanding so "devoutly to be wished."

Correspondence.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Atlantic City, N. J.—Apollo theater building, 3 p.m., Feb. 9.
Berlin, Wis.—Library hall, 8:15 p.m., Feb. 13.
Boise, Idaho.—Pinney theater, 815 Jefferson street, Feb. 6.
Crandon, Wis.—Princess theater, 8 p.m., Feb. 11.
Ironwood, Mich.—Pierce's opera house, 8 p.m., Feb. 10.
Jacksonville, Ala.—College hall, 8 p.m., Feb. 10.
Marshfield, Wis.—Adler opera house, 3 p.m., Feb. 9.
Milan, Tenn.—Auditorium, 8 p.m., Feb. 14.
Montgomery, Ala.—Church edifice, 3 p.m., Feb. 9.
Pasadena, Cal.—Church edifice, Oakland avenue, 3 p.m., Feb. 9.
Pittsburgh, Pa. (Second Church).—Carnegie Music hall, corner Ohio and Federal streets, North Side, 8 p.m., Feb. 14.
Salt Lake City, Utah (Second Church).—Salt Lake theater, 8 p.m., Feb. 9.
Savannah, Ga. (First Church).—Lawton Memorial, 8:30 p.m., Feb. 13.
St. Louis, Mo. (First Church).—Church edifice, Kingshighway and Westminster place, 8 p.m., Feb. 13.
Twin Falls, Idaho.—High school auditorium, 8 p.m., Feb. 10.
Visalia, Cal.—Armory hall, 8 p.m., Feb. 10.
Westfield, N. Y.—Assembly hall, 8 p.m., Feb. 3.

TESTIMONIES OF HEALING.

Four years ago, while residing in northern Germany, I began to suffer from asthma. The trouble grew worse, and I consulted a physician. I was given a remedy which relieved me at first, but soon had no effect, and I was then advised to try a change of climate. I did so, but instead of improving, my condition got worse until my suffering became unbearable. I had heard of Christian Science seven years previous to this, but had always rejected it, as I thought I could get on without it. When, however, I found myself in this extremity, I decided to apply for treatment. I went to Frankfort, Germany, to see a practitioner, and after several treatments I was completely healed, as I have never had a return of the trouble. At the same time the appetite for tobacco left me, and although it returned for a short time afterward, it completely dropped away through the study of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and I have never had any further desire to smoke.

I am most grateful for these beautiful physical healings, but still more for the spiritual light which has come to me and revealed God as ever-present and eternal Love, who never forsakes His children. I have also found Christian Science a great help in business, and in my daily life I desire to show my gratitude for the great blessings which have come to me by following the teachings of Christ Jesus and those of our beloved Leader.

AUGUST VINTZENS, Palmers Green, London, N., England.

For many years I had known that Christian Science healed the sick, but I did not accept it for myself until August, 1908, when I had been very ill for five weeks. I had medical treatment all the time, but improved very little. The physician was very kind, but said he could do nothing more, as medicine did not reach the trouble. Early one morning I decided I would never take another dose of medicine, but would have Christian Science treatment, and from that hour I left the medicine alone. It was three days before I had an opportunity to see a practitioner, but from the first I felt that I would be healed. My healing came slowly, but now, when I realize how much of Truth I learned during the time, I am grateful for this.

Today I am a living witness to the fact that Christian Science heals paralysis. Before coming into Christian Science, I had lost faith in God and man. I was so tired of what life seemed to be, so tired of what I thought was myself, that I would have been glad to end it all; but I was also very much afraid of the unknown future. Christian Science has taught me that God is Love, it has also given me a different concept of man. It has healed me of sorrow which I thought was a part of my life; it has enabled me to overcome intense hate toward one who I thought had done me a great injury. Christian Science has taught me to love the Bible, although during eleven years of my married life I had never read any part of the Bible except the New Testament, as I did not like the Old Testament. I borrowed a Bible to read the first Lesson-Sermon I ever studied in the Christian Science *Quarterly*, but I immediately purchased one for myself, and since that time the Bible and Science and Health have been my daily companions.

We have had many cases of healing in our family of four. Our oldest son was healed of catarrhal trouble which he had had since he was a baby. He had been on the operating-table twice, with relief for only a little while. Today he is a well, strong boy. I have seen croup overcome in a few minutes, also a bad wound from a nail healed in a short time. If I were to write on and on, I could not tell all that Christian Science has done for me. It has given me health, happiness, and peace, such as I never knew before; it has removed discord from our home, given me a pleasanter environment and more congenial associates. There is not a thought or condition in my life which has not been improved.

To say that I am grateful for the physical healing expresses it mildly. For the spiritual uplift which I have received, I am however more grateful; and also for the church and Sunday school, which I earnestly long to serve. I am also thankful for the *Journal*, the *Sentinel*, and the *Monitor*, with their messages of Truth which help us in every way. My gratitude for this revelation of Truth embraces Mrs. Eddy, through whom it came, and I am glad that I have gained enough understanding of Truth to help myself and others. Mrs. Eddy says (Miscellaneous Writings, p. 160): "There is a special joy in knowing that one is gaining constantly in the knowledge of Truth and divine Love." This joy is mine.

MRS. MAY LINDER, Beaumont, Texas.

[Translated from the German.]

I feel impelled to give public expression to my gratitude for all that Christian Science has done for me. For years I suffered with a severe abdominal complaint and had continuous medical treatment for a period extending over six years, but with no lasting benefit. Finally my attention was called to Christian Science by an acquaintance, and I began to attend the meetings, where I always found comfort and would return home uplifted. I saw that this teaching contained the truth, and decided to rely upon it entirely. I am glad that I carried this through, for today I am in good health, freed from an old trouble, and altogether a different woman. I have found that Christian Science confers health, happiness, and a sense of contentment, and nothing could induce me to drop or part from this Science.

I am glad to give this testimony, and hope that it may prove encouraging to many a one, that they too may seek the way of Truth and find it, as I did.

FRAU ELISE OBERER, Basel, Switzerland.

This is to acknowledge that I was healed of a severe attack of acute lung trouble under Christian Science treatment. I suffered but little while under treatment, and was up and at work in about ten days. I had had the same disease twice before, and under the treatment of a physician I was in bed something over six weeks and suffered a great deal. I am truly thankful to God for Christian Science, and it is my hope that this testimony may help the cause in some way. I shall always wish success to the cause of Christian Science.—A. M. WILLIAMS, Logtown, La.

This is to certify that the above statement of my husband is true. He became interested in Christian Science about four years ago, when I was instantaneously healed of hernia. Since then I have been healed of so-called swamp fever, a gathering in the ear, severe headache, stomach trouble, etc. I am learning to carry all my problems to God in prayer, and am so grateful that I know how to reach Him and gain the solution. I rejoice to know that each discord as it presents itself is only another opportunity to prove God's allness.—MRS. IDA W. WILLIAMS, Logtown, La.

I thank God every day for this blessed truth which heals all diseases. For twenty years I was not able to keep house. My husband employed the best physicians he could get, including specialists, and sent me to several sanitariums, where I took all kinds of baths; but I received little benefit. The physicians told my husband that nothing more could be done for me, as I had no constitution on which to build, but with the help of a Christian Science practitioner and the daily study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have been able to keep house for the last four years.

Digitized by Google

By applying my small knowledge of this truth, a growth on my husband's face which the physicians called malignant, gradually faded away. I am grateful for the kindness and patience shown me, and my heart overflows with thankfulness to God for my healing, and with gratitude to our dear Leader for Science and Health. May I each day live this truth the best I know how.

MRS. MADISON HAYES, Indianapolis, Ind.

I wish to express my gratitude for Christian Science. When I first heard of it I was very much in need of help, both physically and mentally. I had met with a great trouble, over which I was brooding, and my health was broken; in fact, I daily prayed for death, thinking that it would end my troubles. When Christian Science was presented to me, however, I willingly accepted it, thinking that if there was any peace to be found, I wanted it.

The thought of physical healing never once occurred to me; what I wanted was something to quiet my mental suffering, and I found it after a short time. I studied very earnestly, sometimes until three o'clock in the morning, and after I had been studying for about three months, I had occasion to ask for treatment. I was taken with a very severe attack of throat trouble. I had been subject to these spells every winter, sometimes twice in one season; but this time I was not frightened as I knew I would get relief. I had been unconscious on account of fever most of the day, and it was during a moment of consciousness that I asked for help in Christian Science. It was given me, and in about three hours' time I was feeling much better. The fever was entirely gone, and only a slight soreness of the throat remained, but I kept my bed until next morning, when I ate my first meal for several days. It was with great difficulty that I swallowed even water at first, but I felt very grateful for the relief received. During former attacks I had always suffered for a week or ten days; but this time I was healed in three treatments, and what is more, I have never had a return of the trouble.

I might mention another instance closely connected with this one, in which divine Love met my need. Before coming into Christian Science, I had for two years nursed a patient who had lung trouble, and every one thought I had contracted the same disease, as I had many of the symptoms. I was troubled with continual colds and had a very annoying cough. By this time I was studying Christian Science, and though I had been treated many times for the cough, I had found only temporary relief. At last came the thought that perhaps it was the old image of disease in my own thought or in the thought of those around me which was causing the trouble, so I told a practitioner about it and she took up the thought of contagion, with the result that in two treatments I was healed. I have not been troubled since with a cold or cough.

To say I am grateful would be to express it very poorly. These are only two out of the many blessings which have come to me through the understanding of the truth. I find Christian Science a great help in everything and every day. I am also grateful for our literature, I find so much good in it. There always seems to be an article written especially for me in the periodicals. My desire is that I may be able to help others along this right path as I have been helped, and may my life prove my love and gratitude to God, also to our Leader for the great truth given us in Christian Science.—LUCY LEWIS, San José, Cal.

I wish to express my gratitude for all that Christian Science has done and is doing for me. I was healed of a severe cough in two treatments, and I have had many smaller proofs of the power of Truth to heal, for all of which I am most grateful to God and His Son, Christ Jesus; also to our dear Leader, Mrs. Eddy.

MRS. NELLIE C. MUNN, Somerville, Mass.

It is with ever increasing gratitude for Christian Science that I tell of an experience of the protection which this truth affords us. One evening my husband and I drove to church, leaving our four-year-old boy in the care of a young woman in the house. Just as the service began, word was sent to me that the boy had been seriously hurt, and that I should come to the telephone at once. Upon calling the house, I was told that the child had fallen from an up-stairs window and hurt his arm very badly. My first thought before leaving the church was one of assurance that the truth as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy was all I needed to rely on; that the child was safe in God's care. Instead of going for my husband, who was reading at the church service, I drove home as rapidly as possible, having to travel over a mile up a dark canyon road, and during this time the one statement uppermost in my thought was, "Accidents are unknown to God" (Science and Health, p. 424).

On reaching home I found the child sleeping, but he wakened while I stood by his bed and seemed restless. Finally he began to cry, and then asked me to say, "God is Love." I recalled in part the words on page 393 of Science and Health, which begin, "Be firm in your understanding that the divine Mind governs, and that in Science man reflects God's government." I denied the material evidence in connection with the fall and ill effects from it, and affirmed the truth about God and man.

My husband came home shortly after this, and assured himself of the child's safety. The only evidence we could find of the fall was a slight swelling and discoloration below the elbow on one arm, and in a day or two this was entirely gone. The little one slept all night, and when he got up next morning he neither cried nor spoke of his arm, but played all day, using one arm as freely as the other. Later, when I questioned him about the incident, he told me he went to sit on the window-sill, and the screen flew open, which was how he lost his balance and fell. The one in charge was sitting close by, but did not notice him until it was too late to prevent his falling.

When it has seemed necessary to leave our little boy, it has been our practise to depend on our understanding of Christian Science for his protection, putting aside our fears and holding to the truth of being. Through the study of Mrs. Eddy's writings we have learned that God is an ever-present help, and that by daily reliance on this divine protection, and by recognizing the loving care that divine Principle affords, no evil can come nigh our dwelling, for God our Father-Mother is guiding, protecting, and delivering us from evil at all times and under all circumstances. Our boy is also being taught to love God, good, and to know that God made good only, and that all unlike Him is nothing and has no power.

Frequently I find myself giving thanks that one so pure and receptive of this divine intelligence as was our Leader, was found ready thus lovingly and gladly to give this rich legacy to a needy world.

MRS. JULIA M. MASON, Park City, Utah.

[Translated from the German.]

Not long ago I was seized with a violent attack of bowel trouble which greatly weakened me, so much so that during the night I was taken with a fainting-spell and fell to the floor with a light in my hand. I hurt myself in such a way as to experience great pain on the following day, the suffering becoming seemingly unbearable. This was the condition I was in when the practitioner to whom I had sent word came to see me; but she bravely took up work and Truth soon drove all error out of my consciousness. The healing went on slowly but surely, and in two weeks' time I was again able to perform all my work. For this proof of the power of divine Love I am deeply grateful.

FRAU EMILIE KREMSER, Berlin, Germany.

Digitized by Google

I am indeed grateful for what Christian Science has done for me, and desire to give my testimony, with the hope that it may be the means of helping some one who may be suffering as I was. For more than eight years I was almost a physical and nervous wreck from sleeplessness and extreme nervousness, scarcely going to bed a night in all that time feeling that I could go to sleep without the use of drugs. I was greatly depressed mentally, and almost without any hope of ever being well again, until four years ago, when Christian Science healed me.

Words fail to express my heartfelt gratitude to God, also to our dear Leader, Mrs. Eddy, for this healing truth. I was lovingly and patiently led out of darkness and despair into the light of Truth and Love as taught in Science and Health, and my desire is so to live that I may prove my gratitude by giving expression to my highest understanding of this truth.—MRS. M. A. MURRAY, Los Angeles, Cal.

I have so much to be grateful for that I do not know where to begin. Christian Science came to me at a time when fear seemed to be dominating all my thoughts,—fear for my own health, and for that of my two children. A copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy was lent me to read when I was in bed with an attack of rheumatism. I was subject to these attacks, and was always in great fear and dread of the pain. I was, however, healed on the day that I read our text-book, though I did not realize it at the time, as I got up that day and never had any more of the illness. This was six years ago, and how thankful I am for this revelation of divine Truth which shows that there are no laws to bind us to suffering, if only we understand the law of God, the law of health and joy and peace.

A year or so after I had taken up the study of Christian Science, my youngest boy was attacked by a severe illness which lasted for several days. He ate nothing, but drank a very little milk. One day the climax seemed to be reached, and the practitioner who was treating him came out to see him (we were five miles out of a town). She gave him treatment, talked to him, and then comforted me. The next thing I saw was my little boy walking around, as happy and bright as possible. Before the practitioner came he did not seem to have strength to lift his arm, but the next day he was running about as if he had never been ill. I well remember how full was my heart with thankfulness to God, also with gratitude to our dear Leader and appreciation of the patient love shown us all the time. I am likewise deeply grateful for the privilege of belonging to the Christian Science Society in Cambridge, and for the love and help that has always been poured out to me, even when I seemed to be "tried and found wanting." Then loving hands were stretched out, and such love was shown to me, and a confidence and trust placed in me (which I felt all too keenly was not deserved), that it roused me to better things. I am indeed grateful for the services, for the never-failing help one gets from them. I also want to express my gratitude for the quick recovery to health from what seemed an especially severe attack of measles which both of my boys developed at the holiday season, while I was away from home, and which was speedily overcome with the help of a practitioner.

I have no words to express what Christian Science did for me when a great sorrow befell me. I had the loving help of a practitioner, and through the power of Truth I was able to realize the truth of being, to feel and know our oneness with God and that all blessings are ours. This understanding of Truth is ours because there was found one pure and good enough to be God's messenger to this age, and is it any wonder that those who are striving to become Christian Scientists have hearts overflowing with love and gratitude to their beloved Leader, Mrs. Eddy, when they read her life-story, her heroic stand in the face of what seemed insurmountable obstacles, and her patience, unselfishness, and love. May we express our gratitude, not by words but by deeds, to one who has shown us the way to health, happiness, and "the peace of God, which passeth all understanding."

ELEANOR M. CURRIE, Waterbeach, near Cambridge, England.

A short time ago I had a wonderful proof of the power of Christian Science to destroy fear and pain. One of my teeth, with a strong root, was extracted without any fear of the operation and entirely without pain. No anesthetic of any kind was used, Christian Science being my only help. There was no soreness in the gum after the extraction, and the same evening I found myself eating without inconvenience, and the wound healed very quickly. A sense of great joy and happiness has come to me, with a clearer understanding of what it means to have dominion. Jesus said, "Ye shall know the truth, and the truth shall make you free." Through Mrs. Eddy's teachings we are beginning to experience something of this freedom, and I know that this was the freedom and this the joy which flooded my consciousness.

Loving help was afforded me by a Christian Science practitioner, before and at the time of the operation, and I should like to take this opportunity of giving hearty thanks for the effectual help that Christian Science has been to me in working out all my problems.

E. KATE WINSLOE, Baden-Baden, Germany.

Having been the operator in above case, I gladly confirm the testimony as stated.

AUG. WESTERBERG, D.D.S., Frankfurt-a-M.

[Translated from the Swedish.]

I give this testimony not only to express my gratitude for the knowledge I have received in Christian Science of the healing power of God, but also to give to other people some practical evidence thereof. My childhood and the first years of my youth were joyless, on account of different sicknesses, and at last I was declared by the physicians to be incurable and my days seemed to be numbered. I suffered twice from measles, and then from an eruptive fever which caused severe headache. This headache became chronic and lasted without interruption during two years, until I had Christian Science treatment. At the same time I had a very distressing spinal affection, which caused me such suffering that it was hardly possible for me to walk from one room to another. All these illnesses were indeed enough to make me an invalid, but I also had a weak heart and a chronic bowel difficulty. The physicians gave me medicine as nourishment, and at last I could take no other food. My miserable condition became worse and worse, and for long periods I was fettered to the bed. Besides bodily sufferings, there was mental depression; I had such great fear of everything that I did not dare to be alone in a room.

When all seemed to be hopeless and physicians were unable to help me, my deliverance came from a new and unexpected source. I live in the country in Sweden, far away from the places where the currents of advancing thought are flowing, but my darkness was penetrated by a ray of that light which had come at first from America and which has in such a wonderful way enlightened our knowledge of God, teaching us that He is all-power and always present. My parents received one day a letter from my sister in America, and she asked that we should try to learn about Christian Science and that we should write to a practitioner in Stockholm. I wrote a letter to this person, whom I have never yet seen, and received absent treatment. The effect of it was soon visible. I grew better every day, and after some months I was perfectly healed, so that I have been well without interruption for more than two years.

Digitized by Google

I am able to work and to take part in all the domestic affairs in my home, I am no longer afraid to meet people, I can go anywhere, and am able to live and work as any healthy and sound woman should.

Above all these blessings, I and my parents are very happy. We are very thankful that we also in this distant country have learned that God is a real help in time of trouble and that nothing is impossible for Him. I do not yet understand the English language, but I am reading Swedish translations of Christian Science literature in order to learn something of this religion which has given me a new life.—JUDITH LIDBERG, Piltagarden, Lastad, Sweden.

Words are inadequate to express what I have received through Christian Science. All I can say is that I am more thankful than I can tell. Christian Science was brought to me over two years ago. I began the study of Science and Health, and was healed of what the doctors called incurable diseases. I never was considered strong when a girl, and after marriage I grew weaker. Following the birth of a child I was an invalid for almost twelve years, and at last the doctor said I must have an operation performed if I lived six months, so my husband consented to have it done. I dreaded it, but consented because it seemed the only chance. The doctor began to prepare me for the ordeal, and every day I would go away by myself and pray that God would lead me, and if that was the way to gain my health, to remove everything which was in my way. But I grew weaker daily, till the doctor said that I was too ill to have it done, and gave me up to die. Then one day a friend called and asked me to try Christian Science, and although I did not know what it was, I told her I would try anything, for I had no hope now in a material way. She brought a Christian Scientist to see me, and this lady told me that she could not heal me, but that God could and would. I grew better, and am now in better health than I ever was in my life.

I am thankful not only for the physical benefit, but for the spiritual quickening and the joy of knowing that God is a very present help in all ways, for I have come to find that perfect faith in God helps to overcome everything unlike Him. I do not say that I have yet overcome everything unlike God in myself, but the blessings I have received are numberless, and the joy of being able to help others is the greatest blessing of all. I am deeply thankful to Mrs. Eddy for her love to mankind, and think it very little to do the best we can to follow her teachings. After all, this is nothing to compare with the devotion of her life to the cause of Christian Science, and my daily prayer is to have more of the Mind that was in Christ Jesus, and to know and do the Father's will. If any one wishes to know more about my case, and will write me, I will gladly answer questions.

MRS. MARY SIKES, Paragould, Ark.

Christian Science has been my only physician for about twenty years, and I have always found Truth a ready help. It has healed me of many ills, such as headaches, colds, throat and heart trouble, and other ills too numerous to mention. Words cannot tell all that this truth has done and is doing for me and my family. It has taught me how to be more patient and kind, and to help others. I am deeply thankful to God, also grateful to Mrs. Eddy for the understanding of the truth that makes us free.

MRS. ETTA HADLEY, Bard, Cal.

To help the growth of a thought that struggles toward the light; to brush with gentle hand the earth-stain from the white of one snowdrop—such be my ambition! So shall I scale the rocks in front, not leave my name carved upon those behind me.—GEORGE MACDONALD.

FROM OUR EXCHANGES.

[Dean Shailer Mathews, D.D., in *Christian Work and Evangelist.*]

If I believed the church of Jesus Christ did not center about its religious message, I would turn to some other form of operation in which such little contribution as I could make might be institutionalized for society; but because we all believe that the churches of Jesus Christ stand for a spiritual message that shall invoke a social passion, that shall lead men out into larger service in which the very nature of religion shall be exploited in terms of brotherhood because founded upon liberty and an experience of the divine paternity, we here together undertake to plan for the great tasks as we face an awakening and a uniting Protestantism. These tasks are intensely concrete and personal. Unless I mistake the drift of the present day, we are face to face with problems that make the issues of the ancient world look almost puerile. We face the issue of whether a civilization that is prosperous can remain religious and moral. Never has there been a prosperous state that has not morally fallen. In the same proportion as idealistic and spiritual forces can contribute to the permanency and power of civilization will civilization be a blessing.

We are face to face with the issue of bringing cooperatively to the non-Christian world not merely a civilization, but an ideal of civilization. If our civilization cannot carry to the people beyond the seas something better than commerce or various forms of government, it is in great danger of being injurious rather than helpful; and if we Protestants do not intend to see to it that the progress of our western civilization carries to the world our ideals of Christian service, we shall be recreant to the duty to which God calls us.

[*British Congregationalist.*]

The beginning of the year is for the church, as well as for the business world, a time of stock-taking. It is a good and healthy thing to try to discover first where we stand, and to reckon up our resources for the future, and our failures and successes in the past. Generally speaking, the result of this is not felt to be altogether encouraging in these days. There are no great triumphs to be recorded. The church is not going on from strength to strength, from glory to glory. The kingdom of God is not drawing visibly nearer, nor is there any assurance of the ultimate victory of righteousness and peace. It is an easy, if thankless, task to point out many signs of failure and even of retrogression, and there are not wanting Cassandras among us who are only too ready to take up their prophetic burden of lamentation and woe. But it is an entire mistake to dwell only on the dark side. To the healthy mind there is always a touch of madness about a Cassandra, and to a Christian, pessimism is the last word of unbelief. "We bid you to hope" is the inevitable Christian message, and one that comes with all the more force and pertinence when days are dark, and when men's hearts fail them for fear.

[From an editorial in *Dallas* (Texas) *News.*]

Anger is an impulse to destruction. It is not creative or constructive from any standpoint. Its children are remorse and regret, death and destruction, sorrow and desolation. It has been the undoing of kings and the ruin of empires, the breaking of friendships and the severing of ties of love. It is a stranger to reason and unacquainted with prudence. Small wonder, then, that the wise man said, "He that is slow to anger is better than the mighty; and he that ruleth his spirit than he that taketh a city;" and he said this also: "Be not hasty in thy spirit to be angry: for anger resteth in the bosom of fools." Like every other tree, it is known by its fruits. The record of anger all down the ages is red with the blood of innocence and helplessness. It is a crimson stream of egotism, impetuosity, and wilfulness.

[*Universalist Leader.*]

Whenever criticism disturbs us, it is time for us to re-examine our position. If it is sound, the storm will pass without doing any damage. If our position is not sound, it is foolish to denounce criticism for pointing out its weakness. If we are going out into this great war with untruth, and if we expect to beat off the enemy, we must have something more than mimic, dress-parade truth on our side. Truth which criticism can shoot full of holes is not truth. That alone is truth which is unsinkable. All of which simply illustrates the folly of anger when some one points out the weak spots in our armor or the faults in the construction of our ideas. Criticism never finally conquered one atom of truth. All that criticism ever has done or ever will do is to clear away the débris and clear off the barnacles which impede the progress of truth.

[*Christian Register.*]

To specialize the sacred and leave all else to the secular, to connect holiness with one class of doing and leave every other class outside, to distinguish some things as sacred with the plain intimation that other things are unsacred, has done immeasurable harm, and sundered for the most needy portions of life that which they require. The place for a holy spirit is not in a metaphysical scheme, but in human life. There ought to be some way of speaking of it so that the wayfaring man will desire to get it rather than avoid it. An energetic spirit, a kind spirit, a cheerful spirit, a courageous spirit,—all the kinds of good purpose included under the phrase "a right spirit," all these make up a holy spirit. To put them into life aware of their high relationship is to make the spirit of a new time holy.

[*Advance.*]

What does God require of us, asks Micah, but "to do justly, and to love mercy, and to walk humbly with thy God?" The righteousness which is the white robe of the saints, is not merely keeping oneself unspotted from the world; it is a positive life in which the three primary virtues —justice, mercy, and humility—are all blended. There is some truth in the affirmation that what men demand today is justice instead of charity. More than one employer screws the wages of his employees down to the last possible turn and then credits himself with the "presents" he generously bestows on Christmas day. That is not justice. Justice means better wages and fewer "tips."

[*Watchman.*]

Man has himself the consciousness of direct relation to his creator and feels in himself the instincts of his nature. Religion is the expression of his aspirations and assurances. The good man in particular feels that he cannot perish like the unthinking clod. His conscience and heart respond to the standard of Scripture. It is true that sin impairs man's consciousness and sense of relation to God and eternal things, but there is always that moral consciousness to which the word of God appeals with a response. The apostle has stated: We preach "to every man's conscience in the sight of God." The strength of religion is the answer of conscience to its appeal.

[*Zion's Herald.*]

We spend too much time trying to explain doctrines about Christ and too little time declaring the fact of Christ. The doctrines are interesting, and they help us to know the Master better; but, after all, it is the fact that is supremely important, for it is the fact that saves. We go back for our warrant to the beginnings of Christian history, and find that the work that was done then by the apostles was this witnessing and heralding task. They were busy proclaiming Jesus and the resurrection. It was not until long after the apostles had ceased their work that the great explanations came into being.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

Digitized by Google

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, *in the form of questions* and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Make all remittances payable to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Ratifications of the wireless telegraph treaty signed at London July 25, 1912, will, it is expected, be exchanged at the British capital within a few weeks by the thirty-one signatory powers. By this convention the important maritime nations of the world have linked themselves together to obtain the widest range of international usefulness of the wireless without restriction as to its further development. One of the most important provisions of the treaty is that compelling the free interchange of communication between ships and coast stations employing different systems. Other provisions of the treaty relate to the transmission of weather reports, measures to prevent the interference of long-distance with ordinary wavelengths, compelling the installation of wireless on certain classes of ships and the maintenance of a continuous watch for distress signals.

The largest sale of government timber ever made in the Northwest will be consummated April 1, when the national forestry service will dispose of two hundred and sixty-three million feet of sawed timber in the Kaniksu forest in Pend Oreille county, Washington, to the highest bidder. At the same time one hundred and ninety thousand cedar poles will be sold. The minimum prices that will be considered vary from one to five dollars per thousand feet, and it is estimated that the timber will net the government at least an average of five dollars per thousand, making a total of more than one million five hundred thousand dollars for the lot.

The Norris bill to authorize government seizure of imported merchandise controlled by a trust, or imported under illegal agreements, has been approved by the Senate judiciary committee. The measure is aimed at the Brazilian coffee monopoly, which has had thousands of sacks of coffee stored in New York in bonded warehouses, out of reach of the government's antitrust machinery. The bill has passed the House, and the Senate will be asked to take it up at once.

Governors from all the New England states except Maine were in conference in Boston last week on the railroad situation in New England. The conference was proposed by Governor Foss of Massachusetts, and its purpose was to see whether consistent and concerted action might be undertaken by the different states through a delegated commission to secure a condition in railroad matters more satisfactory to the general public.

In a broadside leveled at antiquated laws and the "timidity of judges," Justice Wesley O. Howard of the appellate division of the Supreme Court of New York declared before the alumni of La Salle Institute that there will be a revolution of the courts unless they purge themselves of outworn methods and thus quell the merited impatience of the masses.

President Taft has signed an executive order directing the appointment of a special committee to investigate and report to him with reference to the recent specifications involved in the action of the general supply committee in attempting to standardize typewriters needed in government work.

The interstate commerce commission has issued the formal order for the inquiry into the affairs of the American Telephone & Telegraph Company. The investigation recently was transferred to the commission from the department of justice by Attorney-General Wickersham.

Governor Ferris, who has declared in favor of government ownership of railroads, advocates taking over by the state of Michigan the Pere Marquette system, which has been in the hands of a receiver for about a year.

A total working income of approximately thirty-five million dollars was received by eighty-seven state universities and other state-aided institutions of higher education in the United States during the past year.

The government has filed with the supreme court notice of opposition to the plea of the hard coal roads for a modification of its decree holding that the so-called 65 per cent contracts are illegal.

By a vote of 228 to 0 the Massachusetts House passed the order for the investigation of rates and service of the telephone companies in Massachusetts.

The House passed the river and harbor appropriation bill carrying forty million eight hundred thousand dollars. No important amendment was made.

Woman suffrage in Nevada has passed the House with but three dissenting votes.

International.

The ramparts encircling Paris are to disappear. This decision was recently made by the municipal council. Over half of the newly acquired territory will be made into public parks, playgrounds, and broad thoroughfares. The municipality's plan is to construct one boulevard that will skirt the entire city. It will be about fifteen miles long. The remaining space is to be divided into building lots, and four per cent of these is to be reserved for cheap lodgings. About fifteen hundred acres will thus be added to the city's circumference, at a cost of twenty million dollars, which is to be fully paid in thirty-eight years.

An extensive series of experiments with agricultural implements was carried out by the Russian department of agriculture during the season of 1912 with a view to putting an end to the dependence of Russia on American manufactures. The government hopes to induce agriculturists to substitute other implements for the American machines generally in use. Seventy-two per cent of the business in this kind of machinery is now in the hands of manufacturers in the United States.

The English government has decided to guarantee interest on the loan of three million pounds to be raised by the Soudanese government for the development of the cotton industry. The new cotton field is Gezira plain, which lies north of Khartum, between the White and Blue Niles. About twenty thousand bales were exported from this district last year, the area under cultivation being two thousand out of five million acres available for this purpose.

It was decided at a meeting of the miners' conciliation board for the federated area, held at the Westminster Palace hotel, to grant the miners' demands for an increase of five per cent on their wages. The demand is due to the steady and continuous rise in the sale price of coal, and in the increasing quantity of the output. The number of workers affected by the decision of the board is four hundred thousand. The rise in the wage aggregate per week will amount to twenty-five thousand pounds.

It is understood that the Mysore government of India proposes to grant to educated men who have capital behind them and who desire to adopt agriculture as a profession, farms of one hundred and fifty acres each on certain conditions, one of which is that such farms shall be worked as a whole and shall not be broken up. An inquiry which has been instituted has revealed the fact that a total area of over one hundred and sixty thousand acres is available in the Bangalore, Kolar, Mysore, and Chitaldrug districts.

The Balkan allies have given notice at Constantinople of the termination of the armistice, the period of grace of four days to start at seven o'clock, Jan. 30. The armistice, which has been in operation since Dec. 3, was signed on that day by Bulgaria, Servia, and Montenegro on the one side, and Turkey on the other. Greece never was a party to the cessation of hostilities. She has continued fighting both on land and sea.

As a result of a stormy debate in the House of Commons and of the practical ruling of the speaker that the adding of the woman's suffrage amendments to the franchise bill would so change the character of that measure as to render further consideration of it impossible under the rules, the cabinet determined to withdraw the bill.

Industrial and Commercial.

Cooperation in marketing their products is the object of the Four States Fruit and Truck Exchange, recently formed by the Southwestern Fruit and Truck Growers marketing committee, representing members in Arkansas, Oklahoma, Louisiana, and Texas. The stated purpose of the exchange is: "To aid in the organization of individual and local growers' organizations for a more businesslike distribution and marketing of fruits and truck and in the buying of supplies; to aid legislative cooperation, the adjustment of complaints, educational work for standardization of packs and packages, and to aid educational work among growers for better methods and for the control of insect enemies of fruits and vegetables; to establish a credit-reporting service and to cooperate with transportation and refrigeration lines in relation to loading, packs and packages, cars, tariffs, and service."

Not since 1897 has so small a railroad mileage been constructed in the United States as during the past year, the total new construction amounting to 2,907 miles. Twelve railroads with a total mileage of 3,762 miles went into the hands of receivers. No important roads were sold under foreclosure.

Relationship between the cotton and automobile manufacturing industries is shown by the recent announcement that more than one million five hundred thousand bales of cotton per annum are consumed for motor-car tire and top fabrics.

It is estimated that the total quantity of Portland cement manufactured in the United States in 1912 was approximately 81,341,998 barrels.

It is estimated that the yield of grain in South Australia will be 20,137,870 bushels.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

PERISHABLE AND IMPERISHABLE BEAUTY.

HON. JOHN D. WORKS.

To declare for the nothingness or unreality of the material, without understanding the allness of the spiritual, may beget a disposition or tendency to underestimate the meaning of the beautiful manifested in nature. It may even impel some to turn away from this beauty, and to declare that nothing which is temporal can express spiritual good. This would lead one to draw a sharp line between perfection and imperfection, and to discard everything as unworthy of cultivation but that which we understand to be spiritual, and therefore to be enjoyed but not increased by industry, energy, or effort of our own.

Nevertheless, mankind, because of their lack of understanding of the spiritual, are far from perfect. They have to make their advance by way of improved beliefs. They must strive for better things, for a higher understanding as a means of advancement and regeneration; and one means to this end would seem to be the cultivation of a truer sense of the beautiful and harmonious in nature, with the desire to see in it more of the spiritual ideal, perfect and imperishable beauty. By the study of the beautiful and good in the world, the human mind is elevated and the vision broadened and enlightened. Mrs. Eddy says: "Observation, invention, study, and original thought are expansive and should promote the growth of mortal mind out of itself, out of all that is mortal" (Science and Health, p. 105). By the study of the best in nature and in literature, thought is drawn away from evil and expands in the direction of good. Thus advancement is made, step by step, into the higher regions of good, out of the attractions of material manifestation into the eternal beauty and harmony of spiritual perfection. Again Mrs. Eddy says: "As the physical and material, the transient sense of beauty, fades, the radiance of Spirit should dawn upon the enraptured sense with bright and imperishable glories" (Science and Health, p. 246).

The beauties of nature, as we see them, are therefore not to be despised, but cherished as manifestations of Mind, not of matter, and cultivated as a means of attaining to still higher and more permanent beauty. The distinction between the transient and perishable and the imperishable and eternal should, however, be constantly kept before thought. It is the latter which we should be striving to understand and attain, and the appreciation and cultivation of the former should be regarded only as a present means toward the realization of a higher ideal. It is an inspiration, when looking upon the things which pass away, to be able to realize, even in a small degree, that over and above and back of them all is the perfection and eternity of beauty, a beauty which fadeth not, and that the transient beauties which we look upon with pleasure and profit are only at best types and shadows of the perfect and everlasting beauty of God's creation. We are unable to understand and appreciate that perfection of imperishable beauty now, but we may and should cultivate a higher sense, a greater appreciation of beauty as a manifestation of Spirit, of the eternal good.

Again we read in our text-book: "In the midst of imperfection, perfection is seen and acknowledged only by degrees. The ages must slowly work up to perfection. How long it must be before we arrive at the demonstration of scientific being, no man knoweth,—not even 'the Son but the Father' " (p. 233). Certainly the love and appreciation of beauty as we are able to see it, as manifested all about us, must help us to see, and acknowledge more readily and at an earlier time, the beauty that is perfect and eternal. The attention of the writer has been sharply drawn to this subject by the beauties of nature as increased by the skill, energy, and good taste of man, which he witnessed in a striking degree while spending a brief vacation in one of the most beautiful spots of the world. Coming away from scenes of strife and contention incident to a somewhat strenuous public life, into this haven of peace, a splendid home surrounded by the charms of nature, the green fields, the beautiful flowers, and the placid lake set in massive rocks, and primeval forests,—all this has stimulated that natural reverence for the beautiful and the good which we are taught to look forward to as the ultimate and eternal manifestation of perfect Mind. After all, however, much as we may enjoy and profit by these transient delights, we are forced to consider them as passing and fading pleasures. No product of material sense, however helpful and elevating it may seem to be for the time, can be other than mortal and perishable. It is the imperishable and immortal which should be the object of our constant aim and which alone can bring us permanent satisfaction.

To reach this aim, something more than a love of outward beauty is necessary. To attain to spiritual and eternal beauty, in all its perfection, we must be ready to accept and able to understand it; hence the one thing necessary is the regeneration of men, their elevation out of and above the false belief in the material, however beautiful, into a knowledge and understanding of the spiritual with its transcendent beauty and harmony. This is man's rightful estate. He is one of God's ideas, and represents harmonious and immortal creation. One's belief in the material as real, and that he is himself a part of that material existence and subject to its supposed laws, must be overcome in order to reach the joys of spiritual life in all its splendor and permanence. Imperfection cannot exist in perfection; hence we can understand, appreciate, and enjoy the perfection of spiritual beauty only when we have ourselves arrived at perfection. Then, by having overcome all evil, by his victory over the unreal, each one will have realized his true selfhood as a child of God. This is "a consummation devoutly to be wished," an achievement worthy of the highest endeavor.

The way to this accomplishment has been unerringly pointed out in Christian Science, and it is a source of wonder that men have for so long followed a different way, a way which leads not to health and happiness, but to sin, disease, and death. The flesh is weak, and the arguments of evil are seemingly overpowering, but reliance on divine help, and willingness to follow in the way of righteousness, is a sure way to avoid the evils of material belief and the supposed pleasure of sin. To reach the understanding, appreciation, and enjoyment of spiritual beauty and harmony, one's life

Digitized by Google

must be made a part of it, harmonious and beautiful. The discord and ugliness of malice, hate, revenge, and all evil belief resident in or entertained by mortal thought, must be cast out and replaced by love, charity, benevolence, and righteousness. To reach the understanding of the spiritually and everlastingly beautiful, we must ourselves be beautiful and true, and it thus becomes purely a matter of overcoming evil and false beliefs by the understanding of good. The real man, like real beauty, is perfect and immortal. It is the false conception of man, the material sense of man, like the material sense of beauty, that perisheth. Both are unreal, the counterfeits of the real and immortal. When humanity becomes perfect, when men throw off the false beliefs which appear so real and come into their own, they will recognize only that true, spiritual beauty which is eternal and imperishable.

Each of us must work out his own salvation by bringing his own nature and disposition into complete harmony with the divine will, which forever creates all things harmonious and beautiful. This is the work set before us. It is a work of individual striving, of daily overcoming. The way seems a long one, the trials and temptations many, but the reward for perseverance in well-doing is transcendently great. The trials and temptations are not real, but only seem so; they are things to be met and overcome. Sometimes they are very real to our sense of things; in our belief of weakness we allow ourselves to be ruled and overcome by them. Again, when we do meet and overcome them, we realize how unreal and powerless they are, and rejoice in the victory that proves them to be without substance and without power.

Our striving must be to arrive at the knowledge and understanding of the unreality and impotence of all evil, the reality and omnipotence of the good, the beautiful, and the true, and to conform our lives wholly to the law of good. Some time, and in some way, we shall rise above all discord, and reach that perfection demanded by Christ Jesus; we shall enter into the full understanding and enjoyment of man's birthright, eternal and imperishable beauty and harmony, the life everlasting.

TRUTH'S CALL.

MARY BROOKINS.

HOWEVER much the realities of being may be obscured to mortal sight by the dust and rubbish of tradition and illusion, it cannot be questioned that there is consciously present with every one some apprehension of and longing for Truth for its own sake,—a willingness, a desire, more or less clearly defined, to be guided and controlled by Truth. But, on the mistaken premise that there are lives many, minds many, made and governed by a Deity outside of and apart from man, mortals mistake their own dim perception of the divine leading for the actual and special intervention of Providence in the ordering of the details of daily life. Thus there grows out of this misconception of the divine ruling, the belief that God is partial, that His favors are unequally bestowed, that His demands vary in different cases, and that He even ordains some of His children to be saved to the enjoyment of His grace and favor, and others to be eternally lost.

Among the first lessons to be learned in Christian Science is this: that much which has been held as settled and established, on the testimony of tradition and material sense, is denied and annulled by the higher evidence of spiritual sense. A further knowledge of the divine teaching reveals the startling fact that every statement, every interpretation growing out of finite material belief concerning God and man, must be and is reversed and rejected, as the eternal truth of being appears. So it will be found in this matter of the divine ruling in human affairs. Mrs. Eddy says that "immortal Mind, governing all, must be acknowledged as supreme in the physical realm, so called, as well as in the spiritual" (Science and Health, p. 427). But how is this acknowledgment to be made? By knowing surely that the "physical realm, so called," has only seeming existence as a false concept of the spiritual realm, which is, and was, and ever will be, God's real creation, held forever in the order and beauty and continuity of unchangeable and eternal law. Then, as the erring belief in a material creation, controlled in some uncertain, haphazard way, is discovered to be without foundation or reality, its forms and outlines begin to fade from human sense, and the divine government in the realm of the real becomes more and more apparent, shining through. That man is divinely called and divinely governed there can be no question, and it is our highest interest to understand the nature and import of that call and that control, for in so doing we learn to know ourselves and our place in the divine economy.

There is a prevalent theory in mortal mind that God specially calls certain chosen ones to preach the gospel and endows them with peculiar powers for the work. So He does; but so "the Lord hath called every one," as Paul wrote to the Corinthians, instead of a select and limited number. Preaching the gospel, however, means much more than simply giving audible expression to the words of Truth. Truth should be expressed in the pulpit, but it should be expressed in the pews as well, and in the daily walk and conversation of the church as a whole. For are not the members in their true character all "kings and priests unto God"? Then should each be found so demonstrating Truth, so manifesting Love in all ways, that the order and harmony of the divine government will be felt and the church be "none other but the house of God,"—the very gate of heaven, through which many may enter into the realization of good, the true heritage of the children of God. Thus is the gospel preached in thoughts of good, made manifest in worthy deeds: and when it is so, neither words nor deeds are wanting to herald its good tidings.

It is related that when Jesus found the two fisher brothers, Simon and Andrew, he called them to follow him. "And they straightway left their nets, and followed him." Also the account says that, "going on from thence, he saw other two brethren, James the son of Zebedee, and John his brother, in a ship with Zebedee their father, mending their nets; and he called them. And they immediately left the ship and their father, and followed him." Truth, coming into view, ever finds us seeking the supposed benefits of a material sense of life, and calls us to forsake the fruitless task and follow a higher leading. When the essential, eternal verity of being comes to our consciousness, to point out the way of Life, it usually finds us mending our nets of worldly policy, wherewith to gather in possessions, or distinction, or honor in the sight of men; mending our nets of old habits, of associations, of affections, of ties seemingly hard to break; mending our nets of doctrine, of creed, of ecclesiasticism, by means of which we expect to get eternal gain hereafter.

Let us take a lesson from the disciples' prompt response to the Master's call. The moment the voice of Truth is heard, is the moment in which to respond. Nothing is ever gained by delay, except a sense of disappointment and loss. Obedience, not of the sort that lags at the end of the line or follows under protest, or as a last resort, but ready, willing, glad obedience, is the passport always to the highest good. Otherwise, after days and nights of fruitless toil, one finds he has not only failed to secure the coveted objects of sense, but has become entangled in his own nets of materiality and so has hindered himself and others. As our Leader has written: "Never was there a more solemn and imperious call than that God makes to us all, right here, for fervent devotion and an absolute consecration to the greatest and holiest of all causes" (Miscellaneous Writings, p. 177).

Digitized by Google

Not one is excluded in Truth's call. The summons is to every thought, every condition of mind, to come into union, into harmony with the good, through the rejection of the false and the increasing sense of the true,—"casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ." And this to the end "that ye should show forth the praises of him who hath called you out of darkness into this marvelous light."

CONQUERING PERSONAL DESIRES.

LUCY HAYS EASTMAN.

FEW of us, perhaps, realize to what extent our desires shape our careers. Yet, if we but examine our past in the light of Christian Science, we perceive that from the time when as children we cried for prohibited sweets, until in maturity we madly scrambled after the whims and fancies of drifting desire, our experiences have been harmonious or discordant according as the "I-wants" have been based upon or have fallen below the Christly standard of self-immolation.

We see how personal desire and mortal self have all too often banded together to seek the destruction of true happiness, and how we have yielded without a murmur to their unlawful rule, until, inveigled into their castle of anticipations, we become their unresting slaves. Here, however, through the penalties inflicted upon us, we finally learn with what cruelty these satanic majesties wield their asserted but baseless power, and to what selfish ends they demand obedience from their subjects. We discover, too, the subtlety with which they would make us the victims of failure, blockade the higher pathway, dethrone our ideals, and fetter moral strength. Though personal desire be disguised as the queen of all joy, it is but a fleeting phantom. Self is but the straw-man of false belief whom we ourselves have placed upon the throne where the divine idea of man rightly belongs.

Shall we then continue to listen to the deceptive whisperings which so persistently argue that this or that personal desire fulfilled will bring us into all joy, only to be cast upon the barren shores of discontent, until we voluntarily offer up each self-centered desire to Him who will turn and overturn until the right desire shall reign? With spiritualized aspirations established in consciousness, self is banished forever and Principle rules supreme. So does the coming of right desire destroy all wrong desire, and prove the truth of Ezekiel's statement: "Son of man, behold, I [God, good] take away from thee the desire of thine eyes with a stroke [liberate thee from material obsession]." Upon the altar of self-sacrifice the strained tension of fear and self-will gives place to patient waiting on the divine, while the ceaseless, fretful strivings of personal impulse are supplanted by the quietness of those immortal cravings by which assurance is gained of the certain attainment of all good. In such assurance we receive the supreme joy of realizing; it is never a question of what we want, but of what God wants; never of what is best for personal self, but of what is best for all.

In her Message for 1900 to The Mother Church, Mrs. Eddy said, "Strong desires bias human judgment and misguide action, else they uplift them" (p. 9). Since, therefore, desires produce harmony or discord, health or disease, according as they spring from love for good or love for self, it is of paramount importance that we gain control of each desire, instead of allowing it to control us; that we examine it, and stamp it out if it does not include the greatest good to the greatest number. This we can do only through the aid of Christian Science, which frees human thought from earthward gravitation by revealing the attraction of Spirit, until desire mounts upward on pinions of purity and we exclaim with David, "There is none upon earth that I desire beside thee." Thus are we lifted above the shifting currents of human sense; and though we are sometimes confronted by a persistent "I-want" of personal self, we need but to know that our part is to leave all real desires to God, while we make room for whatever blessings are rightfully ours by losing self in the one great desire for all good to all men. This we can best do by fervently praying, each day and all the days: "'Thy kingdom come;' let the reign of divine Truth, Life, and Love be established in me, and rule out of me all sin; and may Thy Word enrich the affections of all mankind, and govern them!" (Church Manual, p. 41.)

Webster defines desire as "the natural longing that is excited by the enjoyment or the thought of any good, and impels to action or effort for its continuance or possession." Christian Science teaches that since man exists at the standpoint of infinite good, then because God's work is finished, there can be no good thing that does not already exist, no divine event that has not already occurred, and no joy of which man can ever be deprived. Therefore we can have no right desire which is not already granted; and the only explanation of our sense of wanting something which we are not already conscious of possessing, is that we have done what the word desire commonly signifies, namely, looked away from Spirit to matter.

We must awake to the fact that there is no good thing which is not already at hand, and the desire for it simply unfolds its manifestation to human comprehension. The realization of this fact acts as divine law to every uplifted aspiration which, when applied, makes its fulfilment not only possible but inevitable. Indeed, it is as impossible for a right desire to be fruitless as it is for two times two to lose its answer. Then let us cease to plead, strive, or elbow, in order that we may bring something longed for into our possession or cause some desired event to happen, and instead let us reach out, appropriate, and radiate the gifts of God that are already ours. So will we prove the truth of the Master's words: "All things, whatsoever ye shall ask in prayer, believing, ye shall receive." Verily, no good thing shall be withheld from them whose thoughts are both Christian and scientific.

On the other hand, if desires have not yet become purified, if they still mingle with selfishness, covetousness, or revenge, we must not be surprised that we ask and receive not, for we surely have asked amiss. Until all selfish aims are eradicated from consciousness, they are externalized in belief in unhappy, discordant conditions. As impossible is it for us to have our hearts filled with heterogeneous desires and expect to have them harmoniously externalized, as it would be for us to write down a column of numbers, place below it whatever result we wish, and then expect to have that result in harmony with mathematical law. Once we fully understand this, we shall find very often that we do not really desire what we may perhaps have thought we did; that if attained, it has lost its charm. In fact, we find many of our wants to be but passing whims which we would do well to give up.

Webster's definition of desire continues: "an eager wish to obtain or enjoy." Through selfish greed or any other error we can never obtain or enjoy any real thing. We do not need what it is not right for us to have; but if we believe that we need such things, we are dwelling in a state of self-deception; for if we had not supposed that our wrong desire would bring us good, we surely would not have entertained it. Such desires are born of the serpent's argument, as it is given in Science and Health (p. 530): "'Only admit that I am real, that sin and sense are more pleasant to the eyes than spiritual Life, more to be desired than Truth, and I shall know you, and you will be mine.'" Since evil has no principle, there can be no real law back of wrong desire with which to bring about its fulfilment. He who is yearning for righteousness need fear neither the so-called malpractitioner nor those who may unconsciously be wish-

Digitized by Google

ing him evil. Truly has it been written that "the effectual fervent prayer [desire] of a righteous man availeth much;" and it is equally true that the prayer of the unrighteous availeth nothing.

As these facts are realized in Christian Science, we become more than conquerors, for we win without fighting. Unoutlined desires reach out for a knowledge of God, not because of the loaves and fishes, but for the very love of good. Impelled by them, one yearns to heal the sick and raise the dead: not to be seen of men, but to fulfil the commands of the Master; meanwhile striving to be faithful over a few things, not to be made ruler over many, but that these sweet words may be heard: "Well done, thou good and faithful servant." Governed by such motives, we perceive all holy aspirations being gathered into one flock, through the Christ-idea that is revealed by Christian Science, until, flying upward for singleness of purpose, and soaring beyond all corporeality, thought is led up to the kingdom prepared "before the foundation of the world." Here, in the peace which exceeds human understanding, we find that our Father has our treasures, and that He satisfieth all our right desires.

ALERT TO TRUTH.

GERTRUDE S. MC CALMONT.

AMONG the many blessings gained through the study of Christian Science, one of the greatest value is the ability to listen for that "still small voice" of Truth which is ever uttering itself. It is the attentive ear which receives and discerns between the things of God and erroneous intimations. The mental discipline expended in silencing self-will and self-righteousness is always rewarded by the inflow of revelation into consciousness, the putting aside of the veil; and it is only when self is silenced that thought is truly receptive of the word of Truth.

The truths presented in the Bible for our instruction may be read hundreds of times without their deepest meaning being revealed, if one's thought is closed by prejudice, self-righteousness, or self-sufficiency; but to the open mind the "deep things of God" are revealed. I am only one of many who have proven this great fact many times. Recently, when tempted to make a sharp retort in answer to one of its kind, instantly was heard that "still small voice," saying, "The word of God is . . . sharper than any twoedged sword." As I listened, thought bounded up, away from the things earthy, for there was commenced the analysis, "Why, the sharpest retort that could be made would be a gentle word of Truth; and a word of Truth is the answer that turneth away wrath." It is needless to say there was left no desire to respond in anger, nor was there any anger to which to respond.

Sunday school work gives one ample opportunity in which to listen for the "still small voice" of Truth, for often in the most unexpected ways and from what might be called the least promising sources will come a question or answer revealing hitherto unknown depths of meaning to a word or phrase many times previously discussed. Great light on the word "beatitude" was recently gained in just this way. In response to a question as to what subject was to be discussed for that Sunday's lesson, came the answer "attitude." The student had failed to prefix the first syllable, but thought was open and ready to receive, therefore there was acquired a far deeper meaning than had ever been entertained before as to the meaning of the word "beatitude"—attitude of be-ing. What deeper, fuller, more comprehensive understanding of this word could possibly be acquired!

Each like instance ever awakens a humble sense of gratitude that one is privileged to have a part in the work of a Christian Science Sunday school. Previous to my appointment as a teacher it had always seemed impossible for me to teach anybody anything, so it was with much fear and trembling that I entered upon the work. All fear and trembling, however, was soon overcome by close adherence to the reassuring words given to Moses: "Now therefore go, and I will be with thy mouth, and teach thee what thou shalt say." Knowing full well that the promise would be fulfilled after strict obedience to the command, I went to my class each Sunday with a glad heart and a listening ear, striving to know only one Teacher, the Christ, Truth; and that, as man is the expression of that Truth, the manifestation of the one Mind, the only Mind, all that is required is obedience to the command with confident assurance that God's promises are fulfilled. Thus it is being constantly proven that each listening ear heareth, and another step is taken toward that full revelation of Truth; at the same time, a large step is taken toward learning that coveted lesson of humility, for surely humility means ever-readiness to hear.

ILLUMINATION.

LOUISA M. WEYGANG.

WHILE looking from an open window in a busy thoroughfare of London, I beheld a golden sunset against a cloudless sky on my left hand, and on turning to my right I saw the window of a church bathed in a flood of golden light. At first sight I thought the window was aglow with a light from within, but on turning again to the west I saw it was a reflection of the setting sun that was flooding the window with light. As I stood there, watching the sunset glories till they faded from view, I turned again to the church, and saw it standing there grim and dark, with the erstwhile golden window dull and lusterless. Then my thought turned to that greater light, the light of the Sun of righteousness, which has come through Christian Science and illumined the consciousness of unnumbered thousands, and I gave thanks.

In Science and Health our beloved Leader tells of the wonderful perception which came to her awakened thought. She says, "The Scriptures were illumined; reason and revelation were reconciled, and afterward the truth of Christian Science was demonstrated" (p. 110). Every student of Christian Science can bear her out in this statement, and it is one of the writer's most cherished possessions when some seemingly obscure text of Scripture is illumined with an underlying and beautiful meaning that had never before been discerned. This is the reappearing of the impersonal Christ, who comes individually and silently to those who are steadfastly working in truth, who have the seeing eye, the hearing ear, and whose consciousness is in a measure clear enough to receive the light which "lighteth every man that cometh into the world," unwavering and unchanging good.

Surely it is meet for all to give thanks that there is in our day one who has "gained the scientific certainty that all causation is Mind, and every effect a mental phenomenon" (Retrospection and Introspection, p. 24); who listened with the hearing ear for the angelic voice retelling the glad news to a weary, sin-sick world.

New mercies, new blessings, new light on thy way;
New courage, new hope, and new strength for each day;
New notes of thanksgiving, new chords of delight,
New praise in the morning, new songs in the night;
New wine in thy chalice, new altars to raise;
New fruits for thy Master, new garments of praise;
New gifts from his treasures, new smiles from his face;
New streams from the fountain of infinite grace;
New stars for thy crown, and new tokens of love;
New gleams of the glory that waits thee above;
New light of his countenance full and unpriced;
All this be the joy of thy new life in Christ.

HAVERGAL.

SELECTED ARTICLES.

[Frederick Dixon in *Islington Gazette*, London, England.]

The lecture given by a clergyman and reported in your paper has a reference to the teaching of Christian Science with respect to evil, which I think would be interesting to examine. He declared that according to Christian Science evil was a fanciful creation, whereas he declared for himself that it was on the contrary very real. Man, he explained, was possessed of free will and rationality, and when he abused this, evil originated in him and not outside him. The serpent, he further declared, stood for sensuous man, and woman for the emotional nature. He wound up by saying that this sensuous nature was very good in its own place, but was no guide to great moral and spiritual issues.

I think it will be admitted by most people who read the report of this address, that, having started out to explain the origin of evil, he left it exactly where it was, while during the process he made several statements which he would find it extremely difficult to reconcile with the teaching of the Bible. First of all, Christian Science does not say that evil is a fanciful creation. What it does say is, that evil is an unreality; that is to say, it is no part of the creation of God. To the human senses, however, it is as real as any other lie, till that lie is exposed. "To assume," Mrs. Eddy writes on page 447 of Science and Health, "that there are no claims of evil and yet to indulge them, is a moral offense." The only way to prove the unreality of evil, is by reaching that understanding of divine Principle which enabled Jesus to say, "The prince of this world cometh, and hath nothing in me." The Christian Science teaching with respect to evil is, as a matter of fact, exactly that of the Founder of Christianity when he said: "Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Speaking in the metaphorical language of the day, he personified evil as the devil, but he went on carefully to show that just as a lie has no reality, so there is no reality in the lie of evil.

Now a lie is not a reality; it is the supposititious denial of a reality. The deliberate acceptance of evil could never rationally occur, and yet this critic says that God gave man free will and rationality, and that his abuse of this was the origin of evil. The evil, he insists, originated in man, not outside of him; but man, the Bible says, is the image and likeness of God; therefore, according to the critic, evil originated in the image and likeness of God. Christian Science says that the image and likeness of God is absolutely sinless, that it reflects perfectly the divine Mind which created it, and that the sinful human being is not the image and likeness of God, but the supposititious counterfeit of this image and likeness.

Jesus said, "The flesh profiteth nothing." Would the critic like to argue that God made as His image and likeness something that profiteth nothing, and in which evil originated,—if evil originated in the image and likeness of God, or if it originated in God, unless there are two creators? The Bible says that God made all that was made. If evil is real, then it was made by God. The alternative is that God did not make all that was made, which would limit the infinity of God as well as His omnipotence. To argue that evil originated outside God, is to argue not only that there are two first causes, but that God is not omnipotent. Yet the Bible says that God created all that was made, and created it good. If He created everything, and created that everything good, and evil is real, then He created evil and created evil good.

There is no possibility by which the gentleman can hope to escape from this entanglement. It is the old dilemma which gave rise to Gnosticism in the primitive Christian church. The Gnostics put the case quite clearly as to how evil could originate from an entirely good First Cause, and how Spirit could possibly be confined to matter. That was one of the first controversies of the Christian church, and what are termed the orthodox churches never have answered it, and never will be able to answer it so long as they insist on the reality of evil.

The critic, however, created other difficulties for himself as he advanced. The serpent, he said, stood for sensuous man, yet he went on to say that sensuous nature was good in its own place, but was no guide in great moral and spiritual issues. Now, if God created everything, and if the human being is the image and likeness of God, who created the serpent and sensuous man? Either the serpent—whether you take it as a type of evil or not is quite immaterial—was created by God, or else it has a supposititious existence. If it was created by God, then God created sensuality. If sensuality was not created by God, what did it originate in, if God made all that was made and made it good? Again, what is the critic's authority for describing woman as the type of the emotional nature? It is quite clear that if God created the one, He created the other, and that if He did not create the one or the other, they originated somewhere, if they are real. Where could they have originated but in God, if God created all things? But He created all things good: therefore sensuality and emotion are good. Yet the critic says they are no guide in great moral and spiritual issues.

Christian Science attributes just the same reality to sensuality and to emotion as it does to evil. That is to say, it includes in the term evil, everything which is unlike God. In doing this, it goes very much beyond the critic in what it considers to be the gamut of evil. It says that the ordinary sins of commission are sins admitted by everybody, but it insists that the sin of omission is none the less a sin. To take a specific example. A man who gets a headache as a result of drunkenness is guilty of an obvious sin in commission; all the world admits that. Christian Science, however, goes farther. It says that a man who believes that a headache is real, is guilty of sin because he has been believing in something apart from God. That was why Jesus said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" In plain English, Christian Science includes as sin many things the ordinary world regards as natural effects, such as sensuous nature and emotionalism; it does not, however, handicap itself in the attempt to destroy the false belief in these by insisting that they are real. And if the critic is going to explain that Christian Science denies the reality of evil, he must begin by quoting the definition of sin, which is everything unlike God.

The origin of evil never has been discovered, and it never will be discovered, for the simple reason that if it could be discovered, that moment it would become real. Again and again Jesus showed in his teaching that man is the image and likeness of God, and his command to the world was, "Be ye therefore perfect, even as your Father which is in heaven is perfect." If evil is real, it is part of the divine consciousness, and it can never be destroyed,—unless divine Mind is to be made finite by being deprived of some knowledge of reality. The tree of the knowledge of good and evil, with its fruit of death, would become the type of the eternal, and it would be in no case possible for man to escape from the presence of sin.

[W. D. Hinchsliff in *Ardmoreite*, Ardmore, Okla.]

Christian Science, instead of being a fallacy, as a reverend gentleman has claimed, is truly Christian and is based absolutely on the teachings and demonstrations of Christ Jesus. The Bible is its only authority and the only source of its teachings, as will soon be discovered by any one who will read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, with an unprejudiced mind.

Digitized by Google

It teaches the highest and purest morality, the cleanest living and thinking, and it honors God as no other system does, recognizing in Him the only Life, Mind, or power, and man as made in His image and likeness, reflecting all that belongs to his Maker. Christian Science teaches that as God is good, His creation being like Him must be good; and that as evil is no part of the divine creation, it is unreal in the sense that God's creation is real. If sin is real, God must have created it, and He could not have been a wholly good God who would or could create sin.

With the beloved disciple, Christian Science teaches that God is Love, and Christian Scientists are trying to imitate God in reflecting the love that is pure, loving their neighbors as themselves, and thus fulfilling the divine command. Instead of Christian Science being a prayerless religion, all of its work is the outcome of the prayer of understanding. To quote from the text-book (p. 1), "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love."

Christian Scientists are taught to love Christ Jesus and to take him at his word; believing and living in harmony with his teachings, they imitate him in keeping his commandments to heal the sick and lift up the fallen and unfortunate. In the text-book (p. 583) Christ is defined as "the divine manifestation of God, which comes to the flesh to destroy incarnate error." On page 589 of the same book we find the definition of Jesus as "the highest human corporeal concept of the divine idea, rebuking and destroying error and bringing to light man's immortality."

[Marie Hartman in *Bloemendaalsche Weekblad*, Bloemendaal, Holland. Translation.]

In the *Bloemendaalsche Weekblad* of recent date I read the article by "T." entitled "What is Christian Science?" and although I appreciate that he considers Christian Science a blessing for many women, this assertion seems rather peculiar at the present time. In this twentieth century, people generally consider that the needs of men and women are alike in regard to religion, which must be a science of being and not merely a doctrine, and that something which blesses women can have the same effect on men. That many men think of Christian Science in this way is evident by the relatively high percentage of men attending the services in the Christian Science churches. Does T. really think that Christian Science could be a blessing for anybody if it "lacked an element of truth"? This thought would evidence but little respect for his fellow men; that which is not true is bad always and for everybody, because a lie has a poisonous effect.

By saying that "critical thinking is foreign to Christian Science," T. may mean that Christian Science does not seek its strength in criticizing and condemning those who are of a different opinion, and if so he is quite right. We Christian Scientists are so convinced of the necessity of letting that Mind be in us "which was also in Christ Jesus," of doing our utmost to let our thinking and life be governed by the consciousness of God, good, as the only power and cause, that we cease to dwell on that which seems wrong in our neighbor, and try to do all we can to free him from it, by recognizing the expression through him of God, good, as the sole reality of his being.

If T. means that Christian Science does not or is unable to discriminate between truth and error, between good and evil, a further study of Christian Science literature, and especially of Mrs. Eddy's chief work, "Science and Health with Key to the Scriptures," will convince him to the contrary. As far as I know, in no other system is the line of demarcation between truth and error drawn so sharply and from such a fixed basis as it is here. Christian Science teaches that God, divine Principle, is the absolute, omnipresent, omnipotent Truth, expressing Himself in creation, the spiritual universe and spiritual man, and that His ideas alone are true, as unchanging and perfect as God Himself. The understanding of the truth about God and His creation, the impersonal Saviour, frees man from all false beliefs and opinions, from all which does not proceed from God and is therefore not true, and brings to him "the glorious liberty of the children of God." Do not the fruits which the study of Christian Science brings to men, the destruction of sin, sickness, and evil, prove clearly the truth of this teaching? Would Christian Science, if it indeed "lacked an element of truth," have spread all over the globe in half a century?

[George Shaw Cook in *Lakeview* (Ill.) *Times and News*.]

An article in a popular magazine calls attention to the asserted growth in America of what the author terms mysticism. Christian Science is included by him in the category of the mystical, but mistakenly so if that word is used as meaning that which is mysterious or mystifying. Mrs. Eddy says, on page 80 of "Science and Health with Key to the Scriptures": "Science dispels mystery and explains extraordinary phenomena; but Science never removes phenomena from the domain of reason into the realm of mysticism." Students of Christian Science have found that its explanation of phenomena which are little comprehended by the popular thought, is such as to remove them from the realm of mystery, as claimed by Mrs. Eddy. Even those phenomena of the human or mortal mind regarded by Christian Science as temporal and unreal, are interpreted in such a manner as to make their nature better understood. However, it is in its interpretation of the real, the spiritual facts of being, that Christian Science has rendered its greatest service to humanity. That which to many has heretofore seemed remote, indefinite, and intangible, has through Christian Science become to them a present, definite, substantial reality.

Reason is generally considered to be a purely human faculty, and that which is spiritual or supersensible is thought to be beyond the ken of reason. However, God said through Isaiah: "Come now, and let us reason together;" and Christian Scientists are beginning to understand that in extending this invitation to mankind God was not asking an impossible thing. Communion with divine intelligence, or the Mind which is called God, is indeed possible to one who is on this plane of existence. This has been proved by successive revelations of Truth to humankind through individuals whose spiritual perception was sufficiently clear to make it possible for them to become revelators. This succession of revelation has culminated in the present age with the discovery of Christian Science, which as its Discoverer, Mrs. Eddy, declares, reconciles reason and revelation.

Through the study of Christian Science and of the Bible in the light of spiritual interpretation, many who were before confused and mystified by the so-called miracles recorded in the Scriptures, have had them explained in a reasonable way. Such explanation has not, however, deprived these wonderful manifestations of divine power of any of their glory; on the contrary it has shown them to be lawful expressions of the one Mind, or Spirit, and thus enhanced their value. Many who formerly were unable to reconcile the recorded miracles with reason, when they were contemplating them purely from a material view-point, which made them more or less doubtful as to their authenticity, have since been able, through the teaching of Christian Science that all is Spirit and spiritual, to accept them as true and understand them. In the light of divine Science, therefore, the miracles of Jesus, such as walking on the water, feeding the multitudes, healing the sick, and raising the dead, while indeed marvelous, are not mysterious. These miracles are understood in Christian Science to be natural exhibitions of the power and presence of "God with us," and therefore as capable of repetition.

[John L. Rendall in *Charles City* (Iowa) *Intelligencer.*]

Under the caption, "Many Attend Revivals," in a recent issue, I find an extract from a sermon by the evangelist which gives an erroneous idea as to the teachings of Christian Science concerning the question of sin. The statement is made: "The teaching of Christian Science and new theology on the subject of sin is deadening the consciences of the people. Sin is a fact and not a fancy."

The inference would be that this gentleman is under the impression that Christian Science teaches sin to be a fancy. Nothing can be more remote from the actual teachings of Christian Science in this respect. One who has even a superficial knowledge of the subject knows positively that the whole teaching of Christian Science is aimed at the destruction of sin and that its teachings emphasize the fact that the sum total of discord, disease, and death is the result of the sum total of sin in human consciousness. The effort, therefore, is so to arouse the individual to a higher and better consciousness of things, that he ceases to be a sinner and thus ceases to suffer as the result of sin.

In "Science and Health with Key to the Scriptures," the text-book of Christian Science, by Mrs. Eddy (p. 391), we read: "It is error to suffer for aught but your own sins. Christ, or Truth, will destroy all other supposed suffering, and real suffering for your own sins will cease in proportion as the sin ceases." From this it will be seen that Christian Science offers no ready refuge for the one who wishes to keep on sinning, but on the contrary, its teachings, if lived and practised, will result in the complete elimination of sin and its effects through the understanding of the infinite good which God has established for each one.

[Warwick A. Tyler in *Beaver County News*, Milford, Utah.]

Recent issues of your paper have contained accounts of a company of hypnotists who have been giving a show in your city, from which accounts it would appear that some of their actions have aroused a great deal of indignation among your citizens. The manager of this show has frequently stated, during his performances and to your citizens generally, that he is a Christian Scientist in a great many respects, and that hypnotic healing and Christian Science healing are the very same. These statements are utterly at variance with the facts, for Christian Science is not hypnotism, and the gentleman was sadly misinformed and spoke without any knowledge of Christian Science when he made such assertions.

The facts are that Christian Science and hypnotism are not only not the same, but practically speaking each may be said to be the exact opposite of the other. Christian Science deals only with the things of God, Spirit, and its whole endeavor is to liberate mankind from all bondage, mental, moral, and physical, by bringing them into a realization of man's identity and being as the image and likeness of God, as shown in the account of his creation in the first chapter of Genesis. On the contrary, the intention of hypnotism is to deprive man temporarily or permanently of his freedom and volition.

Whereas hypnotism deals with loss of liberty and suspension of powers brought about by material and artificial means, sometimes to the very serious injury of the one upon whom hypnotic influence is exercised (as apparently shown by the case recently under your observation), Christian Science is God's law, enabling men to understand and prove the divine Principle which not only makes the individual free in all respects, but operates for the freedom of every man, woman, and child in the universe, and gives a rule whereby this freedom may be won by them for themselves and the whole universe. It is not the writer's province or desire to enter into any discussion of the ***modus operandi*** or effects of the practise of hypnotism, except to say that, inasmuch as it is far more likely to produce evil than good, both to the operator and the subject, it cannot in any way be derived from God or an understanding of His laws, for God is good, as the Bible teaches, and only that which is good in every respect can be produced by and derived from God.

It is now acknowledged throughout the length and breadth of the world that the practise of Christian Science heals the sick and reforms the sinner, and this healing is the result of prayer, and of prayer only. It is the prayer of which the apostle James says: "The prayer of faith shall save the sick, and the Lord shall raise him up. . . . The effectual fervent prayer of a righteous man availeth much." Of this prayer the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, says on page 1: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love." And in the same book, on page xi of the Preface, will be found these words: "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation. Now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us.'"

[Jesse Pickard in *New York Sun.*]

Referring to the work of the Salvation Army in a book review on Dec. 29, one of your contributors has taken occasion to cast a slur upon the religion of Christian Science, which he terms "commercialized," and to impugn the motives and character of Mrs. Eddy, the revered Leader of Christian Science. This disparagement of what has brought into the lives of thousands of intelligent people that which has uplifted and healed them, and of one through whose unselfish labors they have been made happier and more helpful citizens and neighbors, is surely uncalled for, and I hope you will see fit to publish this protest against such contumely.

The work of Mrs. Eddy needs no champion, although a short time ago thousands of newspapers throughout the world united in a pæan of praise to her memory as one who had loved and served mankind. Those who bought her published works or paid for her instructions and treatment were not found objecting to the charge therefor, but, contrariwise, declared the benefit they received was beyond price. If there is a more legitimate or more praiseworthy manner of supporting oneself, or one that helps a larger proportion of people than this dissemination of pure enlightening ideas, it has been little heard of. Literary men should be the last to criticize it. Because Mrs. Eddy, furthermore, lived a life of self-sacrifice and earnest labor for humanity, and finally left the fortune she so well earned to a cause which she was convinced would continue to uplift and bless mankind till all were healed and redeemed, surely there should be no opprobrium cast upon her purpose.

The Christian Science church is probably no richer than other large religious bodies, nor should its motives be condemned because it sees the present-day necessity of supporting its readers and officers in the way that other religious bodies pay their clergymen. Those who devote their lives to serving others are very generally paid for their services. The patients of Christian Science practitioners declare they are benefited, and do not object to the price which enables those who assist them to continue in this work. It is not in order for others to object or to question this, so long as the procedure is lawful and free from deceit, as Christian Science practise is. The influence of Christian Science is seen in happier faces, purer lives, more just and kindly activities in business and in social relations. It is seen in better health, moral and physical. Should this be held up to ridicule and scorn because it is orderly in its method, and neither solicits nor demands state support nor general contributions from those who may not understand in the least or sympathize with it?

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

OFFICE OF THE READING-ROOM.

IN the Wednesday evening meetings and in the testimonies published in our periodicals, frequent mention is made of the reading-rooms which are open to the public in all the cities and towns where branch churches are located, and in many others where as yet the progress of the Christian Science movement has only justified the formation of a small society. In many of these testimonies the statement is made that, through what seemed almost a chance occurrence, the person's attention was directed to the reading-room, and his first impression of Christian Science was formed there. Reference is also frequently made to the restful character of these rooms and to the atmosphere of hopefulness and good cheer which pervades them, as well as to the spirit of kindly courtesy shown by those in charge. Above all else, gratitude is expressed for the opportunity thus afforded to learn the truth about Christian Science through reading Science and Health and our Leader's other writings, together with the authorized periodicals.

All this goes to show the importance of first impressions, and such being the case, how necessary it is that every reading-room should be made as attractive as circumstances will permit, that it should be open punctually and at convenient hours, be well located, well managed, and in charge of a competent person, one qualified to answer intelligently the questions of beginners, to minister to those in distress if necessary, and to extend a courteous welcome to all. Christian Science not only teaches kindness, gentleness, mercy, justice, wisdom, and all other Christly qualities, but it also demands that these qualities be demonstrated in the daily life of all its professed followers, and probably in no other place is a display of these "attributes of God" (Science and Health, p. 465) more required than in the conduct of the reading-rooms. It is here alone that many are brought into contact with the institutional work of the Christian Science movement, and it is largely through the impressions they receive in this way that they are attracted to or repelled from further investigation of its teachings.

All that is needed for any intelligent person to form a favorable opinion of Christian Science is for him to give it unprejudiced study, and to investigate impartially its claims. In many instances the librarian of the reading-room can do much through tact and courtesy toward disarming prejudice, and directing attention to the most helpful of our Leader's works. In stipulating the qualifications for the office of librarian in the reading-rooms maintained by The Mother Church (Manual, Art. XXI, Sect. 2), Mrs. Eddy emphasizes the need for consecrated effort and whole-hearted devotion on the part of those who undertake this work, and that there is the same call for fitness for the office in this as in any other department of the church's activities.

It will be readily seen, therefore, how necessary it is that only those whose qualifications fit them for this service should be selected for so important a place, and that this avenue for the dissemination of the truth should be kept clear from all that might tend to obstruct its usefulness. Not only this, but the reading-room work should have the cordial interest and support of the members of the church, remembering that it ministers to a constituency which can perhaps be reached in no other way. We are indebted to our Leader for the wise forethought which made possible this helpful provision for the welfare of seekers of the light.

ARCHIBALD MCLELLAN.

FORGIVENESS.

THAT the question of forgiveness is a vital doctrine of Christianity, no student of the New Testament can deny. Early in his ministry Jesus declared that he had not come "to destroy the law, or the prophets," but he immediately announced the great difference between his sense of their moral and spiritual requirements and that popularly entertained. He challenged the law which demanded "an eye for an eye, and a tooth for a tooth," and instead declared that we must not merely forgive our enemies, in the ordinary sense of this word, but that we must love them and do good unto them. As a reason for this he cited the impartial love of our heavenly Father, who sends rain and sunshine upon the just and the unjust alike, little as mortals avail themselves of the divine beneficence. We further find, that as Jesus carried forward his mighty redemptive work for humanity, and instructed others how to continue it, he laid greater and greater emphasis upon forgiveness. On one occasion Peter asked how often he should forgive the trespasser, and the Master replied that seven times was not sufficient, but that the forgiveness should extend to "seventy times seven." Well might his disciples say, after such teaching, "Increase our faith"!

From the view-point of Christian Science the question of forgiveness is greatly simplified when we learn that evil is not of God, hence its unreality. The one who is guilty of an offense against God or one of His children, grievously wrongs himself through ignorance of divine law, and needs our pity, and likewise our help if he is ready to accept it. We are not, however, called upon to love either sin or sinner, since neither is of God, but we are required to maintain unwaveringly the ever-presence of God and His idea, the real man, and to love this idea with an intensity great enough to dispel the whole of the mortal illusion of sin and sinner. If we truly love God and His idea, as revealed in Science, we shall readily see how the erring brother must also love the same, could he but awaken from the false sense of separation from God.

What perhaps concerns us most, assuming that we are striving to keep the commandments, is the effect upon ourselves of forgiveness. In the 11th chapter of Mark's gospel we read that Jesus told the disciples how even mountains of error could be removed if only faith were vital enough. He however added to his instructions one condition which is too often forgotten by his professed followers. It is this: "When ye stand praying, forgive, if ye have aught against any: that your Father also which is in heaven may forgive you your trespasses. But if ye do not forgive, neither will your Father which is in heaven forgive your trespasses." May not these words explain the reason of delayed healing in many cases, this mental attitude affecting either patient or practitioner, or possibly both? Certainly if there is enough of faith and love, there can be no question as to the overthrow of the "mountain"!

We should remember that Christ Jesus did not demand of others what he was not himself prepared to demonstrate. In the awful hour of physical torture and mental anguish, deserted by those who should have been most faithful, he prayed, "Father, forgive them," and through his victory over fear and hate gained "a name which is above every name." In Science and Health we read that "he proved Life to be deathless and Love to be the master of hate" (p. 44). Not so long ago, men gloried in vengeance, but a better day has dawned, and it is being more and more clearly seen that the strength of manhood is best proved in doing right oneself, and in seeing the power of the Christ-ideal to heal and uplift all who have strayed, whether friends or foes. Thus do we win our own pardon, and if the opportunity to forgive comes seven times each day, or seventy times seven, we should avail ourselves of it.

ANNIE M. KNOTT.

THE FLAWLESS LINK.

ALL science is exacting, and in this sense intolerant. Christian Science consents to no imperfection for the reason that it is scientific, conformed to the perfect order of Truth's manifestation, and a moment's thought will lead one to see that all harmony and progress is directly dependent upon this invariable integrity of the source of being. Science can overlook no flaw or fault, and this must have been clear to the ancient worthies who instituted the requirement that every offering unto God should be without spot or blemish.

The existence of flaws explains all human ills, and this comes home to one as he witnesses the making of the anchor chains for one of our mammoth modern ships. The process is absorbingly interesting. The clever manipulation of the huge links as they are welded and finished, and the swarthy men swinging their mighty hammers with rhythmic beat in the glow of the roaring furnaces, constitute a bit of splendid team work, and the result seems perfect,—but is it? The appeal here is to the imagination. Instantly we are looking upon a raging sea as it lashes a lee shore toward which a giant vessel is perchance slowly drifting. Bravely the towering waves are faced, but no headway is made. As a last hope the anchors are cast, and as their flukes grip the rocks the supreme test of every link is at hand. Will the chains bear the tremendous strain? If there is a flaw in a single link, a mere air bubble unexpelled in the welding, then the strength of a thousand other links in the mighty cable will not avail, and an unpicturable disaster may follow. Again and again the towering waves rush to the assault, but if every link be true, their violence is in vain.

The chain with an imperfect link speaks for unbalanced character, for some lack of integrity, a consent to something which is unscientific, untrue. It may not be noticeable to the many—a moment's indulgence, a little reserve of faith, a flavor of selfishness, ignorance, or dishonesty, a single carelessness or forgetfulness—how trivial these things seem! and yet the link in which one such fault is found becomes the measure of efficiency in crucial moments, though otherwise the chain be splendidly strong.

In declaring for perfect man, Christian Science insists upon the ideal proportion; the adequate character, and its inspiration and helpfulness, inhere in the fact that it forever maintains this ideal, and enlists one for life in a holy war against falsity. It enables him to see that every thought link must be perfect, be brought, as St. Paul says, into captivity "to the obedience of Christ." Only as we acquire a spiritual sense valuation of all things, can we be sure that we are filling out this measure of a man, one who will not be found wanting in the trying hour. The Christian Scientist who with patient thoughtfulness is learning to deny mortal selfhood, and to rely upon the power of Truth in every time of need, is forging an anchor chain that is flawless; the imperfections of human sense are giving place to the Christ-consciousness, the divine character is being revealed.

Christian Science knows no imperfection and it can consent to none. The true Scientist speedily awakens to the fact that he cannot afford to be hospitable to any unideality of conduct, word, or thought. He must therefore welcome every well-meant criticism or rebuke, whether its expression be kindly or crude; yes, even from the unkindness and cruelty of malice and envy it is his to wrest a blessing. Enamored of the Christ-ideal, he becomes scientific in his every thought of himself, of others, and of the experiences of daily life. His eyes are fixed upon this supreme attainment, that faultlessness and completeness of character may be manifest in every relation and circumstance of life. This means for him the end of abnormality, unlovableness, and unreliability. It means for the world, the reappearing of the Christ-man. Flaw-filled links have been denied place, and however dreadful the storm, aspiring sense is safely anchored to Truth.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

LA FAYETTE, IND.—First Church of Christ, Scientist, held its first service in the new church building at the corner of Columbia and Seventh streets on Sunday morning, Dec. 29. Having outgrown our room in the Crain property on South street, we rented U. V. L. hall on Main street last March, and have held services there while waiting for the remodeling of the new building (purchased in February) to be completed. The location is very desirable, and the colonial lines of the house, and the large pillars in front, give it an appearance which needed very little change to make it suitable for our purpose; but the interior has been completely transformed from apartments to a handsome auditorium. This place of worship, so harmonious in all its details, is a manifestation to us of gratitude inspired by the healing power of Truth in our midst.—*Correspondence.*

BOISE, IDAHO.—The *Evening Capital News,* in its New Year's edition, reviewing the progress of local church work, has the following to say concerning the Christian Science church: "This church was organized Dec. 28, 1898, as First Church of Christ, Scientist, of Boise, and incorporated under the laws of the state of Idaho; Dec. 29, 1898. After it was organized, its services were held in the G. A. R. hall. Its present church structure at 816 State street, which has a seating capacity of between two and three hundred, was erected in 1904. In anticipation of the growing need for more room, the church recently acquired a lot at the corner of Washington and Fourteenth streets. On this site, by the time the church outgrows its present building, which is now sometimes taxed to the limit, it is expected that a new structure will be erected."

DAVENPORT, IOWA.—The recently completed Christian Science church on Kirkwood boulevard and Grand avenue is one of the most beautiful churches in the city. Services will be held there tomorrow morning [Jan. 5] for the first time. The estimated cost of the building is thirty-five thousand dollars. The ground on which it was built cost about six thousand dollars. The building is 90 x 85 feet and consists principally of an auditorium, which will seat between six and seven hundred people. The remainder of the building includes a spacious lobby and cloak-room, directors' rooms, reading-rooms, and readers' rooms. The Sunday school room is located in the basement.—*Davenport Times.*

HOLYOKE, MASS.—At a recent meeting the Christian Scientists in Holyoke decided to organize, and an organization has now been perfected which will be known as First Christian Science Society of Holyoke. While there has been a great deal of interest in Christian Science in Holyoke, and meetings have been held at the members' homes, yet up to this time no steps had been taken to form a society, the members having attended at either Northampton or Springfield. With the growth of interest, enough people have joined to make the foundation of a society feasible, and there seems little doubt but that a church will eventually be organized.—*Springfield Republican.*

SARATOGA SPRINGS, N. Y.—The members of the Christian Science Society of the Citizens' Bank building met with the members of the Christian Science Society at 344 Broadway, in the Atheneum building, on Sunday, Dec. 15, and united in one society.—*Saratogian.*

SYDNEY, NEW SOUTH WALES.—Quite appropriately it was decided to hold our Thanksgiving service Friday, Nov. 1, the date of what might be called the formal opening of our

Digitized by Google

new church building. Notice of the service had been sent by Second Church to First and Third churches, and quite a large and harmonious gathering, representing all three churches, was the result. Second Church was organized Dec. 22, 1910, and shortly after that date, apart from the fact that the only hall where our services could be held was much too large, expression was given to the desire that as early as possible we should move to get our own building. On March 5, 1912, the first practical step was taken; a fine large block at the corner of Rangers road and Allister street, Cremorne, being secured, with ample room for a church edifice and a hall for the Sunday school. One month later the hall was commenced, and it was completed Oct. 31. It has seating capacity for two hundred persons. A most delightful feature in the building of the church is the fact that the other two churches, First and Third, one officially and the other through individual members, are contributors to our building fund. This excellent evidence of unity among the churches in this field is particularly pleasing, and augurs well for the future of the work of Christian Science in this city.—*Correspondence.*

TAMPA, FLA.—The first regular service in their new church edifice was held yesterday morning [Jan. 5] by the Christian Scientists, and it was largely attended. The church is located on Florida and Henderson avenues, and was recently purchased from the Christian church trustees.
Tampa Tribune.

TWIN FALLS, IDAHO.—Sunday, Dec. 29, the Christian Science church was dedicated. It was in June, 1907, that the first Christian Science service was held in Twin Falls. Only four persons were present at this meeting, which was conducted in a private home. In April, 1908, through the local press, an invitation was extended to the public to meet in an office which had been tendered for this purpose. Sixteen persons accepted the invitation, and a good interest being shown, more commodious quarters were sought to accommodate the congregation, and the K. P. hall was secured for Sunday services. The Wednesday evening testimonial meetings were inaugurated the following August, and were conducted in private homes. The attendance and interest continued to increase, and it was found necessary to secure larger quarters for these meetings, so in the spring of 1909 a move was made into the Odd Fellows' hall.

Just two years from the time the first meeting was held, the Christian Science society was officially organized, and the rapid growth of the society emphasized the need of a permanent place of worship. About this time the Christian church was building its present structure, and the opportunity presented itself to buy the edifice which they were vacating. The deal was quickly closed and the first payment made. It was in the latter part of June, 1909, when the society became established in its own home, and on Dec. 18, 1912, it was incorporated as First Church of Christ, Scientist, Twin Falls, Idaho.—*Twin Falls Times.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

BOSTON, MASS.

Virgil O. Strickler delivered a lecture on Christian Science under the auspices of The Mother Church, The First Church of Christ, Scientist, Boston, Mass., in the church edifice at Falmouth, Norway, and St. Paul streets. The lecturer was introduced by the first reader of The Mother Church, John C. Lathrop, who said:—

There is no doubt but that the world is growing better. Unmistakable signs of improvement are evident on every side. Efforts for reform and progress have steadily prevailed, and by encouraging degrees are surmounting the sin, the superstition, and the ignorance of the past. The present is bright with promise, and to those who have eyes that see and ears that hear it is even joyous with the prospect of inevitable victory over all that opposes complete spiritual realization.

Mrs. Eddy says in Science and Health, "The time for thinkers has come" (Pref., p. vii). The time has arrived for a great awakening of thought to recognize the blessings of life, of health and happiness which are just at hand and which only require a correct adjustment of the human point of view, a stimulating of more righteous desire, and a right instruction in the method of the divine Principle and rules which have been revealed to this age, to overcome every evil and diseased thought and to disclose the kingdom of heaven which is just at hand.

That the spiritual method of Christian Science is the divine way leading mortals to this complete salvation is the profound conviction of countless thousands, and it is hoped that the lecture which you will hear this evening will show to many more in this large audience the plain path leading upward to present and eternal peace. I take very great pleasure in presenting to you a member of the board of lectureship of this church, Mr. Virgil O. Strickler of New York city.—*The Christian Science Monitor.*

DENVER, COL.

Large audiences greeted Frank H. Leonard, who lectured twice on Christian Science in Second Church of Christ, Scientist, corner of East Bayaud and South Grant streets. He was introduced the first evening by Josephine G. Clayton, second reader, who spoke in part as follows:—

When we see people thronging to hear the old, sweet story as retold in Christian Science, it reminds us of the multitudes who centuries ago availed themselves of every opportunity to listen to the story of Christ Jesus and his love. Jesus said, "The Comforter, which is the Holy Ghost, whom the Father will send in my name, he shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you." Our revered Leader, Mrs. Eddy, says in our text-book, "Science and Health with Key to the Scriptures," "This Comforter I understand to be Divine Science" (p. 55). All earnest students of the Bible and this text-book know that it does bring all things to our remembrance, whatsoever he hath said unto us.

In Jeremiah we find these words: "I will give you pastors according to mine heart, which shall feed you with knowledge and understanding." These pastors we know to be the Bible and Science and Health, and these pastors are feeding with knowledge and understanding all who come to hear, learn, and apprehend.

On the second evening the lecturer was introduced by H. A. Beech, who said in part,—

As we turn the pages of history, we find in each age some clear-minded thinker with lofty aspirations, standing far ahead of the majority, holding up the banner of Truth and Love, leading the people to a higher plane of existence.

Digitized by Google

Thus we find in the latter half of the nineteenth century a noble and deeply religious woman guiding the people to a loftier standard and a clearer understanding of the Bible. The story of the healing power of Christian Science has been told many times, but its repetition only makes it more beautiful, as a lecturer presents it in a new light. As we listen to the discourse this evening we shall glean some new thoughts that will give us a better understanding of Truth and Love as taught in Christian Science.

South Denver Tribune.

LACONIA, N. H.

A large and appreciative audience gathered in the Unitarian church to listen to a lecture on Christian Science by William R. Rathvon. E. P. Thompson, Esq., of Laconia, in introducing the lecturer, said in part,—

It is the individual that needs to become better. The community is composed of single individuals, and will rise no higher in the scale of honesty and goodness than the people who make up that community. We should welcome any agency that will serve to make better men and women. We should encourage every effort, by whomsoever put forward, that will tend to make for a better world in which to live, by making better people in that world.

I do not profess to be familiar with Christian Science, but as I understand, and I think I understand rightly, it does teach people to study the Bible and become familiar with its precepts. Christian Science is founded on the Word of God, and its purpose is to teach us the right way to live. While the study of the truth will be of great benefit to us, it needs to be aided by the study of ourselves. Are we what we ought to be? Are we doing the good work we ought to do? Are we so conducting ourselves as to obtain the highest degree of perfection? Are we ourselves honest and upright? Are we doing unto others as we would that others should do unto us?

We have assembled here this evening to listen to a lecture on Christian Science, a subject which is attracting the attention of people throughout the whole world, and which we hope and trust will be for the betterment of mankind. The purpose of these lectures is to give the public an opportunity to gain authentic information in regard to Christian Science. It is the mission of the gentleman here tonight to aid us in gaining this information.—*Laconia Democrat.*

ERIE, PA.

A large crowd gathered in Masonic temple to hear the lecture on the teachings of Christian Science, delivered by Francis J. Fluno, M.D. The lecturer was introduced by Clinton B. Burgess, who said:—

In the book of The Acts of the Apostles it is recorded that at one time the disciples were "all with one accord in one place," and we read further that on this occasion an especially clear understanding of spiritual things was manifested not only by the disciples, but also by the multitude which had gathered to hear them, so much so that not even differing nationalities and languages proved a bar to the reception of the word of Truth. Doubtless this "one accord" of thought aided greatly both the receiving and the giving of the good news of God, for a common starting-point of thought is the very touchstone of persuasiveness.

There are probably in the minds of those present here nearly as many differing opinions and estimates of Christian Science as there are individuals, and the same might be found true concerning many other subjects; on the other hand, there are some things in which we are all of us of "one accord." For example, we are all as one in our desire to know the truth about things; not one of us wishes to be deceived about anything. Again, we all of us desire freedom in every right direction; not one of us longs for limitation or bondage. So, however we may differ on other subjects, the love of truth and of freedom is something in which we are all of "one accord." It is to this thought, which we all share, that the Science of Christianity makes its appeal, and it is for each one of us to judge for himself how far the declaration of its great Teacher, Christ Jesus, can be demonstrated, when he said, "And ye shall know the truth, and the truth shall make you free."

Erie Despatch.

JANESVILLE, WIS.

A lecture on Christian Science at the Myers theater was delivered by the Rev. William P. McKenzie. He was introduced by Mrs. Julia S. Lovejoy, who said:—

First Church of Christ, Scientist, of this city, invites you to this lecture because it wishes you to know about the truth which has blessed so many of us. There is a large company, of whom I am one, whom Christian Science has freed from bondage to fear and worry, sin, weakness, and disease, giving them an understanding of God and of man's relation to Him which is practical and usable every day and which brings life and immortality to light. Christian Science opens the Bible to us as a mine of precious truth, and this teaches us how to utilize this treasure, how to apply this truth to daily living. We learn from experience how Truth obliterates error, Love destroys hate, and our Master proved that the Principle of divine Life overcomes death. We are encouraged to walk in the steps of the Master, who said, "I am the way, the truth, and the life."

Correspondence.

CAMDEN, N. J.

The Temple theater was well filled when William D. McCrackan, M.A., delivered a lecture on Christian Science. H. Graham Bleakly, Esq., member of the bar, introduced the lecturer, saying in part,—

Paul in addressing the Athenians said: "As I passed by, and beheld your devotions, I found an altar with this inscription, To the unknown God. Whom therefore ye ignorantly worship, him declare I unto you." What has been the cause of all the sin, sickness, and disease to which humanity has seemingly been heir? Has it not been man's ignorance of God? Christ Jesus said: "Ye shall know the truth, and the truth shall make you free." Christian Scientists all over the world have proven and are proving through healing the sick and the sinner that Christian Science is the truth about God.—*Camden Post-Telegram.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Charleston, S. C.—Christian Science hall, 145 Meeting street, 8:30 p.m., Feb. 14.
Charlotte, N. C.—Academy of Music, 4 p.m., Feb. 16.
Chicago, Ill. (joint lecture, eleven churches).—Auditorium, 3:15 p.m., Feb. 16.
Colorado Springs, Col.—Princess theater, 8 p.m., Feb. 9.
Kinston, N. C.—Court house, 8 p.m., Feb. 17.
Lincoln, Neb.—Church edifice, 8 p.m., Feb. 11 and 13.
Los Angeles, Cal. (joint lecture).—Shrine auditorium, 3 p.m., Feb. 16; Third Church edifice, 734 S. Hope street, 8 p.m., Feb. 17.
Macon, Ga.—City auditorium, 3:30 p.m., Feb. 16.
Meriden, Conn.—Church building, corner Liberty and Norwood streets, 3:30 p.m., Feb. 16.
Nevada, Mo.—High school auditorium, 8 p.m., Feb. 18.
Nottingham, England.—Mechanics hall, 8 p.m., March 4.
Olympia, Wash.—Olympia theater, 8 p.m., Feb. 18.
Seattle, Wash. (First and Fourth churches).—Moore theater, 2:30 p.m., Feb. 16; Arcade hall, 8 p.m., Feb. 17.
Shellman, Ga.—High school auditorium, 7:30 p.m., Feb. 17.
Statesville, N. C.—Court house, 8 p.m., Feb. 18.
Wilmington, Vt.—Memorial hall, 8 p.m., Feb. 21.

TESTIMONIES OF HEALING.

For some time I have thought that I should write and testify to the benefits received from the study of Christian Science. Living eighteen miles from the nearest church, a distance which I must make by stage, it is not often convenient for me to attend the Wednesday evening meeting, and very often I feel a deep yearning to express my gratitude to God for the great and wonderful revelation given to the world through Mrs. Eddy, namely, Christian Science. It has been my privilege to know of this truth for the past fifteen years, and I can say that the first knowledge I gained of this Science has been permanent, although I have met many obstacles which seemingly have temporarily blocked the way. To me the truth taught by the Christian Science text-book, "Science and Health with Key to the Scriptures," is no less valuable as a protection from disease than it is as a cure. This result I feel sure is due, in my case, to a daily perusal of the Bible, with Science and Health, and other Christian Science literature.

In more than one instance I have felt the power of God "who forgiveth all thine iniquities; who healeth all thy diseases." About a year ago it was demonstrated to me again that this truth, as taught by Christian Science and confirmed by the Scriptures, does heal bodily and mentally. I went with my husband on a trip in the mountains, almost twenty miles from home. Not being used to these trips, I was not dressed as warmly as I should have been, and as we went on horseback it did not seem convenient to dress otherwise. The woman where we stayed called my attention to this, and voiced it more than once.

We were away a couple of days, and came home late in the evening. I did not get my usual study while away, or that evening after coming home, and the next day and for days following my body seemed to be racked with pain. I telephoned to my mother, who is also an earnest student of Christian Science, and gradually help came to me. The pain faded away to the nothingness whence it sprang. No woman was in my house during the time, and I did all that was necessary to be done, with the help of my husband, who is very much in sympathy with the Christian Science way of treating disease. For this healing, and many other blessings which have come to me through the study of Christian Science, I am truly grateful.

I wish also to express my gratitude for our periodicals, the *Journal, Sentinel,* and *Monitor,* also for the masterly way in which our publications are managed. I cannot help feeling the wisdom of those at the head of this movement, which to me is like one great army, moving forward as did the Israelites of yore out of the land of bondage into the promised land. God bless them all, is my sincere prayer.

MRS. J. J. LOWELL, Greenwood, Col.

In 1906 I turned to Christian Science, after having been helped several times in the preceding twelve years; but each time I had turned away from Truth and gone deeper into the mire of dissipation, proving the significance of what Jesus said to the impotent man: "Sin no more, lest a worse thing come unto thee."

When I determined to become a Christian Scientist, it was after several months of contemplated self-destruction. I did not care to admit that I really wanted Science, after being a backslider three times; so I hesitated to ask for help, as I realized the necessity of sincerity and earnest work on my part if I expected the proper results. I had lost my position on account of drink, and had come face to face with the awful conviction that so long as I continued to do as I had been doing, I had nothing but misery, mental, moral, and physical, before me. I asked a sister who is a Christian Scientist and who had helped me at different times, to help me once more, as I was in earnest this time.

My sister did as I asked, and I began to read and study the Bible and Science and Health whenever I could, with the result that in less than three months the desire for intoxicating liquor left me, never to return, and a few weeks later the desire for tobacco ceased, although I had been an inveterate smoker and chewer for eighteen years. According to mortal sense, I was in a deplorable physical condition after years of continuous dissipation, but in six or seven months I was a well man, having been healed of so-called hereditary drunkenness, the tobacco habit, an organic trouble of eleven years' standing, rheumatism, malaria of eight years' standing, and kidney trouble.

Now I can say, as did St. John, "And I saw a new heaven and a new earth: for the first heaven and the first earth were passed away." In the past five and a half years I have had innumerable business, financial, and physical demonstrations. The spiritual awakening has been and is the most beautiful and delightful of all, for now I too "know that my redeemer liveth." Since accepting and working in Christian Science, I have married. Previous to our marriage my wife was opposed to what she thought this blessed truth is; but since she has been studying and putting into practise its teachings, she accepts Christian Science for herself and for our two children. About two years ago I was able to pass this healing truth on to a young man who needed it just as I did five and a half years ago, and he is now working and striving daily to get a better understanding.

It has been necessary for me to ask for help a number of times, and I thank God for the pure-minded practitioners who have worked so faithfully for my wife, our children, and myself. I am truly grateful to Mrs. Eddy, who interpreted the truth in such simple and fearless statements that the uneducated as well as the scholar can understand and use daily in overcoming all that is opposed to God, good.

LAUNCELOT T. BIDDLE, Evanston, Ill.

When a little child, I remember that my father read of a woman who could heal as Christ Jesus did, and in the conversation about it I asked why we could not be healed in that way now. His answer was that our faith was not sufficient. My parents were members of a church and lived its teaching as well as they knew how, but sickness and death brought sorrow to our home; my sisters and father were taken, and financial loss left us under a sense of sorrow that our church could not heal.

At the age of fourteen I had to make my own way, and while away from home I saw a woman healed of rheumatism by Christian Science. From that time I could never think of its teachings as being wrong, if it could thus help suffering humanity, but when I went home and told my mother, she talked to me in such a way that I turned from my Christian Science friends and went to the city to make my home. I went to church, but it made no difference to me what church I attended—I wanted Christianity. I married a physician, and we prospered for three years; then his health failed, and we sold our home and traveled. We had the best medical help, and all that money and human skill could do was done without avail. Then we asked a neighbor to write to a healer he had often told us about, and he kindly did so, but could not find him. Later he wrote to a Scientist in Chicago, who sent a list of names from there for us to choose from.

The practitioner selected asked if we had ever read the Christian Science literature. We had not, so asked for some; and when we saw that the text-book, Science and Health, was spoken of so highly, we sent for it, and I can never forget the first two or three nights that I studied the book till late in the night. My husband read it by day, and was healed of a fever of three years' standing. He got up and went to town, fourteen miles, then came home and walked around as though he had been at home all day. I was healed of severe headache and of the coffee habit, also of a sense of sorrow.

Digitized by Google

Christian Science has met my every need for a year and a half. I am thankful for physical help, but words cannot express my joy and my gratitude to Mrs. Eddy for the truth that helped me to rise out of the awful sense of sin in so many forms. I now know that it was God who led me to Christian Science. I get help from the Home Forum page of the *Monitor,* and the *Sentinel* and *Journal* are studied along with Mrs. Eddy's works. I am alone on the prairie, so have time to study, and my prayer is that I may live Christian Science in the honorable way we should. The Bible is a new book to me, and I have demonstrated God's power for my three children, one child having been burned quite severely. My only help was in studying Science and Health. I could do nothing at first, for his screams kept me from thinking rightly. I had loaned Science and Health, so I had to go for it. When I returned the boy was asleep, and next morning I asked him how long it was after I left the house that his leg hurt him. He said it was not long. I now know that if God does not meet my every need, it will be my fault. I am a member of The Mother Church and long for an opportunity to attend the services.

This is only my feeble way of telling my love and gratitude for Christian Science. I want to say that one way by which I got rid of selfishness was to send my *Journal* and *Sentinel* to those who are in need. I told my neighbor that the *Sentinel* was enough to convince me, and I feel that I must help all I can to get the good I did from such pure literature. I lend my copy of Science and Health, and will buy another for my home use when I can. I cannot express my gratitude, but will try to live it. My prayer is that I may grow in the understanding of Truth and Love, a privilege which we all have with Science and Health and Mrs. Eddy's other writings. I hope many will find the joy, peace, and love that Science reveals, for these are free for all.

MRS. CHLOE SMITH, Centerville, N. Mex.

[Translated from the German.]

"Thou hast turned for me my mourning into dancing: thou hast put off my sackcloth, and girded me with gladness." I join in the psalmist's song with all my heart for the blessings which I have received through Christian Science, both spiritually and physically. I suffered with nervousness for twenty-three years, and consulted many physicians,—I think about fourteen in the course of years. Massage, magnetic treatment, electricity, baths, etc., were given a thorough trial; still my health was sinking gradually. The last physician told me that nothing could be done for me, that I must go through life as I was. This verdict did not frighten me, as I had always felt that all things are possible to God. In order to leave nothing untried, however, I went to the seashore in the summer of 1908, though without being benefited in the least; but while staying there, my attention was called to Christian Science by a relative of one who had been healed through its teaching.

After a year's treatment I had made sufficient progress in the understanding of Christian Science to be able, in the practitioner's opinion, to take care of myself. Although in the succeeding years there was much error to struggle with, and I sometimes felt like asking for help, God enabled me to overcome the discordant conditions. Thus I was able to help myself in a case of hernia and abdominal trouble. At times there was the temptation to wear the truss which I had used in former times, but I asked myself whom I should trust—God, or this material thing. God's power was relied upon, and I was enabled to attend to my household and lift heavy objects with the firm trust that Mind produces all activity, and that God is with us. In an instance where I had an abscess on the right arm, I once more had a striking proof of Truth's healing power. I had tried to open the abscess several times, when I saw that this was not the way; that I should rather put myself entirely in God's care. A thought contained in a testimony in *Der Herold der Christian Science* proved to be a help. It was the case of a lady who was healed of a similar trouble, and she said that the purifying and regenerating law of Spirit had manifested itself in this instance. I included this idea in my treatment that night, and on the following morning the abscess had opened.

The wonderful feature about Christian Science is, that it is applicable under any and every circumstance of life. When I lose or misplace an object, I try to realize that in God's kingdom nothing can be misplaced or lost, that I am being led by infinite intelligence, and often I will find the object immediately. I have now sufficiently progressed in the understanding of Christian Science to be able to overcome with God's help any discordant condition. I think of Mrs. Eddy, our beloved Leader, with a sense of profound gratitude for her selfless love, through which the Christ-healing has again been given to the world.

HELENE KLEINIG, Leipzig, Germany.

About two years ago I made up my mind to find out what Christian Science teaches. I had always been a student, and so wanted to look into this as I did into many other subjects. As a result of this line of thinking, I went to church one Sunday morning merely out of curiosity. Having been brought up an orthodox Jewess, the service did not in the least appeal to me, and I resolved never to go again; but in the course of the next month I could not refrain from thinking about the happy faces I had seen at that meeting—yes, I made up my mind that I wanted to know more about Christian Science. I went to a practitioner who was then living here and asked her some questions. She tried to explain to me what God is, and what the Christ is understood to be, in Science. This appealed to me, and I took home a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which she loaned me. Not then needing any physical help, I did not intend to go into this study very deeply, but I could not help it. It began to mean more and more to me as I read on. Since that time my little boy has been healed of a stomach and bowel disorder from which he had suffered since infancy. I had worn glasses for some seven years and expected to do so all my life, but in a few months I laid them off and never think of them now at all.

These are only two out of the many demonstrations of Truth's power made for me, and for which I am indeed grateful. I am grateful for class instruction, for having been led to a teacher who points one away from personality to Principle. I am indeed thankful to be able now to prove this truth which makes free for myself, and also to help others. I am very grateful that there was one woman, our revered Leader, Mrs. Eddy, who was pure enough to understand the teaching of the Master and so express it for us in her writings.—MRS. ANNIE J. LIPPMAN, Hibbing, Minn.

I am so thankful for what Christian Science has done for me that I feel it my duty to write this testimony. Three years ago I began to read Science and Health, getting the book from the public library. I renewed it three times, and before I had finished reading it I felt like a different person. I knew I had found what I had so long been searching for. It made the Bible plain and clear, and life meant so much more to me. To me it is the true teaching of Christ Jesus, without any man-made doctrine, the pure religion of divine Love. I was not searching so much for the physical healing as for the satisfaction which I had not been able to find in the different churches with which I had been connected, but I am now a member of a Christian Science church. While reading Science and Health, I found I was able to eat anything I wanted to without its distressing me. I had for thirty years taken medicine regularly, but have not taken any for the last three years. I took a few treatments of a practitioner, and gained a great deal in that way.

Digitized by Google

I am deeply thankful to God for the truth found in Science and Health, and for all it has done for thousands in bringing to them the health and happiness which they could find in no other way. I appreciate the *Sentinel* and *Journal*, the testimonies being very helpful to me. I am thankful that so many are healed quickly. What a blessing to know of the great Physician who heals all our sickness! I am very grateful to Mrs. Eddy for her book, "Science and Health with Key to the Scriptures" and the spiritual uplifting it gives. I am trying to put into practise the truth found in it.—MRS. MARTHA E. YOUNG, Boundbrook, N. J.

It is with the greatest pleasure and deepest gratitude that I here witness to the wonderful healing power of Christian Science. About eight years ago I was in a very serious physical condition, the physician who diagnosed my case stating that I would have to submit to two surgical operations before I could ever hope to be a well woman. One trouble, of twelve years' standing, was said to be organic, and from this I suffered greatly. With the fear of two operations confronting me, I was anything but happy, and having been in constant pain for over three months, I was in a dreadfully nervous condition.

One evening Christian Science was brought to my notice by a friend, and treatment advised. The very next day I went to a practitioner and asked for help, and while receiving my first treatment I was relieved of all pain for the time being, which made me very hopeful that I might receive permanent relief. In exactly four treatments I was entirely healed, and have remained so, never having had any return of the troubles in any form. For over nine years I had worn glasses constantly, being unable to see without them, the trouble having been diagnosed as a structural defect. About a year and a half after my first healing in Christian Science I met with a serious automobile accident, and while receiving treatment for my injuries, which consisted of five broken ribs, a badly injured spine, also numerous cuts and bruises, my eyes were entirely healed, although I had no direct treatment for them.

I have received so many benefits through the application of Christian Science, that I am more than grateful. It is a great comfort to me to know that God is Love and an ever-present help. I earnestly give thanks to God, and am grateful to our dear Leader, Mrs. Eddy, that I have been so wonderfully helped, both spiritually and physically.

MRS. D. E. WELLCOME, Los Angeles, Cal.

It is with a feeling of deep gratitude that I give this testimony, which proves the allness of God's power to heal. In the early part of 1911, while away from home on a business trip, I met with an accident which resulted in a badly injured arm. I was not sure at the time of the exact nature of the injury, but knew it was serious. I went to my room and tried to realize man's relation to God; but fear had taken possession of me and I was unable to help myself, so I telephoned to a practitioner and stated my case. On her advice I went to a doctor, who on examination said I had sustained a serious injury—what is known to medical science as a "Colles' fracture." He set the arm, and I immediately asked for more help in Christian Science, with the result that the next morning I was able to shave as usual, using both hands, and then went to my place of business.

At that time my work was of such a nature as to require not only the use of both hands, but also required my being very active, and this I was able to be. One week from date of the accident I went to a doctor in another city and had him remove the splints. On examining the arm, he was much surprised to find it, as he said, perfectly normal, without the usual condition found after the knitting of a bone. I had no further trouble, and from that day to this the injured arm has been in no way different from the other.

While I have seen many beautiful demonstrations of healing in our family in the last five years, this one meant very much to me, and the blessings which followed the experience were many. I take this opportunity to express my gratitude to God, also to Mrs. Eddy for our text-book, "Science and Health with Key to the Scriptures," which enables us to know God as Love and also as justice.

F. ARNOLD BLISS, Allston, Mass.

It is now four years since I first became interested in Christian Science, and during that time I have benefited in many ways from the understanding I have gained from Mrs. Eddy's teaching, which has brought much happiness and contentment into my life through the realization which has come to me of the absolute power of divine Love and the nothingness of evil.

I should like to tell of a healing which I experienced in August, 1911. My husband and I were at a cricket-match in our village, and we were invited to tea on the grounds. A great many wasps were all around the table, and without noticing I put a piece of cake into my mouth with a wasp on it. My husband, who was standing near me, saw what had happened, and as I got up from the table, he and I went off a short distance from our friends. My mouth began to swell immediately, but I at once declared the truth and had no fear, and felt able to hold to the thought that there is no power in evil, my husband also helping me. I had been stung on my tongue, the roof of my mouth, and the lower jaw. When I began to realize the power of divine Mind, I found that the swelling was reduced perceptibly, and after a short time my husband and I returned to our friends. Only two or three people knew I had been stung, and they could not believe anything had happened, as my speech was just as usual, for I talked to several people for an hour or more. My mouth was still a little painful, but all swelling had disappeared when I got home, and I was able to eat my dinner without any discomfort.

I am deeply grateful for all the blessings I have received through the teaching of Christian Science, and I recognize more clearly each day that we are surrounded by God's loving care, and that we only need more understanding to live happily in that knowledge.

MARY L. LAMBART, Fouracres, Harefield, Middlesex, England.

I can corroborate my wife's account of her almost instantaneous healing from wasp stings. She showed me her mouth next morning, and the marks of three stings were distinctly visible, but there was no swelling.

COL. EDGAR LAMBART, Fouracres, Harefield, Middlesex, England.

I was very much in need of help when Christian Science found me in December, 1910. I had a great many things to trouble me; among others my little boy had a throat disease and was ordered removed to the isolation hospital by the doctors, who could not give me very much encouragement because of the weakened condition of his heart. Another trial was that my financial supply was entirely exhausted. I had worried a great deal and was very much distressed, and though my friends tried to console me, they had only sympathy to offer.

Finally Christian Science was presented to me, and I accepted it for myself and my little boy. I received treatment that night about nine o'clock, and three hours later such a sweet sense of peace came over me that I fell asleep, to awake next morning healed of what had seemed so terrible to me. I called up the isolation hospital next evening, and they reported the child's throat was entirely clear and said

Digitized by Google

his heart was much stronger; so we soon had him home with us again, well and happy. Another time he had an eruption on his cheek which spread rapidly, and again I resorted to the same treatment and the child was healed. I was also able to secure steady employment and my financial problem was met. I am indeed very grateful for this healing truth which has come into my home, and I have been helped through a great many difficulties by Christian Science.

MRS. CLARA ERICKSON, Spokane, Wash.

I give this testimony with a heart filled with gratitude to God for the blessings which Christian Science has brought to me. I am also grateful to Mrs. Eddy for the wonderful healing truth which she has made available to mankind, and the study of Science and Health together with the Bible is truly beautiful.

It is a little over a year ago that I came into Christian Science. At that time I thought I could not get along without intoxicants, but I was prevailed upon to try Christian Science, and after a few treatments was completely cured of the desire, as from that time on I never craved liquor or thought of it. Christian Science has also helped other members of my family, and the spiritual uplifting has brought happiness to our home. My work as a fireman prevents me from attending church regularly, yet I never fail to read the Lesson-Sermon each day. The more I read, the more I want the divine word. For all this I am very thankful, and it is my hope that this testimony will help some one who is in need of it. I know Christian Science will help all who are willing to study the text-book faithfully.

GEORGE E. FLOYD, Mount Healthy, Ohio.

I am very happy to testify to the truth of my husband's testimony.—MRS. CLARA FLOYD, Mount Healthy, Ohio.

[Translated from the German.]

I wish to express my gratitude for the benefits derived from Christian Science. For a number of years I suffered with attacks of appendicitis, which kept recurring at intervals of one and a half to two years. The last time, about four years ago, I was in bed from October until December. The symptoms were very serious, the pain unbearable, while the baths to which I resorted failed to improve my condition. I did experience some help at times; then the pain would become all the more severe.

It was in this condition that Christian Science found me two and a half years ago. I attended the Wednesday evening meetings and Sunday services regularly, bought copies of *Der Herold der Christian Science* as well as German pamphlets, and read a good deal in them, till at last I realized that I had been freed from pain without my having had treatment. Again, in May, 1910, I was suddenly taken ill. I remarked to my husband that it seemed to me to be a return of the old trouble, and he immediately went to a Christian Science practitioner to ask for help. She came at once, gave me a treatment, and when she went away the fever left me, so that I was able to get up the next day. I had two more treatments, and have had no further attack of the disease.

The anemic condition from which I suffered had brought on sleeplessness and a sense of anxiety, so that I would often leave my bed at night and experience such fear that I thought I might lose my mind; but one treatment in Christian Science freed me of this trouble also. Sleeplessness, anxiety, and fear have disappeared, and the Master's words have been verified in my experience: "Ye shall know the truth, and the truth shall make you free." For this understanding, as well as for the selfless love of our dear Leader, I am most deeply grateful.

FRAU MARIA KUNKEL, Berlin-Wilmersdorf, Germany.

FROM OUR EXCHANGES.

[*British Congregationalist.*]

We are faced, not by the failure of any particular church system, but by the apparent breakdown and failure (let the words pass) of religion itself. The people in ever-increasing numbers are neglecting the churches as if they had no interest in them or use for them. How are we to account for this state of things, and what can we do to remedy it? It has been said again and again that what we are really suffering from is the prevalence of the materialistic spirit. Ours is an age that has its heart set on the things of this life. The two great objects of its pursuit are money and pleasure. Sacred things are at a discount. The Sunday is rapidly becoming the weekly holiday. Even our politics are materialistic. And in so far as our present distress is due to the crass materialism of our day, we must be content patiently to bear it, and wait for the time of revival, which is sure to come. For man cannot permanently satisfy himself with bread; his soul cries out for God, the living God, and by and by he will turn again with wistful desire to those places where the word of the ever-living God is to be heard—by which word alone man's spirit lives. But is the present distress entirely due to the prevailing materialism? Is there no fault in ourselves? That is the business to which the publication of statistics ought to drive us—the humbling but salutary task of self-examination. It is a cheap expedient to lay the blame on things outside ourselves; the more profitable way is to betake ourselves into our Lord's presence and ask, "Is it I?"

[Rev. Charles Stelzle in *Christian Century.*]

The future victories of the church will be won largely because of its cooperation with the men who in other fields and through other methods have been laboring in the spirit of Jesus to reach the same goal toward which the church has been struggling. Not always known as Christians, and sometimes spurned by those who thought they had a monopoly of the Christian religion, nevertheless they have been controlled by the spirit of Jesus, which, after all, is the truest test of genuine Christianity. Already these men and women have won victories of which the church might well be proud. Dimly the best leaders of the modern social movement realize that theirs is a religious movement. They are sometimes puzzled and ofttimes distressed because they cannot harmonize their terminology with that of the church, but they are conscious that somewhere there must be a nexus. Leaders in the church the world over are convinced that the church must soon become the leader in a new social propaganda. They are unwilling that the church should surrender to the unscrupulous agitator the place which it has made for itself in the social and the economic world because of its teachings throughout many generations. With deep concern they are searching for the rock foundation upon which they may build a far-reaching social program for the church.

[*Zion's Herald.*]

The important thing is the man morally transformed, and there is no power that will do this excepting the religion of Jesus Christ. All kinds of attempts have been made to bring about results otherwise. For years it has been heralded about that the surgeon's knife could remove the evil tendencies of man; but here is the announcement, wired from Buffalo within a few days, that the most noted experiment of the kind ever attempted has failed utterly. Two years ago there was discharged from the Dannemora (New York) state prison a man who had been operated on, and through that believed to have been cured of all his viciousness. But alas for mere science! Now comes the report that the cured criminal is at the head of a notorious gang of safe-blowers, the brain, in fact, that plans the crimes. And once again we

Digitized by Google

must record the breakdown of mere materialism when it comes to deal with the heart of man. Christianity, and Christianity alone, is the all-transforming power. Hence we say that social work, social service, begins right there. And well it should, for it is the business of Christianity to change men.

[James I. Vance, D.D., in *Christian Intelligencer.*]

The church cares, but it must do more than care; it must cure. It proposes to cure, not by some raw scheme of social or political or industrial reform, but by putting man where he belongs, by making him spiritual, so that he is controlled from within. The purpose of religion is to supply human life with a motive big enough to drive it up-hill, to so tie up the individual to God that whatever he does, he will do it in a godly way and with godly power—that is, as God would do the thing were He on the spot. It does not undertake to boost labor union, but to make the laborer a Christian wage-earner. It does not try to espouse the cause of the capitalist, but to teach him what it means to be a Christian employer. Do you tell me that this is weak and evasive? I tell you it goes straight to the root of the trouble. The church with a spiritual mission is not a dead church; it is the most dynamic thing on earth.

[*Christian Register.*]

The world over, all human society is in a state of tension such as never existed before, because for the first time in all the ages all parts of the world are brought into direct communication with each other. There is an upward push of all elements which has not yet been answered by an upward pull on the part of those who have power. But that pull will come, and then half the diseases of society will disappear. The energies that now go into things detestable will flow into that which is admirable, and the lion of enterprise will lie down with the lamb of docility. Mastership will give place to leadership, and obedience to lawful authority will gladly be rendered, and so the meek shall inherit the earth.

[*Congregationalist and Christian World.*]

God's habit is to reveal Himself through man to men. That explains the failure of all mere logical proofs put forward to convince the world of God's existence. Anselm's ontological argument, the argument from design, and all the rest, are useless when we go out to convince the unconvinced. If there were no want and faculty of apprehension in the human heart, if the necessity of God were not upon the soul of man, no logic could lay firm foundations for divinity. The pastor finds that out in his experience, for argument never persuades. He wastes his energy in proving God's existence to those who have made up their minds to deny Him.

[J. Gresham Machen in *Princeton Theological Review.*]

The church is puzzled by the world's indifference. She is trying to overcome it by adapting her message to the fashions of the day. But if, instead, before the conflict, she would descend into the secret place of meditation, if by the clear light of the gospel she would seek an answer not merely to the questions of the hour, but first of all to the eternal problems of the spiritual world, then perhaps, by God's grace, through His good Spirit, in His good time, she might issue forth once more with power, and an age of doubt might be followed by the dawn of an era of faith.

[*Universalist Leader.*]

If you desire to have men believe in a good God, the best way to help them to such a belief is in being good yourself. Here again Jesus states the case with his usual clearness and accuracy: "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." The best psychology echoes that command to all who would lead humanity toward higher spiritual experiences.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Results" has been translated and is now printed in German (Die Christliche Wissenschaft: Ihre Resultate). This pamphlet contains 35 pages and is for sale at the prices of all the regular pamphlets as shown on the opposite page.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy	$ .65	$ .06	$ .07
Twenty-five copies	1.60	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913: XIIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Provision for the "people's water rights and power commission," to consist of an experienced civil engineer, an expert hydraulic engineer, two experienced dam builders, and a capable business man, is made in a bill presented to the Maine Legislature. The commission is to ascertain the amount and location of all water privileges in the state and take possession of all unoccupied water-powers belonging to the state and advertise them for rent for manufacturing purposes. Leasers of water privileges under the act are to be forbidden to transmit electricity outside the state. The commission also would control the cutting of ice on great ponds or rivers and sell the right for cutting at from twenty-five cents to one dollar per ton, except that no charge is to be made to municipal ice plants, farmers, and private individuals. An act providing that "the fee to all undeveloped water-power and water-power sites which now are or hereafter may be owned or held by the state shall be conserved and forever remain the property of the state of Maine," was also presented by a representative.

Wyoming's ratification of the income tax amendment completed a list of thirty-six states, three-fourths of the Union, which have approved the provision. This is the first amendment to the constitution since 1869, when the one prohibiting restriction of suffrage on account of "race, color, or previous condition of servitude," was adopted, and is unique in that it restores to the government a right previously held or exercised, but taken away by judicial interpretation. It was in 1895 that the Supreme Court, by a vote of five to four, decided that Congress had no right under the constitution as then worded to levy taxes on incomes. The agitation in favor of an income tax amendment to the constitution began immediately after the announcement of that decision, and it has taken almost four years to ratify it.

The House foreign affairs committee has agreed upon a favorable report on a bill for general regulation of the use of the water of Niagara river for power purposes. The measure would provide that the secretary of war issue permits for the diversion of water on the American side upon condition that the company receiving it shall comply with all regulations as to rates and service of the state in which power is generated or transmitted. No change would be made in the existing law limiting the amount of water to be diverted on the American side to fifteen thousand six hundred cubic feet a second. The secretary would be authorized to issue permits for the diversion of water below as well as above the falls, and for the transmission of power from the Canadian side.

Mayor Harrison of Chicago and members of the city council committee on transportation are understood to have reached an agreement on the general terms of a plan authorizing the consolidation of the surface and elevated railroads of Chicago, the construction of a system of subways, and the merger of all three. This combination will ultimately represent from four to six hundred million dollars. In forty years the city will own the entire property without additional cost at the time of transfer. This municipal ownership of all transportation facilities is to be accomplished by utilizing the city's percentage of profits to assist in retiring the financial obligations of the various traction companies.

A new plan for the promotion of industrial education in Illinois has the support of many influential organizations. The school bill, as prepared by a conference of these organizations, provides that vocational training shall be furnished through the present school organization. Under the conference bill plan the state will pay fifty per cent of the cost of vocational training, which shall be provided not only in city schools, but in country districts, where agricultural classes will be conducted. It is estimated that state aid for vocational training will amount to about one million dollars a year.

There has been introduced in the Connecticut General Assembly a bill to oblige the New Haven railroad to replace all its wooden cars with steel cars at the rate of twenty per cent a year until the entire equipment is of steel coaches. Under the terms of the bill the public utilities commission is charged with seeing that this is done and to its satisfaction.

Favorable report on the bill to authorize a physical valuation of railroads is expected from the Senate committee on interstate commerce.

International.

"The foremost task of Liberalism in the near future is the regeneration of rural life—the emancipation of the land of this country from the paralyzing grip of a rusty, effete, and unprofitable system," declared David Lloyd-George, chancellor of the exchequer, at the recent annual meeting of the National Liberal Club in London. "When the reports on the relations between landlords and tenants," said he, "are published, they will prove conclusively that there are hundreds of thousands, if not millions, of men, women, and children, living under conditions with regard to wages, housing, and the rest, which ought to make this great empire hang its head with shame. They will prove by unchallengeable facts that this rich country does not provide decent homes for the laborers engaged in an occupation which is vital to our very existence." Mr. Lloyd-George also denounced what he called the land monopoly of towns.

At the conclusion of the congress of the Australian Ornithology Society held at Launceston recently, twenty-nine delegates visited the Straits islands in the steamship Yambacoona, and formed two camps, one on Cape Barren and one on Flinders islands. About fifty different species of birds were found on Barren island and the surrounding small islands, and sixty on Flinders island. The birds were all Tasmanian fauna, which indicates that Flinders island and the adjacent islands have been more recently connected with Tasmania than with the mainland. Of plants, no less than three hundred different varieties were collected on Flinders island, and the plant census points to a close resemblance to the flora of Tasmania.

The recently published annual report of the surveyor-general relating to pastoral lands leased from the crown in South Australia shows than an area of 144,095 square miles of pastoral country was held on June 30 last at an annual rental of £25,772, or an average of three shillings a square mile. In addition to the rental, government improvements valued at £276,658 are being paid for by annual installments of £12,871. Thirteen hundred and eighty-seven square miles was allotted during the year.

The Persian foreign minister, in conversation recently with the British minister, declared that his government was sincerely anxious to improve the conditions on the trade routes, but its efforts were impeded by the embarrassed state of the Persian finances. To carry out the projected plans would involve the expenditure of about three hundred and fifty thousand pounds, and he asked that Sir W. Townley employ his good offices for the purpose of obtaining the necessary advance from the British government.

Jean Bielovice, the Peruvian airman, has succeeded in crossing the Alps on a Hanriot monoplane, with an eighty-horsepower Gnome engine. Ascending from Brigue in a series of spiral flights in the direction of the Simplon Kulm, he flew over the famous pass and descended at Domodossola. He was exactly twenty-six minutes in the air.

A resolution calling for an eight-hour day for all classes of workmen and workwomen was adopted by the Trades Union congress, at a recent meeting in London, at which over two million British working men and women were represented.

As was anticipated, the House of Lords, after a four days' discussion, rejected the home rule bill by a vote of 326 to 69.

Industrial and Commercial.

The first demonstration in this country of the Pollak-Virag rapid telegraph system, by which forty thousand words an hour can be despatched, was given recently at the Vanderbilt hotel, New York city, by Antoine Pollak, the inventor. The system has been successfully tested in Germany and France. A feature of the invention is, that the message, sent at such great speed, is recorded directly in writing, as with the hand, at the receiving end.

In order to haul the grain shipped from western Canada over the Canadian Pacific railway between Sept 1, 1912, and Jan. 25, 1913, six hundred trains, each a mile long and drawn by three powerful locomotives, would be required. The total number of cars shipped over the Canadian Pacific railway during that time was 71,077. The Canadian Pacific alone has handled more than one hundred million bushels of western Canada's crop.

A fifty-million-dollar corporation, controlled by seventy-five leading sugar planters in Louisiana, has been launched at New Orleans, to compete with the so-called sugar trust. It is proposed to take over all the sugar houses in the state for the purpose of controlling the manufacture and sale of sugar, and thus drive out the American Sugar Refining Company.

The Canadian Pacific railway has decided to establish throughout the grain provinces a system of internal elevators of one million bushels capacity each. The first three are to be at Calgary, Edmonton, and Saskatoon.

In the foreign trade of the United Kingdom the value of imports amounted to £744,836,514, and of exports to £487,434,002.

It is estimated that six billion bananas are consumed yearly in the United States.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

AT THE MIDNIGHT HOUR.

WILLIS F. GROSS.

THE Master declared that to know God aright is life eternal. The same truth was expressed by Paul when he wrote, "To be carnally minded is death; but to be spiritually minded is life and peace." The understanding of God is eternal and forever harmonious, for it recognizes no element of evil to produce discord or to destroy.

Since the understanding of God is life eternal and includes all good, it must be that this understanding is the effectual remedy for all discord and suffering. The Master knew of no other remedy for the ills of human experience, and he demonstrated that no other is needed. This understanding changed the water into wine, fed the multitudes, provided the tribute money, stilled the tempest, healed the sick, cast out devils, and raised the dead. His demonstration of God's presence and power was complete, and he proved that man comes into the conscious possession of all good in proportion as he gains the understanding of what God is.

No doubt there is that in every human experience which, if rightly regarded and dealt with as it should be, will bring to one a clearer understanding of God, and consequently a fuller realization of Life and its eternal realities. The discords of earth have caused mortals to turn away from the things which brought them suffering; and since good has resulted from this turning away, they have sometimes concluded that suffering is sent of God, or at least that it has the divine sanction. Christian Science, on the contrary, declares that suffering is not sent of God, neither does it even seem to exist by divine permission; and its teaching that discord is no part of man's real being and in no way affects it, has given to thousands that concept of evil which enables them to deal with evil intelligently.

The help one derives from any discordant experience comes not as the result of having been in bondage to evil or in fear of it, but from gaining the victory over evil as the result of having attained a higher sense of good. The mesmerism of mortal belief oftentimes prevents humanity from making the necessary effort to gain a clearer realization of good. The suffering occasioned by evil serves to arouse mortals and often causes them to see what is demanded. The effort which is made to gain good, merits and receives a reward, but this same effort would have been rewarded as promptly and as effectually if it had been made at a time when the need of being delivered from suffering was not so keenly felt.

It is true that we sometimes profit from a discordant experience, but this does not warrant the conclusion that such experience was divinely appointed, or that it should have been. There are many pleasant and desirable experiences, and it is possible to gain as much good from these as it is to gain from those experiences which compel us to seek Truth because of suffering. One cannot always choose for himself how he will learn, but it is within his power to improve his opportunities and to come off more than conqueror in every experience. It is not enough that one be delivered from discord; he has labored in vain if his victory over evil has not brought him a clearer sense of God as infinite Love and Truth. It is to this end that one should work. If he is more interested in gaining the understanding of God than he is about getting rid of suffering, he will find that he is delivered more quickly than when his chief concern is to be healed of some physical infirmity or to be relieved of some discordant condition.

Evil must be overcome with good. One should not submit to evil, neither should he attempt to resist evil with evil; the exercise of the human will is never the remedy for evil. The greater the evil the greater the necessity for gaining the consciousness of good which will destroy the false sense. Mrs. Eddy writes in Science and Health (p. 410), "The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love." It is needless to murmur about the injustice of mortal existence or to complain because of the seeming hardness of one's lot. There is no good in the carnal mind, and one should not expect it to be just. Error seems to operate whenever and wherever there is opportunity, and the results are as disastrous as human belief will permit.

If there was any one truth which the Master sought to impress upon his hearers more than anything else, it was the vital necessity of overcoming evil with good. At the very commencement of his life-work he said to those who came desiring to learn the way of life, "Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you; that ye may be the children of your Father which is in heaven." His followers were successful in overcoming all forms of evil in the degree that they carried out his instructions. This method of dealing with evil is the only truly satisfactory method, for it is the only one which is really effectual. To be obedient to the Master's teachings may at times seem to be most difficult, and it is oftentimes the case that the thing which seems the most difficult is the most necessary at the time.

We have a striking illustration of this in the experience of Paul and Silas, when they were cast into prison for no other reason than that they had healed "a certain damsel possessed with a spirit of divination." There were those who had profited in a pecuniary way because of the belief that this young woman could foretell future events, and they became so enraged by reason of their loss that they stirred up the people, and the disciples were cast into the inner prison and their feet made fast in the stocks. From the human point of view it would be difficult to conceive of a more distressing situation than is here presented. The injustice of the treatment they had received, for they had been beaten with many stripes before they were cast into prison, the distress of the burden laid upon them, and the anxiety as to what would be the outcome,—all this had a tendency to arouse a feeling of intense resentment and to cause them to dwell upon the things which are seen, or experienced, rather than to look upon the things which are not seen. However, the disciples were able to do the very thing which was most necessary. It is recorded that at the midnight hour, when from the human standpoint there was scarcely

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

a ray of light and there was no hope of deliverance, their thoughts turned to God in prayer.

The true sense of prayer is clearly expressed in our text-book, "Science and Health with Key to the Scriptures," where we read: "Jesus prayed; he withdrew from the material senses to refresh his heart with brighter, with spiritual views" (p. 32). This is what the disciples did. Here was the opportunity to put into practise what they had learned from the Master, and to test the practical worth of his teachings. They had been told to love their enemies, but it was impossible for them to do this so long as they permitted their thoughts to dwell upon what they had suffered because of the wrong-doing of others, and so they turned from the material sense of things to the spiritual fact of being. They not only prayed, but they "sang praises unto God." Even in the hour of their extremity, when thought was set right, they found they had abundant reason for thanksgiving. And what was the result? "Suddenly there was a great earthquake, so that the foundations of the prison were shaken: and immediately all the doors were opened, and every one's bands were loosed." It was not necessary for them to wait for the morrow. Even in the midnight hour their deliverance was accomplished. It is possible that this unusual occurrence came as a surprise to the disciples, but in any event it was the reward of their faith.

One helpful lesson may certainly be learned from this experience, namely, that even in the darkest hour thought should turn Godward and rejoice. True prayer heals,—it matters not what the infirmity may be,—and enables one to "rejoice evermore" and in everything to give thanks.

SPIRITUAL WARFARE.

HELEN FRIEND-ROBINSON.

WHEN the call "to arms" sounds in a militant human struggle, what enthusiasm it arouses in the hearts of the soldiery, and how quickly they shoulder arms and march to defend the honor of the cause they have espoused! In this age the bugle-call in the battle between Truth and error has been sounded through the revelation of Christian Science, and it may well be asked how many of us have equipped ourselves with Truth's armor and weapons and stand ready to obey the inspiring summons. The vital issues in this warfare are contended for in the arena of individual consciousness. In this struggle the might and majesty of divine Mind are placed at our disposal to destroy the foe entrenched in human belief. The Bible as spiritually interpreted in Christian Science instructs us as to the Master's method of attack, and because ever-present Truth, as revealed by Christ Jesus, is the great commander-in-chief of the army, victory over error is assured.

St. Paul admonished the Ephesians to put on the whole armor of God, that they might be able to "stand against the wiles of the devil." While the apostle evidently recognized the utter powerlessness of evil when directed against those who are clad in the armor of God, he must first have detected the enemy as impersonal evil and then realized the importance of taking action to combat and destroy its assumed power, for he further explains that they were not wrestling against flesh and blood, but against principalities and powers, "against the rulers of the darkness of this world, against spiritual wickedness in high places." There is no authority in the teaching of the prophets, of the apostles, or of Christ Jesus, for ignoring this enemy. Instead, all through the Scriptures, we find both by precept and example that everything, be it mental, moral, or physical, which is not in the true likeness of God, is to be known for what it is and to be overcome.

Christian Science does not deviate from the spiritual import of the Bible. Science and Health, its text-book, is just what the title declares it to be, a "Key to the Scriptures." This key unlocks the treasures of Truth and reveals what the material senses have not seen or heard. This Science teaches that sin, disease, and death are but different phases of the one evil, or devil, referred to in St. Paul's epistle, and that mankind need not submit to this enemy to righteousness, but that they may and should wage a successful warfare against its seeming power, against its encroachments upon the "saving health" which is man's heritage from the beginning. It teaches, again to quote St. Paul, that "the weapons of our warfare are not carnal, but mighty through God to the pulling down of strong holds:" that it is not through material, but through spiritual and Christlike methods that we gain the victory. Hence, in the language of Gamaliel, if this teaching be of God, it cannot be overthrown, and if we are fighting on the side of Truth "who can be against us?"

If as students of Christian Science we have not yet awakened to the importance of this warfare, we cannot arouse ourselves too speedily from our earth-sleep. The problem is an individual one, and each must work out his own salvation. Whether conscious of it or not, he who has entered earnestly into the study of Christian Science has in reality already enlisted for a campaign which must bring the final destruction of all the so-called evils that beset mankind, and it depends entirely upon himself whether he advances to the highest posts of duty, or remains indefinitely in the ranks. He surely cannot advance one step except his promotion come from the Father as a reward for faithful, honest work. Our efforts, therefore, should never be for personal aggrandizement, but rather to make ourselves worthy to stand at any post where we can do the best work for God and His Christ. The student of Christian Science early learns that it is not a material sense of activity, but the activity born of spiritual understanding, which determines his usefulness in this vital issue, and the campaign will not be too hazardous or too difficult for even the youngest student to join, if he works from noble life-motives and does not desert his post of duty when called to active service in our cause.

Shakespeare says: "There is nothing either good or bad, but thinking makes it so." The student soon learns that evil is but the conclusion to the premise of wrong thinking (either his own, or by accepting as his own the wrong thoughts of others), and although many times it may seem otherwise, his real foes in every combat are but the result of this kind of thinking. No student, however, is obliged to allow any one in this or any other age to do his thinking for him, and he can be a "hero in the strife" whenever and wherever he overcomes an evil thought with a good one. The battle will not be hard and the victory is sure, if through spiritual vision he first familiarizes himself with his own and the enemy's forces, and is led in the assault by the word of Truth. He need not fear the imposing array of the enemy's troops which seem to confront him, for, as Mrs. Eddy says, "good thoughts are an impervious armor" (Pamphlet, What our Leader Says, p. 7); and if wrong thinking has been his foe, then at all times and under all circumstances right thinking is his impregnable defense.

If watchful and vigilant, nothing can delay or hinder our gradual overcoming of every foe and the attainment of ultimate perfection; but this victory is not won in a day or in a year. It comes through persistent, faithful work. Mrs. Eddy writes in Science and Health (p. 254): "God requires perfection, but not until the battle between Spirit and flesh is fought and the victory won." There will be many a conflict in the student's consciousness before the enemy is completely routed; but, as errors are vanquished one by one, every battle with self renders the opposing forces less formidable, while one's own strength increases in like ratio.

As the student advances in spiritual understanding, he will learn to follow the Master in all his ways; to heal the sick as well as the sinning. The bugle-call of Truth comes daily and hourly for more consecrated effort in this line of work. He will have many opportunities to test his valor in

Digitized by Google

overcoming the myriad forms of error, both for himself and others, but he should not be daunted nor beat a retreat in confusion before the different phases of its presentment. Mental apathy seems the most subtle enemy at this point, and we need to watch diligently against this foe in ambush. No soldier of Christ, at any point in his progress, can afford to fall asleep at his post. The battle is not won either for himself or his brother by crying "Peace, peace; when there is no peace." Every victory over error will, however, bring its own sweet season of peace, until constant vigilance is no longer needed.

In the awakened consciousness where "the Lord God omnipotent reigneth," evil is soon discerned to be only an illusion, and its missiles directed toward the soldiers of Christ are proved to be harmless, for these soldiers of the cross are fully clad in the armor of God, and for their weapon they have "the sword of the Spirit, which is the word of God."

LOYALTY TO THE IDEAL.

CASSIUS M. LOOMIS.

WHEN we hear the word loyalty, thoughts of virtue and stanchness of character come to us, and yet there are many kinds of loyalty. There may be loyalty among thieves, when they make an equal division of booty wrongfully obtained. On the other hand, there is the active Christian's loyalty to Truth and Love. Besides these mental conditions there are many degrees of allegiance to causes just and unjust. Still, on the whole the term is uplifting, and our admiration for the loyal standard-bearer never grows less. Said the Master to his apostles, "But whom say ye that I am?" Peter replied, "Thou art the Christ, the Son of the living God." This evidence of sterling loyalty met with the Master's instant approval, but the rebuke Peter received from Jesus soon after, "Thou art an offense unto me," was not given him with any lesser loyalty of motive because of its vehemence. These words, if taken literally, would seem to savor of anger or impatience; yet no Christian of any faith would think for a moment that Jesus meant otherwise than well to Peter. Since this devoted apostle did not retaliate, we are led to suppose that he took the reproof in the spirit with which it was given.

Loyalty is a term denoting our measure of conscience. Human beings are less material when they recognize in the perfect image of God their true selfhood. This concept effaces their love of direct reward or credit for right doing, and God's man stands out clearly in their reckonings. It is indeed a mortal trait all too common, to expect some definite reward for every loyal act; that a good turn rendered another must bring a like accommodation back to us, to even up the score. Just here Christian Science, with its wealth of inspiring thought, comes to our aid. We are taught that, like the good Samaritan, we must work with complete forgetfulness of self; we must bind up the wound with a hand of love, and not wholly from a sense of duty.

Thus to the active Christian Scientist there opens up a field of good intent never before dreamed of. In our healing ministrations, for example, a complete effacement of self is imperative. The one who would act as the healer must be truly and unselfishly loyal to his task. He need not crave even the thanks of his patient. When his word of truth is spoken, all thought of self-interest fades out, and working thus with an unswerving loyalty to his office, good results. We are told this with marked terseness in the Christian Science text-book, "Science and Health with Key to the Scriptures," where we read: "Divine Mind rightly demands man's entire obedience, affection, and strength. No reservation is made for any lesser loyalty" (p. 183). All true benefit to mankind comes through divine Mind, and without our complete adherence to the essentials of Christ's teachings, even our work of healing or of preaching the gospel meets with indifferent success. Thus the term loyalty takes on a meaning that is supremely just.

There is another dangerous pitfall which should be carefully avoided in our every-day relations with our fellow men. To dispossess another of his freedom through persuasion, even with a good intent, becomes an act of disloyalty. We are loyal only as we are true to Principle. Every man's freedom to think, to do, and to worship, should be respected, but to make the truth, as we can demonstrate it, so attractive to our fellow thinker that he drifts lovingly toward it, is surely a most commendable loyalty. To the neighbor who has been healed we do not say that he must join this or that church; but we can say, with Jesus, "Sin no more, lest a worse thing come unto thee."

Could Peter have healed the impotent man at the gate Beautiful, had his loyalty to the Master's teachings been neglected or allowed to lapse? No. And the same measure of allegiance which Peter evinced will do as much for any sufferer among us today. "The light of the body is the eye: if therefore thine eye be single, thy whole body shall be full of light." This clear-cut excerpt from the sermon on the mount has indeed been brought down to date by the tireless loyalty of our Leader; for it is true that the works of the Master are being once more made manifest throughout the civilized world. In her years of devotion loyalty has found its perfect work, for she labored faithfully for a cause that through misunderstanding of its purpose was being derided, spoken of with contempt.

Today the thinking world accords Mrs. Eddy's teachings a large measure of respect, so generally have the results of these teachings been made manifest by actual demonstration. To be single-eyed is to have no other god than the one God; then indeed is the gospel preached unto all men, demons are cast out, and the sick healed. Shakespeare gave us of his best when he wrote:

> To thine own self be true,
> And it must follow, as the night the day,
> Thou canst not then be false to any man.

DOUBT OVERCOME.

EMILY A. ASHCROFT.

FROM the story of Gideon, as found in the book of Judges, many useful lessons and much encouragement may be gained by those who are striving, against seeming odds, to realize and demonstrate the truth of Christian Science. Gideon was performing his duties under a great sense of fear, and was trying to hide his doings from the eyes of surrounding enemies. How often are we, as students of Christian Science, afraid to let our light shine, forgetting the ever-presence of protecting Love! But if we have been working faithfully, infinite wisdom is sure to find us work to do, as in Gideon's case.

To him an angel appeared, and commanded him to deliver the Israelites from the hands of the Midianites. How did Gideon receive the command? He first expressed doubt as to the willingness of God to help him; then self-depreciation crept into his mentality; and even when Truth had declared the falsity of these claims of mortal mind, he still doubted, and demanded a visible sign that God was with him. Three times was a sign given, proving that Love "suffereth long, and is kind." Though we doubt again and again, Love is always at hand to bless us, and to reward the slightest sign of trustfulness. Infinite Love never leaves us, is never impatient, but ever constant and ever active in our behalf.

At length Gideon was convinced that it was his duty to deliver Israel from the enemy. Gathering all the human aid which he could summon, he prepared for battle. Again Truth spoke to him, and showed him that his reliance still rested on material means instead of upon Spirit. The word of Truth was: "The people that are with thee are too many

Digitized by Google

for me to give the Midianites into their hands, lest Israel vaunt themselves against me, saying, Mine own hand hath saved me;" in other words, mortal mind would try to monopolize the power which belongs solely to Spirit. We need to guard our thoughts against this subtle error. When we are striving to realize the true source of our supply, how often reliance upon material ways and means tries to force an entrance into our thoughts! Like Gideon, we have to learn to stop relying upon anything but Spirit's resources, and then our problem is solved. Very often the solution is totally different from what we expected, and the method by which it is worked out proves that an intelligence far greater than that of any mortal has been engaged, and that "Soul has infinite resources with which to bless mankind" (Science and Health, p. 60).

Gideon had yet another lesson to learn before the whole of his fear was eliminated. His enemies still seemed to him very real, very powerful, and very numerous. He was commanded to go down to the camp of the enemy and hear what was spoken there. Error was not to be ignored, but faced, and examined at close quarters. What was the result? Gideon learned that "error is a coward before Truth" (Science and Health, p. 368). Having realized this, he proceeded to demonstrate it, and the victory was gained, for error destroyed itself. May we all take courage from this story, and know without a doubt that, in spite of all its boastfulness, error is absolutely powerless, for God is All, and divine Love never less than omnipotent.

OUR DAILY PAPER.

LAURA F. SEELY.

THE thoughts of the writer have been filled recently with a deeper sense of gratitude to Mrs. Eddy for the divinely inspired wisdom which led her to give to the world *The Christian Science Monitor*. She subscribed for it at once, but for a time was rather indifferent about reading it, as newspapers had been considered of more importance to men than to women. Then the Christian Science article on the Home Forum page was found to be particularly helpful and often to bring just the encouragement needed.

From that beginning, interest has spread to the whole paper: articles on the political situation, labor questions, art and music, the wonderful things that are being accomplished all over the world, the able and broad-minded editorials,—all are read with pleasure and they are at the same time educational, causing the reader to widen greatly her mental horizon. This is a progressive age for women, and the writer is finding the *Monitor* invaluable in gaining an intelligent understanding of many questions of the day. It is with confidence, withal, that one can read it, for we are assured that the truth is being told,—there is no exaggeration for the sake of making a "good story," and each subject is treated with the utmost impartiality, so that one can come to an opinion without being influenced toward some party or faction.

All mankind is consciously or unconsciously striving for better conditions, and as we each individually learn to love, appreciate, and read this messenger which is working for the universal brotherhood of man, the desire to share it with others naturally follows, and there is surely abundant opportunity to do this; as an illustration, the following incident, which came under the writer's notice, and which resulted in three yearly subscriptions being voluntarily sent in for the *Monitor*, may here be cited:—

A subscriber to the *Monitor* first asked an acquaintance if he would like to receive the paper and would read it. An affirmative reply being received, each issue of the paper was passed along to the friend until the sender was notified that a subscription had been sent in. Two more acquaintances were taken up consecutively in the same manner and with the same result. No one of the three received it continuously more than three months at the most, which clearly proves that where one becomes interested in the *Monitor* and reads it, he finds that he also wants to have part in this work, and in turn he will share his paper with others. One of these persons was not a Christian Scientist, but he stated that the *Monitor* was the best newspaper he had ever read; that there was more good interesting news in it than in all the magazines he was taking. He was also much pleased with the courteous request to "Pass it along," and had neighbors to whom he was interested to give his copies.

Some of the above-mentioned copies were sent out alternately to three different persons. On their final return they were sent to a small hotel, where they were eagerly read and from there were placed in a box in a public station, so that each copy was used at least five times besides the reading by the original subscriber. In another instance where a Christian Science family was taking two copies of the *Monitor*, one was sent for a period of about three months to a friend, at the end of which time a letter was received stating that the recipient had sent in a yearly subscription as the paper was greatly appreciated.

We should each of us consider it our joy and privilege to watch for opportunities to extend the influence of this paper which is doing so much for the elevation of mankind, and if we as Christian Scientists are faithful in spreading the "good news," we cannot help but see the inspiring motto of the *Monitor* fulfilled: "First the blade, then the ear, then the full grain in the ear."

[Written for the *Sentinel*.]

THE CHOICE.

MARY JAMES ARNOLD.

A PATH I chose, wherein my feet should tread;
It lay before me, lily-lined and fair;
Roses and sunshine, summer skies o'erhead,
Sweet peace, companionship, and love, were there.

"And service?" came a voice with question clear—
"Doth duty call thee to this path of flowers?
Dost find therein sad hearts, o'erwhelmed with fear,
Seeking surcease from pain through weary hours?

"Art needed there? In ways all sunshine-bright
What comfort wilt thou give, what pain relieve?
Canst light afford to those who seek the light?
In service rendered thou shalt joy receive.

"The seed that holds a blossom pure and sweet
Must first have soil prepared in which to grow,
Then patient tendance, nourishment most meet,
Water and light, ere we the perfume know.

"Hast broken up thy fallow ground, and made
Channels through which all good may enter in?
Thou canst not share a blessing yet unearned;
Unselfish honest work reward shall win.

"The Lord hath portioned thee His word to bear,
His healing truth to prove; this canst thou do
Where'er thou art, or here, or otherwhere,
If to the Master's will thy thought be true.

"Kindness and gentleness shall swiftly grow
Into fair blossoms, lilylike and tall;
Roses of love along thy path shall blow,
The sunshine of God's peace be over all."

"Master, I am content; all paths are fair
When Love doth lead. God's way is best for me;
In faithful service I thy praise would share,
Nor near nor far, but where the need may be."

[Editorial in *The Christian Science Monitor.*]

"Justice is the moral signification of law," wrote Mrs. Eddy in her text-book of Christian Science (p. 391), and this seems a fitting prelude to the announcement that her sons have abandoned their suits against her estate, and have also made full retraction of the charges made against the religion she founded. That final decrees and judgments will be entered against them in all litigation is a necessary sequence of events, for justice, as a part of the divine plan of the universe, does not operate for a favored few. Consideration should be given, nevertheless, to the fact that this step is taken at the request of the counsel for the plaintiffs, for animosity has never governed the defendants in resisting the effort made to prohibit Christian Science from realizing the opportunity its Discoverer and Founder planned for it.

It is not conceivable that many persons believed this great religious movement was jeopardized by the litigation just ended. The reverse is the case. The net result of such attacks was well stated by Mrs. Eddy when in 1909, during a period of persecution by a section of the public press, she wrote: "I do not regard this attack upon me as a trial, for when these things cease to bless they will cease to occur" (*Sentinel,* June 12, 1909).

Unquestionably it would have been a great misfortune had Mrs. Eddy's effort to help the world been interfered with. A purpose that is absolutely beneficent should never be abridged. Hers is such a plan. There is not a human activity but could be benefited by the enlightening touch of Christian Science, and with Truth operative in the world's consciousness, right will loom where evil hid. Mrs. Eddy, realizing this, provides for the extension of this demonstrable religion as taught by her. Her wishes will be carried out. "Whosoever attempts to ostracize Christian Science will signally fail; for no one can fight against God, and win" (Mrs. Eddy's message to The Mother Church, June, 1900).

[Frederick Dixon in *Academy*, London, England.]

When I first heard of Christian Science, I was not in the slightest degree interested in it. What I believed to be its methods were as repugnant to me as were what I imagined its aims. Gradually, however, I got interested in it, and I was, I think, fair-minded enough to take the trouble to examine it before I talked about it. My early reading of Science and Health convinced me that Mrs. Eddy was saying something which I did not clearly understand, though I might superficially reject her arguments. I determined, therefore, to test her teaching, in the only fair way, by attempting to demonstrate it for myself. For two years I read Science and Health and applied its reasoning, so far as I could, to all the phenomena of daily life. To me, the result was amazing. By accepting her premise of the allness of good and the existence of divine Principle and law, I was able not merely to overcome such physical troubles as came my way, but to prove the efficacy of spiritual law over material belief generally. At the end of two years I had accumulated a, to me, vast mass of evidence, all tending to prove the fact of spiritual causation, and all demonstrating the fact that inharmony, of whatever description, could be overcome by obedience to the law of divine Principle.

Now Mr. —— says, "what differentiates the Christian Scientist from ordinary people is that, in his eyes, the reason why the man (the blind man) recovered is just as much a question of fact as his own recovery." I agree entirely with the critic, and I have given my own reasons for coming to that conclusion. If he will excuse me for saying so, the reason why an individual Christian Scientist arrives at a conclusion is very much better evidence of the reliability of that conclusion than the opinion of an outsider as to the train of reasoning in other people's minds. It is an *a priori* argument with a vengeance to form a conclusion by assuming you know how other people, whom you do not even know, worked out their conclusions on the subject at issue.

For two years before I called myself a Christian Scientist, and for very many years since, I have been daily proving that, by the acceptance of the postulate of the allness of good, of God, it is possible not only to heal sickness, but to heal sorrow and sin, and to overcome inharmony of every sort. During all those years I have accumulated an enormous amount of evidence which proves to me that the healing of sorrow and sickness and sin, and the overcoming of all inharmony, is traceable to the fact of the existence of divine Principle and spiritual law. I do not know if this critic knows a more scientific method of arriving at a conclusion, or if he thinks that it is unscientific to regard, on this basis, the reason why a man is healed as just as much a question of fact as his recovery.

If I may be permitted to sum up the conclusion for myself, it is this: that, when I hear what Lord Beaconsfield might have termed the harebrained chatter of irresponsible criticism (let me specifically state I am not alluding to any particular individual) from gentlemen on platforms and in newspapers who know rather less about Christian Science than they do of higher mathematics or the composition of ether, even when I read the seasoned criticisms of those who have spent some time in thinking out Mrs. Eddy's teaching more logically and with greater fairness, I am left in the position of the apostle to the Gentiles, when he wrote, "None of these things move me."

[From an editorial in *Fort Smith* (Ark.) *X-Ray Bulletin.*]

Nineteen hundred years ago a seemingly new idea of our natural relations sprang up in the minds of the people—especially the common, plain people, over there in the mountains and little valleys about Jerusalem. The shepherds attended their flocks by day and by night. They lived and loved and did even as we now do. There was perhaps more simplicity and directness in the speech and manners of the people then than now. The oppression of the rulers and the extravagance of their profligate courts was much the same then as now. But this new thought began to spread among the common people, the humble, the poor, despised, and distressed. There seemed to be healing in the words of the new Jewish Messiah that drew men unto him, and they loved him for the human sympathy that seemed a part of himself. Of course the self-sufficient, the wealthy, the proud, and the great despised the Messiah, and the rabble, as they called them, which followed and listened to his teachings. The words of the Christ were accepted literally by these plain people, and they believed on him, and there was a church founded upon his teachings.

Nearly two thousand years have passed since then. Evolution has left its mark on everything as well as upon human thought. Still, there is found today among us a devout, fast-growing band of Christian believers who accept every teaching of the new dispensation and are applying those teachings to every-day life and actions with a sublime faith in their literal efficacy and truth. These are called Christian Scientists; and they are to be found among our best educated and most exemplary citizens. They accept the Christian Scriptures as the unerring rule and guide of their faith. These are earnest citizens who, every one of them, are self-sustaining dispensers of charity and receivers of none. They are not proselyters or haranguers of the public. They have their churches and literature—a literature shown forth in their *Christian Science Monitor,* one of the world's greatest daily newspapers, as clean and free from immorality as any publication in the world; in fact, a beacon of cleanliness for the journalistic world. We do not pretend to understand their sublime faith, sublime in its simplicity and evident sincerity, but if these people are doing good, the world needs them and all the good they can do. They are certainly welcome here.

[From *Sheffield* (England) *Guardian.*]

We want a daily paper, a paper to give us accurate information, not of our own town alone nor of our country, which may be but a small and comparatively insignificant little island off the coast of Europe, like England let us say, but of every throb and pulse of the great heart of the great human race. We should not demand a list of the world's failures, its crimes, the wholesale murder of war, and the calculated perjury of politics, unless it be for the purpose of ventilating and purifying by giving light and air to that which has formerly been nurtured in secret obscurity along with the accumulations of dust and cobwebs.

Let there be light, is the constant demand of the spirit of our age. Let there be light, more knowledge to enable mankind to conquer the forces of nature, more light and sunshine that they may rise with the mist at daybreak from the brute clay to take possession at noon of their mighty heritage, falling in crystal purity with blessing upon a thirsty world and commanding a glorious harvest of kindness and joyful labor. Too long have we retained the clan spirit, and now we demand a newspaper universal enough in its scope to give us the world spirit. We feel stifled within the narrow limits of the city boundary, and we take an excursion into the country in search of freedom, only to find the country boundary, not a real boundary, imposed by callous nature or by an autocratic god, but a man-made limitation, only real enough to increase the cost of administration, to cramp somewhat our sense of the vastness of our heritage. These boundaries chafe us, and we take a cheap trip to the coast only to find a national boundary, on one side of which we must say, "God save the king," and on the other, "Confound their politics, frustrate their knavish tricks."

We demand a newspaper to carry us across these man-made limitations and make us rejoice in the fruitful earth as a whole. Miller, why do you weep? The baker has need of your mill and will give you bread. England, why do you lament the harvest? Your manufactories have never before been so busy. The world's harvest has never before been so abundant. Look out, O England, from your self-made boundaries and see that the world has abundance for your every need. Such should be the message of our daily newspaper. Whether we understand the full meaning of Christian Science or not, whether we have sufficient evidence by us to admit its claim to the position of universal panacea, we must at least give praise where it is due and welcome the effort of this rapidly growing movement to abolish every boundary of state and class, of sect and party, by just such a daily paper as the one we have described.

We have before us the latest Thanksgiving number of *The Christian Science Monitor*, comprising ninety-six pages of matter. It contains nothing but clean news of the world's doings, the world's aspirations, the world's art, the world's amusements. Those who know how much a paper depends upon advertisements for its funds, will recognize the sincerity and high aim of the promoters, when they are told that it has not been unusual for this paper to refuse eighty per cent of the advertisements submitted. No advertisement is accepted from an unhealthy firm or for an unhealthy article. In the realm of sport it encourages the truly sporting instinct, and in the realm of art the truly beautiful.

[Charles D. Reynolds in *Concord* (N. H.) *Monitor.*]

In response to a proclamation by our Governor that Jan. 17 be observed throughout the state as Health day, and that on that day all citizens shall join in contributing something which will tend to give information and help to the people, and so promote greater interest in everything that makes for better health, the following is submitted:—

In summing up all the influences and forces that make for better health, private and public, religion is no longer to be ignored and left out. Christianity has again become a recognized factor as the foremost contributor of all toward the physical health of the people. Through the healing works of Christian Science, manifest on every side, Christianity has again, as at the time of its Founder, become identified with health, and the public thought on this subject has wonderfully changed. When Mrs. Eddy began her work of reestablishing primitive Christian healing forty years ago, she found almost no interest and no faith in it. Today it is recognized as a leading contributor toward the physical health and mental uplift of mankind; it is accepted as a fact by the broad-minded thinking men and women of today. Everywhere throughout the world are to be found living witnesses to the fact that Christianity, as Jesus taught it, heals every kind of sickness and prevents it.

Health day is, therefore, not a day set apart exclusively for the consideration of the claims of *materia medica*, or any one system or school of healing; it is broader than that. It is not a sectarian day, a day in which an elect class is wont to strengthen its own interests or pose as the autocratic legal guardian of the public health, claiming for itself the exclusive right to dictate and monopolize the healing of sickness. No such insinuation confronts us today. Health day belongs to every one who has something helpful to offer, something to contribute on the subject of health. Applied Christianity is serving well this age. By its undoubted cures, its success, Christian Science has quickened and sent forward a new public interest in health as man's legitimate heritage. It is assuring us that the time is coming when sickness and disease will be mastered, but not while we continue to live in a society addicted to ignorant and wilful sin.

Christian Science sounds the note that the foundation of all permanent health improvement lies in mental and moral reform. We now accept the proposition that if there had been no sin, there would have been no sickness. A human consciousness, regulated and subdued by the knowledge of what God is, and what He requires of man, is the most sanitary and hygienic condition known to man. When anger, fear, jealousy, hate, avarice, lust, and worry—all of them wrong mental states—creep in, then inharmony, disorder, discord, and pain begin to manifest themselves; injustice reigns instead of "the mind of Christ."

The great demand of the age is this kind of mental sanitation—a pure Christian life. It is the best hygiene that one can practise, as a preventive no less than a cure; for by doing one it does both. Let physical science continue to advance and discover facts, its ultimate goal will be Christianity, as Christian Science points out; it will merge, not into atheism, but into spiritual idealism, into metaphysics, as described by the revelator. When we reflect upon all the immoral practises and evil habits into which illegitimate sinful mental states lead men from day to day, we can readily understand the need of observing Health day. Such a day would not be properly observed or devoted to its highest use without emphasizing the great significance of Christian healing, the relation between religion and health, and noting the greatly changed attitude of the public mind on this subject.

[Ezra W. Palmer in *Denver* (Col.) *Post.*]

A well-known medical journal recently suggested that Christian Scientists could use material means to advantage with the spiritual means they are now employing in healing the sick. The writer in this medical journal apparently has an erroneous view of the basis of Christian Science practise, as is evident from the above suggestion. To reason that a working combination of drugs and prayer would be effective and desirable for the good of humanity, is fallacious because it fails to take into account what really constitutes spiritual healing and the way to attain it.

Christian Science is based on the fundamental postulate of the allness of God, good, infinite Spirit, omnipotent, omniscient, omnipresent. "God is love," declared the inspired apostle John. Since, therefore, God is Love, and is good, the creator of all things, it of necessity follows that His creations are like Him, good and not evil. Evil, dis-

Digitized by Google

ease, sickness, and death are of necessity ruled out of the true spiritual universe, and are unreal in the sense that they derive no authority or sanction from the one true cause, God. For example, it is apparent that errors are no part of the principle of mathematics, and as the student progresses in this science he finds that his knowledge enables him to detect and cast out errors which caused him to stumble earlier in his career. He sees more and more clearly that errors in mathematics are not real, not inherent in mathematics, but are merely the result of his human misconceptions.

In like manner the great Bible characters grasped the Science of being. They saw the true universe which God had created, spiritual, perfect, immortal. They saw also the corporeal human sense world, the objective world, and perceived its ephemeral nature. They furthermore discovered that, as they advanced in the understanding of God and His universe, material things, opposed to the divine nature, lost their appearance of permanence and reality and were seen as errors, illusions, having no part in the true creation and therefore rejected by a clearer vision as unnecessary and valueless. On this basis the prophets and apostles and Jesus Christ himself healed the sick, raised the dead, and proved irrefutably the power of Spirit over the assumptions of material phenomena. Jesus declared that those who believed on (understood) him, should have everlasting life; and to prove this he healed multitudes of all manner of diseases, showing the powerlessness of sense evidence before knowledge of spiritual reality.

Since, therefore, man's true progress lies in gaining this understanding of Spirit which overcomes mortal ills, it would be absurd for a Christian Scientist to attempt to destroy material ills by the use of drugs. Christ Jesus declared, "It is the spirit that quickeneth; the flesh profiteth nothing." One mathematical error will never correct another mathematical error. Jesus never employed material remedies. He used only the might of Spirit. So, likewise, did the apostles, and so long as their followers clung to the spiritual sense of things, healing by prayer was accomplished, and this spiritual healing, according to the historian Gibbon, continued for about three hundred years after the ascension. But when the early Christians began to accept sense phenomena as true, then their vision of "things not seen" was darkened; spiritual healing was lost, and men turned to the concoctions of earth in search of health and salvation.

Christian Scientists have proved to their own satisfaction that God is sufficient to heal all mortal ills when we go to Him in the right way. They also are clear that God does not heal through drugs, many of which are deadly poisons. How then can the reputed action of drugs be accounted for? Drugs derive their supposed power, both to heal or destroy, from human belief in them. Overcome the belief in their supposed efficacy, and they no longer produce any effect on body or mind. This accounts for the frequent changes in the use of drugs. Few drugs or serums are employed today that were in use even twenty-five years ago, and this frequent change in nostrums has been the almost invariable history of drug healing. It is inevitable that this should be so, because man is a spiritual being and he can never rest content on a matter basis. A drug, its entire potency based on a limited human belief, can never satisfy those who aspire to godlikeness. Nor can it in reality heal mortal ills, all of which are due to lack of companionship with God.

It is evident, therefore, that no unchanging law governs drug use. Its basis is mere human belief. The Bible tells us that God heals all our diseases, and nowhere does it point to any other source than God for relief from human ills. The advocates of drugging systems now frequently admit that the mind has influence over the body. Perhaps they do not perceive how far this admission carries them. Because if they admit, even in one particular, that mind can control the manifestation of material laws or phenomena, then the whole fabric of drug healing and the reality of matter, on which it rests, totters to its falling, since mind cannot at the same time be both master and servant.

For Christian Scientists to use drugs is needless. They find God, divine Mind, a surer, safer reliance, forever at hand, the true fountain of Love, forever flowing, healing disease where drugs fail; and at the same time renewing the man so that he sees with clear vision his true fellowship with God. Nor can Christian Scientists pray to God for help and at the same time use drugs. Reliance on drugs darkens the spiritual vision and breaks the first commandment, "Thou shalt have no other gods before me." In fact, Christian Scientists have found by experience that healing is protracted and frequently impossible where the patient relies on drugs while looking to God for help. When we cast aside all earth-props,—"come out from among them" and be separate, as the apostle admonishes,—then is the miracle of Love made manifest to sick and sinning men, even their escape from these ills, and their ever strengthening grasp on the immortal universe of Spirit.

[Charles K. Skinner in *Kalamazoo* (Mich.) *Gazette.*]

The presumption of any one making a tramp through the country and subsisting on the charity of the inhabitants for support, has no part whatever in the teaching of Christian Science. It is on a par with the allegation of the tempter when he said to Jesus, "If thou be the Son of God, command that these stones be made bread." The Master's reply does not give encouragement to any mortal to assume a greater understanding than he possesses, for Jesus said, "It is written, Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God."

Christian Science teaches that whenever one is in pursuance of duty, in response to an honest motive or for the relief of suffering humanity, he can do without harm to himself whatever may be necessary, provided he has a clear realization of the omnipotence of God. At the same time, to drink poison or subject oneself to unnecessary danger of any nature in bravado, or to make a boast of a blind faith without understanding, has nothing behind it but the glorification of self, and would prove a weak staff in times of distress.

[Olcott Haskell in *Porterville* (Cal.) *Messenger.*]

I have seen a clipping from a recent issue in which it is said that in a local gathering the speaker who discussed Christian Science attributed its healing to "mental suggestion and the power of the subconscious mind over the body." Doubtless there are many who believe in such a power and who seek to relieve sickness by its use, but this is not the method employed by the Christian Scientist. What is popularly known as mental suggestion is dependent upon the human will, and does not offer help beyond the action of one human thought upon another. It opens a door into the sacred precincts of individual consciousness, whereby the hypnotist may enter unrestrained to work his will, whether that be for good or for evil. Hence its danger.

Jesus employed no such questionable methods. He explained that he sought not his own will, but the will of the Father; also that it was not personal influence which healed the sick, but the operation of divine law, which could be understood and demonstrated, for he said: "Ye shall know the truth, and the truth shall make you free." He made no distinction between chronic and acute, organic and inorganic, curable and incurable, in dealing with disease, but showed that the power of God is sufficient to meet every need. Christian Scientists today are thankful to testify that the same divine power which saved men then is available now for all who follow Jesus' teachings.

Sow an act and reap a habit,
Sow a habit and reap a character,
Sow a character and reap a destiny.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

LITIGATION AT AN END.

At the time Mrs. Eddy's will was probated, a little over two years ago, it was found to contain, among other provisions, one creating a trust fund to be used for the promulgation of the religion of Christian Science, as follows:—

"I give, bequeath, and devise all the rest, residue, and remainder of my estate, of every kind and description, to The Mother Church—The First Church of Christ, Scientist, in Boston, Massachusetts, in trust . . . for the purpose of more effectually promoting and extending the religion of Christian Science as taught by me."

Notwithstanding Mrs. Eddy's express wish as to the disposition of her estate, as above set forth, together with her previous liberal arrangement for her son and adopted son, in full of their share of her estate, on the condition that her will be not contested by them, suits were immediately commenced in their names for the purpose of defeating this provision of the will and obtaining possession of her entire estate. In these suits the Supreme Court of New Hampshire sustained the validity of the will in every particular. In Massachusetts the Supreme Court sustained the validity of the trust created by the will of Mrs. Eddy, but declared any church in Massachusetts incapable of taking so large a bequest, because of a Massachusetts statute which dates back to colonial times, but which had never previously been adjudicated. This disability on the part of The Mother Church will be removed, so far as this bequest is concerned, by an act which has passed both houses of the Massachusetts Legislature and awaits the signature of the Governor. The provisions of the act are as follows:—

"Sect. 1. The First Church of Christ, Scientist, is authorized to take and hold real and personal estate devised and bequeathed to it under the will, duly admitted to probate, of its Founder, Mary Baker G. Eddy, late of Concord, N. H., deceased, to be held and administered by its Board of Directors subject to the trusts created by said will.

"Sect. 2. This act is to take effect on its passage."

The suits above referred to have now been abandoned by those who brought them, as will be seen by a news item from *The Christian Science Monitor* of Feb. 8, as follows:—

"The sons of Mary Baker Eddy, Discoverer and Founder of Christian Science, on Friday abandoned all their proceedings against their mother's estate, and against The First Church of Christ, Scientist, in Boston, Mass., and at their own request final decrees and judgments will be rendered against them in all the litigation brought by them in the New Hampshire and Massachusetts state courts, and in the federal court for the district of New Hampshire.

"In 1909 George W. Glover and E. J. Foster (Eddy), son and adopted son of Mary Baker Eddy, made with their mother a family settlement whereby they received from her in cash and trust funds the sum of two hundred and ninety thousand dollars as a full settlement of their share of her estate, and agreed with her that they never would contest her will or any other disposition of her property she might make.

"Immediately upon the probating of their mother's will in January, 1911, however, the sons, notwithstanding the above agreement, began actions in the state and federal courts of New Hampshire, claiming she was intestate and that they were entitled to her entire estate. They also appeared in the Massachusetts Supreme Court making the same claim. In all of these proceedings the sons also made direct attack upon the religion of which their mother was the Founder, and upon the officials of her church. But in the stipulations just filed, they unconditionally retract such charges and consent that the courts may enter judgment against them thereon.

"No moneys have been paid or will be paid to the sons in connection with this disposition of the entire litigation. Outside of the matters in litigation the sons possessed a contingent right during their lifetime to renew the copyrights upon their mother's published works, and for the assignment by them of such rights the administrator paid the sum of five thousand dollars.

"The four stipulations filed grew out of an agreement executed on Jan. 17 between the Hon. Herbert Parker of Boston, representing the sons, and all his associate counsel, and Gen. Frank S. Streeter of Concord, N. H., representing the administrator, the church, and his associate counsel. This preliminary agreement having been approved by all parties concerned, was reexecuted by Mr. Parker and General Streeter on Jan. 25, and provides that there should be final decrees entered against the sons on all pending litigation, and that all allegations in the sons' pleadings reflecting upon Mrs. Eddy or upon the religion of Christian Science, as founded and taught by her, or upon the integrity and good faith of her associates, counsel, and trustees, should be expunged from the court records. It also provides that the administrator should pay the sum of five thousand dollars for the assignment of the sons' contingent right to renew copyrights, and that the trustees holding the fund of one hundred and seventy-five thousand dollars (which is the trust fund portion of the two hundred and ninety thousand dollars given by Mrs. Eddy in 1909) for the benefit of the family of George W. Glover, should not further claim that the rights of Glover and his family in that fund were forfeited by their action in the other court proceedings.

"The first stipulation filed in the suit of George W. Glover against Henry M. Baker, executor in the Merrimack county (N. H.) superior court, provides that a final decree shall be entered by the court that the gift by Mrs. Eddy of her entire residuary estate in trust for the promotion and extension of the religion of Christian Science as taught by her, 'is legal and valid;' and that in accordance with the opinion of the New Hampshire Supreme Court, 'the administrator be instructed to pay over her residuary estate to trustees found duly qualified and appointed by the probate court;' 'that the plaintiff's bill be dismissed upon the merits;' 'that no further suit or proceedings of any kind attacking upon any ground the validity of Mrs. Eddy's will or of any bequest or provision therein contained be brought by the plaintiff in any court;' and further, 'that this decree shall have the same effect as if rendered after answer filed by the defendants denying every material allegation of the amended bill; after a full and final hearing on the merits, and findings made by the court in favor of the defendants and against the plaintiff upon every material allegation of the bill and its several amendments.'

"The second stipulation filed in the same court in the case of the petition of the son, George W. Glover, for leave to appeal from the probate of his mother's will, provides 'that the petition be and hereby is dismissed upon the merits;' that a final judgment shall be entered; that the probate of the will 'be and hereby is affirmed in all respects.' It also provides as in the first stipulation that the judgment shall have the same effect as if rendered after a full and final hearing upon the merits, and after findings made by the court against the son upon every material allegation of his petition.

"The third stipulation filed in the suit brought by the adopted son E. J. Foster (Eddy) in the New Hampshire federal court also contains the provisions, that Mrs. Eddy's

Digitized by Google

trust estate 'for the promotion and extension of the religion of Christian Science as taught by her, is legal and valid;' that the administrator be instructed to pay over the estate to trustees appointed by the probate court; 'that the bill be dismissed upon the merits,' and that the decree shall have the same effect as 'if rendered after answer filed by the defendants denying every material allegation of the bill; and after findings made by the court in favor of the defendants and against the plaintiffs upon every material allegation of the bill and its amendments.'

"The fourth stipulation filed in the case of Chase against Dickey in the Massachusetts Supreme Court, provides that there shall be a final decree that the sons 'are not, nor either of them is, entitled to any interest in any property within this commonwealth comprised in the estate of Mrs. Eddy at her decease or disposed of in her last will,' that 'no further suit, intervention, or other proceeding attacking upon any ground the validity of any provision of Mrs. Eddy's will, or making claim to any of her property . . . shall be brought by said intervening petitioners (the sons) or either of them in this or any other court;' and that 'this decree shall have the same effect as if the same had been rendered after a full and final hearing upon all the evidence that any party desired to present and after findings made by the court upon such evidence against the sons upon every material allegation of their said petition and their answer filed in said cause.'

"The attorney-general of the commonwealth of Massachusetts joined in signing the stipulation consenting to the entry of the foregoing decree.

"The attorney-general of New Hampshire and special counsel for the state joined in consenting to the entry of the decree provided for in the first stipulation, but reserved all rights to which the state may be entitled under its inheritance tax laws."

The agreement and stipulation in full were published in *The Christian Science Monitor* of Feb. 8.

"SUBJECT UNTO YOU."

IT is no less surprising than true, as one comes to think of it, that the average man finds it much easier to believe in God, of whom physical sense gives him no knowledge whatever, than to disbelieve in matter, for supporting evidence of which he must look to physical sense alone. In the one instance conviction is quite indifferent to sense testimony, and in the other it is entirely dependent upon and wholly satisfied with it, though acknowledging that it is imperfect and often fails to report the facts as they are later on found to be.

Christian believers have always looked upon the material world as temporal. They have been taught that some day the earth is to "be burned up" and that there is to "be no more sea." They thus recognize, at least theoretically, that matter is not a part of the realm of Spirit or essential to it; that it has no place in God's kingdom. Moreover, in declaring for the omnipresence and omniscience of Spirit, every intelligent Christian has conceded that God cannot be subject to the limitations of time and space, so that to Him whatever is to be, is now. At this point the believer, if logical and given to the habit of thinking things out, must see that since the consummation of all things is "at hand" to God, the material order, all that is to "pass away," does not exist to Him, and hence it can have no real being to us, in so far as we have gained the divine point of view.

To perceive reality, spiritual substance, is to be deceived no longer by appearances. It must be apparent, therefore, that one of the fundamental contentions of Christian Science is true; namely, that matter and all its phenomena are unreal, since they have nothing to do, right now, with the continuity and completeness of the divine manifestation, the universe of Spirit. The possibility of the disappearance of sin, sickness, and death, the various phases of unreality, becomes entirely explicable the moment we admit that they have no place in the divine consciousness, in Truth. One may not yet be able to accept all that is included in this logical imperative, but he can see that matter and its fearsome phenomena must yield to Mind as naturally as darkness yields to light. All who accept the teaching of the Scripture must further concede that the Mind which was in Christ Jesus is in fact our Mind, and may become such in experience; hence, in so far as we are spiritually-minded we may now see things as God sees them, a condition which Christ Jesus made precedent to and explanatory of salvation when he said, "Ye shall know the truth, and the truth shall make you free."

It is thus made plain that the teaching of Christian Science respecting our present possible exemption from the ills of human experience involves simply a consistent adherence to the generally accepted Christian teaching that God is Spirit; that He knows all things as they are in truth, and that it is possible for us to embrace His thought and declare it with power. Christian Science presents an explanation of salvation, including physical healing, which is entirely in keeping with the call of the prophet when, speaking for Truth, he said, "Come now, and let us reason together, . . . though your sins be as scarlet, they shall be as white as snow." It assumes only what it can and does prove, namely, that matter is subject to Mind, as falsity is subject to Truth.

When therefore Mrs. Eddy declares that "the time for thinkers has come" (Science and Health, Pref., p. vii), she avers that the content and significance of the statements concerning God's nature and manifestations which the Master made again and again, and which professed Christians have always stood for, supply the sufficient basis for all that Christian Science has claimed and demonstrated, and that this Science demands naught but consistent thought about God and the relinquishment of a lot of beliefs which are as profitless as they are illogical, as disabling as they are contradictory.

JOHN B. WILLIS.

"BE STRONG IN THE LORD."

THERE can be no question that mental and moral strength is indispensable to human progress, but not all are willing to rouse themselves to make the effort needed for its attainment. Long ago Isaiah, as divinely bidden, called to those of fearful heart, with weak hands and feeble knees, saying, "Be strong, fear not," and he forthwith proceeded to show the needlessness of fear inasmuch as no "ravenous beast," or any evil thing was to be found on the highway of holiness over which the redeemed should pass. Again and again do we find on the sacred pages the command to be strong, the psalmist assuring us that God will "give strength unto his people." Luke tells us of John the forerunner, that from his childhood he "waxed strong in spirit," and says of Jesus, "The child grew, and waxed strong in spirit, filled with wisdom: and the grace of God was upon him."

Need we wonder, then, that with advancing years Jesus was able to face fearlessly every opposing condition of the carnal mind, even to look calmly upon the evidences of death, and right there to prove the presence and all-sufficiency of Life as God. In Science and Health we read, "We have strength in proportion to our apprehension of the truth" (p. 80), and it were well if we often tested ourselves by this scientific statement. Personal sense would have us believe that our strength, mental and physical, is dependent upon matter, and that we need to take into account the opposing influences of materiality. Christ Jesus, however, disposed of this question when he said that one could not "enter into a strong man's house, and spoil his goods, except he will first bind the strong man." Concerning this, Mrs. Eddy says, "Mortal mind is 'the strong man,' which must be held in subjection before its influence upon health and

Digitized by Google

morals can be removed" (Science and Health, p. 400). If good is a stronger influence in determining all our thoughts, words, and deeds, than is evil, we need never fear an encounter with any of its false claims, no matter what its pretensions may be. By the same logic, if the supremacy of Spirit and spiritual law is constantly maintained in the depths of our own consciousness, we shall find ourselves equipped for any trial of our strength and we shall prove that because God "is strong in power" not one of His children faileth. Are we not told that "the weakness of God is stronger than men," and that the child of God reflects the *infinite* strength?

Paul as a political prisoner spent several years among Roman soldiers, and from them learned many lessons of courage and endurance. In writing from Rome to the Ephesian converts, he bade them "be strong in the Lord, and in the power of his might." It is very clear that, without strength to use it, even the finest armor would be of no avail. The Christian Scientist has ceased to think of personal enemies, but he knows that until he himself and humanity at large shall have emerged from the dream of life in matter, he must constantly be on guard against the mortal manifestations of sin, disease, and death. Not only so, but he must be prepared to fight valiantly against the myriad forms of error which constitute the belief of mortal existence. Paul learned that watchfulness was needed, also perseverance and faith, truth and love. A weak faith or a weak sense of Truth's power will not suffice to heal the sick or to disarm wrong. No, we must "be strong" in our faith, our truth, and our love for God and man, listening ever for the voice which calls today even as of old, "Awake, awake; put on thy strength, O Zion."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

PHILADELPHIA, PA.—With a membership of fifty active workers, the committee devoted to the work of distributing Christian Science literature and periodicals to homes and institutions, libraries, car barns, fire-houses, police stations, barber shops, hotels, theaters, clubs, steamships, department stores, etc., has shown greater activity and accomplished a broader and more expansive scope of labor than ever before. The total number of pieces distributed during the year was 81,979.—*Correspondence.*

PAWHUSKA, OKLA.—Our society has been organized less than a year, and is the outgrowth of the meeting together of two families during the latter part of 1910 to read the Lesson-Sermon each Sunday morning. We now hold services in our own bungalow chapel, whose attractiveness lies in its homelike simplicity. For all these proofs of God's loving guidance we are deeply grateful.—*Correspondence.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

SEATTLE, WASH.

Virgil O. Strickler lectured to a large audience at Junction hall, Ballard Station, on Christian Science. He was introduced by Robert A. De Cou, who said in part,—

Each advancing step of mankind has come with the recognition of an already existing Truth, not through man's creation of anything; and this recognition of Truth, or Principle, has given to those sharing it a greater freedom from the limitations their former ignorance imposed. The world has been loath to acknowledge that the truth pertaining to man's relation to God is the same as the basic laws which govern him in his daily goings and comings in the realm of business or any activity in which a man or a woman may be engaged.

When Jesus stood before Pilate, he was asked a question which has been asked unnumbered times, "What is truth?" For three years he had been teaching and proving the truth about man. Always, when asked for proof of his teachings, he referred to his works, and he made these statements, which have equal bearing on all men: "By their fruits ye shall know them." "He that believeth on me, the works that I do shall he do also." After his final victory over materiality in his resurrection and ascension, his followers continued to teach and to prove the available presence of God for nearly three hundred years. Then the thought of the world became so absorbed in conquest and pleasures that the Principle of Jesus' teachings was lost sight of.

In her joyful recognition of the basic truth which Jesus taught and which she named Christian Science, Mrs. Eddy gave to the world again the truth that makes possible man's freedom from all manner of bondage, and to prove Jesus' saying, "Lo, the kingdom of God is within you." It has been scarcely fifty years since she discovered Christian Science, and in that time tens of thousands of people have been restored to health through its gentle ministrations, the sorrowing have been comforted, and sinners have been given their freedom. Tonight we have come to hear more of the truth which appeals so strongly to this age that demands proof of man's faith in God.—*Correspondence.*

YONKERS, N. Y.

The lecture on Christian Science by William R. Rathvon, in Library hall, was attended by about four hundred attentive listeners. The lecturer was introduced by Alfred D. Flinn, of Park Hill, this city, who spoke in part as follows:—

To most persons in Yonkers the name Christian Science is no longer strange, but unquestionably many still have quite incorrect or seriously incomplete conceptions of what the words stand for. Although much information can be given in one evening, the study of this subject should occupy a lifetime; its practise should be our every-day business and pleasure.

Three ways of spreading this information are employed: Christian healing, the literature, the lecture; and more important than any of these are personal intercourse and example. Consistent, upright living, according to Principle, cannot be overestimated. The printed word spreads afar. The cleanest, most informing, and most enjoyable daily newspaper of which the speaker knows, is *The Christian Science Monitor,* published in Boston, for sale in many cities, and mailed to subscribers all around the world. Besides this, there are the weekly and monthly publications and the books, always ready for those interested, to be had by subscription or at the reading-rooms. But this evening we are to have the privilege of listening to a lecture by one who has for many years been a thorough student of the Science.

Yonkers Herald.

SPRINGFIELD, MASS.

Francis J. Fluno, M.D., spoke on Christian Science to an audience that filled Court Square theater. The lecturer was introduced by Guy S. Perkins, first reader of the Christian Science society, who said in part,—

When defining man's relationship to his heavenly Father, St. Paul at one time declared: "For in him we live, and move, and have our being." Christian Science today is unfolding in an ever-increasing degree, the fact of God's allness, His nearness, and His willingness to care for His children in their every need. This fact was most conclusively proven by our Master, Christ Jesus, and today Christian Science presents but the fuller elaboration, explanation, and demonstration of Christ's teaching, whereof he said, "Ye shall know the truth, and the truth shall make you free."

Springfield Union.

NEWARK, N. J.

A lecture on Christian Science was delivered by William D. McCrackan, M.A., in Symphony auditorium. The lecturer was introduced by Franklin Pangborn, who said:—

I am quite sure there is not one person here tonight, even though he be relatively unfamiliar with the teachings of Christian Science, who will doubt but what there must be some truth in it. The evidence before our eyes of the many healings of all kinds of discord, shows that its import is to give mankind only that which is good. It is quite true we read in the Scriptures that one should beware of false Christs and false prophets, but how simply Jesus pointed out the way when he said, "By their fruits ye shall know them."

Surely one is not walking in the wrong path by following him who said, "Follow thou me," and "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you"—all the things that are good.

Correspondence.

PORTLAND, ME.

There was a large gathering of the best people of Portland in City hall on the occasion of the delivery of a lecture on Christian Science by Prof. Hermann S. Hering. The lecturer was introduced by George W. Foster, first reader of the local church, who said:—

Christian Science is no longer a new or an untried thing in the state of Maine. There are seated in this audience, on your right hand and on your left, many who are living witnesses of the efficacy of what Mrs. Eddy has termed "this Christian system of healing disease" (Science and Health, p. 150). Christian Science lectures are provided at least once each year by every branch church throughout the world, but they are not held primarily for the benefit of Christian Scientists. They are prompted rather by a lively sense of gratitude for benefits received, and to afford an opportunity for those who desire to hear a brief statement of the fundamental teachings of this Science by those who are both qualified and authorized to make such a statement.

Eastern Argus.

NORWICH, CONN.

Frank H. Leonard at his lecture for First Church of Christ, Scientist, delivered in the Universalist church, was introduced by the pastor of the church, the Rev. Joseph F. Cobb, who spoke in part as follows:—

If we take a careful view of the religious field of life, we shall find that Christianity, which is the entire realization of all the Christian types and shadows that had gone before, comes to us as the perfect rule of faith and practise, and is abundantly competent to inspire man's best hopes and be the guide of his life in every possible stage of human progress. It furnished the first simple lesson that drew close around the Redeemer the despised publicans and sinners of Judea. In the darkest periods of the church it condescended to the humblest wants of the lowly and shed all the light upon benighted minds that their capacities could bear. It has received the highest homage of sages and philosophers in more advanced ages of the world, and been regarded by them as the best lamp to their pathway throughout life; and, whatever progress is attained within the whole range of human research, this religion is still in advance of man, inviting him to higher and still more excellent attainments. Its beneficent power is continually exerted over all the enlightened nations of the earth; in the civilization of the world; in the truly reformatory spirit, wherever that spirit may be doing its work, and in the promotion of all the best interests of humanity.

Various interpretations have been and are given to this religion, but whatever they may be, one great fact remains, and that is, that God is the Father of all and that He is Love, whom Jesus our Lord came to reveal and demonstrate.

Correspondence.

MORRISTOWN, N. J.

A lecture on Christian Science was given at the Palace theater by Judge Clifford P. Smith. The first reader of the local society, William H. P. Day, introduced the speaker in part as follows:—

Today there is great unrest in the mental world—a reaching out for facts, for something more satisfying, for a higher knowledge which will efface the woes of life. Such desires are springing into action, and the world is astir, slowly awakening to a nobler, grander sense of living. Christian Science is often misunderstood and thereby misrepresented, which prevents the sorrowing from realizing the peace and joy which an understanding of it brings to the waiting heart. But, for each one remains the forever sure knowledge of God, good, which destroys all evil and is expressed in the fatherhood of God and the brotherhood of man.

Daily Record.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Brooklyn, N. Y. (First Church).—Church edifice, New York avenue and Dean street, 8 p.m., Feb. 24 and 25.
Dover, N. H.—Banquet hall, City opera house, 8 p.m., Feb. 24.
East St. Louis, Ill.—Church edifice, corner Washington place and Summit avenue, 8 p.m., Feb. 21.
El Centro, Cal.—Holt opera house, 2:30 p.m., Feb. 23.
Guthrie, Okla.—Guthrie opera house, 3 p.m., Feb. 23.
Hamilton, Bermuda.—Mechanics' hall, 8 p.m., Feb. 27.
Haverhill, Mass. (First Church).—Elks' hall, Summer street, 4 p.m., Feb. 23.
Independence, Kan.—Beldorf theater, 8 p.m., Feb. 27.
Joplin, Mo. (First and Second Churches).—Joplin new theater, 8 p.m., Feb. 25.
Knoxville, Tenn.—Church edifice, West Fifth avenue, 8 p.m., Feb. 24.
Lancaster, Pa.—Colonial theater, Queen and Chestnut streets, 3 p.m., Feb. 23.
New Bedford, Mass.—Church edifice, corner Middle and Sixth streets, 8 p.m., Feb. 27.
New Bern, N. C.—Church edifice, 8:15 p.m., Feb. 21.
Pittsburg, Kan.—Orpheum theater, 8 p.m., Feb. 24.
Prescott, Ariz.—Elks theater, 8 p. m., Feb. 25.
Richmond, Va.—Academy of Music, 4:30 p.m., Feb. 23.
Riverside, Ill.—Riverside Town hall, 8:15 p.m., Feb. 28.
St. Louis, Mo. (Third Church).—Church edifice, 3524 Russell avenue, 8 p.m., Feb. 20.
Tucson, Ariz.—Church edifice, 20 E. Pennington street, 8 p.m., Feb. 28.

TESTIMONIES OF HEALING.

With grateful thanks to God, who through our loving and faithful Leader, Mrs. Eddy, has again revealed the spirit of Christ, Truth, so clearly in Christian Science that all may read and understand the true Science of Life, which sets us free from the self-bound sense of fear, ignorance, superstition, disease, and pain, to which, as St. Paul says, the mortal sense of humanity is heir, I send the following testimony. I do this trusting that others who are bound as I was may have hope, and realize that the Christ-power is in the world today to set them free from all ills, if they will but turn their thoughts earnestly in the right direction and honestly seek for the Science, or truth of Life, with an unbiased and open mind.

For twelve years I was addicted to the liquor habit and its accompanying evils,—mildly at first, but afterward in its worst form. I drifted into this habit through taking stimulants to release me from the ague of malarial fever, though neither liquor nor drugs ever helped me for any length of time. Finally I turned to stimulants for relief from all discords, and strong drink soon became my master. If I went without it, I felt depressed and ill; if I indulged in it, it was to excess, which usually ended up with delirium and nearly death. Needless to say, when I first found the habit growing on me, I tried all I knew to break away from it through will-power, drugs, and one or two so-called "cures;" but none of these were of any lasting benefit.

At this stage, when I seemed absolutely without hope, and began to think I would eventually come to my end in an insane asylum or the gutter, my attention was drawn to Christian Science by a relative who knew what I had suffered and what a struggle I was having for existence. At first I would have none of it, and laughed at the idea, as I thought it was some new society religious fad; but this same relative sent me the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and as I was at this time in a new mining or prospecting camp in the veld, without much reading matter, I began on this book. After I had finished the chapter on Prayer, I became interested, for I realized that if there was nothing else in Christian Science there surely was no hypocrisy or cant in its teachings. After studying for about a month, the light or understanding of the substance, or the spiritual reality, the truth about Life, God, taught and demonstrated by Jesus the Christ, began to dawn in my consciousness. For the first time I realized that I had not indulged in liquor, and had had no desire for it since I began to study the book. Since then, five years ago, the habit has not troubled me, and only one who has been through the experience can understand what a blessing this freedom is.

I had also been a smoker for thirteen years, but this appetite gradually died away after I had been studying Science and Health for about three months. I did not want to give up smoking, but it gave me up, as I absolutely used to forget to keep drawing at my pipe when I did light it, and it would go out. This was repeated every time I tried to smoke, till I did not even trouble to carry tobacco. Besides the malarial fever, other ills, such as cuts, colds, veld sores, etc., have been met and overcome through the slight understanding of the truth which I have gained.

The physical healing with which I have been blessed counts little in comparison with the spiritual and moral awakening. I have become more compassionate and charitable toward others, less likely to judge unrighteous judgment; for as I now understand the truth about God and the real man, it is quite evident that it is possible to love one's neighbor as oneself. The Bible and the Christian Science text-book, that key which opens and unfolds the spiritual meaning of the Bible, are a daily study and revelation to me. I am also very grateful for the Christian Science *Sentinel* and *Journal*, which contain much help and a feast of spiritual enlightenment. Needless to say, I cannot express my gratitude in words for all the regenerative good that has come to me through the study of Christian Science, but I realize that as I strive for the Mind to be in me "which was also in Christ Jesus," as our beloved and faithful Leader, Mrs. Eddy, has done, I shall understand Christ, Truth, and the Science of Life, more fully, and so be able to reflect this blessed truth in my daily life and deeds.

FREDERICK W. ENSOR, Johannesburg, South Africa.

When I was about two years old I had a serious fall, and as a result I had a slight curvature of the spine, which threw one hip and one shoulder a little out of place. As it was not painful, or even annoying until I discontinued wearing little girls' dresses, I had no medical treatment. Two years ago I went to a normal school and took elocution as a special subject, and almost the first thing my instructor noticed was that I did not stand properly. She asked me to consult the director in gymnastics and see what could be done for me. I did so, and for eighteen weeks I took four lessons a week in gymnastics, at the end of which time my back was thoroughly examined and I was told that it would be useless to try anything further. I was also advised never to let a physician try to straighten me, as it would be impossible to do so, and be only a waste of time and money.

After hearing this, my mother, who is a Christian Scientist, advised me to take up Christian Science in earnest. I did so, but I had no treatment, nor did I think of my back as I studied the weekly Lesson-Sermon. The result was, that recently, when I was being measured for a new dress, I found I was no longer deformed. I could scarcely believe it, and had the measures taken three or four times; but there was no mistake. I was and am straight, thanks to God, divine Truth, as understood in Christian Science.

BEULAH SYLVESTER, Watertown, S. Dak.

[Translated from the German.]

It is two years since I became acquainted with the glorious teachings of Christian Science. Without this knowledge I would hardly have been able to bear all the experiences which I have had to go through, especially when our dearest one, the supporter of the family, was taken away from us. But now I know that God forsaketh neither "the widow, nor the fatherless." I have experienced many blessings in a business way and have witnessed many instances of healing in my home and with my children. The youngest child, a boy nine years old, was healed through Christian Science of a skin disease of years' standing. Some time ago the boy sustained an injury of the arm, caused by a piece of glass, and as it was close to an artery and very painful, while discoloration began to appear, fear got the better of me, and I sent to a Christian Science practitioner, who immediately took up treatment. The wound healed very quickly and without pain. A short time after, the school which my youngest daughter attended was closed on account of throat trouble, but not before the little girl had high fever and complained of her throat. I again applied for Christian Science treatment, with the wonderful result that the child was restored the next day and able to leave her bed.

I might mention many more instances in which I have experienced the blessings of divine Love. It will be my endeavor to increase my understanding of Truth, and I am deeply grateful to all who have helped me to walk in the right way. Thanks to God for the many great and glorious proofs of His goodness, and next to Him, I am grateful to our beloved Leader.

FRAU BERTHA KLEMM, Berlin, Germany.

Christian Science is the best thing that has ever come my way, for it is the healing truth taught by Christ Jesus. I had been a great sufferer, mentally and physically, for a number

Digitized by Google

of years, when my physicians began to plan for three operations to be performed. While in this condition, with no hope of ever being well, a lady handed me a copy of the *Christian Science Sentinel.* She remarked that it had been sent to her, and I took it because I was a great reader; for I had no knowledge of what it was, as I had never heard of Christian Science and have not yet seen a Christian Scientist. I read the testimonies, and hope began to rise in my heart. I would say over and over, If God has done all this for others, He will do as much for me, as He "is no respecter of persons." I did not delay in purchasing a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I had to read only a little while to realize that the word of God is indeed "quick, and powerful, and sharper than any twoedged sword," for all pain and discomfort had gone. That was three years ago, and I have not taken or given a dose of medicine since.

I would say to all suffering ones, that if they would but read this wonderful book, Science and Health, and study and practise its teachings, they would find the "pearl of great price."—Mrs. George Runion, Del Rio, Tenn.

In August, 1910, I concluded to try Christian Science treatment for a chronic stomach difficulty. I was at work in the city of Omaha, Neb., at that date, and being in great distress, I endeavored during my lunch hour to find a Christian Science practitioner. This I finally did, and told him my troubles, but added that I was due at work by one o'clock. He looked at his watch and found I had just eleven minutes. He told me to return at once and he would give me absent treatment. Then he walked with me to the elevator, and on reaching it I found that the distress I had endured all the morning, and for days at a time before, had left me, never to return. I thought it very wonderful at that time, as I had never seen or heard of the practitioner until then, and did not know anything about Christian Science. Now I know such healing is divinely natural. I am indeed thankful to know God, all good, an all-wise Father who watches over all, divine Love that meets every need, as I am being taught through the study of Christian Science.

Words cannot express my heartfelt gratitude to God for this manifestation of divine Love, also to our dear Leader, Mrs. Eddy; and I would advise all who are in any manner afflicted to try Christian Science healing, for it leads to God, "who forgiveth all thine iniquities; who healeth all thy diseases."—Mrs. Geneva Morton, Venice, Cal.

With sincere gratitude to God, infinite good, for all that has come to me through Christian Science, and to Mrs. Eddy who prepared herself through years of study of the Bible to be the bearer of the glorious message embodied in "Science and Health with Key to the Scriptures," I submit this chapter of the leading incidents in my experience, hoping it may encourage some suffering fellow being to seek and find "the Life that is Truth, and the Truth that is Life" (Science and Health, p. 97).

In 1857 I was attacked by what the doctors called liver complaint, and was treated for two years by three systems of medicine. Later, my case was diagnosed as acute stomach trouble, and I suffered from this complaint till 1906, sometimes better, sometimes worse, with oftentimes severe attacks of neuralgia, and had almost as many doctors as years. I also had three severe attacks of rheumatism, culminating in the most severe one in the spring of 1906. By this time I had pretty much lost faith in doctors, but my dear wife persisted in calling any doctor who was said to have any success with rheumatism. After suffering several weeks, I heard of a neighbor who had been sick a long time, about a year in bed, suddenly appearing on the street, well! As he was passing our house one morning, my wife called him in, and asked him what he had done to get well so quickly. He replied that he had taken Christian Science treatment. We had heard of Christian Science before, but had never met any one who had been entirely healed of a serious trouble. I at once said that I would like to have treatment, and as there was a practitioner in the village she came to our home at once. In a very short time I was entirely free from pain, was out attending to business in two weeks, clear of all disease, and have had no trouble with these ailments since.

The next June, that is, in 1907, I suffered a severe stroke of paralysis, could not walk, dress or undress, or even feed myself. A practitioner was speedily called, and soon the healing began. In about a week I could feed myself with a spoon, take a glass of water to my mouth, and walk with assistance. I then became very nervous and could only sleep for short, infrequent periods. Some one would read to me, often till after midnight, and I continued in this way for nearly three weeks. In the mean time my family were very restive; they insisted on calling a physician, as they claimed I was not improving. My grown children had come home, fearing I should pass on; but I held my faith in Science and resisted their appeals. Finally, they had gathered sympathizers in the parlor and were trying to devise some plan to have me accept the services of a physician, when the friend who had introduced the Christian Science practitioner called to spend the evening, as he often did. I told him of the pressure by my family and said it might be well to let a doctor come, to remove the anxiety on that score, but that I would not take his medicine, as I could surreptitiously dispose of it. He replied, "Do as you think best, it is for you to decide; for myself I would not do it." I answered at once, "Neither will I. Please step down to the parlor and tell them I will have no doctor, that I will go across the dark river first."

I was sound asleep before my friend left the house, and woke late the next morning, feeling fine and well except for a little weakness in the joints. I was at business in three weeks. From the day of that healing I have enjoyed better health than for many years previous.

J. C. Howell, La Grange, Ill.

A little over three years ago I was, to mortal sense, in a very serious condition. I had a bad cough with occasional hemorrhages, and had scarcely enough strength to keep at work; so when I sat down I did not care whether I ever got up again or not. The doctors pronounced my difficulty a lung trouble with heart complications, and as their medicine relieved me only temporarily, I was pretty much discouraged. About this time a Christian Scientist talked to me regarding myself, and said I could be healed; that many had been healed by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, a copy of which he offered to loan me. At first I was reluctant to accept his offer, because his statements regarding the book seemed incredible; but as I was willing to try anything in order to get well, I said I would read it, although I did not have any faith in it. Inside of six weeks, however, the benefits derived were so noticeable that I asked this Scientist to buy me a copy of Science and Health. I continued to read, and for two years I have had neither cough nor hemorrhages.

It is with thankfulness to God, with deep gratitude also to Mrs. Eddy for this wonderful truth, that I send this testimony, trusting that it may be read by some one who is in like bondage.—F. H. Richer, Ingram, Wis.

I feel it is time I should pay my tribute to Christian Science, and perhaps be the means of encouraging some one who needs help. Through the healing of my mother by Christian Science of creeping paralysis, at the age of seventy-four years, I became much interested, and the following year had treatment when my baby was born, with the result of an almost painless birth. This was a wonderful demonstration to me, for eleven years before, when my first baby was born, I had suffered extremely. Since then, I have

Digitized by Google

had many proofs of this healing truth. The so-called children's ailments have been quickly overcome for my little boy, who has never had any other than Christian Science treatment, as it has been sufficient to meet every need.

The last two years I have passed through deep waters, to mortal sense, but with the understanding I have had of Christian Science, and by clinging steadfastly to the truth, I have been able to realize the assurance of the 91st Psalm, "I will be with him in trouble; I will deliver him;" also the words from Isaiah: "It shall come to pass in the day that the Lord shall give thee rest from thy sorrow, and from thy fear, and from the hard bondage wherein thou wast made to serve."

For all these blessings my heart goes out in gratitude to God, the giver of all good, and to our beloved Leader, Mrs. Eddy, for having been so patiently and lovingly helped along the road that leads ever upward.

MARY E. THAYER, Framingham, Mass.

With a grateful heart I write to testify to the healing of my little daughter. In the spring of 1910, when she was just three years of age, she was attacked with a bowel disorder. At first I was not much afraid, as I thought I would be able to help her with Christian Science; but I found that I could not overcome my own fear, and the child seemed to be losing strength rapidly, so early one morning I decided to ask a Christian Science practitioner for help. The child was still very ill when eleven o'clock came, but a few minutes afterward she suddenly became quite well. She raised herself up in my arms and said, "I am better now." I thought, "Oh, how I wish you were!" I had not seen the improvement then, but I soon realized it, as within half an hour she was dressed and walking about as if nothing had been wrong. When her father came home to dinner she sat at the table and ate a hearty meal, with no ill effects afterward.

In the afternoon she was singing and playing in her usual happy way. Next day being Sunday, we took her to church, and no trace of any illness was to be seen on her face. Since then she has been perfectly well. For this, and many other blessings, I am deeply grateful to God for leading me into Christian Science.

MRS. CAROLINE GYNN ROWLAND, Exeter House, Upperthorpe, Steel Bank, Sheffield, England.

I desire to express my gratitude for what Christian Science has done and is doing for me daily. If there is one thing more than another for which I am grateful, it is the power of right thought. Ten years ago I was sick with many ailments, some of them extending over a period of twenty years. I had tried all known material means, and was not only no better of my old complaints, but was taking on new ones. I was then persuaded by friends to try Christian Science, and went rather reluctantly to see a practitioner. I thought I might receive some help, and then drop the Science, as I did not think I wanted to be a Christian Scientist.

I took three weeks' treatment, also bought a copy of Science and Health and began its study. During the three weeks some of my ailments disappeared and I felt the touch of Truth. I continued my study, and one by one my old ailments disappeared, with the exception of a bad form of stomach trouble. At this time I was engaged in public business, and it became my duty many times to tell people of their wrong-doing. This I did not always do in a spirit of love, but I soon found that this was not in accordance with the teaching of Christ Jesus, or of Christian Science, and I strove to correct this error. Still the stomach trouble remained with me, and I again turned the search-light of Christian Science upon my own consciousness. I found that though I did not express myself audibly, the unspoken thought was just as bad; but I am learning that just so far as I can keep my thought right, and express love to my brother man, the physical condition is harmonious.

I am truly thankful to God, also grateful to our faithful Leader, Mrs. Eddy, for the illumination of the Bible as revealed to me through her works and words, wherewith we are able to heal ourselves and others.

MRS. LOTTA E. KNOX, Los Angeles, Cal.

[Translated from the German.]

In the spring of 1910 I became afflicted with a painful varicose abscess. Knowing that medical skill could do little or nothing toward bringing about a permanent cure, I applied by letter to a Christian Science practitioner in Berlin for treatment, which was most willingly given. The trouble, however, did not yield as readily as I had expected, or rather hoped; but I saw that it had to be eliminated by an internal process, not through medicine, but through the acquisition of greater confidence in God, through the casting out of the old Adam. As my confidence in God increased, the wound began to disappear, and with the realization that no evil, no suffering, could come from God, the pain diminished until it ceased altogether. Over a year has elapsed since my complete healing, and there has been no return of the disease during that time; neither did I have to neglect my professional duties for a single day during the period of my affliction.

Next to the Bible, "Science and Health with Key to the Scriptures" by Mrs. Eddy has become a very dear book to me, and I read in it daily (I was not familiar with the English formerly). I have also witnessed the healing effect of prayer in my family, and I thank God from the depths of my heart for the proofs of divine Love and Truth. It is with a grateful heart that I think of Mrs. Eddy, the Founder of Christian Science.

FRITZ OERGEL, Forst (Lausitz), Germany.

It is with a heart full of gratitude to God that I give my testimony of the healing I have received in Christian Science. For over ten years I had been troubled with severe headaches and stomach troubles in the worst form. For days at a time I could not eat anything, as it would instantly give me pain. I had medical treatment for years, but failed to get help, which convinced me that there was no help for me in medicine. A short time ago a friend advised me to try Christian Science. I did so, and can say that I was completely cured after three weeks' treatment. I am indeed thankful for all the blessings I have received since I became interested in Christian Science, and grateful to our dear Leader, Mrs. Eddy, who has been the means of bringing this blessed gospel to us.

MRS. HILDA SANDTNER, Bisbee, Ariz.

I hereby certify that in the first part of December, 1910, I had a very severe attack of throat trouble which was overcome in two treatments in Christian Science. This demonstration proved to me the verity of Principle as taught by our beloved Leader, Mrs. Eddy, and I am convinced that a true follower of the Christ can demonstrate his healing power. I hope this will be of use to many in proving the ability of Christian Science to give mankind a better understanding of our relationship to the Father-Mother God.

MISS LOUISETTE MACK, Philadelphia, Pa.

I would like to express my gratitude for some of the blessings which Christian Science has brought to me. It is such a help and comfort in the bringing up of children, and is so much easier than the old way, when they were entrusted to the care of doctors and nurses. If discord ever manifests itself in them, the understanding of Truth sustains both them and me, healing them and leaving me with a clearer

Digitized by Google

realization of Truth's power and a firmer mental poise. My children have been sustained through an attack of whooping-cough, and healed of measles and other discords. Unlike former experiences when *materia medica* was employed, they were not confined to their beds and no outside help was necessary. They were left without any ill effects and went on with their school work harmoniously. One of my sons had a severe cough for four years, and though he has had a few attacks of it since we came into Science, they have been quickly relieved under Science treatment, whereas before it was continuous. We have had so much good from Christian Science that it would be a long story to try to tell it all.

Every day I have many proofs of the power of Truth. I can see that I am less sensitive and more charitable than I used to be. I seldom have a cold now, and when one does manifest itself it is quickly overcome. I appreciate the opportunity of attending the church services, and the Wednesday evening meetings have been especially helpful. I enjoy and look forward to the coming of the *Sentinel,* with its weekly message of Truth and Love. The Bible, with our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is more valuable to me than any of my possessions. Words are indeed weak when I try to express my gratitude to our Leader for this wonderful truth which was revealed to her and which she has so lovingly shared with all who will but drink from this life-giving stream.—MRS. W. J. SHELDON, Oak Park, Ill.

It is with great pleasure and thankfulness that I tell what Christian Science has done for me. For five years I suffered terribly from pains in my back, and although I consulted several doctors and took many remedies, I did not get relief; at last the pain became so severe that I made up my mind to see some one else. At this time, however, a lady advised me to see a Christian Science practitioner. I did so, though I did not believe in Christian Science, and after one treatment my back was completely cured. This was early in 1911, and I have had no return of the pain since.

MISS ELLA SPEED, Elsternwick, Melbourne, Australia.

[Translated from the German.]

About two years ago I became acquainted with Christian Science through a dear friend. When she saw my suffering, she gave me some literature to read, and among other things a copy of *Der Herold der Christian Science.* I had no hope at first, having been afflicted since early youth with a severe nervous trouble which at times would lead to terrible crises and make me look forward to the future with fear and anxiety, for I was fully aware that my mental powers were steadily declining. Last spring the trouble manifested itself so severely that I expected the worst. I suffered with intense headache, and from time to time would lose consciousness. Still I refused to consult a physician, a specialist having told me years ago that my trouble was incurable. My husband, seeing my distressed condition, then applied help to a Christian Science practitioner, who came, and lovingly gave me my first treatment.

After a short time I had sufficiently recovered to be able to call on the practitioner; I could take food without discomfort, and felt my trouble growing less every day. Three weeks later I experienced such well-being as I never had before, for formerly I had rarely been one day without pain, and my acquaintances marveled at the change which had taken place in me. I now know for a certainty that our heavenly Father, who is omnipotence and Love, will hereafter guide me. Words are insufficient to tell of God's loving care, and I can but inadequately express my gratitude to Him for all the blessings which He has bestowed upon me. I also feel profoundly indebted to our beloved Leader, Mrs. Eddy, for having led us again to a proper understanding of the teachings of Christ Jesus.

FRAU HEDWIG RAMPP, Bern, Switzerland.

FROM OUR EXCHANGES.

[Prof. Rudolph Eucken, Ph.D., in *Christian Commonwealth.*]

What obligations does the rebirth of religion in our time lay upon us? What are our immediate duties as friends and advocates of a free, rational, and spiritual faith? First, we must fully and frankly recognize the changes which through the productivity of the last centuries have been wrought in the spiritual concerns of mankind. Whatever, therefore, is antiquated, outgrown, and no longer useful, we must be willing to surrender as no longer of significance and value to our day and generation, as, perhaps, a positive harm to it. These older systems of thought and conceptions of religious truth once had their validity and importance, and are to be respected, even revered; but the picture of nature has become so enlarged, our insight into causal relations so deepened, our interpretation of universal law and order, our understanding of historical and critical processes, so extended, that we can no longer hold absolutely to the older philosophies and doctrines. Much in the old systems that was once held to be absolute truth is now felt to be only a symbol. The latter conception of it is the chief excuse for its retention on our part. But it will be still better if we openly and frankly disavow it, and not wait until our opponents compel us to do so. It is our duty as Protestants earnestly, reverently, to revise our traditional beliefs, that religion itself may live. Deprived of these husks of outgrown dogma, the essential kernel of religion will not die, but only be purified and released for new germination and increase.

[*Continent.*]

The right way to cure laxness of modern faith is by a path that leads up from the high level of Christian toleration to the higher level of this understanding: every conviction of truth that a man can attain to by deep living and high thinking and close fellowship with God, he owes to the world; he must hold on to it and live by it for the world's sake. Truth, that is to say, is a trust fund. It is in spiritual realms, not acquired by the wise, but granted to the faithful. It becomes not property for the owner's distinction, but endowment for mankind's benefit. And no one man's measure of it is complete in itself. His part is but a measure to be contributed, more or less, to the full truth-stores of the world. Whoever sees these things, can neither be vain of his own acquirement nor bitter toward those who for the present will not have his truth; but still less can he cease to care for and cherish that truth in his own breast. As a trustee, he must keep his trust undamaged until the world does take it. Keeping the trust, he must openly testify meantime to its worth as he understands it. Especially must he live it to the highest limit of his power in order to be an illustration commending his faith. Truth's trustee, conscious of his responsibility, becomes not a dogmatist seeking proselytes, but a brother of men desiring to spread the benefit of his own blessings. It is thus that tolerance and conviction are to be married in the household of faith.

[*Quincy* (Ill.) *Herald.*]

One of the most gratifying things that comes to the notice of the average good citizen is the evidence of increasing interest in the Bible. There are more persons reading that good book just now than ever before in the history of the world. Whether a man be a church-member or a rank outsider, a believer or an agnostic, he will be ready to concede that the people who are reading the Bible are getting better morally and are making better citizens,—are more honest, more honorable, more just in their dealings with their brother men.

To the careful student of human conditions there appears a greater leaning toward spiritual things. The discovery is being made that the Bible can bring not only deliverance

Digitized by Google

from sin, but physical healing to those who study it carefully, read it not perfunctorily but thoughtfully, and apply its precepts with honest endeavor to measure their lives by them and eliminate the material things, the carnal lusts and pleasures which are antagonistic to the higher spiritual life. And so we really see a positive and earnest awakening and a real sincere effort to attain to truer, holier, and hence to happier things as learned from the Scriptures.

[*British Congregationalist.*]

It goes without saying that the faith of the church is manifested not by her opinions, but in her works. This is true of the individual church, as well as of the church as a whole. And when we speak of the individual church, we come at once to its leaders and members. The measure of their faith is the conscience they put into their work in and for the church. As things are, it is too easy for the individual among us to escape responsibility by shifting it on to the whole of which he is a part. The church is wrong and faulty in this direction and in that. But what is the church but the man himself, and a number of others like him? It is what they do and say and think that makes up the churches' collective life, and when they fail the church fails.

[*Universalist Leader.*]

The Bible undertakes to ground religion in a golden rule of justice. What the world needs is a prophet who can put the aspirations of the toilers of the modern world into the mighty call of Isaiah, and who can turn the face of worship toward that East where is beginning a new day in industry. In that hour we shall find deep down in humanity one faith, one hope, one baptism, and one vision of the new earth in which dwelleth righteousness. When that time comes, we shall understand that the perversities and bigotries and mutual animosities which affect our discussions of these great human problems have not been all on one side of the controversy.

[*Christian Register.*]

The spirit of unrest is abroad. All men and nations are moved by it to question everything that is and to wonder what the next things will be. Every institution is challenged to show cause for its existence, and the assertion is frequently made that everything is different from what it was, say, fifty or a hundred years ago. The home and the church are conspicuous targets for criticism, assertion, and prophecy. All this is well, and good will come of it in due time; but it is well to remember that false spirits and false prophets are abroad, and that the unrest of the times is in part an artificial intoxication, while much of the assertion and prophecy is mere guesswork, and therefore worthless, if not injurious.

[*Christian Work and Evangelist.*]

A careful study of the teachings of Jesus reveals equal emphasis on two aspects of religion. The first is on the obligation of the soul toward God; the second, its obligation toward other souls. The gospel deals equally with man's personal relationships with his Father and his relationships with his fellow men. There is the parable of the repentant son who returns to the arms of the forgiving father; there is also the parable of the good Samaritan. The two together comprise the gospel.

[*Advance.*]

If you seek selfishly for a happy year for yourself, the year will bring you disappointment and heartache. But if you seek earnestly to bring the happiness of the year to others, every day will bring you something of joy, reflected from the high peaks of the joy you have brought to others.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Results" has been translated and is now printed in German (Die Christliche Wissenschaft: Ihre Resultate). This pamphlet contains 35 pages and is for sale at the prices of all the regular pamphlets as shown on the opposite page.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies .	1.00	1.15	1.30
Fifty copies . . .	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

Make all remittances payable to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Government ownership or control of telegraph lines is again recommended by Postmaster-General Hitchcock in his complete annual report transmitted to Congress. Mr. Hitchcock says: "In the last annual report the opinion was expressed that telegraph lines in the United States should be made a part of the postal system and operated in conjunction with the mail service. It is believed that under proper management such a consolidation would result in important economies and permit adoption of lower telegraph rates. Now that a postal saving system has been established and a parcel-post provided for, there would seem to be no better opportunity for the profitable extension of our postal business than through the adoption of a government telegraph system." Mr. Hitchcock also recommends that the use of the franking privilege be restricted "to official correspondence, not exceeding four ounces in weight, and to the mailing of such speeches and documents as are printed by order of Congress."

A decree of the United States circuit court at Cincinnati dissolves the Great Lakes Towing Company as a monopoly in control of the towing business of the fourteen principal ports of the Great Lakes. The decree decides that in driving out of business the numerous independent tug companies which were in active competition prior to 1899, when the company was formed, the Great Lakes company directly violated the Sherman antitrust law. The evidence showed that the company controlled ninety-five per cent of the towing business on the Great Lakes. The decree recites that letters of the towing company officials to its agents in various ports not only suggested to them the cutting of rates, but in some instances suggested the bribery of port officials. The company is given thirty days in which to suggest to the court the means of dissolution and complete elimination of present and past practises.

Thousands of human lives and hundreds of vessels, valued with their cargoes at nearly eleven million dollars, were saved from the perils of storm-swept seas by the little cutters of the revenue service which guard the coastline of the United States in an unbroken line from Maine to Texas and from Alaska to California. A total of two hundred and sixty distressed vessels were assisted during the year, and their burden, twenty-two hundred and twelve souls, rescued from danger. Forty-five derelicts and other dangerous obstructions to navigation were removed or destroyed. "For every dollar the government invested in the maintenance of the revenue cutter service," says Captain Berthold, "there has been a return of $4.36 in the form of property and lives saved from the perils of the sea."

The final batch of claims for loss of life and property in the Titanic disaster has been filed with the federal commissioner appointed in the limitation of liability proceedings begun by the Oceanic Steam Navigation Company. The first set of claims numbered 270, and amounted to about five million nine hundred thousand dollars. Since these were scheduled, another ninety have been received for $2,127,274, making a total of more than eight million dollars. To satisfy these, if the contention of the White Star line prevails, that the American law must apply, there will be about ninety-six thousand dollars, and if the court decides that the British rules may be enforced, about two million five hundred thousand dollars.

Attorney-General Wickersham announces that he has reached an agreement with the representatives of the Union Pacific and Southern Pacific railroads for the dissolution of the Harriman merger, as decreed by the Supreme Court. The Union Pacific agrees to sell its 1,265,500 shares of Southern Pacific stock to its own stockholders, and those of the Southern Pacific in what the government regards as a safe proportion. The Union Pacific will acquire the Central Pacific from the Southern Pacific, giving it an extension from Ogden to the Pacific coast.

James A. Patten, the cotton and grain speculator, pleaded guilty in the federal court at New York last week to the sixth count in an indictment charging him with restraint of trade. Judge Mayer imposed a fine of four thousand dollars, which was paid immediately. The sixth count charges Patten and his associates with having agreed under a contract to buy practically the entire raw cotton crop of 1909 in order to hold it out of the market until Nov. 1, 1910.

A gift of a million and a quarter dollars from Andrew Carnegie, in addition to fifteen million dollars previously received from him, is announced by the Carnegie Foundation for the advancement of teaching. The new gift has been conveyed to the Foundation as a special supplementary fund to help it carry out the purposes of the earlier fund.

The construction of twenty-eight armories is sought in a bill prepared by the Pennsylvania state armory board, which asks an appropriation of $1,331,800 for the new structures and the maintenance of the buildings now owned by the board.

An assistant director of the postal savings system has sailed from New York for San Juan, Porto Rico, to institute the system of postal savings banks in that island.

International.

The dream of the alchemist has been realized, and one element may be changed into another, or even created out of electrical force, according to the statements of the world-famous British chemists, Sir William Ramsay, Prof. Herman Collie, and Professor Patterson. These three, working independently of one another, have found that when an electric discharge is passed through a vacuum tube containing a little hydrogen, two rare gases, helium and neon, appear. They can appear in the tube in only one of two ways, says Sir William Ramsay; either by the transmutation of one element into another or by the creation of an element from electricity. In an interview Sir William said: "I do not know whether the discovery will mean that it will be possible to turn lead into gold. It might, though probably the cost would be too great to make it worth while."

The German government's petroleum monopoly bill has been revived by the committee of the Imperial Parliament, which reversed its action of Jan. 30 when it killed the first and vital paragraph of the measure containing this clause: "The importation and the preparation of mineral oils for burning in lamps (illuminating oils), as well as the wholesale trade in these oils, belongs exclusively to the imperial German government, as far as regards the interior of Germany."

When the French government established its protectorate in Tunis, it inaugurated a financial, educational, and agricultural department in order to advance the economic condition of the country; but until the present there has been no cooperation between these three branches of public work. There has just been created an organization called "Economic Service for the Natives" which is to centralize and coordinate the activities of the three departments.

Captain Scott and his four companions, who made the final dash to the south pole and reached it Jan. 18, 1912, perished on the journey back to their provision depots. This party had been preceded in reaching the pole by Captain Amundsen's expedition, which reached the pole Dec. 14-17, 1911.

British troops have entered Tibet, and the Dalai Lama, it is reported, has authorized four delegates to negotiate a treaty with the object of obtaining British protection in return for special advantages.

Industrial and Commercial.

A bill is now pending in Congress which has an important bearing on the problem in this country of the high cost of living. It is designed to effect a saving of two billion dollars a year in the unnecessary expense of marketing farm products and in saving products which now go to waste on account of a lack of market facilities. The theory on which the measure is based is that the high cost of living is due in large part to the enormous expenses incurred in the distribution of food products. The supporters of the measure argue that up to this time the entire attention of the government, through the department of agriculture, has been devoted to the question of production, to the absolute neglect of the question of distribution. It is pointed out, for instance, that the crop of 1912 will yield six billion dollars to the producer; yet when this same crop reaches the consumer, it will have increased in cost to the enormous sum of thirteen billion dollars, showing that under our present system it is more profitable to distribute than to produce.

Increased efficiency in the handling of freight-cars during the last six months has been "equivalent to an addition of more than one hundred and fifty thousand freight-cars" to the equipment of American railroads, is the statement made in a report to the interstate commerce commission by the general agent of the American Railway Association, who says the figures show that "the American freight-car beat the record for efficiency." These cars would have cost the roads a total of one hundred and twenty million dollars.

The bill to be introduced in the Oregon Legislature for the establishment of a state plant for mining the lime found on the north Pacific coast, and its distribution to farmers at cost, is considered of most importance to agricultural interests because it provides a practical method of overcoming a deposit which has "soured" thousands of acres of land in moist districts, making it unsuitable for many kinds of crops.

One of the largest purchases of coal land in the history of the country has been consummated, the deal embracing three hundred thousand acres of land in the Elkhorn field of Kentucky. A new company, under the name of the Elkhorn Fuel Company, which will have a capitalization of thirty million dollars, has been incorporated in West Virginia to handle the property.

The longest piece of straight railway line in the world is from Ryngan to Bourke in New South Wales. This railway runs one hundred and thirty-six miles on a level in a perfectly straight line.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

ATTACKING EVIL AS A BELIEF.

SAMUEL GREENWOOD.

THE teaching of Christian Science concerning evil is sometimes criticized by those who fail to see the distinction which it makes between the spiritual and the material. While Christian Science, following Scriptural precedent, declares that evil, from the spiritual standpoint, is unreal, it does not deny that a belief in a power besides God obtains in the human consciousness, and that this belief must be destroyed before the kingdom of heaven can fully come to that consciousness. There is no question but that, to finite sense, evil seems to be real, else that sense would feel no need of a savior; and it is equally certain that if evil were what it seems to be, there could be no savior from it. Christian Science does not belittle the problem of the belief in evil with which awakened humanity is grappling, but it does deny that evil is something intrinsically real, a God-known and God-permitted power, and it does this to the point of its disappearance.

Throughout her published writings on Christian Science, Mrs. Eddy teaches the necessity of a discriminating knowledge of the nature of evil and of its *modus operandi* in human consciousness,—not as something to be feared, but as something to be denied and mastered as a falsity. Because of their understanding that God is the only power, Christian Scientists are working to overcome evil, not as power, but as a false belief of power; not as something besides God, but as the false sense of something besides God. Mankind have believed evil to be as real and powerful as good, and have battled with it on that basis, but the conflict has naturally been a losing one. Mankind have been defeated because, although ostensibly fighting the enemy, they have in reality been arrayed on its side; that is, they have themselves assigned to evil all the power it needed to overcome them. Since it is not possible that evil should obtain in divine Mind, it is only in the so-called human mind that evil seems to exist; and how can this mind possibly hope to overcome evil, after having arrayed itself on evil's side?

Evil's only basis of activity, its only protection and continuity, is mankind's belief that there is another power than God, good. Take away this belief, let the infinity of good be recognized and adhered to, and the downfall and disappearance of what is called evil must inevitably follow, since it is nothing and can do nothing of itself. If we admit God's infinite nature, an opposed being or power can exist only in belief, and this false supposition cannot in any way affect what is true. It is to false sense alone that evil seems to bring its devices to pass, for being of the nature of a negation it has neither substance nor power. It never made a wicked man or woman, nor made God's man or woman wicked. It never transformed goodness into vice, love into hate, or life into death, else in the process it had extinguished both God and His creation. As Mrs. Eddy writes, "It is neither person, place, nor thing, but is simply a belief" (Science and Health, p. 71). Its only kingdom or realm of activity is the wrong mental state which St. Paul designates "the carnal mind;" but this mental state has no relation to or place in the infinite, all-knowing, divine Mind which the same apostle declared was in Christ Jesus.

Evil should not, therefore, be acknowledged as real by any Christian, since it is logically evident that it will cease even to seem a presence or a power to the human consciousness, when this consciousness ceases to acknowledge and obey it. The teaching that evil is unreal may be looked upon by the so-called human mind as an insult to its intelligence; but so might the first commandment, for that matter. The human race has gone on accepting material testimony until the sense of a power working in opposition to good seems to overshadow all human activity, religion not excepted. From this standpoint of belief and fear it no doubt seems preposterous on the part of Christian Science to pronounce the whole dark vision an illusion, an imposition upon man's God-derived intelligence and manhood; but what is the use of beating about the bush or of hiding from the truth on a question of such tremendous concern to humanity? Why not face the position frankly, and discover whether or not mankind have been deceived, whether what they have been fearing and fighting all these centuries has not been only their own false belief instead of a reality. Evil is either something or it is nothing; it is either true or it is not true; God made it or He did not make it. If it is an actual something or some one, if it springs from the same source as good, if God sanctions or permits it, mortals may as well let it have its course. But on the other hand, if evil is not of God, if we accept the Master's teaching that it has no truth in it, would it not be wise if Christians changed their attitude and their efforts accordingly?

Christian Science does not make light of the necessity for overcoming evil, in standing uncompromisingly for the absolute infinity of good, for it is thereby seen that evil is not a quality or even a possibility of God's image and likeness. Jesus did not ignore evil in giving it the lie, for he spent his life upon earth in destroying its claims. Why can we not see that evil asks nothing better than to be let alone, that is, to have its claim to be real, not denied or disputed? Why can we not see that evil has held its position in human consciousness, in spite of what the churches and other organizations have attempted to do, simply because it has been thus let alone? It has held its ground, not because it is real, but because its claim to be real has been let alone, that is, admitted. Mankind have exhausted their efforts in fighting the effects of their own belief in evil, but they have not attacked this belief itself or they would have been more successful.

The motives of the devoted men and women who have labored to save men from sin are above reproach, but they have been handicapped by their misconception of what they were fighting, and this misconception has foredoomed them to defeat. They were taught to believe that evil is stronger than they, stronger than anything they could bring to bear against it, that God Himself acknowledged its existence and power; in other words, that evil is impregnable. What could one hope to accomplish from that standpoint? What wonder that the sense of evil has continued to flourish in the face of all that Christendom has opposed to it, not be-

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

cause it has any power, but because it has been let alone in its one and only stronghold, namely, human belief. Had it been met by such a recognition of God's allness as admits of no consent to the existence of another power, would evil be enthroned in the general belief of mortals as it is today?

That which differentiates the Christian Science method of warfare is this, that it attacks evil as a false belief and not a reality, and because of this it is successful where other methods fail. It is at just this point, however, that Christian Science is sometimes condemned, because it attributes no reality to aught but God and His creation; but what prompts this criticism? Does it proceed from a supreme love of good? Is it a God-imparted impulse? No, it is but the sense of evil itself crying out to be let alone. Opponents of Christian Science should awaken to see this, and consequently to see that to condemn the condemnation of evil, to deny that which denies evil, proceeds from evil, not from good, and partakes of the spirit which crucified Christ Jesus. When this is fully recognized, condemnations of Christian Science will cease. The Master was persecuted because he stripped evil of its every pretense to be true, and Christian Science meets with opposition because it follows his teaching in this respect.

If, as is self-evident, evil is unable to operate through the human consciousness unless this consciousness believes in it, why should not all Christians advocate disbelief in evil? Why encourage mortals to go on admitting the claims of evil, when it is this admission that makes them sinners? Is it in any sense godlike to believe in evil? Does such admission or belief add to one's usefulness, efficiency, or manhood? Does it make him happier, healthier, or wiser? Does it make him love God or his fellows better? Has this belief any place or any recognition in the kingdom of heaven that we are taught to work for and to establish?

The success that attends the Christian Scientist in overcoming evil is solely because he meets it as a false belief, and not as a God-endowed power. His conception of God as omnipotent good does not leave room for evil power. His conception of God as omnipresent Love does not leave room for an intelligence that can make men hateful, malicious, selfish, or depraved. His conception of God and His manifestation or creation as All-in-all does not leave room for an opposite cause or effect anywhere or at any time. He knows that if God filled all space and was infinite at the beginning, He is the same now, and always will be. Is any less absolute position consistent with the teaching of Christ Jesus? or is there any other way than by acknowledging God's allness by which men may realize the kingdom of good within their own consciousness?

"LIGHT ABOVE THE SUN."

IGERNA B. J. SOLLAS.

IN Science and Health we are told that "when the mist of mortal mind evaporates, the curse will be removed" (p. 557). There is an experience that belongs to Switzerland in winter which must have come with a burst of joy upon many an unexpectant visitor, and which well illustrates the common experiences of Christian Scientists. After a spell of hot bright sunshine and busy days spent in skating, skeeing, tobogganing, and general merriment, suddenly without warning all is plunged in dense mist, the view is cut off, the immediate surroundings look commonplace and dull; while the visitors, cold and complaining, are at a loss for occupation.

But some more buoyant spirits cannot believe that, beautiful as the sunshine is, we are wholly dependent upon it for happiness, and they set forth to enjoy the day and to find new beauties in spite of the mist. If the snow does not glint in myriad colors in the sunlight, the hoar frost on the pine trees displays dainty forms in infinite variety and cheers the toilers up-hill, who soon grow warm with their efforts. After climbing about a thousand feet they find the mist no longer a dense pall; it is breaking up into clouds, and the sun is struggling through. Soon the sun is brilliant, and they find themselves above the clouds, in a veritable earthly paradise, as they stand on the sunlit mountain-top, a snow-covered island in an archipelago of similar islands, throned in a sea of mist. The homeward journey is cheered with the thought of taking the good news to the others, for the mist shows no sign of lifting and may perhaps remain for days. But the news is not received as they expect it to be. The commonest reply is that it is hardly worth while to take so gloomy and toilsome a journey for the chance of a short time in the sunshine at the end.

Thus in Christian Science we sometimes find that we cannot always help people as we would by telling them the good news. They must want the light, and be willing to toil for it, and to "rejoice all the rugged way" (Poems, p. 14); otherwise we may be able to help them only by thoughts entertained in silence. Bacon quotes the saying, "No pleasure is comparable to the standing upon the vantage-ground of truth (a hill not to be commanded and where the air is always clear and serene) and to see the errors and wanderings and mists and tempests in the vale below;" and he adds, "So always that this prospect be with pity, and not with swelling or pride." Certainly Christian Scientists know that it is good to stand in the light upon the mountain-top, and to know that no sea of mist divides them from those below, but that the light is for all, always.

UNFOLDING COURAGE.

ROBERT O. CAMPBELL.

SOME years ago a man employed by a mercantile firm became subject to discouragement, following an occurrence which made impossible the fruition of a cherished hope. This event was beyond his power to control, as he was unaware of anything in his own experience having caused it; and no instruction in his life previous to this time had given him a glimpse of the fact that unfolding courage in his consciousness would free him from a dejected mental condition.

In this trouble he sought advice from one who had shown a friendly interest in his welfare, a man of wider experience. This friend, evidently knowing no way to destroy the direct result of the incident, counseled him to try to find relief by faithful efforts in the business in which he was engaged. His advice was to this effect: that the despondency would in time lose force, and if during the lapse of time every opportunity was improved to gain success in business, this success would be accompanied with results which would annul the consequences of the disappointment. Considered from a business view-point, this was not bad counsel, but its lack of anything that would increase his courage to endure, by turning thought to the spiritual, was apparent. The friend who recommended this course was an excellent type of manhood, one who met all obligations to the best of his ability and frequently sacrificed his own welfare for the benefit of others, yet his highest hope appeared to be in the result of human achievement. The teaching of Christianity had certainly influenced his life in many ways; but though the Christian imprint had proved helpful in shaping his manhood into a good standard of character, the wonder was that so much had been done without creating more dependence on a help above the human.

Several years after the recommendation to seek satisfaction in business prosperity was received by the employee, years filled with persistent effort to acquire capability and its consequent success, a series of business disturbances occurred which were world-wide in their hurtful effects, clearly exposing the weakness of basing one's welfare on material prosperity. During the period of depression which followed these disturbances in the world of trade, almost

Digitized by Google

every branch of commerce became affected. Men who had gained success in great undertakings, who possessed undoubted capacity, appeared as helpless in their desires to restore the currents of trade to their proper channels as were those of lesser resources. In the life of the employee business experience had been gained, but the hope of success, which before had appeared possible, now seemed farther than ever from accomplishment, while some of the devices used to gain trade had become burdens difficult to lay down. New associations became necessary by reason of changed conditions, and anxious thought was almost continuous. At this time, moreover, physical ills had grown into such a state that the demand for their healing was urgent.

Men sometimes find in their experiences a condition so difficult to bear that the severity awakens hope in a change which may open for them new ways of progress. In this instance the need of physical healing was the channel that opened into the new way, but the course led to the spiritual and away from the material. A new era in the ministry of the Christ had dawned in the world through the discovery of Christian Science. In this man's contact with the new revelation, hope that was almost forgotten was revived; freedom from both mental and physical ills, through the ascendency of the spiritual in consciousness, was promised and later realized. In the study of the Christian Science text-book, "Science and Health with Key to the Scriptures," all the leisure hours of many days were filled with persistent searching for help from God. Little by little he gained glimpses of the Nazarene's healing method, and learned, with the healing, that all forms of worthy success were subordinate to the higher purpose of proving man's relationship to God.

This man's experience in Christian Science history is a common story. Multitudes are finding freedom from hopeless existence, cumbered with mental and physical ills, in a corrected apprehension of Christianity. These people, in their efforts to grasp the understanding of the Christ, will not be satisfied with anything less practical than a provable knowledge which bears fruit in overcoming the woe and suffering of humanity. Promises of happiness beyond the grave have slight influence with those who are seeking and finding relief from the burdens of the present time. Demands for a renewal of the Christ-healing, demonstrated by Jesus and practised by his disciples, are not being met by the statement that the healing recorded in the Scriptures is now unnecessary, especially as no smallest hint can be found in Jesus' teachings that his healing work would ever be discontinued so long as humanity needed its life-giving influence. Mrs. Eddy says (Science and Health, p. 306): "Undisturbed amid the jarring testimony of the material senses, Science, still enthroned, is unfolding to mortals the immutable, harmonious, divine Principle,—is unfolding Life and the universe, ever present and eternal."

"WHAT YE SHALL SPEAK."

KATE W. BUCK.

WHEN Christ Jesus was commissioning his disciples for their great work of healing the ills of mankind, he said, respecting the prospective difficulties which mere human wisdom could not cope with, "It shall be given you in that same hour what ye shall speak."

A Christian Scientist was standing recently at a subway station when a young man, carrying a suit-case and umbrella, jumped on the running board of an incoming car which was moving at a high rate of speed. Losing his balance, he was dragged a short distance by the car, and finally fell face downward upon the pavement, almost at her feet. Time was when under such circumstances she would have felt a great sense of fear and anxiety, but instantly, like a revelation, there came to her this thought, as clear and authoritative as a voice: The idea of God, for which this man stands, has not fallen, knows nothing of falling, and is not hurt. She remembered that "the real man is spiritual and eternal" (Science and Health, p. 302). So sure was she of this fact that, while others cried out and two officials ran to the man's assistance, she stood absolutely unmoved, with a smile of joy and certainty on her face.

The man was helped to his feet, his coat badly torn and the umbrella smashed beyond repair. He swayed a little, and the Scientist noticed on his face a look of bewilderment and confusion. Instantly again came a clear realization that God's perfect idea is never bewildered or confused; that there is no reason why he should be. The man's face cleared, and straightening himself, he stood erect and smiling. Turning to the "starter," he said, "Thank you, I'm all right now, feeling fine; guess I'll make the North Station this time." Asked for his name, he replied: "What's the use? There is nothing the matter with me," and boarding a car he went his way, gazing rather ruefully at the torn coat. The "starter" and another official gazed at each other in amazement, one saying to the other, "Well, what do you think of that!"

The Scientist, who had been feeling that she was not making the progress she should in Christian Science, her desire to know and to do being so far ahead of her accomplishments, went her way, too, with a song of thanksgiving in her heart, at the same time saying to herself: "If this is the way Truth works, and if my understanding, which has seemed to me so small, is clear enough to let it so work through me, then indeed I too 'must be about my Father's business.'"

COMPASSION.

HERBERT ARTHUR HUTCHINSON.

POPE says, "To err is human, to forgive divine." In the record of the Master's ministry he often said to those who had gone to him for help, "Thy sins be forgiven thee;" and this divine forgiveness was a blotting out of sin, the only real forgiveness. Human forgiveness is often merely a forgetting, whereas the understanding of divine reality, which sees man perfect as God made him, effaces all trace of sin and shows compassion in Jesus' way. The statement that Jesus was "moved with compassion," defines his attitude toward those who were seeking for that uplifting of Christ, Truth; and "he healed them all" is the simple comment made.

In this age, also, we have an example of this God-given compassion, through the healing ministry of our dear Leader, who has described herself as "a willing disciple" (Science and Health, Pref., p. ix). We, too, must have this same compassion if we are to lift up the Christ-idea, to help those who seek release from bondage to evil. Should there come to us one who is borne down by the weight of sin placed on him by belief in evil, the burden of a misspent life, surely we can feel neither human sympathy nor antipathy toward this victim of fear, but only divine compassion, and such compassion will enable us to cast from him some portion at least of his weight of false sense. We can then listen patiently to the recital of misdeeds, however bad they may be, without any feeling of being shocked or horrified, by knowing that in the divine consciousness there is no evil, no shadow, and no terrible past, but that good and harmony are always present. Mrs. Eddy says, "Tenderness accompanies all the might imparted by Spirit" (Science and Health, p. 514).

In the gospel accounts of Jesus' works it is interesting to notice the numerous cases of dementia—those who were said to have an "unclean spirit"—that were healed. The first case of healing which Mark mentions was of this nature, and we read later of the release from error of "him that was possessed with the devil." The case of the epileptic boy will also occur to the reader. While all diseases are and must of necessity be healed by the truth of being, it is comforting to know that in Christian Science there is no incurable sickness or disease. The belief of dementia often

Digitized by Google

seems particularly distressing to human thought because it is generally regarded with so much fear and thought to be almost the worst disease known; but the certainty that the deepest hell which human belief has invented can be and is daily being wiped out through Christian Science, must occasion great thankfulness among the families of those afflicted.

Statistics in the British Isles show that lunacy seems to be greatly on the increase, and some of the counties round about London have been spending immense amounts annually to provide new buildings to accommodate patients. This state of things can only be met by consecrating ourselves more fully to the healing work through Christian Science, because *materia medica* confesses its inability to meet this need by erecting these buildings. Let the relatives of those in this condition take heart, for there is no incurable disease in the divine economy, and divine Love meets this as well as every other need. All who turn honestly and sincerely to Christian Science for help will certainly find that divine power is as truly available today as at any time in the past.

The people who inhabit the world may be said to be divided generally into two classes,—the persecutors and the persecuted. When his persecutors were nailing Jesus to the cross, he said, "Father, forgive them; for they know not what they do." He had compassion even on them, "not imputing their trespasses unto them." When we are "persecuted for righteousness' sake," even by those who should know the truth, let us always remember him "who, when he was reviled, reviled not again; when he suffered, he threatened not." Persecution is often one of the greatest helps spiritually to the persecuted; and did not the Master say, "Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake"? In showing only compassion to all those who love or those who may think they hate us, we shall have no enemies, and we shall some time or other realize the fulfilment of that grand prophecy of Isaiah, "Thine eyes shall see the king in his beauty: they shall behold the land that is very far off."

INEXHAUSTIBLE SUPPLY.

CARL HORTON PIERCE.

BECAUSE of our past education and environment we have been accustomed to think of money as the basis of our supply, and the human mind insists that it is; whereas supply is found in the intelligence which enables us to solve the problems that confront us. A situation which seems insurmountable to the business man or housewife, is not insurmountable at all when one comes to analyze it in the light of Christian Science.

A little intelligent discussion; a willingness to yield one's will to the divine; a desire to take the step nearest at hand instead of trying to reach the top rung of the ladder before taking the lowest one; a meekness and gratitude for the privilege of solving the problem, rather than indignation because one has it to solve, and a righteous activity in proceeding to the solution,—these factors not only bring about satisfactory demonstrations, but they make it apparent that spiritual intelligence and not money is the means by which the answer has been obtained. Money cannot give the solution of our difficulties, but the reflection of intelligence, when brought into operation through unswerving faith and application, not only aids one to have the money at hand wherewith to meet his obligations, but it goes still farther by giving one those incidentals of harmonious life experience which mankind is wont to admit that money cannot buy.

This consciousness of supply as the manifestation of intelligence, obtained and retained, brings into one's experience more and more of affluence of thought and abundance of supply, so that not only one's own but the world's great need is met. For example, let us say that out of tribulation and suffering one has gleaned even a meager glimpse of that compassion which actuated Christ Jesus. From this well-spring of tenderness he is able to supply the needs of many others. Since "Love is reflected in love" (Science and Health, p. 17), the supply necessarily returns to the sender in whatever way will best meet his need. Certainly this is the experience of every earnest giver of good, every follower who is laboring in the vineyard, every faithful steward. In olden days we may not have been able to grasp the justice in Jesus' statement, "Whosoever hath, to him shall be given;" but in the light of Science we understand that every man "has" because intelligence is infinite here and now, is waiting always to be applied, and in reality is always an inseparable integer of man's spiritual consciousness. Therefore he who realizes that man has, "to him shall be given" in proportion to his exercise of this universally bestowed "talent."

Supply, then, means not only the receiving of good, as has been commonly believed, but the active doing of good; the intelligent application of our understanding of the divine Mind to every little detail of individual human experience,—the finding of a seemingly lost article; the outworking of a patent; the cleaning of a house; the founding of a business, —more than this, it means the giving out of truth in the healing work of Christian Science, which brings a rich return in blessings. While these other things are all related to human experience, they nevertheless have also a right to be, and are, governed harmoniously, even as Mrs. Eddy says in Science and Health: "Immortal Mind, governing all, must be acknowledged as supreme in the physical realm, so called, as well as in the spiritual" (p. 427). Some one has said that in no way is God to be comprehended except as He is made manifest in the lives of those about us. God's infinitude of supply must be cognized in the abundance of our patience and compassion. Thus, as mankind becomes more Christlike in deed, harmony is substituted for discord and abundant supply for want.

Concurrent with this growing realization that supply is expressed by the reflection of divine intelligence rather than by money or any material possession, what peace enters the heart of the Christian Scientist as he begins to realize that no man taketh his joy from him! His joy multiplies, and his supply of good multiplies, as he realizes that he is really laying up treasures where neither moth nor rust doth corrupt. There is a feeling of security which bank accounts never gave and which their loss can never take away. Panic, pestilence, famine, woe,—these are powerless to rob such a one of his realization of the divine affluence, and, as our revered Leader points out in Science and Health, "to those leaning on the sustaining infinite, today is big with blessings" (Pref., p. vii).

[Written for the *Sentinel.*]

A THANK-OFFERING.

BENJAMIN JOHN WADE.

THOUGH power in me may not abide,
To praise Thee, Lord, in numbers grand,
I thank Thee Thou hast not denied
The grace to hear and understand.

I listen while another sounds
The strings my fingers trembled o'er,
Rejoicing that such skill abounds—
If less in me, in others more.

Thus listening, I have learned the truth:
A father's heart is not more mild
To burning words of stalwart youth
Than lispings of the younger child.

So unto Love's attentive ear,
These matchless pæans, half divine,
Are not more welcome nor more dear
Than are these broken chords of mine.

SELECTED ARTICLES.

[Editorial in *Manchester* (N. H.) *Union.*]

The termination of the litigation over the estate of Mrs. Eddy, among other things, gives reassurance that when parties enter into a solemn agreement whose terms are drawn by attorneys of high ability, and specifically declared to be fully understood and accepted without reservation, such agreement will prove valid and binding. The story of this matter is familiar. During her lifetime Mrs. Eddy made a settlement with her heirs, making to them the payment direct and in trust of liberal sums of money on the condition that they themselves would not contest or question whatever disposition she might make of her estate at her decease. They accepted the proposition in what seemed to be the strongest and plainest terms that language could express, and received in full the immediate benefit of the financial terms therein contained.

Following her decease, however, and notwithstanding, action was brought contesting and questioning the disposition she had undertaken to make of her estate. Litigation was begun and carried forward in various courts and seemingly upon all the pretexts that able attorneys could devise, even to a bitter attack upon the religion which Mrs. Eddy had founded. As far as had been determined by the courts, the plain purpose of the testatrix had been sustained, when the undermined contentions are withdrawn in order that the terms of the agreement made during her lifetime and her wishes later determined might be fully carried out. It is a warranted conclusion that such would have been the outcome if the litigation had been terminated by court findings rather than by voluntary action.

Gratifying as the outcome is to Christian Scientists, it has the widest possible scope in the reassurance that carefully drawn and fully understood agreements cannot be successfully violated or upset later on by one party to the agreement, and if it shall be undertaken our courts will stand as a firm barrier against such an effort.

[Frederick Dixon in *Devon and Exeter Daily Gazette*, Exeter, England.]

I am sure that "Plain Peter" must be an exceptional person. It is perhaps a weakness that so exceptional a person should, behind the mask of anonymity, accuse those from whom he differs of dishonesty; but as Clerk of Edlin said of "the fighting instruction," there must be a reason for it which the ordinary man is too ignorant to discover. In his original article the critic wrote: "Cunning men have ever been quick to seize hold of this term and apply it to systems and devices from which they hope to draw immoral and unjust benefits, one such, for instance, being Christian Science." In his second article, he draws a discreet veil over this intemperance, but he kindly suggests that I am not quite honest. As for the list of distinguished men whom I quoted against him, he is good enough to admit that "we can, at least, give them credit for being sincere." At this point, the humor of the situation begins to manifest itself, and one remembers that it is "better to err with Pope than shine with Pye."

The simple fact is, that this critic has taken an entire column of your last issue to demonstrate, beyond cavil, that he has not the faintest suspicion of what Christian Science really teaches. He is falling foul of Mrs. Eddy the whole time for teaching something the orthodox theologians as consistently blame her for not teaching. The only conclusion, in short, it is possible to come to is, that he went out of his way, in the first instance, to be insulting to Christian Scientists, without having taken the ordinary means of discovering what Christian Science really teaches. Let me take a single example. He obviously imagines that Christian Scientists believe in an anthropomorphic God. They, of course, do nothing of the sort. If, however, you permit yourself to misrepresent an opponent to the extent of insisting that he define an isosceles triangle as a circle, there is no particular reason why you should not make a *reductio ad absurdum* of his conclusions. Do not, however, let us dignify such a process with the name of science. It is rather the way in which that astute Taoist, Chuang Tzu, disposed of the teaching of Confucius.

Still, if I may dare say so, I am not quite sure that this critic is so eminent a natural scientist as he gives us to understand. "All that real science asks," he writes, "is that any new theory propounded either by Peter, Paul, or Mrs. Eddy, shall be in harmony with established facts." Now, will he very kindly inform us what an established fact is in natural science? It was once an established fact that the sun moved round the earth; consequently the discovery that it was stationary was unscientific. It was once an established fact that the earth was flat; therefore the discovery that it was a sphere was most unscientific. It was once an established fact that matter was the only reality; therefore the whole of idealistic reasoning was hopelessly unscientific. It was even an established fact that the elements were unchangeable; therefore the discovery of radium was outside the pale of science. When you come to think of it, perhaps the only way to keep within this critic's definition would have been for humanity to continue dancing round mistletoe bushes with bodies painted green and vermilion; for, according to natural science, education has been disestablishing established facts ever since, and one cannot be quite sure that it is going to draw the line at the critic's conclusions.

Now, it so happens that Christian Science insists uncompromisingly that Science must agree with established facts, only it insists that those facts are not material, but spiritual. The critic, not having begun to know what Christian Science teaches, naturally has not begun to perceive where it diverges from natural science. I am therefore going to endeavor to explain to him. Natural science, its disciples insist, is confined to a knowledge of secondary causes, or physical facts; primary causes, or spiritual facts, being in the nature of things unknowable. It is precisely this conclusion to which exception is taken in Christian Science. A secondary fact, Christian Science replies, can only be relatively true, consequently is not an absolute fact. The primary fact must be the absolute fact, and the knowledge of primary facts must necessarily comprise the only absolute Science, for that which is not absolute is not scientific. Of course, if you are going to conclude that nothing can be known of primary facts, you, at any rate, are never likely to know anything of them, but that will not limit the knowledge of your neighbor. By this time the critic may have begun to discover why a Christian Scientist would not consider Huxley's definition of science adequate; not because, as he innocently imagines, it does not accept as a first cause what Matthew Arnold once fairly described as a huge non-natural man, but because it reduces Science to human opinions, always in a state of flux about secondary causes, instead of confining it to spiritual knowledge of the absolute.

The critic's Parthian shaft at Peter, Paul, and Mrs. Eddy is consequently an unfortunate one. God, Christian Science teaches, is divine Mind or Principle, the First Cause of all things that spiritually and eternally exist; consequently Science, as the apostle affirms, is a full or exact knowledge of God. "Jesus of Nazareth," Mrs. Eddy writes, "was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause" (Science and Health, p. 313). His gospel was the good news of this spiritual causation, expressed through his miracles, or object-lessons, in demonstration of the absolute truth of his theology. Peter, Paul, and Mrs. Eddy realized something of his teaching, and proved just so much as they understood in their healing of sorrow, and sickness, and sin; in a word, of all unlike God, or Principle. Christian Scientists are daily demonstrating their grasp of Principle in exact proportion to what the apostle calls their full, exact, or scientific knowledge of God.

[From *Australian Review*, Sydney and Melbourne, Australia.]

One of the most interesting developments of newspaper enterprise of recent years is the phenomenal success of a Boston two-cent daily newspaper, *The Christian Science Monitor*, which is not a proselytizing sheet or a religious paper in the usual meaning of the term, but a genuine, up-to-date newspaper of the highest class. Four years ago its first issue appeared as a pioneer of clean journalism, a newspaper which was professedly "to injure no man, but to bless all mankind." Perhaps because of the object thus expressed, or probably because of its title, but more likely because if it adhered to its professed mission to provide only clean and wholesome reading it would have necessarily to exclude from its news sheets every item of salacious scandal and withhold from its advertising pages everything of immoral or degrading tendency, its early failure was predicted by all but the characteristically optimistic Christian Scientists.

The prediction never came near fulfilment, for the paper was an unqualified success from the start. During the Republican national convention at Chicago, it established a record by accomplishing with complete success a daring and original journalistic feat. Instead of depending on copy transmitted to headquarters through the time-honored medium of "our own reporter," it rented space in a vacant store adjoining the convention meeting place, and installed for the occasion a new and complete printing plant, with business office and editorial rooms, and issued a special daily edition during the continuance of the meetings. The high editorial standard and typographical excellence of the Boston publication characterized the temporary edition, and the Chicago *Inland Printer*, in an appreciative comment on the efficiency with which the work of installation and organization was carried through, expresses the opinion that "the enterprise and progressiveness of *The Christian Science Monitor* are as worthy of respect as the high standard it has set in the cleanliness and wholesomeness of its reading matter."

In addition to the telegraphic services of the United Press Association, the *Monitor* has correspondents throughout the world who regularly supply items of general interest and information, thus making the paper readable and instructive long after the date of issue. The *Monitor* has a considerable Australian circulation, and we understand it has been admitted to the Victorian prisons, the responsible official having recognized in the scope and nature of its contents, which include no items of criminal information, and in its freedom from sectarian bias, features which render it specially suitable as a prison newspaper.

[Charles F. Kraft in *Tacoma* (Wash.) *Tribune*.]

A sermon on Christian Science reported in a recent *Tribune* contains much that is inaccurate concerning this subject. I appreciate the clerical critic's evident sincerity, and hope to present that which will clear up the confusion which manifestly has obtained. The text selected by our critic implies the belief that Christian Scientists do not live Christian lives. On the contrary, it is generally conceded that the adherents of this faith are exceptionally lovers of the truth. Instead of "tearing the Bible to pieces," this religious teaching elucidates the truths of the Bible, so that it becomes a daily practical help to the Christian Scientist.

Objection has been made to the Christian Scientists' use of the term "mortal mind," and the critic declares that man's mind is not "mortal." It should be understood that by "mortal mind" is meant the vacillating, finite sense of things which Paul styled the "carnal mind" and which he said "is enmity against God." Christian Science declares that the only perfect intelligence, or Mind, is God. This Mind is immortal, and the spiritual, God-created man reflects this Mind. It was through the operation of this Mind that the Master healed the palsied man to whom our critic referred, and cast out devils—evils generally. These demonstrations of the power of Mind to correct the errors of "mortal mind," Christian Science is today repeating, by destroying wicked tendencies, and in the conceded healing of what our critic is pleased to call "real" ills.

Right here let me say that Mrs. Eddy never has claimed that sickness is "imaginary." In "Science and Health with Key to the Scriptures" (p. 460), she says: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy." And in "Rudimental Divine Science" (p. 10) she defines disease as "a thing of thought manifested on the body." In other words, disease is the result of error, evil. Being abnormal, unnatural, the manifestation of error, disease is not a part of God's real creation. Jesus defined evil, or devil, as a lie and a liar. A lie is never true, and a liar is not to be believed. When the crippled woman was brought to him to be healed, his diagnosis was that Satan (evil, devil, a lie) had bound her. How, it may be asked, could evil, being unreal, bind her? We answer, In the same manner that a lie always causes trouble; that is, through the belief that it is true. Christian Science strips evil of its false claims of power to produce either pleasure or pain and so destroys both the desire for it and the fear of it. This teaching is daily proving itself to be the truth which the Master promised his faithful followers should know, and that should make them free.

Notwithstanding our critic's contention, we fail to find reliable authority for his assertion that "God does not mean that all who are prayed for shall get well." We prefer to agree with his next declaration, that "healing the sick is in accord with the word of God." To charge God with our shortcomings and failures to realize the answer to our prayers, seems to us to be merely a begging of the question, for the promises that "the effectual fervent prayer of a righteous man availeth much," and that "the prayer of faith shall save the sick," plainly do not mean "sometimes," but always when faithfully and understandingly employed. Is it unreasonable, then, to assume that our failures are due, not to God's unwillingness, but rather to our own lack of spiritual growth and understanding faith?

Pleading in behalf of *materia medica*, our critic refers us to the Master's declaration: "They that are whole have no need of a physician, but they that are sick." It should be understood that he was here referring to the metaphysical truth, the great Physician, which he was demonstrating, and not to the physician doctor as our friend would have us believe. Jesus did not employ material means in healing the sick, and it is safe to conclude that he never intended his followers to do aught but follow him in all his ways. When sending out the disciples to preach the gospel, he added the command to "heal the sick," as he had done; and later on he promised that all those who should believe on him (not merely believe him), should do the same and even greater works than he himself had done.

Theologians frequently mistake the Christian Scientists' refusal to accept the teachings of scholastic theology, to be a rejection of Christ and his atonement, but the truth is that Christian Science explains Jesus' mission rationally, and is giving to its adherents a clearer faith and greater spirituality of thought than they formerly possessed. Because this teaching explains the seeming contradictions of the Bible which material thought has placed upon it, and thus brings reason and revelation into accord, Christian Science churches are usually filled to overflowing at the public services, with honest seekers for truth. And this without display, effort, or elaborate programs. It is not always "false reports" which spread rapidly. Truth is mighty, and its progress cannot be stayed. The world is looking for more than mere doctrinal theories. It wants practical proofs of present efficacy and power, and Christian Science is supplying this demand. "The tree is known by his fruit" today, even as in the day of the Master.

[W. G. Watkins in *La Crosse* (Wis.) *Tribune.*]

A recent issue of your paper contained a reprint from the *Advent* in which misstatements are made about Christian Science. The critic's desire to be fair was obvious; nevertheless, even honest efforts to judge another correctly are fraught with an uncertainty which the master Christian recognized when he admonished his disciples to "judge not."

The reference to Christian Scientists as "Eddyites" savors of personalizing Mrs. Eddy's work—which is indeed the very opposite of what she taught and practised. Her years were spent in tireless effort to turn suffering humanity away from earth's vainglories and the shadowy substance of man's wisdom to the contemplation of the one living God who healeth all our diseases. What she impressed upon her students characterized her own attitude, as shown by the following quotation from page ix of the Preface of "Science and Health with Key to the Scriptures": "Today, though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ."

Instead of Mrs. Eddy's book being a Bible to Christian Scientists, it has proven a commentary for which they had long been looking. Its golden thread of pure logic has endeared the Scriptures to hearts that had waxed gross, and has enabled deaf ears to hear and blind eyes to see the message of love with its healing for "all the nations." Every member of the Christian Science church affirms his fidelity to that Book of books in subscribing to the church tenets, the first of which reads: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497).

As to the comment about a "successor to Mrs. Eddy," I would quote from an article in the *Boston* (Mass.) *Times*, that "it is quite as much out of place to talk of a successor to the Discoverer and Founder of Christian Science as it is to talk of a successor to the discoverer of America. There is nothing in the position of the revered pastor emeritus of the Christian Science church which could be succeeded to by any man or woman. Already Mrs. Eddy's teachings have in a large measure become her successor, and she will never be succeeded by anything else than the spiritual influence she has planted in human consciousness." Christian Science is not what our critic terms it, "quasi-philosophy," but is a demonstrable religion, as attested by its beneficiaries in all parts of the world.

[William J. Bonnin in *Manchester* (Eng.) *and South District Advertiser.*]

The whole of the vast volume of healing work that is being achieved in Christian Science is being accomplished through the understanding of God as the only Life, and consequently of true health as one of His manifestations. All disease is in some degree the manifestation of a limitation of life,—the human sense of life, that is to say,—and all healing is a freeing from such limitation. And so Christian Science approaches the question of healing with the demand that the profoundly important point is, not to be acquainted with the nature and claims of disease, but to know more about life and about its one and only source. To seek to cure by the use of human will-power, or through the agency of the human mind, is to employ the very medium through which disease comes, for more and more is it coming to be recognized that all disease is mental in origin, and such a looking for both sweet and bitter water from the same fountain cannot hope to be successful. In the light of Christian Science, all methods depending on any manipulation of the human mind are seen to be forms of mental suggestion, and mental suggestion is the polar opposite of Christian Science.

There can be no doubt that the most successful healing ever performed was that by the Founder of Christianity, and there cannot be any very serious question that he intended his followers to prove by their healing work their understanding of his teaching. Christian Science teaches that this duty is still imperative. It teaches that it was Christ Jesus' understanding of the truth about God and man which enabled him to heal; that this understanding is the reflection of the one and only Mind, God; and it also teaches that as we let that Mind be in us "which was also in Christ Jesus," we shall be empowered to carry out those works of salvation from evil which are characteristic of a practical Christianity.

[David Anderson in *Melbourne* (Australia) *Reporter.*]

"Science and Health with Key to the Scriptures" is the Christian Scientist's commentary on the Bible. It is so because he has found it more elucidating in its results than any other aid or commentary he had previously used. Probably the critic has likewise his favorite book of Biblical commentary, and a sermon with Scriptural text affixed is only the Bible with the preacher's comment; or, to use the critic's expression, "the Bible plus" the preacher. Science and Health is a metaphysical work, containing on every page statements of the absolute and the relative. To understand it, the book must be carefully studied from an unbiased standpoint, and the only way to become acquainted with it is to study it for oneself. Disagreement with its statements is conceivable, but it is just a little surprising that critics should challenge these statements without making sure that they understand them, and, on the strength of a not very thoughtful perusal of the book, should feel justified in throwing stones at those who do not accept their criticism.

The remainder of the present attack is given as an extract from a pamphlet in which Christian Science is characterized as a religion of hallucination, inconsistencies, and contradictions; a prayerless religion, and a religion without a Saviour. The last two assertions alone write down the pamphleteer as ignorant of the very ABC of Christian Science. But if one wished correctly to understand this critic's views on any subject, say, baptism, would the latter quote as authority, or commend, a pamphlet by a writer of a totally different belief, and who had no very clear knowledge of that on which he had written? The truth or error of Christian Science is not affected by opinion, and discussion centered on opinion tends only to doubtful disputation. "The hour has struck when proof and demonstration, instead of opinion and dogma, are summoned to the support of Christianity" (Science and Health, p. 342). Christian Science is a demonstrable religion, logical and practical, based on the potency of divine Love. Pulpit attacks on it do not appeal to the twentieth-century hearer. In face of such opposition it moves calmly on, adding to the number of its churches and societies with regular Sunday services at the rate of two per week.

[From an editorial in *Indianapolis* (Ind.) *Independent.*]

Mrs. Eddy discovered that if a person keeps his mind clean and fixed on higher things, his body will be in good health. The "pestilence that walketh in darkness," and "the destruction that wasteth at noonday," will not harm a true Christian Scientist. Christian Science really makes the sick well. A thousand cases can be cited in this city in which physicians have given up patients and Christian Science practitioners have restored them to health. The Christian Science faith is optimism of the most exalted kind. Certainly if it does no good, it can do no harm. But it does good. It gets a patient into a calm state of mind; it fills him with faith and a firm belief that good health is his birthright and that he may have it. This is half the battle in combating a bodily ailment; and the healer continues until, finally, the one-time sick man walks the street well, cheerful, and hopeful. Furthermore, Christian Science raises the standard of citizenship. It makes people clean; they realize that cleanliness really is next to godliness, and that decency and right living go hand in hand with good health and long life.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"FEAR YE NOT."

THROUGHOUT Science and Health Mrs. Eddy points Christian Scientists to the need for faithful endeavor on their own part that they may attain to the freedom from all evil which is man's heritage. She holds out no hope that those who seek ease and comfort for ease and comfort's sake shall progress very far toward the goal in Christian Science, but keeps before them the paramount requirement of salvation as laid down by the Master, "Seek ye first the kingdom of God." No one, however, has put greater stress than has she upon the encouraging promises of both the Old and the New Testaments which open heaven to them that love God. Nor is this the far-away heaven for the attainment of which one must pass through the dark portal after having patiently endured the trials with which he believed himself to have been afflicted as a test of his faith. Rather is it a present-day realization of the peace that passeth understanding, of the harmony which is an outward manifestation of the indwelling of the Holy Spirit, of the establishment of the kingdom of God in the hearts of men. Jesus said, "Lo, I am with you alway;" and it is the consciousness of this divine ever-presence, too pure to know or behold evil, which dispels the illusion of inharmony, casts it out for the nothingness that it is, and points us to Him who is "our refuge and strength, a very present help in trouble."

Perhaps few but Christian Scientists fully appreciate these promises, because only those can trust God in all things who have recognized that "a higher and more practical Christianity, demonstrating justice and meeting the needs of mortals in sickness and in health, stands at the door of this age, knocking for admission" (Science and Health, p. 224). Christian Scientists regard all these promises as possible of fulfilment, and they also realize that the first step toward their fulfilment must be the recognition of the omnipotence, omniscience, and omnipresence of God, and the consequent unreality of all which is unlike Him. With this recognition of the allness of God, and of man in His likeness, the element of fear which so largely enters into every human problem is eliminated, and in its stead is the consciousness that to one thus guarded belongs the assurance of the psalmist: "There shall no evil befall thee."

The Master announced his mission to humanity in the words of the prophet Isaiah: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised;" and wherever he went the shackles with which error would assert its dominion over the sin-sick and suffering fell away at his word. Such, too, was the commission laid upon his followers, that they should likewise heal the sick and comfort the sorrowing, rouse men from the sense of lethargy and despair to claim the freedom which is theirs by the gift of God.

In the light of the teachings of Christian Science we have come to see how unreal and unnecessary is this age-long servitude to the claims of mortal sense that humanity has rendered; that it is neither the law nor the will of divine Love that mankind should be subject to sin and the suffering which is its consequent, and we have enlisted in this new crusade which has "sounded the keynote of universal freedom, asking a fuller acknowledgment of the rights of man as a Son of God, demanding that the fetters of sin, sickness, and death be stricken from the human mind and that its freedom be won, not through human warfare, not with bayonet and blood, but through Christ's divine Science" (Science and Health, p. 226). Faced fearlessly, the illusion that seemed so real vanishes at the word of Truth, and through daily overcoming of the errors of sense we press forward to the goal, the final deliverance from evil, when we shall fear no more. Evil may spread its nets, set forth its cunning devices, but naught can stay the progress of Truth, for "my spirit remaineth among you: fear ye not," saith the Lord of hosts.

ARCHIBALD MCLELLAN.

PERFECTION DEMANDED.

IT is not always borne in mind that perfection is a demand of Principle which applies to all we think, say, and do, from the least thing to the greatest, and that lapses from obedience to this demand are sure to cost us dear. Christ Jesus said that the one who knew his master's will and did it not should be "beaten with many stripes;" from which saying some have argued that it would be better not to know the moral and spiritual requirement, because of the greater obligation apparently resting upon such a one. This is, however, merely an evasion of the real issue involved, which is the fact that man is a spiritual being and no rest can be found for any one except as he yields cheerful and ready response to the demand to advance toward perfection at every step of the way. This means, of course, that we should strive each day more earnestly after the spiritual; and so doing, we shall find that it is man's native element as truly as the air is that of the bird, and that man could not if he would live in an atmosphere less pure, since God is Spirit and man His likeness.

In the epistle to the Hebrews we find certain passages which seem to teach that one who has stumbled and fallen after having taken the first steps toward a Christian life, is in a hopeless condition. Here it must be remembered that the apostle was addressing those who presumably believed in the fall of man from a purely spiritual condition to a grossly material one. This mental state held tenaciously to material things even in attempting to approach the infinite, although centuries before that time the prophet Micah said that God only required of men "to do justly, and to love mercy, and to walk humbly" with God. But the tendency of the carnal mind, then as now, was to multiply doctrines and ordinances, in forgetfulness of the demand that we leave behind us these "rudiments of the world," and "go on unto perfection." Religious history tells us that at one time it was taught that if any fell into sin after they had been baptized they were eternally lost, even though this rite had been performed in their infancy. Happily our Lord never taught any such thing, but even in the case of Peter, when foreseeing his sad defection, the Master saw beyond it his entire rehabilitation, and said, "When thou art converted, strengthen thy brethren."

In Christian Science we learn that mortal man is subject to frequent lapses, and that only as the mortal sense is "put off" by denial and demonstration are we ready to prove what man is, and to realize that the demand for perfection is not "grievous" but "joyous." Christian Science declares for "perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259). This includes perfect health and perfect morals, perfect justice and perfect purity, as the ideal which should never be lost sight of. If, however, one should seem to express sickness instead of health, it would not prove that the divine ideal had lapsed, but that the individual had temporarily lost sight of it, for without a clear recognition of this ideal there can be no true health or moral progress.

If we were to concede that an evil condition could not be overcome at any stage, we would be giving to evil more power than to good, a belief which has held professed Christians in almost hopeless bondage to sin and disease, until emancipation has come to humanity through the truth

Digitized by Google

revealed and demonstrated in Christian Science. Then the law of the absoluteness of good is seen, and it restoreth the soul, the spiritual sense. Then, too, as this law is written upon the heart and mind, according to promise, the "new and living way" to perfection is reached, and we draw near to our Father "in full assurance of faith."

ANNIE M. KNOTT.

THE SOWER.

"I KNOW that the healing work is the one thing I ought to do. I have my time, am independent, and long to be useful; but I don't feel that I am worthy, it doesn't seem to be for me." The speaker was an earnest Christian Scientist, a long way above the average in her apprehension of the life-problem and in her sincerity of devotion to its solution, and yet through this door of humble reserve she had given entrance to an enemy which was seeking to interdict an activity and usefulness for which she seemed to be splendidly equipped.

This disposition to blackball one's own usefulness by continuous self-depreciation is never fully healed till he has come to realize that divine Truth is the redemptive fact, and that the imperfections of the channel through which it is conveyed in no degree lessens its life-giving, sickness-healing power. It is fitting that we feel impelled to remove our shoes ere we essay to follow the footprints of the Nazarene, but it is not fitting for us to forget that though the enunciation be imperfect, the truth spoken is able to accomplish that whereunto it is sent. The Master defined our ministry in that brief sentence, "A sower went forth to sow." The husbandman has entire confidence in the growing power of the grain, and having entered the awaiting field, so sings the poet,

> with the august gesture of a god,
> A gesture that is question and command,
> He hurls the bread of nations from his hand.

He has done his part in committing the good seed to the soil, and he rests in the unwavering assurance that these little life-centers can take care of themselves, and that, with the blessing of the early and latter rain, which heaven bestows, they will also take care of the crop. He has sown the seed as the conditions favored, and he leaves the coming miracle of good to its care.

This much we also can do. However great our seeming lack of wisdom and of worth, we can bring the truth to those who, impelled by need, are willing to receive it, and we can leave it in the soil of their awakening thought to accomplish a work which is entirely beyond both our philosophy and our capacity to do, knowing that the imperfections of the sower do not devitalize the humbly spoken words of Truth. Christian Scientists have great occasion for thankfulness that despite the seeming handicap which unillumined and uncanny sense, the fears and faults and foolishness of human personality, has invariably brought to its efficiency and progress, the truth of God has nevertheless accomplished miracles of grace in all the centuries, and that today an apprehension of the Principle and rule of the Master's teaching is attainable which renders it the privilege, as our Leader has said, of "every child, man, and woman,—to follow in some degree the example of the Master by the demonstration of Truth and Life, of health and holiness" (Science and Health, p. 37).

This plea of unworthiness makes a show of humility and reverence for high things which seems so entirely in keeping as to deceive sometimes the very elect, though not infrequently it is in fact a cover for mental laziness, for content that others should do our work, and for an utterly false concept of the relation of human sense to the divine achievement. As such it is a subtle mesmerism of which we do well always to be reminded when we read those words of St. James: "Resist the devil, and he will flee from you."

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

AUSTIN, TEXAS.—First Church of Christ, Scientist, of Austin, had its beginning in the meeting together of a few people who had been mentally and physically helped by the teaching of Christian Science. They first met in a private home in 1889, but as the interest grew larger, various places were from time to time rented, until a few years ago a hall was secured in the business section of the city. Not long since, the church purchased one of the most desirable building sites in the city, located at Colorado and West Fourteenth streets, almost within a stone's throw of the state capitol. The interior of the stone building on this property has been entirely remodeled and handsomely furnished, with the reading-room adjoining the church proper. This building will be used until the increased demand for more space shall necessitate the erection of a larger edifice, when it is designed to erect a beautiful structure in keeping with the location and the requirements of the church.

Extensive improvements are now being made about the grounds, including a cement walk and curbing to extend around the entire street frontage. When this is finished, the grounds will be terraced and prepared for landscape gardening in the spring. It is also designed to complete the interior furnishing before long by installing a small pipe organ in a wing to be erected on the east side of the building.

Austin Daily Statesman.

SAN FRANCISCO, CAL.—*The Christian Science Monitor* committee in its annual report says: The Thanksgiving edition was more widely circulated this year. Over two thousand names were forwarded from San Francisco, in cooperation with the distribution committee and several small societies up-country. The handling of this special edition in bulk for direct distribution was tried and found satisfactory, and this feature of the work will be greatly enlarged upon next year. The field has been asked to renew its activities, and your committee is prepared to launch forth upon a broader basis, placing the *Monitor* wherever it may do good, provided we are welcomed. In no case do we force ourselves upon unwilling minds. It is realized by the committee that four hundred subscribers are not our limit for next year, but a rich harvest of subscribers, readers, and friends, surpassing our fondest realizations.

Correspondence.

ITHACA, N. Y.—It has been my privilege to be a member of the lecture committee for some time past; consequently I have been in a position to know of the attitude of the newspapers toward Christian Science. We have persistently knocked at their doors, but with unsatisfactory results, so far as lecture work was concerned, until last year, when we succeeded in getting the annual lecture printed in full in one of the papers. This year, when the editor-in-chief of our leading newspaper, the *Ithaca Daily Journal,* was approached in the interest of Christian Science, he was most courteous and kind, and after listening to our reasons for asking his paper to publish the lecture in full, he very kindly agreed to accept the copy as it was and gave us some very valuable points. The lecture appeared in full, and in splendid form and position. The attendance at the lecture was, we think, larger than ever before, and the audience was mainly composed of thinking men and women.—*Correspondence.*

SAN BERNARDINO, CAL.—With a view of eventually erecting a handsome new structure, First Church of Christ, Scientist, has completed arrangements for the purchase of sixty-eight additional feet of frontage on E street, just south of the present church building. This will give a total

Digitized by Google

frontage of one hundred and twenty-six feet on E street and sufficient depth to make a commodious building site.

Owing to the growth of the congregation of the Scientist church during the past two years, it has for some time been recognized that steps must soon be taken toward a larger and more modern church home, and the arrangement to secure the Curtis property has been the outcome.

San Bernardino Sun.

LEXINGTON, KY.—One year ago First Church of Christ, Scientist, moved from its rooms on Second street to the large banquet hall in the Merrick Lodge building, where we have grown under demonstrations of love, and where at our last lecture there were over five hundred in attendance. Our growth is also shown in the fitting up of a rest-room at our county fair, where hundreds of pieces of literature were distributed. We are now considering a beautiful site on which to erect a church edifice, and we have set aside the last Sunday of the months which contain five Sundays for contributions to the building fund. We were gratified by a generous response on the twenty-ninth day of December.

Correspondence.

WHITTIER, CAL.—On Bailey street, at the southwest corner of Central park, one of the finest locations in the city, is the new edifice of First Church of Christ, Scientist. The lines of the church, inside and outside, are restful and pleasing. On the main floor are the auditorium, the reading-room, and offices, while in the large basement is the Sunday school room.—*Whittier News.*

GRAND ISLAND, NEB.—First Church of Christ, Scientist, has completed and is now occupying its new building, a frame structure somewhat of the bungalow style and located at the corner of Third street and Greenwich avenue, with a north front. The dimensions of the auditorium are 27 x 40 feet, and the seating capacity is about one hundred and thirty.—*Correspondence.*

FORT COLLINS, COL.—The members of the Christian Science faith who have been holding their meetings in the Unitarian church, are now holding services in rooms which have recently been fitted up in the basement of the First National bank. The reading-room will also be located in the building.—*Fort Collins Express.*

PENDLETON, ORE.—Articles of incorporation have been filed by officers of First Church of Christ, Scientist, of Pendleton. The purpose of the new corporation, as stated in the articles, is to perpetuate the teachings and practise of Christian Science.—*East Oregonian.*

OAK PARK, ILL.—The Christian Scientists of Oak Park have completed their plans for a church building to be erected at the corner of Euclid avenue and Pleasant street, where they expect to break ground in the near future.

Correspondence.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

NORTH YAKIMA, WASH.

The lecture on Christian Science by Virgil O. Strickler in the Masonic Temple hall was well attended by an appreciative audience. J. Lenox Ward, prosecuting attorney, in introducing Mr. Strickler, said:—

The cause of the enthusiasm of the adherents of Christian Science is that they believe they have caught a glimpse of the true nature of God; while their explanation of the violent criticism by their opponents is that their opponents are fiercely attacking a misconception of the teaching of Christian Science, and not the teaching itself. It may be well to act upon the admonition of Gamaliel of old, "Let them alone: for if this counsel or this work be of men, it *will* come to naught: but if it be of God, ye cannot overthrow *it;* lest haply ye be found even to fight against God." Whether or not this doctrine is of men or of God, and whether or not it is a dying or a living belief, the fact that in the third of a century since its foundation it has established churches in all civilized countries and in all cities of any importance in this country, shows the prosperity which the church has enjoyed. It is time, if criticism be made, that it be made intelligently, and that all people should understand its precepts and Principle, as most of the differences of opinions and anguish of mind are caused by misunderstandings. It is well people are desiring to get the truth; and I believe that is why you are here tonight, to gain a more thorough understanding of the doctrine and Principle of the Christian Science church.—*Yakima Herald.*

ALTRINCHAM, ENGLAND.

Bliss Knapp, who lectured at the Public hall on Christian Science, was greeted with a large attendance. W. Melland, who presided, said this movement had been so very much misunderstood in the past, and was being misunderstood today, though in a lesser degree,—very often due to sheer ignorance,—that it seemed only right that a board of lectureship should be established which could send its lecturers all over the world to do away with the misapprehension under which Christian Science had lain for so long. That this misapprehension existed was not, he thought, at all astonishing when they remembered how much people took their opinions of subjects ready-made from the newspapers. The daily press had not grasped the meaning and significance of Christian Science, and therefore when it did speak about it in its columns it frequently misrepresented it.

This religion had made enormous strides, especially in latter years, and he very much doubted whether there was a single country in the whole of the civilized world but what had some adherents of this new-old faith. This religion was attracting very large numbers of people for the reason, it seemed to him, that it did not offer an empty creed, but something which many other religions did not, namely, a direct inspiration, and it had eminently a bearing on the daily lives of its adherents. Many thousands were turning toward it today, but he imagined that Christian Scientists did not lay very much stress on mere numbers. He fancied that what they asked was, Were the followers of Christian Science living the Christ-life? On the answer given to that question lay the verdict as to whether success or failure was being achieved.

In the north of England and in that part of the world many people were turning toward Christian Science because it was an eminently practical religion. In that part of the world they were supposed to be very practical, and naturally a religion that bore upon daily lives and did not simply theorize, but proved its statements step by step, had a very strong attraction for them, and although it was in the highest degree metaphysical it was, for the very reason of being

Digitized by Google

able to give those proofs of its truth, open to the understanding of the most simple-minded persons. To those persons who disapproved of Christian Science, one would say that if it was not true they need have no fear of it. If it was not true it could not live. If it was of God, and was of the truth, then nothing could stop it. It had come to stay, and the more it was criticized and the more it was reviled, the quicker it would come. That had always been so in the history of persecution.

One thing that had attracted him very much to Christian Science was the attitude it bore toward those who reviled it. It did not revile in return; so far as he had ever seen, it went on its quiet, peaceful way. There was one feature that he had specially noticed when he had come across Christian Scientists, and that was the tone and feeling of happiness and harmony, and of calm and concord, that seemed to reign among them. He had met a good many in that country, in the United States, in Canada, France, Belgium, Switzerland, and wherever he had been among them he had noticed that quality.—*Altrincham Guardian.*

WHEATON, ILL.

Frank H. Leonard, who lectured on Christian Science in Library hall, was introduced as follows by Albert C. Swan:—

The question "What is truth" is answered in Christian Science by demonstration. Christian Science has come, to quote the words of the prophet Isaiah, "to preach good tidings unto the meek, to bind up the broken-hearted, to proclaim liberty to the captive, and the opening of the prison to them that are bound, to proclaim the acceptable year of the Lord, . . . to comfort all that mourn; . . . to give unto them beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." In fact it has been only through the wonderful works which it has accomplished, and the gratifying results accorded to thousands, yea hundreds of thousands of its happy adherents and followers, that it has been able to circle the civilized globe. Christian Scientists are not disposed to force their views upon others, and it is not the purpose of the lecturer to convert anybody to its faith, but that Christian Science may be set before the public in its true light. Christian Scientists have accepted this teaching because through it they have been able to enjoy a greater measure of peace, of life, of happiness, of hope, a greater measure of all those things which go to make for the happiness and well-being of mankind. Christian Science teaches the omnipotence and omnipresence of God. It has no unkind word, it harbors no malice, and bears no hatred toward those of differing beliefs and opinions. It is the religion taught by the golden rule; it is to be lived for happiness' sake. It is a religion intended for the rich, the poor, the halt, the blind, the strong, the weak; for the sick and the sinning. It teaches the fatherhood of God and the brotherhood of man.

Correspondence.

WATERBURY, CONN.

The annual lecture on Christian Science was delivered at Leavenworth hall by Francis J. Fluno, M.D. Dr. Fluno was introduced by Representative Seth D. Bingham of Naugatuck, who spoke as follows:—

You have been invited to attend this lecture to hear one propound to you the objects, the aims, the tenets of Christian Science; to tell you what it teaches, what it practises, what it accomplishes; to correct mistaken, erroneous impressions regarding it, and to acquaint you with the wonderful message of peace and love that it proclaims. We view the turbulent, disturbed, chaotic religious and political atmosphere of this time, not with alarm or superstitious fear, but with supreme confidence and an abiding faith in the power and supremacy of truth and good to overcome and eliminate all error. We regard compassionately the unequal struggle of humanity for better conditions, for health and harmony and happiness, and we triumphantly point you to that unbounded, never-failing, ever-available source of all supply, divine Love, for a remedy. We affirm that Christian Science is the most potent, the most efficacious therapeutic agent ever known in this or in any other age of this world; and in verification of that statement we proudly yet humbly offer you the testimony of thousands who have been healed of sin, disease, and fear, of poverty and want, and who now rejoice in the glorious liberty of the promise.—*Correspondence.*

POTTSVILLE, PA.

William R. Rathvon delivered a lecture on Christian Science at the Y. M. C. A. hall. He was introduced by Attorney A. D. Knittle, who said:—

This is an age of education and enlightenment, which brings in its train advancement in all the affairs of humanity. Witness the tremendous strides taken in the past few decades in electricity, mechanics, aeronautics, and all the other sciences. Why not then in religion, the very science of life, both material and spiritual? If by progression and enlightenment, brought about by modern thought, we can develop a religion freed from the mists of doctrinism and ecclesiasticism, so simple and clear that it will approach the religion taught by Christ in his lifetime, the world will be the gainer. I am not a Christian Scientist, but I have a number of friends who are; and I say to you that if you and I by studying Christian Science can gain that peace which I personally see is characteristic of them, we shall be more than repaid for our investigation.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Ashland, Ohio.—Ashland opera house, 8 p.m., March 3.
Ashtabula, Ohio.—City hall, 7:30 p.m., March 6.
Augusta, Ga.—The Grand, 3:30 p.m., March 2.
Cheltenham, Gloucestershire, England.—Town hall, 3 p.m., March 15.
Chicago, Ill. (Seventh Church).—Church edifice, 5318 Kenmore avenue, 8 p.m., March 6 and 7.
Cincinnati, Ohio (First Church).—Emery auditorium, 8:15 p.m., March 7.
Deadwood, S. Dak.—Opera house, 3 p.m., March 2.
Greenfield, Mass.—Grinnell hall, 8 p.m., March 4.
Kingston, N. Y.—Association hall, 507 Broadway, 8 p.m., March 3.
Leeds, England.—Town hall, 3:15 p.m., March 2.
Leavenworth, Kan.—Church edifice, corner 6th and Spruce streets, 8 p.m., March 4.
Montrose, Col.—Church, South Second and Park avenue, 8 p.m., March 6.
Philadelphia, Pa. (First and Second Churches).—Metropolitan opera house, 3:30 p.m., March 2.
Portsmouth, Hampshire, England.—Portland hall, Southsea, 8 p.m., March 14.
Tallahassee, Fla.—High school auditorium, 8:15 p.m., March 6.
Toledo, Ohio.—Valentine theater, 3:15 p.m., March 2.
University of Michigan, Ann Arbor, Mich.—Sarah Caswell Angell hall, 8 p.m., March 4.
Vancouver, B. C. (First and Second Churches).—Dominion hall, 8:30 p.m., March 7.
Willmar, Minn.—Opera house, 8 p.m., March 6.
Woburn, Mass.—Lyceum hall, 3:30 p.m., March 2.

TESTIMONIES OF HEALING.

I am more grateful for Christian Science than I can find words to express. I came to it as the result of the wonderful healing of a dear friend. I had been a physical wreck for nearly three years, having been a sufferer from a disease of the stomach and bowels in its worst form, and from nervous exhaustion. I had also received a very serious internal injury, and some of the best physicians of this city had told me that a severe operation was necessary before I could ever be well again. I had, however, put it off so long that they were afraid to operate on account of my weakened physical condition, so after trying the different medical schools, also electricity, massage, and last of all will-power, I thought there was nothing else for me.

It was after this that I decided to try Christian Science, as when I saw what had been done for my friend I remembered that God is no respecter of persons and that what He had done for her He could do for me. My second thought was that what God could not do, man need not try to do, and in this state of mind I decided to lay all material means aside and take my first treatment. I had been confined to my bed for three weeks and was hardly able to raise my hand, but as I did not want my husband to know what I was going to do, I got up and dressed myself, though with great difficulty, and went to the practitioner. I said nothing to any one about it, but I was beautifully healed of every ailment in that first treatment.

In this connection I also wish to state that during the last week I was in bed we had to call the physician three different times during the night, as I would have such severe sinking-spells from weakness (I had not been able to eat any solid food for nearly eight months). The last time, we called the doctor about three o'clock and he stayed several hours. When he left he remarked to a neighbor that he thought my departure was only a matter of a short time. It was, however, on the following day that I was healed in Christian Science, and I at once threw away a large quantity of expensive medicine. I continued the treatment in Christian Science the rest of the week, to be sure that I was well, as my healing was so wonderful I could hardly realize it was permanent. That was three years ago, and ever since then I have been healthier, happier, stronger than ever before. I also have a greater sense of peace and content.

I was greatly reduced in weight when I took my first treatment, but after being in Science only three months I had gained wonderfully. About a year later I had a remarkable demonstration at childbirth. A child was born to me, a thing which the doctors had told us would be utterly impossible. I was confined to my bed only three days, and in a week was doing my usual housework. Since then we have had many proofs of God's care for our baby, myself, and husband, and for all these blessings, and the wonderful spiritual enlightenment which Christian Science has brought me, I am more grateful than I can find words to express,—grateful to know that God is Love, and grateful to Mrs. Eddy, who has given humanity this wonderful understanding of God as All-in-all.

MRS. J. R. SCHERRER, Kansas City, Mo.

I would like to tell a few of my experiences in what Christian Science has done for me. When I first heard of it, I attended the services a few times and then borrowed a copy of Science and Health. During the reading of that book I lost the habit of smoking, which previously I had been trying to give up myself. About three months later I asked for treatment for very severe pains in the back which had been troubling me for some time, and was healed in one week. A fortnight later I left off a body-belt which the doctor had ordered me to wear fifteen months before. About five months later I had inflammation in one of my eyes for five weeks, during which time it seemed to get worse, and finding that I could not overcome it myself, and having a very important engagement to attend a week later, I asked for treatment from a Christian Science practitioner, and was completely healed before the time for the engagement arrived.

For these healings and for many other blessings obtained through the knowledge of Truth, I am very grateful, and for the new understanding of the Bible gained through the study of "Science and Health with Key to the Scriptures" I cannot express my gratitude. My thanks are due to all who have so kindly helped me to attain to this understanding, and also for the literature, which is such a great help to me. Most of all, I am grateful to God, who gave humanity in Mrs. Eddy so wise and practical a Leader. I hope this testimony may be of benefit to some one who is like myself a working man.—THOMAS ALLEN, Rochdale, England.

I wish to bear witness to what Truth has done for me. In 1897 I became a sufferer from what was pronounced a disease of the hip-joint. About this time my first baby came, and for months I was in a most hopeless condition. The disease presented itself again before the birth of my next three babies, so that it was necessary for me to have an operation each time. The last one was in 1903, when the spine also had become diseased. At this time three different surgeons pronounced my case tubercular disease of the hip-joint and spine, and as soon as I had recovered from the operation a change of climate was advised, as my lungs were diseased.

In 1907 we moved to Watsonville, my husband thinking the change would benefit me. We had been there but a short time when my father visited us and gave me a copy of Science and Health, telling me it was the key to the Bible. I shall never forget the joy and peace that came to me from the reading of this book. I was healed in one night of the lung trouble, also of a bowel disorder from which I had suffered since childhood. I began to study the Lesson-Sermons and other literature of Christian Science, this giving me a better understanding of the Bible. I have had two children born since coming into Christian Science, but have had no return of the disease, for which I am very grateful.

Words are inadequate to express my love and gratitude to God for His goodness to me. I now realize more than ever how much we owe Mrs. Eddy for the divinely authorized way shown us. It is true that God is ever present and with Him all things are possible.

MRS. KATE E. CRAMER, San Jose, Cal.

I wish to state what Christian Science has done for me. In December, 1910, I was taken with an attack of stomach trouble and nervousness. I sent for a physician about three days later, who diagnosed the case and prescribed three kinds of medicine. He said that I must not eat certain kinds of food for a long time, and put me on a restricted diet. This physician went to Chicago after he had made two visits, and as I was not improving we called another physician, who prescribed different medicine but advised me to eat meat to get some strength. I did so, but as I seemed to be growing worse I discontinued this treatment, as it caused me so much distress. I was then advised to try other things, but they all had to be discontinued on account of the great suffering they seemed to produce. I again changed my physician, and continued for four weeks, but grew just a little worse each day, so that I at last realized I must look elsewhere for help.

My thoughts turned to Christian Science, although I had never heard or known anything about it except as a church. I telephoned to a Scientist and asked him to come to me, and upon his arrival was advised to procure a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Having done so, I asked for a practitioner, who

Digitized by Google

came and very kindly pointed out some portions which would be specially helpful to read. He gave me three treatments, after which he informed me that he had to go away, but would get me another practitioner. After a few treatments by this lady, I noticed that I was improving quite fast and that fear of food had left me. I was gaining strength, was able to sleep all night, and a feeling came over me that was comforting and beyond expression. I also found I was gaining daily in weight, and I was able to walk six to eight blocks after ten days' treatment. I was able to go to work after about three weeks, and did the usual amount with ease.

I am unable to express in words my gratitude for being led into Christian Science. I am grateful to God; also to Mrs. Eddy, who was the channel through whom this healing truth came to mankind. I also wish to state that I am grateful for the ability to overcome all temptations to dishonesty.—A. R. SCHWARTZBACH, Mitchell, S. Dak.

I give this testimony with the hope that in some way my experience may help others. In 1908, looking back upon fifteen years of despairing invalidism, pain, and seemingly unbearable sorrow, I stood facing Christian Science, the key to liberty. I had thought much of God all my life, yet I got into this awful tangle because I made evil real. When, however, the truth was seen, I threw away all medicine, and waited and watched for the physical change to come; yet it came not, because I had not obeyed the command "to be absent from the body, and to be present with the Lord." I could not see this as a necessity at that time, so the struggle went on, weeks drifting into months of clinging, doubting, and striving, my physical condition seemingly growing steadily worse.

One day, as I was suffering intensely, I called up my practitioner, and sent her a wave of self-pity, doubt, and fear. Like a shot from a cannon came back the answer, and the word of Truth penetrated deep into my sense, startling me out of self into God. The receiver was thrust into its place without a word, and I quivered as if I had been struck. I have, however, been deeply thankful ever since for this wound made by "the sword of the Spirit." I saw plainly that I must make a clear decision. This meant either to go back to *materia medica*, which had seemed to hold the pain in check so that I could endure it, or turn away and face what to my thought meant the awful fear of increasing pain and death. Before I emerged from the telephone booth I had repeated the words of Job, "Though he slay me, yet will I trust in him,"—with all that I was or all I ever hoped to be. In spite of this decision I grew steadily worse, new complications setting in; yet no "wavering" came to me, for I had made my decision forever, and I had no desire even to look back.

An experience which came soon after this showed me that my greatest need was to realize that when a definite choice is made between the spiritual and the material, the healing has really taken place. I did not at first understand this, but as a friend offered to help me, I accepted gladly, and in fifteen minutes I arose from the bed "every whit whole." I was healed absolutely, and fearless of any return of the disease. I have been constantly employed since, and have had no sense of any of my former ills. I am always well, happy, fearless, glad, and free. I was at the same time healed of a great and seemingly hopeless sense of sorrow, almost despair. This has all been wiped out, and I have almost forgotten I ever grieved. My greatest joy comes to me through the knowledge that I can now help others, and I submit this testimony with the assurance that many will see the way to the healing power of Truth. In leaving behind us all belief in material means, we gain all true gifts,—life, health, strength, and peace.

Words cannot express the gratitude I feel to God, or to our faithful and God-strengthened Leader, who was a pure channel through which the love of God flowed freely. My gratitude also goes out to Christ Jesus, who showed us the beauty of selflessness and the power of Truth and Love. I am deeply thankful that a waiting world has been given this glorious truth which will set all men free.

MRS. ADELL LONERGAN, Chicago, Ill.

[Translated from the German.]

I would like to add my expression of sincerest gratitude for all the benefits I have experienced through Christian Science. In 1909 an abdominal trouble of a stubborn nature manifested itself, and for a whole year caused me terrible suffering, so that it became utterly impossible for me to attend to my household duties. We applied to a specialist in Spandau, under whose care I remained six weeks; but there being no indication of improvement, we went to another physician for women's diseases, who agreed perfectly with the former physician's diagnosis. I spent nine months under his care, but to no avail; for although I was relieved of the pain somewhat, I did not get well.

One day, when life seemed a burden, a dear friend told me about Christian Science. I had never heard of it before, but I felt as if a hope had arisen within me. I anxiously asked for some copies of *Der Herold der Christian Science* to read (which were gladly handed to me), and having quickly made up my mind to follow my innermost desire, I decided to put all my trust in God. We now went to Berlin, in order to call on a practitioner. She gave me several treatments, with the marvelous result that I recovered my health, and felt better than ever before in my life. In the spring of 1911 I became afflicted with a sore foot, which was healed with a few treatments in a wonderful way; and when some time ago I fell and injured myself, the practitioner lent me her faithful assistance, and the pain disappeared as quickly as it had set in.

Words fail to express the gratitude I feel that our heavenly Father should thus have caused the light of Truth and Love to shine into my life, for I now have the certainty that there can be no evil or inharmonious workings in His child. I am also grateful to Mrs. Eddy for having again brought to the world this wondrous revelation of the Christ-power.—FRAU ANNA KRÜGER, Parey a. Elbe, Germany.

I wish to acknowledge publicly what Christian Science has done for me and mine. I had been a church-member for twenty years, and my husband was an elder and an active worker in the church, but we could not find a satisfying faith. We read the Bible, but neither rest, peace, nor health came to us, since we were looking for good in material things, where it cannot be found. Finally, Christian Science was brought to me, and I began the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. At that time I was expecting my three-year-old child to pass away, as it did; and this was a burden I had to carry myself, I thought; but through study of the text-book I came to understand the meaning of Christ Jesus' loving invitation: "Learn of me; . . . my yoke is easy, and my burden is light." New hope arose in me, and I soon realized that Christian Science brings us so near to God that all discord of the body is destroyed, and that there is neither yoke nor burden to be borne, except as we allow mortal mind to deceive us.

I want to say that the understanding of Christian Science which I have gained has enabled me to overcome many ills of the flesh, and I am assured that there is no disease which cannot be destroyed if we but live close to God and acknowledge no power apart from the divine Mind. I am the mother of four children, three of whom knew little but sickness and medicine until the age of eight; then Science brought a new sense of life into our home. That was about sixteen years ago, and now we have a four-year-old child who has never known of medicine, and who lives so much in God that sometimes she is a rebuke to me.

Digitized by Google

If only I could put into words all that Christian Science has done for me—but it cannot be told! I do thank God, and am grateful to dear Mrs. Eddy, who has worked so faithfully to demonstrate to the world that this is the truth, the religion which our Saviour taught and practised. Her teaching has brought me closer to the divine Principle of being, for the love that she taught us will never die; it will live throughout eternity. May I be worthy to be called a child of God.—Mrs. Bettie Johnson, Union City, Tenn.

As I recall the past, consider the present, and read in the Bible the promises to all who love and obey God, my heart goes out in gratitude and love to our revered Leader for her interpretation of the Scriptures as given in Science and Health. This has helped me to a full realization of man's true birthright; and not only so, but it has helped all who love the truth therein taught. The blessings that have come into our home since I have been studying the Bible and Science and Health have been many, and I can now truly say to every one, "I love you."

Love is leading me in paths that are healing and pleasant. For many years I was a constant user of tobacco, save when I was endeavoring to break myself of the habit through will-power, during weeks of torture which only a confirmed user of the weed can know; but today, through the reading of Science and Health and the understanding of its teachings, I am free, and I cannot recall one desire for tobacco during the past three years. Each day brings trial and temptation in various forms, and while I am not walking over the waves all the time, I can say, with a heart full of love to God and hope for a higher understanding of the truth, "Praise God, from whom all blessings flow."

C. N. Ambrose, Escondido, Cal.

In April, 1908, I was suffering from pain on a spot where I had as a child received a severe blow from a cricket-ball. I was examined by a doctor in this town, and he advised an early operation; but as he was just leaving for a five-weeks holiday, it was agreed that I should wait until his return. A lady who was staying in my home at the time, asked me why I did not try Christian Science first. I answered that I knew nothing about it. She then told me how she had been cured by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and more with the desire to please my friend than to have Christian Science treatment, I wrote to a practitioner in Zürich and asked for information. She very kindly sent me some literature on the subject, and I was astonished indeed to find what I called a reasonable religion, without any contradictions about God, and something which I could accept.

I had long been dissatisfied with religion as I knew it, and felt like a hypocrite every time I went to church; so I gradually left off going, and decided to act up to my conscience, as nearly as possible, until I saw my way more clearly. In Christian Science, however, I found what I needed,—something to guide me in all my actions, a religion which met my highest ideals and promised to give a solution to every human problem. I speedily asked for treatment, and was well before the doctor returned from his holiday. Since then my every need has been met most wonderfully, and the blessings never cease to flow.

It is nearly five years since the operation was to have taken place, and I have had no further trouble whatever from the ailment. I have experienced other healing since then, and am very grateful. So-called poisoning in one foot was soon overcome, and an internal trouble with violent pain at intervals for about a year was finally destroyed. I am perfectly well, and my household of eight persons has not had a doctor for five years. I can never find words for my thankfulness to God for a knowledge of Truth; and it can only be by an active life, ever striving to practise the truth, that I can show my gratitude to our brave Leader. My heart gladly echoes the words, "Glory to God in the highest."—Mrs. S. E. Welti, Bern, Switzerland.

I wish to express my gratitude for Christian Science, not only in the physical help given me, but for the understanding of the truth which I have gained through its teaching. Two or three years ago, when I first became interested in Christian Science and had very little knowledge of its divine Principle, I never failed to receive help and increased understanding when I went to a practitioner. At one time, when I was suffering from a severe headache, the treatment relieved me very quickly. At another time I had headache and some fever, and symptoms seemed to point toward a serious condition; but these all disappeared, and I was healed in a very short time. For all of these blessings, and many more which I cannot mention, I am deeply grateful.

Mrs. Annie B. Allen, Concord Junction, Mass.

By obeying the instruction contained in our inspired text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, who bids us "cling steadfastly to God and His idea" (p. 495), and remembering that as God's children we reflect only and always harmony, I have been healed of what *materia medica* declares to be an incurable disease of the ear. For this healing and many other blessings which have come through the earnest study of Christian Science, I wish to render my grateful thanks to our Father-Mother God, the giver of all good, and to our dear Leader, who has so patiently and courageously blazed the way for us.

Annie Eilsler, Nutley, N. J.

I wish to express my thankfulness to God for what Christian Science has done for myself and family. It is about seven years since I became interested in its teaching, and the blessings I have received have been many. At one time I had fifteen teeth extracted without taking anything, and I experienced no pain. I have three children, and they have also been healed of many ailments and so-called children's diseases. My husband, too, has been healed of stomach trouble, and has also been greatly helped in his business. For all the blessings we have received I am truly grateful to our dear Leader, who labored so faithfully to teach mankind that God does heal the sick.

Mary E. Lindergren, Boston, Mass.

I take pleasure in stating that through Christian Science I have been healed of asthma and bronchitis of many years' standing. Several members of my family have also been helped by this truth to overcome various forms of sickness and trouble. A little girl seven years old, who was suffering from an affection of the ear, which the doctor said would require an operation, though it would impair her hearing, was completely healed through Christian Science treatment in three weeks. For all these healings,—my own, and the others which were under my personal observation,—I am profoundly grateful.

George H. McCarthy, Washington, D. C.

[Translated from the German.]

In giving this testimony I wish to express my gratitude for the healing which I experienced through Christian Science half a year ago. I became afflicted with poisoning in one finger, and suffered great pain. On a former kindred occasion I had the finger lanced by a physician, but as this had caused me much suffering, I was afraid to go to him again. I tried all kinds of remedies, but to no avail, as the finger grew worse.

Digitized by Google

I had before this heard of Christian Science, and had frequently read *Der Herold der Christian Science*, so I decided to apply to a practitioner for help. The pain in the finger disappeared after the first treatment, though when I went to bed it set in again; but this was perhaps because I had expected this result. Still I kept on reading *Der Herold* and went to see the practitioner twice more, and I was healed of the trouble in about a week's time. Soon after, an abscess formed in my mouth, and my face was badly swollen. I again applied to the practitioner, and was healed of the trouble in a few days, whereas formerly I had struggled with an affliction of the same kind for weeks. For these instances of healing I am deeply grateful.

MARTHA BLÜMEL, Berlin, Germany.

I am certainly thankful it is my privilege to know something of Christian Science, and I wish to take this opportunity to express my gratitude for the many blessings which have come to my home through the study of this wonderful truth. About seven years ago I was healed of eye trouble, at that time leaving off glasses which I had worn for four years, and which the oculist had told me I would always have to use. This healing was accomplished while reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. Other ailments also have been overcome, and everything I have I owe to Christian Science.

BLANCHE M. ROGERS, Spokane, Wash.

[Translated from the German.]

About a year ago I caught a severe cold, which was followed by a serious condition of the throat. Shortly before this occurred, I had heard of Christian Science through a dear friend in America, and I also knew that there were several Christian Science practitioners in Frankfort-on-the-Main. I had thought of asking for help; and after I had been laid up for seven or eight days, stricken with high fever and unable to take even milk, when the woman who was caring for me informed me that she would be unable to do so any longer unless I was moved to her home, I decided to write to a practitioner, and ask her to call on me.

About five o'clock that afternoon I felt a sudden change, and I immediately knew that I was being ministered unto, as I was able to drink some milk without difficulty and had recovered my speech. About an hour later a very kind lady came to see me, and explained the nature and scope of Christian Science. When mention was made of the hour in which I had experienced improvement, we shared the joyous surprise of finding that the healing had taken place at the instant when the true and good thought action began in my behalf. On that same evening I ate some solid food, and on the following day I got up and attended to my housework, with the sense of being perfectly restored. The lady who had been instrumental in my recovery through Truth and Love was not an advertised practitioner, but she was a faithful adherent of Christian Science teaching, and had manifested much love and appreciation of everything that is true, good, and beautiful; the practitioner had sent her to me because her own time was taken up.

Since that healing I have experienced many good and great things through the apprehension and acceptance of the true ideas which Christian Science brings us; and in one instance where Christian Science seemed to fail, this was due solely to my mistaken attitude toward Truth, for Truth never fails. It is we who fail to come into perfect harmony with divine Truth. To strive after this purest, highest, and most sublime goal should be our constant and sole desire, since the fulfilment of this desire includes all happiness and bliss. I give sincere thanks to all who have helped me to apprehend this glorious concept of life.

EMMA RITZMANN, Wallershausen b. Cassel, Germany.

FROM OUR EXCHANGES.

[Dr. W. Tudor Jones in *Christian Commonwealth.*]

We are so much in the midst of wars and rumors of wars that the meaning and value of religion seem for the moment to have receded into the background, or indeed to have disappeared altogether. The attention of the world is drawn to objects outside the religious aspect, but the religious aspect, in so far as it is a reality at all, will make its contribution in the settlement of all these disputes. It is our own fault if religion is not strong enough to prevent conflicts, and it is a sign of weakness that the ethical and religious elements have taken such a secondary place. When the disputes of nations are investigated, they are found to rest upon certain imaginary or real rights which each nation holds it is entitled to possess. The consciousness of the rights of individuals and nations has developed more rapidly than the consciousness of duties.

The new presentation of religion is concerned with this all-important fact. In Germany today the advocates of the need of a better understanding between their own country and England are leaders of religion who have worked their way out of traditional theology to the conception of an international ethic. These leaders believe that no peace and good will can ever come about between nations until religion is something infinitely more than a number of theological propositions, whether such propositions belong to the past or the present. Their work is no other than a deepening of the meaning of religion to include spiritual experience and overpersonal ideals which include the good of all. We have been spending too much time in talking about our religion, and too little time in attempting to realize and live it out in the individual life and in the community. There is no power besides an international, spiritual ethic that will overcome race prejudice, hatred, and selfishness. Many men—indeed, strong armies of them—are conscious of this fact today.

[James I. Vance, D.D., in *Christian Intelligencer.*]

Our real concern should be, not what is the value of the church, nor yet what is its true mission, but is it fulfilling its mission? Is it doing the thing it was built to do? Is it a spiritual force today, or just a homeopathic church? Is it doing a lot of little things, but falling short in the one supreme thing? It may nurse all sorts of sick reforms that cry for milk, and say mean things about the church when it fails to give them cream, but if it fails to lead men to know God in the pardon of their sins, it fails. If the church fails, it fails largely because the people who compose it are themselves not spiritual. Here is where we are weak. The trouble with the church is not that it is behind the times, that it preaches dead doctrines, that it is not interested in present-day movements, that it does not tie up to prohibition or progressive legislation, that it does not preach the initiative and referendum or espouse an employer's liability act, but that its membership is composed, not entirely, thank God, but entirely too largely, of people who have no religious experience, and no personal acquaintance with God. Religion does not grip them; it merely sugar-coats them. They go through the forms, perhaps, but they know nothing of that power of God in their lives which rides down expediency, popularity, and gain, and all baser motives. They probably conform to the forms of religion, but the forms are not enough. Putty has form; dough has form; sawdust may have form, but no power.

[*Christian Register.*]

The persistent use of language representing heaven as a place or state of being which qualified people die into by mere operation of time, is false to common opinion and common sense. To suppose that the mere ending of this life precipitates the issue between bliss and torment for all time afterward, is to forget the fundamental fact of character. A man carries what he is wherever he goes, and

Digitized by Google

having a ticket of admission given on other grounds will not help him feel at home when he gets into the wrong place. There are people who might dwell in a heaven a thousand years and never know they were there; and what Father Taylor said of Emerson, that if he went to hell he would change the climate and the tide of immigration would set that way, is true of many persons. Montaigne's wisdom as to this world's goods applies well for any world: "Whatsoever the goods of fortune are, a man must have a proper sense to savor them. It is the enjoying and not the possessing of them that makes us happy."

[*Dallas (Tex.) News.*]

There is little doubt that creeds and dogmas as often enslave as they liberate. Religion itself has never harmed any one, but many of its misguided and thoughtless adherents have. Zeal is too often exercised more for inducing others to think our way than for the purpose of awakening one to his responsibility in the matter of life and future destiny. How infinitely more desirable it is to induce one to manifest faith and prayerfulness rather than bigotry and prejudice; to realize his condition and say with the psalmist, "Create in me a clean heart, O God; and renew a right spirit within me. Cast me not away from thy presence; and take not thy holy spirit from me;" to heed the admonition of him who said, "Watch ye and pray, lest ye enter into temptation." It is such a one who will recall this indispensable commandment and try to comply with it: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbor as thyself. On these two commandments hang all the law and the prophets."

[*British Congregationalist.*]

Spiritual forces can never be reckoned by count of heads. The most elementary knowledge of church history would convince any man of common intelligence that, again and again, when by the numerical test the church has been weakest, by the real test of spiritual vitality and moral force it had been strongest, and, not less truly, the days of its greatest popularity have not been the days of its truest strength. The ultimate and only reliable test of a Christian church is how far Christ is taught, lived, trusted, obeyed in that church: how can the count of heads determine that? Any man who knows the life of the churches knows that there are individuals who would only count one in a statistical census who count for scores in that spiritual census which God alone can take, and that others may be reckoned by tens or scores in a mere census of figures who would not—all grouped together—count for more than one in the estimate of spiritual forces.

[*Universalist Leader.*]

When we complain that the people are impatient and desert the churches, suppose we try again the simple messages and lessons of life which Christ preached, and see if in this day, as in the olden time, they do not hear gladly; coming again and again, with eager desire, because there is something they want, something they must have. Without cant, without superstition, make the Christ of yesterday the Christ of today, entering into all the life of today as he entered into all the life of the past; entering in to serve and not to get, and the whole world will hear him gladly!

[*Advance.*]

He is in each one of us, the person whom we may become. How shall we define him; how shall we dare to believe in him; how shall we achieve him? This question lies back of all our moral and spiritual problems and strivings. The answer is in Christ. In him is seen the possible man. Triumphant over every threatening circumstance, supreme above every temptation stood Jesus. Master of death and every fear appeared the Redeemer. It was his triumph, and it was ours also. What he was we are to become.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Results" has been translated and is now printed in German (Die Christliche Wissenschaft: Ihre Resultate). This pamphlet contains 35 pages and is for sale at the prices of all the regular pamphlets as shown on the opposite page.

"Christian Science: A Religion of Progress," a lecture by William D. McCrackan, M.A., has been translated into French (Christian Science: Une Religion de Progrès), and is now ready for distribution in pamphlet form.

"Christian Science: Demonstrable Religion," a lecture by Frank H. Leonard, has been translated into Norwegian (Christian Science: Bevislig Religion), and is now ready for distribution in pamphlet form.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles.

"Birthright and Dominion," containing four articles and two poems.

"The Father's Business," containing five articles.

"The Law of Kindness," containing four articles and a poem.

"Confidence and Supply," containing five articles.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency. Money orders should be made payable at the Boston post-office.

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883 1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Make all remittances payable to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

There will be no strike of firemen on the eastern railroads, for they have agreed to arbitrate under the Erdman act the controversy over wages and additional firemen with the Brotherhood of Locomotive Firemen and Enginemen. Three men, acting under the law, will decide the firemen's claims, and their decision will be binding. The firemen have selected as their representative on the board of arbitrators, Albert Phillips of Sacramento, Cal., vice-president of their organization, and the railroads have chosen W. W. Atterbury, vice-president and general manager of the Pennsylvania lines; east. These two men will select a third or neutral member, and within thirty days thereafter the arbitrators must render their findings.

Another suit to oust alleged illegal entrymen from oil lands in Kern county, Cal., has been filed by the government in the federal court at Los Angeles, Cal. The action involves one hundred and sixty acres of land valued at five hundred thousand dollars. Chief among twenty-five defendants named in the suit are the Consolidated Midway Oil Company, the National Pacific Oil Company, and the Standard Oil Company. The government alleges that despite the presidential order of Sept. 27, 1909, by which the land was withdrawn from entry, the defendants have continued to operate on the property.

The United States district court has denied to owners of patents the right to fix the price for the resale of their patented articles. Judge Ray, who rendered the decision, held that the jobber or dealer who assents to fix prices as demanded by the patentee and manufacturer becomes a party to an illegal combination in restraint of trade. The action was brought by the Waltham Watch Company against a New York jeweler, to restrain the defendant for selling for less than a fixed price watch movements patented, manufactured, and sold by the Waltham company

The United States district court at Detroit, Mich., has found the so-called bath-tub trust guilty under the Sherman act. The penalty provides for a fine of five thousand dollars, imprisonment for a period not exceeding one year, or both. The specific charge against the combine is criminal conspiracy in restraint of trade. Last November the so-called trust was dissolved by the Supreme Court in a civil suit instituted at Baltimore. The criminal case was a retrial, the first trial having resulted in a disagreement.

A test is to be made to establish and maintain communication between the great naval wireless station at Arlington, Va., and the scout cruiser Salem, which is out in the Atlantic. The communication, it is planned, will be maintained if possible up to a distance of three thousand miles. If the tests are satisfactory, the government will pay the final instalment of two hundred and fifty thousand dollars due to the contractors who erected the towers.

The president of the National Cash Register Company, who with twenty-eight other officials or former officials of the company was convicted of criminal violation of the Sherman antitrust law, has been sentenced to pay a fine of five thousand dollars and to serve one year in jail. The twenty-eight other defendants were sentenced to terms ranging from three months to a year in jail and to pay the costs.

More than fifteen thousand girls in New York who work on white goods are affected by an agreement reached last week between representatives of their union and the Cotton Garment Manufacturers' Association. The employees have gained the increased wages and shorter working hours for which they struck several weeks ago.

Men of Italian nativity in Missouri are circulating a petition to be sent to Congress asking loans of one thousand dollars by the government to enable a man to buy farm equipment. The plan includes an allowance of forty acres of homestead land and seven years to repay the loan.

Damages paid on account of injuries to crops in Massachusetts by wild deer last year amounted to $9,680, and there are supplementary claims amounting to $5,715, which will be paid as soon as a deficiency bill can be passed. The total for the three previous years is $24,800.

Mail advices relate that the United States wireless operator at Eagle, Alaska, heard the government station at Key West, Fla., sending a message to Mare Island, Cal. Air-line distance from Key West to Eagle is more than four thousand miles.

After waiting twenty-six years for a building of its own in Washington, the geological survey has been recommended to receive an appropriation of two and a half million dollars by the House committee on public buildings and grounds.

The House refused by a vote of 213 to 114 to pass over the President's veto the Dillingham-Burnett immigration bill, which provided a literacy test for immigrants. The Senate by a vote of 72 to 18 had passed it over the veto.

International.

The drift of Japan in the direction of a more democratic form of government is afforded by the present disagreement between Prince Katsura and the elder statesmen. A keen political campaign is being waged throughout the whole country against the cabinet by the Seiyu-kai and the Kokuminto, which has caused Prince Katsura to speak seriously of forming a special party of his own in the Diet. Such a step would mean a very definite move in the direction of the responsibility of the executive to Parliament. The opinion is gaining ground among the stronger statesmen in Japan that the country has advanced beyond the stage of bureaucracy and that it is time that a government on really democratic lines was established.

The island of Crete was finally evacuated by the protecting powers, Great Britain, Russia, France, and Italy, last week and the Greek flag was hoisted amid enthusiastic demonstrations by the Cretans. The British cruiser Yarmouth landed a detachment of bluejackets and marines in Suda bay, and these men hauled down the flags of these powers which have flown since 1898, as well as the flag of Turkey, with full military honors. The flags were handed over to the consuls of the respective countries, that of Turkey being placed in charge of the German consulate.

A parliamentary "white paper" has just been published by the British government giving the figures for the amount of advances made under the land acts of 1903 and 1905, which show that under the former act £50,323,232 worth of agricultural land has passed from landlord to tenant, and under the later act, which makes the advance to the landlord in the shape of guaranteed three per cent stock, not cash, the sales have amounted to £1,632,100.

The House of Lords has rejected the Welsh disestablishment bill, 252 to 51. Thus its fate is identical with that of the home rule bill; it must be passed by two succeeding sessions of the House of Commons before it can become a law.

Industrial and Commercial.

What is expected to revolutionize the fieldwork of the lumbering industry is a machine invented by two men of Portland, Ore., which, it is declared, will reduce the cost of logging from 50 to 75 per cent, in addition to saving an average of eight feet to the tree that is wasted under the present methods. The machine consists of a gasoline motor, to which is attached a drill operated at six thousand revolutions a minute. By moving the drill back and forth, it eats its way through a tree with such rapidity that it will fell a tree eight feet in diameter at the butt within five minutes, and at one quarter to one third less than the former cost.

After successfully passing many crucial tests, proving its efficiency, the Pennsylvania Railroad Company has adopted a device which is to supplant the Westinghouse air-brake. Electricity is used instead of compressed air. A train traveling seventy miles an hour can be stopped within the time that the speed of a train equipped with the old brake, traveling at the same rate, is reduced to forty-five miles an hour. Although the new device will require a financial outlay approximately three times as great as the old air-brake apparatus, the extra expense is justified, according to the statement of railroad men.

The recent rapid rise in crude oil prices, which has brought Pennsylvania crude oil up to $2.10 a barrel, has had a stimulating effect upon prospecting, and as a result many new wells have been discovered. Last week the Quintette Oil Company of Wellsville, N. Y., opened up a gusher in the Allegheny field in New York state, which is said to be the largest producer found in that field in a score of years. The new well produced two hundred barrels of oil in the first twenty-four hours after it was opened.

According to a report received at the University of California from scientists on board a demonstration train now touring southern California, the damage from frost to the citrus crops in the southern part of the state was not so great as reported. The investigators found that at least three fourths of the trees would bear as heavily as last year and that the reported damage from frost in the oranges remaining on the trees has been exaggerated.

The territory around Alpine, Texas, which was formerly devoted exclusively to cattle grazing, is being rapidly converted into apple orchards. The altitude of the valley is five thousand feet. The first apple orchards in this section were planted by ranchmen as an experiment, but the trees produced so abundantly and the fruit was of such a high grade that steps were taken to commercialize the industry.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MAN'S RIGHTS DIVINE ENTITIES.

WILLIAM D. MC CRACKAN, M.A.

IN the year 1776 the thirteen American colonies issued a Declaration of Independence, and in 1789 the National Assembly of France promulgated a declaration entitled "The Rights of Man." Both documents seemed to be due to political conditions; the first to a disagreement between the American colonies and the British home government as to taxation, the second to the failure of the French Assembly to effect a reconciliation with the King of France. Both declarations refer to God in terms which show that there was an appeal to His authority. The Declaration of Independence states: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness." The French Assembly issued its statements "in the presence of the Supreme Being," and referred to liberty as "one of the *rights of man.*"

In truth both declarations were more than political documents. They set forth metaphysical facts, facts which cannot be substantiated by the testimony of mere physical sense and can only be perceived mentally. According to material sense, "all men" are not endowed with the rights to liberty, or to life and happiness. According to sense perception, some men seem to be bound in hopeless slavery to sin, sickness, or other grievous taskmasters; nor can it be truthfully maintained, from the basis of physical observation alone, that man is endowed with the inalienable right to life, since it is common belief that all men must die. Again, as far as such observation is concerned, all men by no means manifest the right to the pursuit of happiness. The widespread misery to which the sight of material eyes and the hearing of material ears bear witness, would seem to indicate that multitudes are debarred from pursuing happiness, much more from overtaking and possessing it.

Yet these two historic declarations, issued at a period in history when the old was giving way to the new and the map of the world was being changed, contain statements which are true in the realm beyond physics,—that of metaphysics. Christian Science is today issuing a declaration of independence from the false beliefs of scholastic theology, material medicine, and mistaken science which the statesmen of 1776 could not foresee. It is reasonable to suppose that could they have done so, many of them would have rejoiced greatly, since Christian Science is establishing the rights of man on a basis so sure and sound that no earthly tyrant in the guise of mortal error can ever overthrow them. Christian Science is proving that independence from error means dependence upon Truth, and that the rights of man are not material but spiritual, endowing him with health, happiness, strength, virtue, completeness, and life eternal, by reason of his sonship with God.

Though the signers of the historic documents just cited evidently perceived that God was somehow connected with the rights which they were justly claiming for all men, only scientific Christianity, *i.e.,* the understanding of God as absolute Principle, could have opened up to their understanding the glorious vista of man already blessed, already possessing his inalienable rights. The metaphysical certainty requisite to a full enjoyment of man's rights can come only from spiritual understanding, from a mental perception which is both Christian and scientific.

The mistakes of the past as well as of the present in regard to government, proceed from ignorance of God. To know God is to know man. No amount of study devoted to the physical counterfeit calling itself man can give the required information concerning man as he is, in the image and likeness of God. Then to participate intelligently in governing man, it behooves us first of all to know somewhat about the nature of God. One can readily imagine what would be the surprise of a candidate for public office on being informed by his electors that he must satisfy them as to his understanding of God before he could receive their votes. And yet it is clear that such a candidate might be well versed in all the characteristics of the material body and all the idiosyncrasies of the human mind, might be a past master of physiology and psychology, and yet know little about man as he really is, or be able to minister to present human need.

Today the trend of public thought is evidently in the direction of recognizing man as a mental being, as a thinker, and not as a mere material mechanism; so that the qualifications of those who are to fill public offices will be judged more and more from a metaphysical standpoint. True government, such as will guarantee the rights of man, must be based upon the recognition that God is the source of all real life, that He is Life itself, and so is the Life of man. The successful incumbent of every government office, executive, legislative, or judiciary, must eventually base his conclusions and acts upon this understanding, and be governed by it.

So, too, in dealing with the glorious right of man called liberty, those who are responsible for government must never lose sight of the fact that liberty is of divine origin, as the signers of the Declaration of Independence evidently perceived. Only in the atmosphere of liberty can human nature develop into true manhood or hope to attain "unto the measure of the stature of the fulness of Christ." It is the special province of truth to bring liberty, for Jesus said to the Jews, "The truth shall make you free." Mrs. Eddy was inspired to write, concerning liberty and the rights of man, in the text-book of Christian Science: "Truth brings the elements of liberty. On its banner is the Soul-inspired motto, 'Slavery is abolished' " (Science and Health, p. 224). She also referred to the coming of Christian Science in the following words: "The voice of God in behalf of the African slave was still echoing in our land, when the voice of the herald of this new crusade sounded the keynote of universal freedom, asking a fuller acknowledgment of the rights of man as a Son of God" (p. 226). Liberty which is based upon the understanding of God can never be abused, nor degenerate into license, for license is the belief that liberty is a material condition instead of a mental or spiritual entity. The "glorious liberty of the children of God" is safe in the keeping of the Father-Mother God.

Happiness, too, flourishes as a growth of the divine planting. What the Father hath not planted must be uprooted, but happiness which is of divine origin can never fade or decay, but will blossom ever more beautifully unto the perfect day. The pursuit of happiness, both for ourselves and others, is an entirely legitimate and natural occupation. It brightens human existence, gives purpose and scope to endeavor, and purifies desire, so long as it is recognized as the pursuit of a spiritual activity, having its origin in the divine Mind.

The apparent failure of mankind to attain happiness is due to a misunderstanding of the essential nature of happiness itself. So long as people believe that happiness lies in the accumulation of matter or in the exercise of personal control, they are led astray into the pursuit of phantoms. When they would grasp substance as the reward for their labor, they find themselves vainly beating the air and are forced to return empty-handed to the point of departure. The false concept of happiness which lures mankind into bypaths of failure, disillusionment, and despair, is wholly unmasked by Christian Science, and the pursuit thereof shown to be futile and foolish.

Christian Science is daily adding to the world's stock of "life" and "liberty." It is guiding "the pursuit of happiness" into profitable channels by proving that these rights of man are the entities of God's creation; that they partake of His nature, hence are mental and spiritual realities. It is demonstrating to expectant multitudes who have turned their faces toward hope and faith, that to know God is to possess His gifts, to be conscious of the actual enjoyment of true being, to rejoice in real existence with all the rights of man pertaining thereto.

CHRISTIAN SONG.

GEORGE H. KINTER.

So far as we know, all attempts at Christian worship have included Christian song. In Paul's epistle to the Ephesians, he urges them to "be filled with the Spirit; speaking to yourselves in psalms and hymns and spiritual songs, singing and making melody in your heart to the Lord." In earlier times the singing of psalms comprised a major part of public worship, and now we have the use of ancient and modern religious poetry set to music as an essential part of church services. Our own Hymnal expresses the endeavor to bring into use for the Christian Science services the best that poetry, combined with music, affords.

It will be of interest to Christian Scientists to know of their revered Leader's love of hymn singing, and that it brightened many of her hours. We all know how happy she was in expressing her thought poetically, and that many of her choicest poems have been set to music, especially for use as hymns and solos in our services, Christian song thus rightly and beautifully entering into our worship. All Christian Scientists do not know, however, that Mrs. Eddy was very fond of music, and especially of sacred songs. She frequently indulged herself to the extent of having songs and hymns sung for her in her home, and from the time she settled in the new home at Chestnut Hill, she devoted one room almost exclusively to this purpose. It was her custom every morning, before the daily routine of the household was fully entered into, to have some one of her helpers take a seat at the piano and play and sing for a longer or shorter period, sometimes as much as a full hour being devoted to this helpful, happy exercise. Quite as frequently she would call in all her helpers and ask for singing in concert, usually on these occasions selecting many of the hymns herself.

It is not unlikely that our friends throughout the Christian Science world would be happy to know what were some of the selections which she usually chose. Almost invariably the first hymn called for was the "Communion Doxology," which appears on the first page of the Christian Science Hymnal. Then in turn, and with happy variations, she would ask for others, occasionally one of her own hymns, "O'er Waiting Harpstrings of the Mind," or "Shepherd, Show Me How to Go," and nearly every day, "Mother's Evening Prayer."

Mrs. Eddy had a rare memory for the hymns and songs of her earlier years, and often called for some which were sung in her childhood days. All who knew her, whether through her writings or by way of personal association, will readily admit that whatever the theme she touched upon, it at once glowed with new spiritual meaning, and it is surely our privilege to gain this same inspiration for ourselves, and to some extent at least to impart it to others, that the spiritual healing of Christian Science may have "free course, and be glorified."

DIVINE GUIDANCE.

GRACE A. WILLIAMS.

WHEN in doubt and perplexity, knowing not which way to turn, and seemingly lost in the wilderness and chaos of mortal mind, we need only appeal to the divine Mind for guidance; for experience teaches that the human mind is no guide, but ever leads astray. Unerring guidance must always come from above the erring human mind, as the following incident will show.

A friend and I had been lost for three hours in a trackless mountain forest. Divine Science was then new to me; I had only glimpsed the teachings of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which my mother had been studying for a year, but I had seen in reading the chapter on Prayer that it contained the truth and essence of Christianity. Now, bewildered and lost in the dark, silent forest, in which was neither life nor light, I stumbled on blindly, not knowing whither to go nor which way to turn, while my companion, I soon noticed, kept turning to the right, as erring mortal mind in its confusion leads lost people to do. I told him of this tendency, and he threw up his hands and with white, despairing face said: "Well, then, suppose you take the lead. I have not the faintest idea which way to go."

For a moment all looked black to me, for I was as hopelessly dazed as my companion. Standing there, gazing blankly at the unresponsive wilderness on every side, lo, through that awful stillness came a "still small voice" whispering, "Apply Christian Science!" I snatched at this angelic monition, and began to work with what little I knew of divine Truth. I tried to realize God's omnipresence and never-failing care; to realize that His ideas could not be lost or get out of their proper places, because infinite intelligence knows where all His ideas are and never loses sight of them. I soon began to see that as there was no confusion in the one Mind, His ideas could not go astray or become confused. I had worked in this way, still walking on, for about ten minutes, when suddenly I seemed to be all cleared up mentally, and I began to see that if we turned back to the left and advanced in a straight diagonal line, we would eventually reach the place of intersection of the two main roads. It was so clear to me that I was able to make my friend see it, and so entirely to his satisfaction that he was willing to go the opposite way from which we had been going, for this reversal of direction was the outcome of the spiritual enlightenment of my thought.

With uncertainty and confusion gone, and still working in Science, I forged rapidly ahead, regardless of swamp and bog, for even in these miry places we always seemed to find secure ground on which to step. I continued in a strangely undeviating line, always at the same direct angle, past many obstacles and difficulties; but it never seemed right to turn out of the path for anything that loomed up. We climbed, crawled, and waded, until at last we saw, after being cheated by several false openings, a white farmhouse amid broad meadows in the distance through the thinning ranks of trees. If we had continued straight ahead, we

Digitized by Google

would have walked directly into the ell of the farmhouse, so unerring was the path over which the divine hand had led us, and if we could have walked through the house walls, we would have eventually come to the intersection of the two main roads without one deflection from our path. It had taken an hour for us to get out of the woods, and we had been lost from ten in the morning until two in the afternoon, the hour at which we reached the farmhouse. My friend had often lost hope during our long way out, not having that sweet secret which was guiding me and buoying me up with hope and confidence.

Did not Moses tell the Israelites again and again not to turn either to the right hand or to the left hand, even as God had commanded him, on their long march out of Egypt, the land of dark and confused mortal mind, into the land (consciousness) of light and love? When in trouble, perplexity, and despair, can we wisely turn anywhere but to the divine Mind for wisdom, guidance, enlightenment? Can mortal mind, which causes all these troubles, give us wisdom, guidance, enlightenment? Did not Abraham start out alone for the unknown country, not knowing whither he went, but trusting the divine guidance unfalteringly? Blind mortals do not see the paths they are taking, but the divine hand leads unerringly those who clasp it in unquestioning faith, for in Truth there is no error.

PRECIOUS METAL.

T. STANLEY BALL, B.A.

IN "Miscellaneous Writings" by Mrs. Eddy, there is a striking paragraph abounding with figurative meaning. It reads: "God is a consuming fire. He separates the dross from the gold, purifies the human character, through the furnace of affliction" (p. 151). It would be difficult indeed to find a more apt material symbol of a spiritual fact than this, for it indicates clearly the order of Truth's activity in the refinement of human character. In assaying metal with the view of ascertaining if its purity is up to the standard required for hall-marking, a certain amount of it is wrapped in a piece of sheet lead, then placed in a small porous crucible called a cupel, and exposed to a bright red heat. The metals melt; but while the pure silver and gold combine, the lead and other inferior metals become oxidized and the oxides are absorbed by the cupel, leaving a small button of pure gold and silver.

Until purified by the furnace, the dross masquerades as part of the pure metal, the evil and the good are apparently mingled and form a whole; but the assayer knows that the only thing which possesses any real worth is the gold, and his fire unerringly and completely separates it from the dross, which shrinks and hides itself, and finally disappears into and forms part of its kindred element, worthless and useless matter. Worthless and useless indeed; for it is a significant fact in physical science that it could not, even were it desired, be recovered from the vessel of bone ash into which it has disappeared. The tenacity of error finds its parallel in the result of the refiner's fire, for the cupel is coated with a layer of shining metal, a pretense of silver, reminding us of the wise man's saying, that "burning lips and a wicked heart are like a potsherd covered with silver dross."

The spiritual lesson is obvious. We see that error usually simulates the good and the real, and as in the case of the pure gold and the baser metal, its pretense is that it gives bulk and therefore greater apparent value, but its worthlessness is proved by the refiner's fire. The assayer of gold purges by his process the dross from the ore and sets the golden metal free, in the same manner as Christian Science teaches how Truth gradually yet surely refines our materialistic thought and belief until only the pure and the good remain. Our Leader has aptly taken the illustration of the assayer's furnace to point out the refining and purifying effect of Spirit upon human consciousness; and it is a notable circumstance that the pure gold cannot, when tried in the furnace, continue to mingle with the dross. In reality, they never did mingle: the gold was always there and forever pure, and could never be less than pure. The process of eliminating the worthless and the impure brings to light the beauty and purity of the true gold, and, freed from the dross foreign to its nature, all that is good and pure is at length seen to be the whole.

Carefully observing the effect of the fierce flame upon the composition, we discern a seemingly terrible struggle taking place, a desperate attempt of the reluctant base metals still to adhere to the pure; but just as the belief in both good and evil cannot be held in the consciousness of the ever-presence of divine Love, so the consuming fire gradually and surely overcomes and expels the base element, every vestige of evil being effectually and forever eliminated, so that nothing but the pure, tried metal remains. The process is fascinating and rich in spiritual lessons. It is difficult to foresee the end of the conflict except through the understanding of the allness of good, for the evil, to mortal sense, seems to be exaggerated; but grain by grain, surely and unerringly, the good predominates, until the end is reached. In the consciousness of individuals this struggle between the pretensions of evil and the absolute good takes place more or less rapidly, according to the regenerating process of the advance in the understanding of divine Science, until eventually nothing appears but the good which has always existed as a reality, and mortal error vanishes into its native nothingness.

Mrs. Eddy has also drawn upon the same figurative illustration in pointing out that "sorrow has its reward. It never leaves us where it found us. The furnace separates the gold from the dross that the precious metal may be graven with the image of God" (Science and Health, p. 66). These assuring words have been a soothing balm to many a heart susceptible to some sense of human sorrow before the consciousness became fully awake to the realization of the ever-presence and all-power of good. By means of the fervent fire of spiritual understanding the dross of materiality will vanish and its nothingness be clearly realized, leaving the free pure gold, man exhibiting his unchanging nature as the image and likeness of God.

LESSONS FROM THE SHEEP.

ESTHER MURRAY.

WHILE on a sheep farm here in South Africa, I noticed there would often be one goat among a flock of sheep. On inquiring the reason of this, I was told that it was very difficult to get sheep to go through a river or even a gateway, but that the goat would go and then the sheep would follow. One farmer in the neighborhood, however, lost a number of sheep through this practise. A goat used for this purpose leaped across a chasm to a small ledge, where he was safe, but there was no room for the sheep. A number of them tried to follow but fell into the abyss. This experience was a lesson to me, because it shows we must beware of following where personality leads; we must be sure it is the truth which is leading us. In her "Message to The Mother Church for 1901" (p. 34) our Leader says: "Study the Bible and the text-book of our denomination; obey strictly the laws that be, and follow your Leader only so far as she follows Christ."

Another lesson which my stay at the sheep farm taught me was this: When I first heard of Christian Science and understood what it meant, I longed to help with the healing, but it seemed presumptuous to think I was then fitted for so great a work. One day, however, after reading Jesus' words about the "good shepherd," the thought came to me that though I might not be ready to be a shepherd, I could begin by thinking of myself as a sheep-dog bringing stray sheep into the fold. So I began to work, helping each one that came my way as best I could, and directing them to the

Digitized by Google

Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have thus found that in helping others I have helped myself, and I feel sure we should never let the thought that we are not worthy hinder us from trying to do the work of Truth, because it is only by working that we learn. By using our one talent faithfully, we prove that we are ready to receive more; and we are not called upon to do work for which we are not fitted.

YOUTH AND AGE.

MYRTLE B. S. JACKSON.

CHRISTIAN SCIENTISTS accept with joy Mrs. Eddy's statement of absolute truth: "Man in Science is neither young nor old. He has neither birth nor death" (Science and Health, p. 244); and they endeavor to make this fact operative in daily experience. It is noticeable that they seize with legitimate expectation upon the possibility that as the years of this mortal consciousness increase they will still retain their freshness and vigor, and expand only in the direction of wider spheres of usefulness and activity.

This is all very beautiful and true, but under these conditions it is only fair to expect that the same privileges may be extended in the opposite way, and that if man is not to grow old, he is likewise not to remain young in the limited sense of being considered foolish, inexperienced, and undeveloped, and incapable on that account of doing good work for the cause. Many ponder thoughtfully over the stories of little Samuel, who abode in the temple, and to whom a special revelation of God came; over Joshua, the young student of Moses; over the prophetic utterance of Isaiah, "A little child shall lead them;" over Paul's loving admonition to Timothy, "Let no man despise thy youth," and more especially over our Master's own words concerning children, "Of such is the kingdom of heaven;" but what would they say in practical experience to the youth or maiden who presumed to differ from them on any metaphysical point, or who dared to evince a profounder acquaintance with the meaning of a given statement than they themselves had given it? The human mind is wholly paradoxical from start to finish, and it is quite possible to be wise at eighteen and frivolous at eighty-two. "The thoughts of youth are long, long thoughts," says the poet; but who is ready to admit this?

The practise of older folk, parents perchance, who sit in ponderous judgment upon the young, is a very primitive error of mortal mind, and these elders sometimes fail to realize that the recognition of man's spiritual selfhood often awakens very early in consciousness, and that when this occurs, it is as much the Mind and power of Christ as if it came at a later period. To be advised to be contented, docile, and meek does not in any way satisfy the infinite immortal cravings to work, to understand, to be independent, individual, trustworthy, and to take due share in bringing the redemptive mission of good to mankind. Few know how bewildering, how stultifying to spiritual growth is a repressive, depreciative attitude on the part of one's elders, nor with what a leaden weight the prescriptive opinions of maturer age crush down upon the earnest young heart, so full of earnestness and vigor, so eager to overflow with spontaneous love and life, so capable, if older people would only see aright, of reflecting and demonstrating them both speedily and well.

If youth and age are to meet together in that sweet concord whereof it has been said, "He maketh men to be of one mind in an house," the motives for affection must be wrested from the false foundation on which human life has built up its social relationship, and real regard born of mutual respect and appreciation take their place. A feeling of dutiful obligation on the part of the younger to the elder is not enough to soften the carborundum of selfish sixteen, nor is an attitude of police supervision, however conscientious, warranted to cancel the thought of personal possession and personal wishes so ascendent in the minds of those in authority. The only way to solve the problem is to establish true friendship on the firm basis from which all friendship springs, genuine fellowship and love, and this will scarcely be attained by drawing a thick cord athwart the interests of the world, and saying, "These belong to skittish youth and those to reverend middle age; youth has neither taste, tact, nor nice discrimination, I will therefore choose for it;" or, "Middle age has solemn, stuffy, restrictive sentiments, I will therefore not confide my inmost feelings to its dictatorial care." Both young and old must be willing to make some sacrifices in order to give and receive each other's good.

And it is appreciable that in this mortal existence most ideas, whether of a simple or complex character, are incomplete, and it is only by adjusting and fitting together the chips of human concepts, and making some unity of the world's big puzzle, that the infinite oneness and allness of God, and His wholly harmonious and harmoniously whole creation, dawns upon us. To a large extent the world understands how necessary to each other are the several qualities of the masculine and feminine, and that when the attraction between them is purely spiritual how strong an influence for good is their united thought; but mankind has not yet learned to avail itself of the blessings attendant upon the unity of youth and age.

While it is certain that there are no limits to the reflection of divine Mind, and that heavenly inspiration flashes forth at all periods of our terrestrial pilgrimage, still there are qualities of thought which tend to appear more definitely at given seasons, and there is a large opportunity for a marvelously sweet interchange of benefits between youth and middle age. The young on the threshold of facing the phenomena of mortality are grateful to be lifted on to that level of thought which allows them to share the experience, insight, knowledge, and control of those who have attained it, they are grateful for gifts and for genuine, tender protection; while the elder mind needs the hope, the spontaneity, the gaiety, the unfolding vigor, the warm, whole-hearted affection and dauntless progressiveness of youth to stir it out of its ruts of prejudice and push it along the steeps of true aspiration. Under these sympathetic conditions, "heart meets heart reciprocally blest" (Miscellaneous Writings, p. 207); homes and churches become centers of love and comfort, strongholds of activity and life, gladdened by sunshiny, unselfish children and busy songful workers, and the bitter, blighting influences of criticism and condemnation forever cease.

[Written for the *Sentinel*.]

RECEIVING AND GIVING.

LOUISE ELIZABETH LITZSINGER.

WHAT shall I render unto God
For all the wealth that Love bestows?
For comfort, peace,—for boundless joy
That from His omnipresence flows?

The Giver of exhaustless good
Needs naught that man could e'er devise;
Indeed, the best that he could bring
Were but the good Love's hand supplies.

Fresh-water lakes, we know, are they
Whose outlet yields what inlet brings;
In verdant meadows they disclose
Their treasure from inflowing springs.

Thus would my grateful tribute find
Expression in dispensing love,
The whole of human sense transformed
By light descending from above.

SELECTED ARTICLES.

[David Anderson in *Australian Farm and Home*, Melbourne, Australia.]

Somewhat less than forty years ago an American lady, Mrs. Eddy, submitted to the public a metaphysical treatise dealing with the relation of man to his Maker. The unique characteristic of the work was the insistent and consistent adherence throughout to the Scriptural premises on which it was based,—the allness of God, Spirit, and man made in God's image and likeness,—and from that adherence its writer never swerved.

The full significance and far-reaching import of the logical conclusions from these premises are not readily manifest to the reader who gives the book a casual and mayhap a hasty and somewhat careless perusal; and they are never visible to the critic who, from the view-point of opposition, allows his mental vision to be obscured and his judgment warped by an attitude of preconceived hostility to the writer and to the title and subject of her book. The truths involved are indeed slowly grasped in their entirety by the unbiased investigator who gives the book systematic study along with the Bible, and who is willing to make personal test of its statements by honest effort to reduce them to practise.

Differing radically from established scholastic theology, as well as from systems of "orthodox" religion and "regular" medicine, no other book has ever met with more sustained adverse criticism and opposition from the pulpit, the medical profession, and the press, or has been more generally misconstrued by those who are content to form literary and religious opinions at second hand; and few books, if any, have had a wider circulation during their author's lifetime, or are exercising greater influence on the religious thought of today, than the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Combining a code of Christian ethics with a wholly metaphysical system of healing disease, clergymen denounced its theology as devilish, although some conceded that, in a strictly limited sense, it might possibly be an aid to the sick; and medical critics declared its therapeutics to be a dangerous menace, although some were constrained to admit its morality as altogether Christlike. Today clergy and medical men are joining hands in agreement that salvation from sin and disease are closely allied as mental processes, and that while in a strictly limited sense the mind governs the body, the treatment of "serious" or "organic" disease must be by mind mixed with medicine.

Medical men have not formulated any clear-cut or unanimously agreed-on distinction between functional and organic complaints, but certain diseases are still classed as "incurable." Ailments of that class, including such diseases as tuberculosis, cancer, locomotor ataxia, etc., medically diagnosed as such, have been healed in Christian Science after long periods of the best medical treatment available have been undergone in vain. Well-authenticated cases of such cures are instanced by an independent inquirer and careful investigator who is not a Christian Scientist, B. O. Flower, a former editor of the *Twentieth Century Magazine*, in his book entitled "Christian Science as a Religious Belief and a Therapeutic Agent," in which comparison is made of the teaching and practises of Jesus Christ with those of Christian Science, and consideration is given to the opposition of those unfriendly to the latter. The public are beginning to realize, from personal observation and knowledge of current happenings throughout the globe, that whether Christian Science be right or wrong in its ethics and therapeutics, it is bringing the comfort and well-being of moral and physical health, and the light and happiness of a spiritual regeneration to dwellers in homes formerly sin-darkened and disease-stricken, and they are beginning to wonder why those whose avocation is the effort to make the world of tomorrow better than the one of today, should quarrel with a religion that produces such results.

[George Shaw Cook in *Lakeview Times and News*, Chicago, Ill.]

It would be entirely inconsistent with the fundamentals of Christian Science to attempt to combine its practise with the practise of medicine. To the extent that material means were employed by the metaphysician, and to the extent that he compromised with matter and placed his dependence thereon, to that extent would he stultify his faith in the power of Mind as the healer of diseases. By such methods the practitioner would become like the "kingdom divided against itself" which Christ Jesus said "cannot stand." The Master consistently declared, "If therefore thine eye be single, thy whole body shall be full of light," and, "It is the spirit that quickeneth; the flesh profiteth nothing."

Christian Science is the restoration or reestablishment of primitive Christianity, and as such it must necessarily use the means in healing which were employed by Jesus and his students and followers in the early Christian church. It is recorded of Jesus that he healed "all manner of sickness and all manner of disease among the people," and when questioned as to how the healing work was done, he said, "The Father that dwelleth in me, he doeth the works."

Although the practise of medicine was in vogue for two thousand years before the advent of Jesus, it is not recorded that he cooperated with medical doctors in his healing work or that he even called upon them for diagnoses. On the contrary, there is every reason to infer from the gospel record that he healed functional and organic, acute and chronic diseases, without failure and without the use of drugs or material remedies. Christ Jesus said to the man whom he healed of the palsy, "Be of good cheer; thy sins be forgiven thee," indicating that the forgiveness or destruction of sin was what released him from the bondage of disease. To the woman who had "suffered many things of many physicians" and who "was nothing bettered, but rather grew worse," he said after he had healed her, "Thy faith hath made thee whole." When he healed Peter's wife's mother of a fever, he "rebuked the fever; and it left her." In the Acts of the Apostles it is recorded that when Peter was appealed to for help at the gate of the temple by the man who had been lame from birth, he bade him in the name of Christ "rise up and walk," and the man was immediately healed of his lameness. When asked how this healing was accomplished, Peter insisted that it was through faith in the name of Christ, and then made the remarkable declaration, "There is none other name under heaven given among men, whereby we must be saved."

Christian Scientists believe that the so-called miracles which were performed by Jesus and his followers, and to some extent by the ancient prophets, were miraculous only in the sense that they were wonderful or marvelous. They believe that these works were not special interpositions of God without regard to law, but that they were natural manifestations of the power of God according to His law. They believe that Christ Jesus understood this law and that his works were done in accordance with it. They believe that the same law is operative today, and that it is discovered to the world by Mrs. Eddy in her book, "Science and Health with Key to the Scriptures." They have learned through the study of this book that the same Mind "which was also in Christ Jesus" is present with men today; that it is abundantly able to heal sickness and may be relied upon with absolute confidence; that sole reliance upon divine Mind in the time of trouble is better than reliance upon non-intelligent matter, and far better than the attempt to rely on both.

[George S. Powell in *Greensboro* (N.C.) *News*.]

Referring to a sermon reported in a recent issue, allow me to say that the preacher was not justified in trying to connect the teaching of Christian Science with that of Plato, Fichte, and Berkeley. Christian Science teaches that God's creation is perfect, harmonious, and indestructible, that evil can be overcome and destroyed, as the Bible teaches, and

Digitized by Google

therefore it is not of God. If evil, sin, and disease were of God, they could not be destroyed, and it would be wrong to attempt to destroy them, for "God saw every thing that he had made, and, behold, it was very good"—"All things were made by him; and without him was not any thing made that was made." God is Spirit, and His creation, including man, is spiritual, indestructible, real, eternal. This is what Christian Science means when speaking of the real and the unreal, and it is what Jesus meant when he said: "It is the spirit that quickeneth; the flesh profiteth nothing." "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father," and "Ye shall know the truth, and the truth shall make you free."

Gibbon, in his history of the "Decline and Fall of the Roman Empire," says it is reported that for three hundred years after the crucifixion of Jesus, his followers exercised this divine power by healing the sick and raising the dead. This power was lost when Constantine, in establishing a state religion, undertook to popularize Christianity by concessions to pagan Rome, with the result that the healing Christ, the seamless robe, was laid aside for man-made creeds and dogmas. The trend of public thought today is, however, toward the religion taught by Jesus and the apostles,—a demonstrable religion that will give present relief from sin, sickness, discord, strife, and greed. If the Bible is true, and man is made in the image and likeness of God, Spirit, not matter, he lives, moves, and has his being in God; "the kingdom of God is within" him; he is an heir of God, and joint-heir with Christ Jesus, and he has the divine right to overcome these inharmonious conditions.

[Ezra W. Palmer in *Denver* (Col.) *Post.*]

When we analyze the claims of evil, it of necessity is apparent that either God made evil or He did not. And it is because men for long ages have had a confused conception of God that they have been equally confused as to the validity of the claims of evil, and have believed either that evil was created by God, or that it is an entity of itself, acting contrary to God's wishes and frequently overruling them. Christian Science brings order into this chaos. It teaches that there is one supreme, governing intelligence, the one Mind, God; that the one Mind is Spirit, perfect, the sum total of all good, and that His creations, man and the universe, partake of His qualities and likewise are spiritual and perfect. Jesus had this ideal in view when he said: "Be ye therefore perfect, even as your Father which is in heaven is perfect." In Genesis we read that God created the heaven and the earth, and that everything He had made was very good. If, therefore, God is good and supreme, where, then, is the necessity for evil, which would, if permitted, set at naught the divine decrees? And if God's creations are good, like Him, of what avail is any foreign element which would endeavor to impair the happiness of His children?

If God created evil, then God must know evil; evil would therefore be a part of the divine consciousness, eternal and immortal, and for mortals to strive to overcome it would be to attempt to overthrow the divine order and integrity. Such a concept would only land us in chaos and despair. If we refuse to make God responsible for evil, and at the same time contend that evil is a reality, where do we land? We must inevitably set up evil as a kingdom in itself, arrayed against God's kingdom, warring against Him, overturning His power, condemning men to sin, sickness, and death, and disrupting the supremacy of God's government. The theological concept of Satan, as portrayed by Milton and other writers, expresses this so-called dual nature of the universe. Since evil in its very nature is the antipode of God, it were impossible that He should create evil. In Habakkuk we read: "Thou art of purer eyes than to behold evil, and canst not look on iniquity." Jesus spoke of himself as "the light of the world," and in John, God is spoken of as "the light of men." Now, darkness is the antipode of light, and where light is, darkness cannot exist. Darkness is incapable of analysis, because it is nothing, being the mere absence of light. Light, however, cannot by any process of reasoning be shown to be responsible for darkness, nor is there any possible connection between them. In like manner, God is not responsible for or in any manner connected with evil.

Nor can evil have existence contrary to the divine will, because, were this true, God would not be supreme. His power being divided with his antipode, He would not be all knowing, all wise, and ever present. In fact, when we admit a place for evil, to that degree do we take away from God the qualities of infinite perfection. If evil has no place in God's kingdom, nor in a hostile antipodal kingdom, how then can evil be accounted for in this work-a-day world of ours? Jesus defined the devil (evil) as "a liar, and the father of it." A lie has no real existence, it is a deception, and it retains the appearance of reality only so long as its true nature is not perceived. If a lie is known as a lie, it deceives no one and is powerless. Where does a lie find a local habitation? Where but in the thought of him who utters it and by him who believes it or allows himself to be influenced by it? Evil therefore can only find lodgment in the false beliefs of the human mortal mind, and it is to this source Mrs. Eddy traces it. In Science and Health (p. 178) she states that all evil comes from mortal mind. By the term mortal mind Mrs. Eddy means more than the evil beliefs which may influence any one individual or any group of individuals. By it she means the belief of an existence apart from God, human knowledge, the carnal mind, of which St. Paul speaks in Romans, when he says, "For to be carnally minded is death; but to be spiritually minded is life and peace. Because the carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be." If all men ceased believing evil, thinking evil, and acting under evil intimations, and were to put on the Mind of Christ, evil would cease, men would see the allness of Spirit, and the problem of a so-called dual universe would vanish like darkness before the majesty of the sun.

Jesus Christ clearly saw the omnipotence of the Father, and the nothingness of evil in whatever form manifested. And because he knew only one Life, God, he saw the falsity of any claim to life or power by mortal belief, and he destroyed every manifestation of evil which presented itself, whether it were lack of food, a storm at sea, hatred of enemies, a form of sickness, or death itself. The things which Jesus destroyed were not realities but illusions, human beliefs, wrong thoughts manifested, the delusive bondage of sin, sickness, and death. Jesus knew that God did not create evil, that evil was not good in the making, and that evil was not necessary to emphasize good; he saw it for what it was, "a liar, and the father of it."

Thinkers in all ages have more or less clearly seen this idealism, this allness and immanence of good, but only in the Bible has it been so clearly taught as to be of practical value to mankind. The weakness of philosophy has been that it had no remedy to heal the ills of humanity. This the teachings of Jesus supplied. He saw so clearly God as infinite Spirit, and the true universe, including man, as the spiritual idea of God, that the evil beliefs of men and women who came to him were seen as falsities, not binding on the children of God. So, when the people looked to God for help, they were healed of every manifestation of evil, whether sickness or sin. To Mrs. Eddy belongs the credit of making clear, in our time, the true nature of God and the nothingness of the claims of evil, as revealed in the Bible; and because of the light shed on the Scriptures through her illumined understanding, as set forth in Science and Health, true spiritual healing is again made practical to destroy the ills of the flesh.

[Charles F. Kraft in *Spokesman-Review*, Spokane, Wash.]

A recent issue of the *Spokesman-Review*, in reporting the sermon of a prominent Methodist minister in your city, credits him with having declared that "the man who needs a doctor is the man in whose heart the plague of sin has left its mark;" that "Christ is the great Physician who has the infallible remedy which destroys the virus of sin," but that he believes in calling in a physician to prescribe for the diseases which he says "are but the symptoms of the disease of sins." The report also has it that he "explained" that he is neither "a Christian Scientist nor a faith-healer."

Whether our Methodist brother designated himself by this or that name is really not of so much importance as is his position on the subject under discussion. Indeed to the ordinarily well-informed his explanation is entirely unnecessary. However, for the benefit of those who may be misinformed or uninformed, permit me to say that Christian Scientists maintain that Christ, Truth, not only "has been," but is, the remedy for all sin, or error, and its concomitants, disease and discord of every name and nature.

The "works" of Christian Science are compelling so-called "orthodox" religious teachers to lay greater stress than heretofore on the fact that sin causes bodily suffering, and that departure from sin is necessary to an improved physical as well as a better moral condition. Christian Science, however, goes farther, and declares that not only wilful sin, but ignorance of God's law and erroneous beliefs concerning His creation must be corrected in order that the fear, discord, and disease to which mankind is in bondage may be destroyed.

Christian Science, by according a better understanding of God, is correcting the mental, moral, and physical abnormities of human experience, and cannot, therefore, be in any sense allied to what is known as faith-healing, or healing through a blind faith in God. Its adherents are learning that instead of a priesthood set apart, all Christians should be "kings and priests unto God," "able ministers of the new testament;" that through the knowledge of the truth that makes free, they should be able and willing to obey the whole command to both "preach the gospel" and "heal the sick" in the way the Master taught, and to realize the "signs following" which he promised to all "them that believe."

[Royal D. Stearns in *Wahoo* (Neb.) *Wasp*.]

Your critic says the "basic principle of the teachings" of Christian Science "is the doctrine that 'nothing is matter,' 'all is Mind' [Science and Health, pp. 113, 275]." Jesus said to the Samaritan woman that "God is a Spirit" and that He must be worshiped " in spirit and in truth." That is the way Christian Scientists worship the heavenly Father. Can anything be more scientific than the truth? As to the unreality of matter which seems to excite your critic, if he has kept up with the trend of thought of his physical science friends, he has seen the numerous statements which many learned men have made on this subject. Professor Ostwald of the University of Leipsic, Germany, says: "Matter is a thing of thought." Grant Allen asserts, "The universe as known to us consists wholly of Mind," and "matter is a doubtful and uncertain inference of the human intelligence." Huxley states: "After all, what do we know of this terrible matter except as the name of the unknown hypothetical cause of states of our own consciousness?" Professor Browne, Professor Davis of Virginia, Professor Woodhull of Columbia University, Professor Tait of Cambridge, and many other prominent scientists, take a kindred position. When Mrs. Eddy first declared that matter was unreal, she stood alone, and her assertions brought forth unstinted ridicule from physical scientists; but today the thinking, investigating scientist admits that she was correct.

Your critic says, "The Christian Scientist may call hunger and food, etc., illusions." He doubtless loses sight of the teaching of Jesus in Matthew: "Therefore I say unto you, Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment?" He well knew that mortals must take some thought for the necessities of daily living; yet he also knew that a vision of reality once had, would forever lift the people above that sordid sense and enable them to apprehend more clearly that the same divine Love which took care of the birds and flowers would also take care of them. About the first thing the Christian thinker, from a Christian Science view-point, has to learn, however, is the distinction between his desires and his needs. He wants many things he thinks are good for him; he needs really only what actually is good for him. And to distinguish between what he should and should not be expecting divine Love to give him, is perhaps his greatest want. It is quite common in human experience, if the individual prays at all, for him to ask personal favors, and then he wonders why they are not granted. Undoubtedly one of the first needful lessons for us to acquire is to get rid of so many material desires rather than to have them gratified. The highest Christianity teaches us that God heeds our need, and that when we are willing to stop outlining what we think we need and to place our welfare under the logical operation of divine law, we shall be abundantly satisfied.

After emphasizing the need of giving less and less thought to the material things of life and putting more and more trust in the spiritual, Mrs. Eddy writes: "The divine Mind, which forms the bud and blossom, will care for the human body, even as it clothes the lily" (Science and Health, p. 62).

[Charles W. J. Tennant in *Saturday Standard*, Dumfries, Scotland.]

I have read with much interest the report of the Antiquarian Society jubilee in a recent issue, but in the address of Mr. Scott-Elliot I notice that he classes Christian Science with mesmerism, hypnotism, esoteric Buddhism, crystal-gazing, etc., and calls it "an ancient superstition." Now, nothing could be said about Christian Science that would be wider of the mark than this. Mrs. Eddy defines Christian Science "as the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1). Christian Science destroys ignorance, fear, and superstition, and demonstrates the saying of our Master, "Ye shall know the truth, and the truth shall make you free." The ever increasing number of those who are taking up the study of Christian Science testify of their freedom from fear gained through an understanding of the subject.

Mesmerism and hypnotism, on the other hand, always dwell in the realm of the human or carnal mind, and work through the belief of will-power, one mind controlling another; and since the carnal mind believes in good and evil dwelling together in the same consciousness, in other words, a "house divided against itself" which "is brought to desolation," no good can come of it. In the practise of Christian Science it is the utilization of the divine Mind, the Mind that was in Christ Jesus, which produces the beneficial results seen in the healing of sin and sickness, and brings to the patient the knowledge which Jesus said should come, namely, that "the kingdom of God is come unto you."

God is the life of all the generations that have been, are, and are to be, and coming generations will continue to improve the conception which humanity forms of Him, of His law, and of our duties. You are bound to adore Him and to glorify Him wheresoever He manifests His presence. The universe is His temple, and the sin of every unresisted and unexpiated profanation of the temple, weighs on the head of each and all believers.—MAZZINI.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

FACTS AND FIGURES.

UNDER the plausible guise of a desire for the public good, and upon the plea that the public is either incapable or not to be trusted in its judgment of what is best for its own interests, the medical societies of the different states are becoming more aggressive and more persistent than ever before in their efforts to secure the enactment of legislation for the purpose of preventing the practise of any system of healing disease which is not within their scope and control. One of the methods by which this kind of legislation is expected to be secured is set forth with engaging frankness in an article in the *Journal of the American Medical Association* of Feb. 15, 1913, from which we take the following excerpt:—

"At the spring meeting of the medical society of a certain county in southwest Kansas, suggestion was made that one of the members of the society should be a candidate for the Legislature, in order that the interests of physicians might be safeguarded by representatives from among the profession. This was determined because the interests of physicians were menaced by the last Legislature and were also seriously threatened through the activities of the chiropractors and the League for Medical Freedom in the Legislature which was to be chosen and is now in session. . . . Notwithstanding that the physician-candidate was a Democrat, while most of the members of the society were Republicans (Seward county is strongly Republican), they stood together 'as one man' and succeeded in electing him. But the story does not end here. The doctors agreed not only that they would work for his election, which they did most heartily, but also that they would turn back all of his patients on his return from the Legislature and pay him a per diem bonus as well while he was in attendance at the capital. . . . Is it not about time that the physicians of the country should emulate the example set by the Seward County Medical Society and 'get together'?"

That there is an ulterior purpose in the legislation which these societies are trying to secure, and that it is not demanded by the public, is becoming more and more apparent at every legislative hearing on the various and sundry bills introduced by or for the physicians at each session of the state lawmaking bodies, but it may not be so generally known that many of the editorials apparently advocating such legislation, as they appear in newspapers throughout the United States, are sent out in bulletin form from the headquarters of the American Medical Association. One of these bulletins is before us at this writing, and later on we shall doubtless see editorials embodying this text, under the eye-catching captions of "School Diseases," "The Stomach in Hunger," "Applied Ideals," "Athletics and Health," "The Specialist," "Alleged Discovery of a Cancer Germ," etc., appearing in some of the smaller newspapers of the country. The object in thus broadcasting these editorials seems to be the manipulation of public sentiment through the fear of disease which they are more than likely to engender, but the institutors of this sort of propaganda should not count too much on the general impressionability of the people.

That, however, an effort is being made to keep the public in ignorance of the real situation, and the fallaciousness of the arguments used to perpetuate this ignorance, is well illustrated in the oft-quoted statement that the United States government is spending millions of dollars for the preservation of hog life and nothing for the preservation of human life. This statement is more brilliant than true, as the facts are that a report called for by the United States Senate and just submitted by the secretary of the treasury shows that the expenditures of the government in its various activities intended to conserve the public health have amounted to $19,800,026.23 in the fiscal year just closed, and that 15,632 employees of the United States are engaged in these activities. Here are facts and figures that speak for themselves, and if it is also true, as we are informed, that every one of the physicians employed in the departments and bureaus of the government are of one school of medicine, the system which is at the back of all legislative efforts to compel the people to submit to its treatment and none other, the animus and purpose of the present legislative activity is plainly apparent.

The figures given above prove that the government has been liberal in its appropriations for this purpose, and even those who have been quoting the "hog and human" epigram must feel reasonably surprised at the magnitude of these federal expenditures.

ARCHIBALD MCLELLAN.

GLIMPSES OF MAN.

THE most impressive object within the range of human vision is humanity, and a truly great man is certainly the most impressive thing in the world. The all-inspiring influence of the Master becomes quite explicable when we remember that as none other he not only defined man, made him appear, but showed how his stature may be fashioned day by day at the hands of all who are humbly aspiring; and the purport of Christian Science might be epitomized in the statement that it is effecting man's reappearance. The contribution which all truly great men have made to this disclosure has been the proof of their impelling, though often ill-understood greatness, and this fact is illustrated when we think of him whose natal day has just been celebrated in all the states, and whose memory is honored in all the world.

An interesting aftermath of whatever may be said in praise of Washington's honesty and integrity of character, his dignity and kindliness of bearing, his conscience and command as a leader, is this, that while many men have given prominence to the worth of some special endowment, such as the patriotism of a Mazzini, the statesmanship of a Pitt, the humanitarianism of a Wilberforce, so that a given distinguishing quality or character is always associated with the given name, Washington has done much to lead the world to think of that to which all these virtues pertain; namely, man. He did his greatest deed when he brought, not only to the American colonies, but to all the nations, a new and inspiring sense of man's native largeness and worth, gave it place and dominion in the thought of mankind. He has helped us all to think of man as capable of doing any and every noble thing, and that by virtue of the completeness of his true, God-given selfhood. As President-elect Wilson has recently said of another distinguished American, "He was great and peculiar, not in some distinctive characteristic, but in his breadth as the representative of a vast movement." Though a slaveholder, Washington was a splendid embodiment of the eternal assertion of democracy, of the sovereignty of man.

The indomitable heroism of Captain Scott and his comrades makes moving appeal to the heart of all humanity; as one has said, The spirit with which these men met their fate "has such nobility as to become a sublime inspiration." Their record speaks for daring and brave uncomplaining endurance, and thus we who in the spirituality and compass of our living bring to our fellow men a clearer sense of manliness, may direct the human gaze to him who said, "And I, if I be lifted up from the earth, will draw all men unto me."

Through instruction there has come to Christian Scientists what seems to have come in a degree to Washington and Gladstone and their kind by intuition, namely, a higher revelation of man as great not in giving emphasis

Digitized by Google

to some special virtue or capacity, but in himself, his origin, nature, and destiny, and this is the most helpful influence that can be exerted by any human personality, to make us think more nobly of ourselves, of what it means to be a man. In the crises of sickness and sin, Christian Science is bringing into demonstration today this greatness and power of man as it has been apprehended and made manifest only here and there and that indefinitely since the early days of Christianity. It is inspiring human sense, so long enthralled by the belief of man as discouragingly if not hopelessly material, with a vision of the Christlike proportions of the stature of the man of Spirit to which, as Paul has said, we may all come "in the unity of the faith, and of the knowledge of the Son of God."

JOHN B. WILLIS.

SCIENCE VERSUS SUPERSTITION.

THERE is no denying that mortals can never be content with the narrow range of existence to which material sense bears testimony. The senses allure and hint at endless pleasures, but long ago the wise man learned through sad experience that the end of all these things is death. This does not mean that pleasure in itself is wrong, for the psalmist says, "At thy right hand there are pleasures for evermore." These pleasures, however, are the flower and fruitage of spiritual consciousness and rest upon divine Principle, so that they are indeed "for evermore."

Mortals in general start life with the pursuit of happiness rather than a quest for Truth, and the result of this mistake is found in disappointment, sorrow, sickness, and it may be death. Many then reach out blindly for help from an "unknown God," and when no help comes they doubt the existence of the God who knows and loves and guides all His children. In the barren soil of unbelief the weeds of superstition then spring up, and instead of the knowing of God which Christ Jesus declared to be life eternal, there is a false sense of being and its laws, expressed in religious superstition and medical superstition, both phases of this error obscuring to mortal sense the light of divine Truth. This is finely expressed in Rebecca's hymn, as given in "Ivanhoe":—

> Our fathers would not know Thy ways,
> And Thou hast left them to their own.

Again, this was voiced by the Master, who sorrowfully said, "Ye will not come to me, that ye might have life."

In turning thought away from God, superstition of any sort dulls the moral sense and leads misguided mortals deeper and deeper into the mire of error. Because of this we find in the Scriptures the most solemn warnings against its indulgence; indeed the children of Israel were told that those who dwelt in the land before them were driven out because of their superstitious beliefs and practises. With the warning, however, was given this assurance of divine Love: "I am the Lord that healeth thee." The kind of healing here promised has its explanation and fulfilment in Christian Science, which, contrary to a prejudiced opinion, destroys all belief in superstition in demonstrating the infinite power of Truth to meet every need of humanity. Of old Isaiah said, in a warning against necromancy, "I will wait upon the Lord, that hideth his face from the house of Jacob. . . . Should not a people seek unto their God?" At another time he warns the faithful against those who "whisper out of the dust," as well he may when we remember that man's heritage is spiritual.

Our revered Leader reminds us that "human philosophy, ethics, and superstition afford no demonstrable divine Principle by which mortals can escape from sin" (Science and Health, p. 99); yet this is more important than all else, for as we rise above sin and honor God by acknowledging Him in all our ways, we at the same time rise above sickness, sorrow, and the fear of death. The belief that we can be really healed without overcoming sin is in itself an ancient superstition, which can find no support in Jesus' teachings or in Christian Science which declares that "superstition and understanding can never combine" (Science and Health, p. 288). Superstition always clings to a blind belief that evil has power, indeed this is its very basis, while Christian Science lifts the individual, step by step, into the realization of one Mind and one power, namely, that of good. The vision of the Apocalypse shows the dark shadows of sin and superstition fading out as they are pierced by the rays of divine Truth, and the men and nations thus saved walk in the clear light of spiritual being into which nothing can ever enter that "defileth . . . or maketh a lie."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

MINNESOTA.—The past year has been one of comparative freedom from disturbing situations. The field has been responsive to any demand made upon it, and the general public has seemed less critical and more appreciative of the work that Christian Science is doing in demonstration of its divine Principle. The press has been very kindly, not only in its references to Christian Science and in the correction of misstatements, but also, and in a very gratifying degree, in kindly reference, in reprints of articles which have appeared in the publications, and in a general recognition of the position of Christian Science as a religious movement. During the past year we have continued our subscriptions for the various penal and reform institutions of the city and state, libraries, clubs, and other places where they would seem to be appreciated and productive of good. We have also succeeded this year in placing all our periodicals and the works of Mrs. Eddy on all observation and library cars of the Minneapolis, Sault Ste. Marie, and the Northern Pacific railroads, thus adding splendid avenues for the introduction of Science literature.

Report of Committee on Publication.

WINCHESTER, MASS.—In the reading-room of First Church of Christ, Scientist, the sale of literature and subscriptions to our periodicals have been steadily increasing. More copies of Science and Health have been sold to beginners than ever before in the same length of time. We have had to increase our subscriptions to the *Journal* and *Sentinel*, to meet the demand for them, and a larger number of subscriptions for the *Journal, Sentinel, Quarterly,* and *Monitor* were taken in January than ever before in any one month. We all rejoice in the growth of this department of our work.—*Correspondence.*

UTAH.—The Christian Science publication committee for Utah in the annual report says: Probably the most important progress of the year just closed is the greater knowledge Christian Scientists have gained of the nature and scope and

Digitized by Google

consequent value of *The Christian Science Monitor,* and too much importance cannot be attached to our work for and with the *Monitor,* for the reason that its mission may be compared to that of John the Baptist in his relation to Christ Jesus, in that it is a forerunner of the healing and saving Christ-principle. Experience is showing that our great daily paper may be placed in the hands of every one who speaks our language, irrespective of what his religious beliefs and prejudices may be, and it is found that even a cursory examination of the paper will invariably break down prejudice against Christian Science.

Upward of eighteen thousand pieces of literature were mailed and distributed through this office, in addition to the distribution work carried on by *Monitor* and distribution committees in Salt Lake, Ogden, Provo, Park City, and Milford, of which reports will be made to the respective churches.—*Correspondence.*

MANCHESTER, ENGLAND.—The members of First and Second Churches of Christ, Scientist, held a joint Thanksgiving service at First Church on Jan. 4, and the edifice was crowded beyond its seating capacity. This is the fourth united Thanksgiving service held by these two churches, and each has shown an increased attendance. Testimonies of the healing and saving power of Christian Science were given, swelling into a long pæan of joy and gratitude for the freedom and harmony which Christian Science had brought into the lives of these witnesses for the truth, in place of the bondage to suffering and discord formerly dominating their experience.

Many bore witness to the priceless treasure which the Bible had become to them through the spiritual understanding revealed by the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, while others expressed gratitude for all the Christian Science literature, the constant heralds of hope and joy and peace to humanity. The *Journal, Sentinel,* and *Monitor* were each awarded meeds of gratitude as healing messengers, purifying, strengthening, and exalting all who open their consciousness to receive these gracious visitors. Never has there been among the members a deeper consciousness of unity, of zeal for the cause, and of loyalty to the Christian Science Board of Directors in Boston, nor of tender love for our revered Leader, Mrs. Eddy, for again presenting Christ, Truth, to a needy world in the teaching of Christian Science.—*Correspondence.*

LONG BEACH, CAL.—A Los Angeles architect has completed plans for the edifice of First Church of Christ, Scientist, to be erected on Elm avenue, near Fifth street. The building will be one story high and will have a basement. The ground dimensions are 90 x 140 feet. The auditorium will seat nine hundred people. The Sunday school room and classrooms will be in the basement.—*Long Beach Press.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 30, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 14, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 1, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

THE LECTURES.

HULL, ENGLAND.

A lecture on Christian Science was given at the Royal Institution, Hull, by Bliss Knapp. B. Haworth-Booth, J.P., D.L., presided. There was a large attendance, nearly the whole of the seating accommodation being occupied. The chairman said it was a common thing to hear Christian Science misrepresented, and he believed that the lectures by authorized members of the Christian Science board of lectureship were the best means of dispelling the darkness and throwing light upon the subject. It was not denied that Christian Science interpreted the gospel teaching in a manner new to the thought of this age; but Jesus plainly told his followers that in the years to come the world would receive fresh light on the momentous subjects on which he had spoken, and that this fuller light was not to supersede but to explain his words. He said, "I have yet many things to say unto you, but ye cannot bear them now. Howbeit when he, the Spirit of truth, is come, he will guide you into all truth: . . . he shall receive of mine, and shall show it unto you."

The age through which we were passing had been rich beyond all others in new discoveries for the great well-being of men, but such men as Bell, Edison, Kelvin, and Marconi did not create the forces now available for all. So Mrs. Eddy did not create Christian Science; she perceived and gave to the world something in the Saviour's teaching which preceding ages had failed to perceive, and thus it fell that the wayfaring man today, if he be willing to be instructed, might know things of which the wise and prudent of this world were ignorant; he might gain a deeper and grander understanding of the truth of God, expressing itself in a wonderful improvement in health and happiness, and in a greatly extended capacity to be of service to others.

On all sides they saw the slaves of sickness and the slaves of sin; but they had Christ's promise, "Ye shall know the truth, and the truth shall make you free." This freedom came through Christian Science; it was a demonstration of the healing of Christ; it was a freedom full, perfect, and sufficient; it was a Christianity worthy of the divine giver "who forgiveth all thine iniquities; who healeth all thy diseases." "Because of the spiritual uplift and physical improvement in my own life and in other lives near to me," said the chairman, "I am grateful for every opportunity to add my mite toward the universal adoption of this new-old truth."—*Eastern Morning News.*

TACOMA, WASH.

Virgil O. Strickler at his lecture on Christian Science in the Tacoma theater was introduced by Charles A. Brower, first reader of the church, who spoke in part as follows:—

It is not within my province to tell you what Christian Science is, the lecturer will do that; suffice it for me to say that it heals sickness and sin and binds up the broken-hearted. I have just heard of a man who was healed of a supposedly incurable drink habit and the vices that go with it. In my own family there have been cures of so-called incurable diseases. One sister, who was pronounced beyond material help as the result of a Cæsarean operation, was raised to health and strength in a few weeks through Christian Science treatment. I myself was healed of asthma, with which I had been afflicted ever since childhood, and for seventeen years Christian Science has been my only medicine. Christian Science is valuable because it is practical and can be used now. There is no waiting for future salvation, but we are taught, as Paul said, to let that Mind be in us "which was also in Christ Jesus," and Jesus said, "The kingdom of God is within you."—*Correspondence.*

EVANSTON, ILL.

The lecture on Christian Science, under the auspices of First Church of Christ, Scientist, was given before the largest audience that ever attended a similar lecture in this city. Every seat in the Evanston theater was filled a half hour before time for the beginning of the lecture, and it became necessary to use seats on the stage. Besides this, quite a number of people were turned away, being unable to gain entrance to the building. The lecturer of the afternoon, William R. Rathvon, was introduced by Chancellor L. Jenks of this city, who made the following remarks:—

All sects of Christianity unite in certain beliefs, among which is that of the absolute control of the universe by an all-wise Providence, possessing and using infinite power and unbounded love. The most important study of man is his relation to this supreme power. Scripture informs us that man was made in the image and likeness of God. Think, then, what must be man's attributes! Like begets like. Unlimited power, wisdom, love, health, life, happiness, and success belong to man as his birthright. He has no power, capacity, or tendencies underived from the one beneficent source. Whence, then, comes the age-long problem of sin, sickness, suffering, sorrow, failure, and at the end the descent into the grave? It were sacrilege to ascribe these evils to an all-wise and all-loving Father. Here lies the greatest mystery of all ages. No truth in all the universe can equal in importance the truth on this subject. This is the truth Jesus referred to when he said, "Ye shall know the truth, and the truth shall make you free." To those who thronged about him on the mount, he made another promise —that the pure in heart should see God.

In God's good time, these promises have been fulfilled. Less than half a century ago there came to a pure-hearted New England woman a message bearing a new interpretation of the Scriptures, a higher meaning of the life and mission of Jesus. Daily a great multitude of happy men and women who have read her message, and have grasped the truth therein set forth, are proving that it does make men free. All of truth is not understood. We can demonstrate it only to the extent of our understanding. But enough already has been apprehended of this truth which makes us free to strike from mankind a thousand limitations which were believed to be inevitable, and to establish a higher standard of health, purity, happiness, longevity, efficiency, and success.—*Evanston Index.*

LYNN, MASS.

A good-sized audience attended a lecture on Christian Science by Judge Clifford P. Smith, delivered in the First Universalist church. The Rev. Frederic W. Perkins, D.D., pastor of the church, in introducing the lecturer, spoke in part as follows:—

The great issue of our time is between a practical spiritual life on the one hand, and a practical material ideal on the other. I stand here to assert publicly what those who know me know to be true, that I would be the friend and helper of those, under whatever name, who would live by the power of the Spirit. The issue is too momentous, the consequences are too serious, to allow sincere religious practitioners to indulge in the wasteful luxury of suspicion and bigotry and misrepresentation. I will endeavor to be loyal to my own conceptions of truth. I will, if need be, voice in kindliness and candor my dissent from another's methods. But I will be more eager to voice my approval of his spiritual purpose, and when I cannot agree with him, I will be glad of any spiritual successes which he, in his own way, may win. I feel at home in any company of men and women who are striving to realize the presence of the divine Father and to live out the divine sonship which is latent in us all.

Lynn Item.

SALT LAKE CITY, UTAH.

Before an audience which packed the Salt Lake theater, Virgil O. Strickler delivered a lecture upon the fundamental teachings of Christian Science. The speaker was introduced by Robert B. Porter of Salt Lake, who said:—

Whether or not we are members of the Christian Science church, we must acknowledge that it has been a tremendous force during the past half century. Whether or not we believe in its teachings, we must admit it has had a wonderful influence for good during that time. Every new organization, every great movement, must encounter hostile criticism and often ridicule from those who oppose it. The Christian Science church has not escaped this criticism or this ridicule, but disregarding it, has grown until the world has been forced to acknowledge its mission.

Every religion that gives hope and courage; that makes men and women better; that teaches them a higher regard for all things spiritual—every religion that lifts men a little above where they stood before—has a right to exist, and should meet a responsive chord from every worker in humanity's cause everywhere. The man who believes only in his own cause, and refuses to listen to the cause of others, is a bigot, narrow, and of little use to his fellow men. The man who believes in his own cause, but who also believes there is good in everything, is a sage, broad and liberal, and a coworker in all great reforms. Growth is a law of nature as well as a command of God. Growth is development along right lines. Development comes from contact with other men; in sifting from all things the good, as the individual is able to judge the good, and in paying heed to one's conscience.—*Salt Lake Herald-Republican.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Amarillo, Texas.—Grand opera house, 8 p.m., March 13.
Bedford, England.—Town hall, 8 p.m., March 10.
Colfax, Wash.—Congregational church, 8 p.m., March 10.
Denver, Col. (First Church).—Church edifice, corner Fourteenth avenue and Logan street, 3 p.m., March 9, and 8 p.m., March 10.
Grand Haven, Mich.—Unitarian church, 8 p.m., March 11.
Grand Junction, Col.—Majestic theater, 8 p.m., March 4.
Hagerstown, Md.—Court house, 8 p.m., March 14.
Hoboken, N. J.—Gayety theater, 8 p.m., March 9.
Jacksonville, Ill.—Grand opera house, 3 p.m., March 9.
Kansas City, Mo. (First, Second, and Third Churches).—Convention hall, 3:30 p.m., March 9.
Laconia, N. H.—First Unitarian church, 8 p.m., March 14.
Lancaster, N. H.—Opera house, March 13.
Lewiston, Idaho.—March 13.
Marinette, Wis.—Church edifice, corner Liberty and Stephenson streets, 8 p.m., March 13.
Milwaukee, Wis. (Fourth Church).—Auditorium, 8:15 p.m., March 11.
Moscow, Idaho.—Egan hall, 8 p.m., March 11.
New Brighton, Staten Island, N. Y.—Curtis lyceum, Wall street and Stuyvesant place, 8:20 p.m., March 11.
New Britain, Conn.—Ruswin lyceum, 3:30 p.m., March 9.
Provo, Utah.—Princess theater, 7:30 p.m., March 9.
Rockland, Mass.—Grand Army hall, School street, 7:45 p.m., March 7.
Tomah, Wis.—Unique theater, 8 p.m., March 11.
Trenton, N. J.—Taylor opera house, 3 p.m., March 9.
Walla Walla, Wash.—Keelor Grand theater, 4 p.m., March 9.
Winnemucca, Nev.—Nixon opera house, March 11.
Woburn, Mass.—Lyceum hall, 3 p.m., March 2.
Yonkers, N. Y.—Yonkers public library hall, 8:15 p.m., March 11.

TESTIMONIES OF HEALING.

It is just a year ago that a fellow sufferer who had been restored to health by the teachings of Christian Science advised me to go to a Christian Science practitioner and be healed. For twenty-five years I had battled for life against the belief in a torpid liver, nervous and stomach trouble, continuous headaches, and sleeplessness. I spent thousands of dollars for the services of physicians and medicines, and only employed the most honorable and capable men in the profession. It is likely that had it not been for their skill I would have died long ago; but though they gave me temporary relief, they did not cure me. Twenty-five years ago I quit the practise of my profession, the law, traveled for two years, and returned to San Francisco more helpless than when I left. I took the "rest-cure," lived on milk for two years, was in practise again, but always troubled as above stated. I took enough of one drug prescribed for headaches to kill an ordinary man, and tried every other drug in vain; but not until I had been treated by a Christian Science practitioner for a month did I obtain relief.

Today I am in perfect health, eating anything and everything I wish, with never an ache or a pain. Those who have known me for years marvel at my recovery; some who do not know me so well, think I imagined I was sick, and that if I had exercised will-power I could have cured myself. To such as believe that disease can be cured by will-power emanating from mortal mind, I have only to say that the physicians who attended me claimed that it was will-power which had saved my life and given me strength to conduct my business. I went into the world to earn my own living at the age of nine years, and no one ever gave me a dollar unless I worked for it. Will-power kept me from letting my friends or those whom I loved know what I suffered, but will-power could not and did not cure me. I think it proper and useful to say that I have never used tobacco, and I have led a temperate and simple life. I read the Bible and loved God and had faith in divine power, but I now know that I never understood the teachings of Christ Jesus until I studied the Scriptures, aided by the interpretation given in Science and Health by Mrs. Eddy. May God direct every man and woman in our beloved land to learn from these two books, not only to live a godly life, but to live a life of happiness and comfort, free from pain, and absolutely fearless of sickness or death.

In conclusion I would advise any one who is unfamiliar with the writings of Mrs. Eddy, and is suffering from bodily ailments and seemingly unable to help himself, to go to a practitioner. Six years ago I was advised to study the Science and was given the text-book to read. I read several chapters, and came to the conclusion that I could not reap any benefit from it, so I gave it up. I now feel that by my failure to seek the needed help at this time I lost five years' time, which had I been a well man would have been the most valuable period of my life to myself, to those I love, and to my city. I send this testimony in deepest gratitude.—J. A. STEPHENS, San Francisco, Cal.

[Translated from the German.]

At the age of ten I began to be ill, and I suffered for years. In May, 1907, when my mother passed on, I broke down completely; my appetite failed, and I was unable to take any solid food. I consulted several physicians, also specialists, but they could not agree in their diagnosis. Our family physician had given me up entirely, and said that the slightest excitement would cause death. While in this distressed condition, there was added another affliction in the summer of 1909. At intervals of eight to fourteen days I was seized with spasms, which were only relieved by hypodermic injections, thus inducing a state of stupefaction.

About this time we heard of Christian Science through dear relatives, and the trouble having reached a stage where the opiate failed to relieve me and I could not bear the after-effects any longer, I went to Hannover, accompanied by my brother. I had been unable to leave my bed for three months, but received absent treatment during the journey. Upon our arrival the practitioner explained Christian Science to us, and my courage was renewed at once. I remained in Hannover under treatment, and the spasms ceased for some time, but it took further efforts before they were entirely overcome. In the following year I experienced many proofs of God's omnipotence and love, for whenever the practitioner was notified of my need, the attack would cease, in most instances quite suddenly. I was unable to help myself in such cases, as I would lose consciousness. In the winter of 1910, however, after a severe crisis, there was a decided change for the better. During this period of chemicalization I had several attacks which affected the left side, so that it became totally paralyzed. I also lost my speech and eyesight, and lay unconscious for a week, but I did not resort to any kind of material remedies and had no physician attend me, as I knew that a radical change was taking place within and that I was under God's protecting care. After this my condition improved visibly and rapidly, so that in the following spring I was able to walk with a stick, and soon after to go to Braunschweig alone, in order to attend the Christian Science service. My healing took over two years in all, but I have been in very good health ever since. I am twenty-three years of age, and able to do the housework as never before. Everything has taken a turn for the better.

The deepest and most sincere gratitude fills me as I write this testimony, gratitude to God, to Mrs. Eddy, and to all the dear ones who have helped me to live this new life; and the hope is present with me that this testimony may be the means whereby many fellow beings, weighed down by sickness, as well as seekers after Truth, may be helped to find the way to the light which dispels all darkness. I am deeply grateful for the physical healing, but more especially for the spiritual regeneration, and my endeavor is to walk more and more in the footsteps of our Master.

IDA MEIER, Osterode a. F., Bez. Magdeburg, Germany.

I fully corroborate the above statements of my sister, and can only add that the glory of God was indeed made manifest in her case. In my own case, although there is much yet for me to overcome, I know that I shall eventually attain my physical freedom through walking in the way of Truth. A marked change has taken place in our home, and I feel greatly indebted to our Leader, Mrs. Eddy, more especially for the fact that while still on this plane she caused Science and Health to be given to the German-speaking people in the form of a translation. For this treasure, which the German people will be able to appreciate more and more as time goes on, thousands are rising in gratitude.

F. MEIER, Osterode a. F., Bez. Magdeburg, Germany.

The testimonies in the *Sentinel* have been so helpful to me that I give mine in the hope that it may encourage some other beginner. Until recently I scoffed at Christian Science, as I considered the teaching full of absurdities and said that I did not like to see people bowing down to Mrs. Eddy. My husband's mother was healed about ten years ago, as the result of two treatments in Christian Science after the attending physician had given up all hope of her recovery; nevertheless, absent treatment seemed so absurdly foolish that we attributed her relief to other causes. She has been a devoted Scientist ever since, although we said: "You might have gotten well anyway."

In September, 1910, I was taken suddenly ill with what the doctors called ovarian hernia, and a foreign growth which could not be relieved without an operation. It was to find a way out of this difficulty that I began the study of Christian Science as taught by Mrs. Eddy. I asked help of a local practitioner, but I shall have to say that I expected

Digitized by Google

her to do the work without my giving up material means. I had been a sufferer from a bowel disorder for so long that it seemed absolutely impossible and extremely dangerous to me to neglect taking the medicine provided by my physician. I had often been taken ill suddenly with a condition of the bowels which I had supposedly inherited from my mother, and the doctor's advice was to be very careful as to diet, etc. When the practitioner discovered that I was using drugs, she remonstrated, and I gave a feeble consent to her advice to try to trust Science. This brought me face to face with radical reliance on God, divine Principle, as taught in Science and Health.

The test of my faithfulness came in a few weeks, when I was again taken with an attack which wakened me from sound sleep. My promise to do without material means came to mind just as I was about to ask for the usual help. I saw the necessity for prompt action, as the suffering was intense, but I resolved to endure rather than prove unfaithful, and I had just made this decision when I was so immediately changed from rigidness and suffering to a quiet restful peace that I wondered at it. It pointed the way for me as clearly as if God had spoken to me, and I have had no fear of the trouble and have had no attacks since. I have needed no medicine since that time and both the rupture and the bowel disorder are completely healed.

"The straight and narrow way," which I recognized Christian Science to be, gave me some doubts as to whether I cared to cast my lot with the other followers, for fear I might not be able to live up to their expectations; but those fears have gradually been overcome, and I realize that God expects us to do our best and no more. I have given myself to the perfect work of patience, looking to Love to smooth off all the rough edges of my nature, for in the light of Christian Science I realized how much I lacked, though I had belonged to a Christian church all my life. I have had too many proofs to doubt God's willingness to heal our physical ills, or that Christian Science can show the way to the healing fount. I am looking forward with pleasure to class instruction, and the study of the Lesson is a daily source of profit and pleasure. I should like to add that many minor troubles have been overcome quickly. It is the results that add conviction in every case, and I trust the "fruit" of my faith may add conviction to others in needless trouble.—MRS. EMMA STELTER HOPKINS, Champaign, Ill.

A deep sense of gratitude will not let me keep silent; I feel I must give a testimony of my wonderful healing in Christian Science. In 1910 I was attacked with rheumatism, which came suddenly and was persistent; but hoping that it would pass off with a night's rest, I continued my work through the day, being greatly absorbed in my painting. I had, however, a distressing time all night, and the next morning I placed myself in the hands of a Christian Science practitioner. After three treatments I was so greatly relieved that I thought myself well and went out to do some errands, but after walking a few blocks something seemed to give way under my left knee, causing great suffering, and I was obliged to be led home, where for three weeks I was under treatment. The healing was slow, but the gain seemed apparent, and I ventured out to church.

After this I was, however, obliged to walk with a crutch and could not go out for several weeks; then I walked with a cane, and I gradually came to feel that I could not walk without it, also that I could not expect at my advanced age ever to be as free, and especially to be able to do my summer work in the country, sketching from nature, which necessitates much physical and mental labor. I was letting myself drift into the old thought, but one afternoon I felt weary with my work and laid down my brush and took up *The Christian Science Journal*. The very first words upon which my eyes rested were these: "God is on the side of health." "Why, yes, I know it! I know it!" I said to myself, and I at once felt and realized it as I never had before. I knew that all the material remedies in the world were nothing compared to it, and I was well! All seemed light about me, the darkness and the sense of limitation were dispelled, and the terrible burden rolled away. The perfect joy and peace with which I was filled held me quiet for many moments, and this message which came to me when I was actually drifting back into the old thought, touched me very deeply. It seemed so altogether tender and loving in our heavenly Father-Mother God, that it was wonderful beyond expression and I knew that God was with me.

After a while a testimony I had read shortly before came to mind, in which the woman was healed in two treatments, without undergoing the operation which all the doctors she had consulted had told her was necessary to save her life. I then took some reading and went away off up-town. As I left my studio door, my hand went out instinctively for my cane, but "No!" I said, "God is my support." After the call I never walked faster in my life than I did to catch the cars, and the next morning I went up a flight of stairs naturally, which was a severe test, as before that the right foot had to do the work, it being agony to lift the left foot the natural way. I have been perfectly well ever since, and have returned to my New York studio after a hard summer's work outdoors. I am deeply, profoundly grateful, and I am realizing from day to day that there is only one way to show my gratitude, and that is as dear Mrs. Eddy has told us: "At all times and under all circumstances, overcome evil with good" (Science and Health, p. 571).

CHARLOTTE B. COMAN, New York, N. Y.

I wish to give my testimony to what Christian Science has done for me. It is now three years since I accepted this truth, and I cannot find words to express my thankfulness to God and my gratitude to Mrs. Eddy. Every minute of my life is a demonstration of the truth that God is man's Life. It was in Chicago I first saw the light of Truth, and at that time I was almost a total wreck. I have had many experiences of healing, but I shall mention only a few.

First I was saved from an evil mental influence, being healed at the same time of an eruptive disease which had troubled me every year regularly; also from the drinking and tobacco habit and profanity. People who knew me before and after my coming into Science say there is a wonderful change in me. It is grand to know that God is Love, Life, Truth, Mind. I am now a member of The Mother Church in Boston, and also take part in the church work here, knowing it is the highest duty I have to do. I can truthfully say that by following the teachings of our Master, and those of our Leader as given in "Science and Health with Key to the Scriptures," we advance steadily. I will add that I was healed by reading Science and Health and attending the church services regularly.

EDWARD J. MILLIGAN, Salt Lake City, Utah.

I feel deeply grateful to our heavenly Father, and also to our dear Leader, who has shown us the way out of our difficulties. It was about two years ago that I first knew anything of Christian Science, when I saw what it did for my grandmother when she was ill from rheumatism. She was in such pain that she could not turn herself in bed, and when Christian Science released her from the bondage of Satan, I could not help but believe that her healing was the work of God. How glad we all were to have our dear one with us again! She seemed like one risen from the dead, for we expected to see her draw her last breath at any minute; and when her health was restored, I looked at it as a marvel.

The following autumn I was taken with a throat trouble to which I had been subject every fall and spring for about seven years previous. Every time the attacks were worse—the one previous to this had lasted three weeks and I was

Digitized by Google

in great pain and could not eat because of the swelling in my throat. I had always employed a doctor when I had these attacks, but he never gave me any encouragement of getting better. On this occasion I was sick two days, and used some of the doctor's medicine; but the third day I was worse, so I gave up the medicine and wrote to the Scientist who had helped my grandmother. I received her reply the next day, and was completely healed after reading her letter. The following winter I had another attack, which I was able to overcome for myself in about twenty-four hours, and I have never been troubled with it since.

For this and many other blessings I am very thankful.

GRACE HARDER, Bay Port, Mich.

[Translated from the German.]

I am one of the many who have experienced help through Christian Science, and for this I give thanks to God. I also think of Mrs. Eddy with a sense of gratitude and reverence. In August, 1911, I suddenly became afflicted with a sore leg, so that I could not stand without its bending over. By the following day the diseased condition had extended to the knee. I had to submit to medical treatment at once, and the physician stated that the knee-joint had become affected. He prescribed various remedies, which I tried for eight weeks without being benefited. I applied to other physicians, had X-ray examinations made, and in fact did everything that was advised, yet to no avail.

This condition lasted three months, and I had given up all hope of ever being able to walk without a cane. Friends and acquaintances then advised me to try Christian Science. I had heard much of its blessed activities, but did not believe that a cure could be effected as far as my case was concerned, especially in view of the fact that the condition of my leg had not improved in the least. I am led to believe that it was due to divine Providence that I finally decided to try the healing efficacy of Christian Science for myself, as there was a change for the better with the first treatment, and after a week had elapsed I was able to walk alone, while the improvement continued daily. The healing was accomplished within a short time, and now I feel as well as I ever did in my life, and am very grateful for all the good that has come to me through Christian Science. I could tell of many other instances in proof that God's love and presence are manifest almost hourly, and I am deeply grateful to Him for inspiring our faithful Leader, who has shown us the way to Truth.

FRAU ELFRIEDE WEICKARDT, *née* BISCHOFF, Halle a. Saale, Germany.

After five years of intense suffering, from a very severe and peculiar pain in my head, and many complications supposed to be caused by internal organic trouble, I was healed by Christian Science in October, 1909. I had tried different climates in Texas, staying a short while in a sanitarium, and had treatment from eight different physicians, among whom were specialists. At times I was not able to sit up, and in the fall of 1908, while staying at my sister's home, I became so discouraged that I did not know what to do, where to go, or where to look for help. My brother, of Nashville, Tenn., then wrote my brother-in-law to send me there, and he would see what could be done for me. While making preparations to go, I was suddenly taken very ill, which prevented my leaving for Nashville before March, 1909. For seven months I tried different physicians and specialists, who were very kind and did all they could for me. My brother is not a Christian Scientist, but his business partner is, and he sent the *Sentinel* and other literature for me to read. I was a church-member, but I read everything he sent, though partly as a matter of courtesy, as I did not seem to understand it and thought Christian Science to be something apart from God.

One Sunday morning my brother came to my room in a very discouraged state of mind, saying that it was no use to trifle about the matter any longer; that the doctors were at most giving me only temporary relief, and that I might be an invalid for life if I continued as I was. He also said that I should go to a Christian Science practitioner for treatment at once. After he left my room I wept, and prayed to God not to leave me, but to go with me and that I would see what Christian Science was; if it were not of God, I would steel myself against it and not be harmed. It can be imagined how differently I felt when the practitioner said to me that God loved me and did not want me to be sick.

During five years prior to this I had suffered from a stomach trouble, but I was healed in that first treatment, the practitioner telling me to eat anything I wanted, knowing that it would not hurt me. The pain in my head was relieved during the first treatment, and though it returned at times for several months afterward, my faith never wavered that God had healed me, and when an attack came on I would apply the truth as best I knew how, get up, and go on about my work. I had also worn glasses for eight or nine years, but laid them off the first week I was in Christian Science and have never worn them since. Formerly I could not understand why I should suffer so, but now I know it was only a false material sense. I was gently led to Truth and Love through Christian Science, and I praise God, "from whom all blessings flow."

MARY MODENA HOLBROOK, Sunset, Texas.

It is with a grateful heart that I add my testimony to those who have found this wonderful healing truth and have been helped by it. Some years ago, while away from home, I became interested in Christian Science and had proofs of its benefits; but upon my return home, being among those who knowing nothing about it were prejudiced, I drifted away from it; my interests were in other directions, as I had during that time been married.

It was before our little son came to us that the doctor told me to take good care of myself; but with all the care it was a long, hard struggle, which left me in a bad physical condition and necessitated my leaving home and baby that an operation might be performed, and more than a year elapsed before I began to feel at all strong. Meanwhile, my interest in Christian Science was again awakened by the visit to my home of a sister who is a Christian Scientist; and before our little daughter came, in March, 1911, my renewed seeking after this wonderful truth was abundantly rewarded, as I seemed called upon to face a very extreme condition of fear expressed by all my friends and family who were about me, because of the statements of the physicians who had been with me through my first experience and their view of the probable outcome of my case.

Again my sister came to be with me, and with her help and a faithful daily study of Christian Science, the fears around me disappeared, so that all the conditions attending the birth were normal. I was up and around in ten days, and my sister left me in two weeks; but there was still another blessing in store for me. A short time after, there were indications of an internal trouble, which the physician verified upon examination, saying that only another operation would remedy it; but by turning to divine Love, I was healed in Christian Science through absent treatment and my own persistent study entirely, and am now stronger than I ever was in my life.

HELEN GILL CONMAN, Prairie City, Iowa.

In August, 1909, while with friends in Humboldt, Iowa, I arose one morning with a dull pain in my right arm and shoulder. I ate some breakfast with difficulty, but by eleven o'clock I was lying on the bed helpless and in the most intense agony, the hand and arm badly swollen to the shoulder. A faithful Christian Science practitioner was called from Des Moines over the long-distance wire, and

Digitized by Google

immediately the pain began to lessen and in half an hour I was asleep. At three o'clock I awoke, went to the dining-room, and ate my delayed dinner with a good relish. I was free from pain, though the swelling and a sense of stiffness still remained. I read and studied the Bible and Science and Health during the remainder of the day, retiring at the usual time to a good night's rest.

This had occurred on Monday, and on Tuesday I used the hand, now fully restored, to write to the practitioner. Wednesday morning I did my washing, and with a heart full of gratitude testified to this healing at the Wednesday evening meeting. *Materia medica* would doubtless have called this an acute attack of rheumatism. When I was a girl, before I knew anything of Christian Science, I was helpless for three months from this same disease, was fed and handled like an infant, and was two years in making even a partial recovery. Complete recovery never came till Christian Science brought it, years later.

During early life I was much of the time an invalid, and like the woman mentioned in the gospels, I certainly "suffered many things of many physicians," but all to no avail. We are farmers, and with the help of Christian Science has come the ability to do the work required. Not always has relief come so quickly, but it has come just as surely as we knew that "God is our refuge and strength." This testimony conveys very imperfectly my sense of gratitude to God for Christian Science, and to its Discoverer, Mrs. Eddy.

LAURA HAMERSLY, Rhame, N. Dak.

It is with deepest gratitude that I testify to the healing power of divine Love. Four years ago, when I took up Christian Science in earnest, I was, and had been for a number of years, suffering from a nervous disorder for which I had been treated by several physicians, only to grow worse each year; but with the help of a practitioner and the constant study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed. The healing was slow, taking nearly three years, for which I am now thankful, as I learned many lessons which I would not have learned otherwise. At the same time I was healed of catarrh and a chronic bowel trouble.

I am also glad to be able to testify to a painless childbirth. A practitioner gave me treatment for some time previous to the confinement, and the birth was perfectly natural, causing me no pain. Neither the child nor myself has had any illness since, and I look upon this as a constant demonstration of God's loving care. I feel that I can best show my gratitude by daily living the truth which Mrs. Eddy taught.—VIOLA M. COTTRELL, Sacramento, Cal.

For years I suffered from kidney-trouble, which at times was so bad that I could not find an easy position or a restful moment. I decided to try Christian Science, so I asked a practitioner to treat me, which she did with wonderful results. At the first treatment I felt like a new person, and the second healed me entirely.—W. J. POOLEY, Chicago, Ill.

[Written for the *Sentinel.*]

FAITH.

MARY C. SEWARD.

O HAPPY bird that springs
On joyous wings
To yonder height
And doth not fear to fall!

O radiant faith to rest,
With doubt suppressed
When fears affright,
On God, enfolding all.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

In the midst of this world of changing fashions of clothes and thought there are millions who pride themselves upon wearing the same set of opinions which they wore twenty years ago. If the ideas of these people were like clothes, and could be seen and compared with other clothes, they would go into the junk almost instantly. Unfortunately, ideas and opinions are invisible; and, contrary to every other form in things, they are called sacred. We change the garments we wear, the automobiles in which we ride, the houses in which we live, the food which sustains life, but we consider it almost a crime for one to change his opinions. In churches, in political parties, in ethics and morality, no person is dealt with more harshly than one who today puts deliberately aside some thought or belief which he accepted yesterday. They call him turncoat, traitor, betrayer, scamp. That which should be encouraged in the interest of growing personality we discourage. Even the trees put forth new shoots each day. The fashion of the forest changes with the seasons of the year. Only man is victim of a preposterous and superstitious consistency which demands sameness of fashion in his higher life. Some time an age will be born which will understand the difference between the outward forms and fashions of ideas, and those inward principles of faith, hope, and love which really abide forever. In that day men will be encouraged to change their ideas for better ones as readily as they do their clothes. Men will then understand that underlying all fashions of garments and ideas there is the expression of an unfolding personality, divinely endowed and forever trying to find a better fit and a more comfortable dress and greater freedom for self-expression.
